ZERO-TO-READY GUIDE

J.P. Morgan Global Private Bank 2027 Summer Internship, London

What J.P. Morgan actually is and how it makes money. What the Private Bank does. What the Advisor and Investment Solutions interns really do all day. And a full breakdown of the screening machine behind the application: Oracle Recruiting Cloud, pymetrics and HireVue, and how to come out at the front of the queue.

Roles covered: 2027 Global Private Bank - Advisor Summer Internship Program - London (req. 210773470)
2027 Global Private Bank - Investment Solutions Summer Internship Program - London (req. 210774281)
Application deadline stated on both postings: 1 November 2026, filled on a rolling basis
Prepared 8 September 2026. Figures are from J.P. Morgan's 2025 annual report, 10-K and press releases unless stated. Sources are listed at the end.

Contents

How to read this

Every section starts with the plain-English version. Boxes marked *"In plain English"* assume you know nothing about finance. Boxes marked *"Use this in an interview"* are the lines worth remembering. Where something about J.P. Morgan's internal set-up is not publicly confirmed, the guide says so rather than guessing.

Part 1. What J.P. Morgan is, past the marketing

In plain English

JPMorgan Chase is a company that holds people's money, lends it out, moves it around, and advises people and companies on what to do with it. It is the largest bank in the United States and one of the largest in the world. Almost anything that can be done with money at scale, it does somewhere in the building.

$4.4tn

Total assets at 31 Dec 2025. Largest US bank by assets.

$185.6bn

Revenue in 2025 (managed basis). Eighth consecutive record year.

$57.0bn

Net income (profit after tax) in 2025. Return on tangible common equity: 20%.

318,512

Employees at end of 2025, in 66 countries. 58% in the US.

$19.8bn

Planned technology spend in 2026, roughly 10% up on 2025. About $1.2bn of that on AI.

$41tn

Assets it safeguards (custody) for clients. It also extended $3.3tn of credit and capital in 2025.

Two names, one company

You will see two brands. **Chase** is the consumer brand: current accounts, credit cards, mortgages, the high-street bank (in the UK, Chase is the app-only bank launched in 2021). **J.P. Morgan** is the brand for big companies, governments, institutions and wealthy families. The Private Bank you are applying to sits under the J.P. Morgan name. Legally, they are all JPMorgan Chase & Co., listed on the New York Stock Exchange under the ticker JPM.

Where it came from, in one paragraph

The oldest piece dates to 1799 (a water company in Manhattan that was allowed to do banking). John Pierpont Morgan, the banker the firm is named after, financed railways, U.S. Steel and General Electric in the late 1800s and personally organised the rescue of the US financial system in the Panic of 1907. The modern company is a stack of mergers: J.P. Morgan & Co. merged with Chase Manhattan in 2000; Bank One joined in 2004 and brought Jamie Dimon, who has been CEO since the end of 2005. In the 2008 crisis it bought Bear Stearns and Washington Mutual when they collapsed. In 2023 it bought First Republic, a bank for wealthy clients, when that collapsed. The pattern to notice: J.P. Morgan is the firm regulators call when something breaks, because it has the balance sheet to absorb it.

What it is known for (the things people in the industry would say)

Reputation	What it means
"Fortress balance sheet"	Dimon's phrase. The bank keeps far more capital and liquid cash than the rules require, so it survives crises and buys weaker rivals during them. Common equity tier 1 ratio 14.6%, liquid assets of about $1.46tn at end 2025.
"First-class business in a first-class way"	An old J.P. Morgan motto, still used. It signals that reputation and doing things properly matter more than a quick profit.
Number one investment bank	It earns more investment banking fees than any other bank in the world, most years.
Jamie Dimon	The best-known bank CEO in the world. His annual shareholder letter is read like a state-of-the-economy speech. Interviewers expect you to know its themes (Part 5).
The biggest tech spender in banking	Nearly $20bn a year. It employs tens of thousands of technologists and has an internal AI tool suite (LLM Suite) available to over 200,000 staff.
"Guide to the Markets"	A quarterly slide pack from J.P. Morgan Asset Management that advisers everywhere use. Reading it is the fastest way to sound informed about markets.
Best Private Bank in the World	Global Finance magazine's ranking, cited in the job posting. The Private Bank is the part of the firm you are applying to.

Part 2. How the bank makes money

In plain English

A bank makes money in two ways. **One:** it takes money from people who want to keep it safe (deposits) and pays them a little interest, then lends that money to people who need it (loans) and charges them more interest. The gap is called *net interest income*. **Two:** it charges fees for doing things: advising on a merger, executing a trade, managing an investment portfolio, processing card payments. That is *non-interest revenue*. At J.P. Morgan the split is roughly half and half.

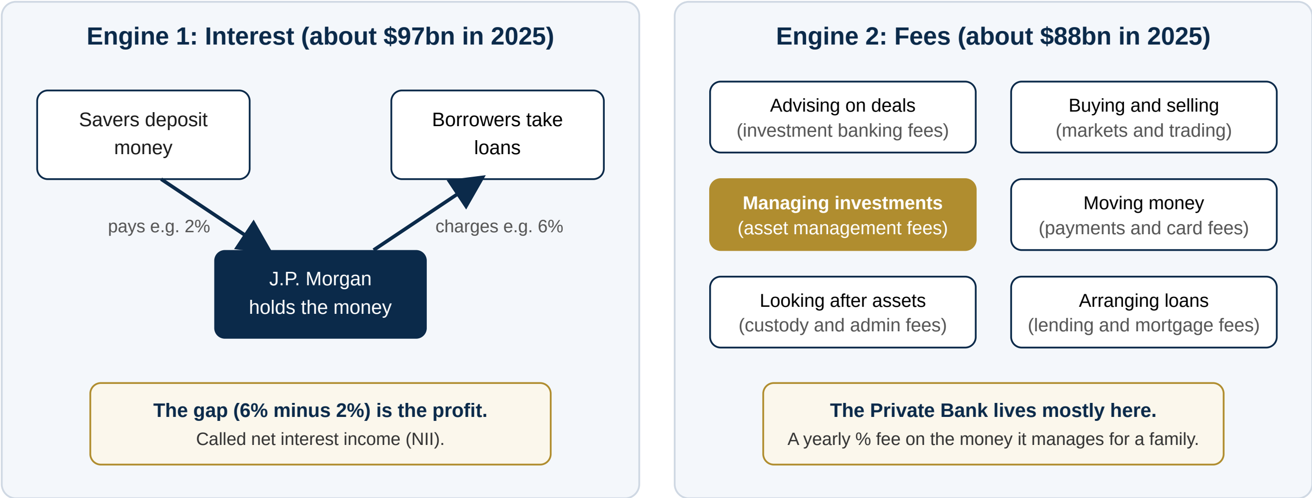

Figure 1. The two revenue engines. Interest figure is the sum of quarterly net interest income reported during 2025; fee figure is full-year non-interest revenue from the 4Q25 release. Rates shown are illustrative.

Why this matters for the Private Bank specifically

The Private Bank earns a management fee, usually a percentage of the client's assets each year, plus interest on loans it makes to wealthy clients (mortgages on large houses, loans secured against share portfolios), plus fees on some products. Because the fee is a percentage of assets, the business grows when three things happen: markets go up, existing clients add more money, and new clients join. That is why the whole division is obsessed with *net new flows* (new money coming in) and why the Advisor track exists at all: someone has to win the new clients. In 2025 the Asset & Wealth Management division reported that 73% of its revenue is recurring, which is why the firm loves it. It does not swing wildly with markets the way trading does.

Use this in an interview

"The Private Bank is a fee business on top of a balance-sheet business. Recurring fees on client assets give it stability, and lending to those same clients deepens the relationship and adds interest income. Growth comes from flows, so bringing in and keeping clients is the core job."

Part 3. The four divisions and where the Private Bank sits

JPMorgan Chase reports its results in three main business segments plus a "Corporate" bucket. Each segment is effectively a huge company on its own.

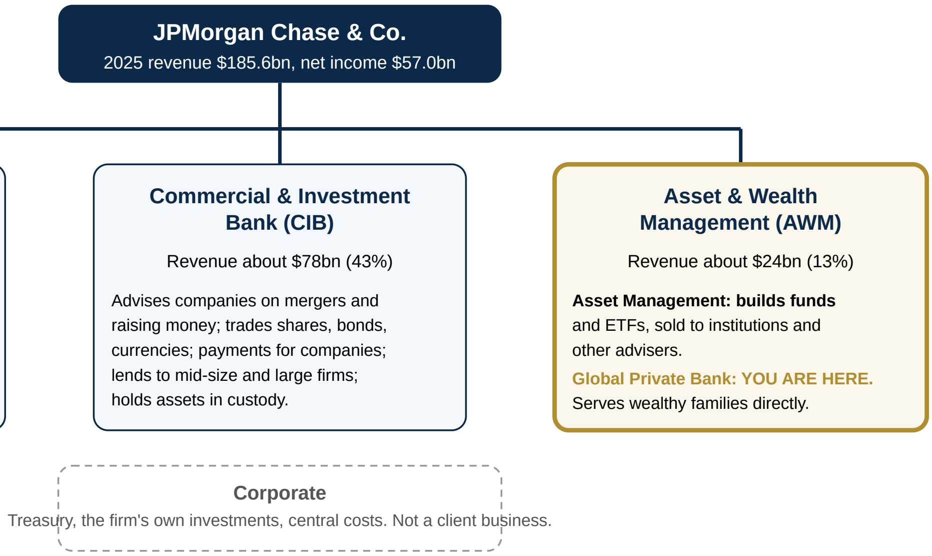

Figure 2. The reporting segments. Revenue shares are approximate and based on segment revenue for full-year 2025.

Each division in one line

- **CCB** is the everyday bank for tens of millions of American households. It is the biggest earner of interest income.
- **CIB** is the "Wall Street" part. It serves over 90% of the Fortune 500. Its revenue is the biggest but the most volatile.
- **AWM** is the money-management part. It is the smallest by revenue but the most profitable per pound of capital: return on equity of 40% in 2025, and 22 straight years of net new client money.

A trap to avoid in interviews

"Wealth management" at J.P. Morgan means two different things. **J.P. Morgan Wealth Management** is inside the consumer bank (CCB) and serves people with, say, £100k to a few million, mostly in the US. The **Global Private Bank** is inside AWM and serves the very wealthy (in the UK the working threshold is around £10m of investable assets, though the firm does not publish a hard minimum). You are applying to the Private Bank. Do not mix them up.

Part 4. Asset & Wealth Management: numbers, recent moves, what they are known for

In plain English

AWM is two businesses with one boss, Mary Callahan Erdoes (CEO of AWM since 2009). **Asset Management** is a factory: it designs investment products (funds, ETFs, private-market funds) and sells them to pension funds, insurers, sovereign wealth funds and other banks' advisers. **The Global Private Bank** is a shop: it sits with a wealthy family, works out what they need, and pulls products from the factory (and from outside) to build it for them. The Private Bank is one of what Erdoes calls the four "killer" distribution channels for the factory's alternatives products.

$7tn

Client assets across AWM at end of 2025 (assets managed, plus assets held in custody or advised on).

$553bn

Net client asset flows in 2025, a record. 22nd consecutive year of net inflows.

$24bn

AWM revenue in 2025, the ninth record year in a row. Pre-tax income about $9bn.

4,100

Private Bank advisers globally, up from 2,500 in 2020. Growing about 11% a year.

$560bn

Alternatives (private equity, private credit, real estate, infrastructure, hedge funds) under supervision, up from $284bn in 2020.

$2.7bn

AWM's own investment spend in 2025, its largest ever, up from about $1bn five years earlier.

The Private Bank in EMEA and the UK

- Around 17 offices in 11 countries across Europe, the Middle East and North Africa. London is the hub. The EMEA CEO of the Private Bank is Pablo Alvarez-Alonso.
- The UK Private Bank is run by Maricé Brown. In May 2026 she told Citywire she wants to add about 30 people a year and double the size of the UK regional private bank business within five years. The firm has been opening regional coverage in Manchester and Leeds to reach entrepreneurs and business owners outside London.
- J.P. Morgan describes itself as the largest US bank in the "high-net-worth-plus" segment internationally, with double-digit growth where it is already strong, and market share under 1% in many countries, which it calls the expansion opportunity.
- The UK Private Bank has been hiring senior bankers from Citi, UBS, HSBC and Credit Suisse. Translation for you: the London office is in growth mode, which is why it is running two intern tracks.

Recent moves in the asset management space (2025 to 2026)

Move	What it is and why it matters
$50bn direct lending commitment (Feb 2025)	J.P. Morgan put $50bn of its own balance sheet, plus about $15bn from co-lenders, into lending directly to companies, competing with private credit funds. It shows the firm treating private credit as a core product, not a fad.
Active ETF leadership	AWM is number one globally in active ETF assets ($250bn) and flows. JEPI, its covered-call income ETF, is the biggest of its kind in the world at about $44bn. In March 2026 it launched two more income ETFs (ROCY, ROCQ). Active ETFs are the fastest-growing product format in the industry.
Alternatives push and 2026 Global Alternatives Outlook (Dec 2025)	Annual report on private markets. In March 2026 the firm hired Stephanie Davis from Hamilton Lane as Head of Private Wealth Alternatives to get private-market funds into the hands of wealthy individuals, a theme that flows straight into what Private Bank investment specialists sell.
Workplace / Global Shares	Bought Global Shares (employee share-plan administration) in 2022. Now $372bn of assets and 1.8 million participants. Strategic logic: employees with share awards become tomorrow's Private Bank clients.
Bringing proxy voting in-house (from 1 April 2026)	First major asset manager to stop using outside proxy advisers for US votes, using its own AI system (SpectrumIQ) to analyse over 3,000 company meetings a year.
AI inside the business	SpectrumIQ (analyses 90,000 securities and 22 million documents; automates 75% of equity trading and 85% of FX); Connect Coach (an AI assistant giving one million personalised prompts a month to 12,000 front-office staff, including Private Bank advisers). You may well use Connect Coach as an intern.
Path to $10tn	At the May 2025 Investor Day Erdoes set out a route from about $6tn to over $10tn of client assets through active management, alternatives, acquisitions and technology. Every hire, including interns, is framed as part of that.

What J.P. Morgan Asset & Wealth Management is known for

- **Active management that actually beats the index.** 83% of ten-year active fund assets beat the peer median. Over 5,000 companies researched, 15,000 company meetings a year, over $500m a year spent on research. Active flows ranked number one globally.
- **Publications the whole industry reads:** Guide to the Markets (quarterly), Long-Term Capital Market Assumptions (annual return forecasts for every asset class), Eye on the Market (Michael Cembalest's notes), and the Private Bank's own annual Outlook. Reading the current one is the single highest-return piece of interview prep.
- **Cross-selling.** Over 95% of AWM's top 50 clients use more than one J.P. Morgan business line. The Private Bank routinely introduces a founder to the investment bank when they sell their company, and the investment bank sends the founder back with the proceeds.
- **Training.** Adviser training hours have tripled since 2019. The firm treats the adviser bench as an asset it manufactures, which is what an internship pipeline is.

Part 5. How the CEO's views turn into strategy, and into your desk in London

Interviewers do not want you to recite Jamie Dimon. They want to see that you understand the chain from what the top says to what a team in London does. Here is that chain.

1. Jamie Dimon, Chairman and CEO (2025 shareholder letter, published April 2026)

Fortress balance sheet. Keep investing through the cycle: $105bn of expenses, $19.8bn on technology, $1.2bn on AI.
AI is "transformational" and will touch every job. Big risks: geopolitics, sticky inflation, higher-for-longer rates.
Small "Navy SEAL" teams, not bureaucracy. Grow internationally where market share is small.
$1.5tn Security and Resiliency Initiative; American Dream Initiative for small business and housing.

2. Mary Erdoes, CEO Asset & Wealth Management

"Clients vote with their flows." Four priorities: active management, alternatives, technology and AI, international growth.
Hire advisers at about 11% a year. Record $2.7bn investment spend. Path to $10tn of client assets.
The Private Bank is a "killer" channel for alternatives. Triple training hours, cut the cost per adviser trained.
AI tools (Connect Coach, SpectrumIQ) so each adviser can serve more clients, better.

3. EMEA and UK Private Bank (Pablo Alvarez-Alonso; Maricé Brown for the UK)

"We're in hiring mode": about 30 hires a year, double the UK regional business in five years.
Poach senior bankers from rivals. Push into Manchester and Leeds to reach entrepreneurs.
Win clients with £10m+ who are underserved by UK rivals. Sell alternatives and lending, not just portfolios.
Work with the investment bank on founders who are selling companies (liquidity events).

4. Your desk: a London Private Bank team, summer 2027

Advisor intern: research prospects (who just sold a business? which families are underserved?), build the pitch, prepare client reviews, learn the products.
Investment Solutions intern: help investment specialists explain markets, check portfolios, model an allocation to a new private-markets fund, write up a fund manager.
Both: use the firm's AI tools daily, present a project in week nine, be judged on "would a team want you back full-time?"

Figure 3. The strategy chain from CEO to intern. Items in rows 1 to 3 are from the 2025 shareholder letters, the May 2025 Investor Day, and press coverage from 2025 to 2026.

Use this in an interview

"The firm's stated strategy is to keep investing through the cycle and to grow internationally where its share is small. AWM's version of that is more advisers, more alternatives, and AI to make each adviser more productive. In the UK that shows up as a stated plan to double the regional private bank in five years. I want to join at the point where that plan is being executed."

Dimon's eight tenets (worth knowing they exist)

The 2025 letter lists eight principles: banking's human impact; shareholder value built through healthy relationships with all stakeholders; the fortress balance sheet; sticking to foundational principles; building enduring businesses; being a source of strength in a crisis; paying fair taxes; investing in people. If asked "what do you know about our culture", the fortress balance sheet, the crisis role and investing in people are the three to mention.

Part 6. What a private bank does (explained from zero)

In plain English

Imagine a family that has just sold a company for £40m. They now have questions they have never had before. Where do we put it? How much tax will we pay? How do we borrow against it without selling? How do we pass it to the children without ruining them? Who do we trust? A private bank is a single team that answers all of those questions and then does the work. The client pays the bank a yearly fee based on how much money the bank looks after, plus interest on anything they borrow.

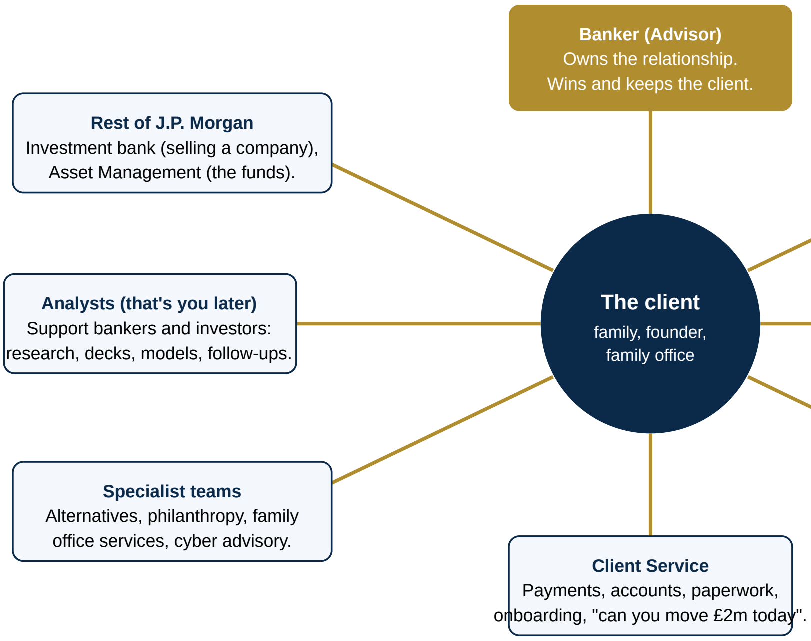

Figure 4. The client team. The two gold boxes are the two careers the two internship tracks lead to. J.P. Morgan calls the banker the "relationship quarterback".

The four things a private bank does for a client

Service	What it means	Example
Invest	Decide how to split the money between shares, bonds, cash, private equity, property and so on (asset allocation), then pick the funds or securities (implementation). Either the bank decides day-to-day (discretionary) or the client approves each move (advisory).	A £30m portfolio: 50% global shares, 25% bonds, 15% private markets, 10% cash and hedge funds. Reviewed quarterly.
Borrow	Lend to the client, usually secured against something they own, so they get cash without selling investments and triggering tax.	A £5m loan secured against the portfolio to buy a house before the old one is sold.
Bank	Accounts, deposits, payments, foreign currency, custody (holding the assets safely).	Paying a €2m invoice for a property in Portugal.
Plan	Trusts, estates, wills, tax-aware structuring, philanthropy, family governance, family office services.	Setting up a trust so that a 19-year-old heir does not receive £10m outright.

Who the UK clients are

Entrepreneurs who have sold or are about to sell a business; multi-generational families; family offices (the private company a very rich family sets up to run its own money); senior executives with large share awards; athletes and entertainers; and people who are international (a British family with US-linked assets, or a Middle Eastern family with a London base). J.P. Morgan's edge in the UK is being an American bank: it is strong on US tax exposure, dollar assets and access to the investment bank.

Part 7. The two roles: Advisor track and Investment Solutions track

Something you should know before you apply

As of 8 September 2026 the London *Investment Solutions* posting (req. 210774281) carries the same body text as the *Advisor* posting (req. 210773470): both describe "an Advisor Summer Intern". That is almost certainly a copy-and-paste on J.P. Morgan's side. The description below of the Investment Solutions track therefore uses the firm's global and 2026 London descriptions of that track, which say the intern will "work with specialists to help research, analyze, and develop global investment strategies and opportunities". Do not be thrown by the identical text, and do not copy it back at them in your application.

Advisor track leads to: Banker / Client Advisor	**Investment Solutions track** leads to: Investor / Investment Specialist
The job in one sentence Find wealthy clients, win them, and own the whole relationship for years.	**The job in one sentence** Design, build and explain the investment portfolio for each client, and keep it right as markets move.
Core question every day "Who should we be talking to, and what do they need?"	**Core question every day** "Given what markets are doing, is each client positioned right?"
Skills that get rewarded Listening, persuasion, organisation, memory for people, resilience to rejection, broad knowledge of everything.	**Skills that get rewarded** Markets knowledge, numbers, clear explanation of complex things, judgement under uncertainty, attention to detail.
Measured on New clients and new money brought in; client retention; revenue per banker (up 15% since 2020).	**Measured on** Portfolio outcomes versus plan; assets moved into managed and alternative products; quality of advice; client trust.
Posting's own tell "Desire to work with external clients in a sales capacity."	**Posting's own tell** "Research, analyze and develop global investment strategies."

Figure 5. The two tracks side by side. Both interns sit on the same client teams and both are told they will "partner with client advisors, bankers, global investment specialists and estate experts".

Why the roles are confusing, and the simple way to hold them in your head

They are confusing because the job postings describe the *team* rather than the *seat*. Every intern works with "bankers, investment specialists, wealth advisors and lending specialists". The difference is which of those people you are training to become. The Advisor intern shadows and supports the *banker*. The Investment Solutions intern shadows and supports the *investor*. Think of a restaurant: the banker is front of house, welcoming the guests and making sure they come back; the investor is the head chef, deciding what goes on the plate. Both need to know the whole menu.

What is common to both

- Nine weeks in London, starting with a one-week induction (training on the businesses, products, systems and compliance). A summer 2027 start, typically late June.
- You are placed on a market team. In London the teams are organised by client type or geography, for example UK, Nordics, Middle East, Global Families Group (the largest families). You do not usually choose.

- One-to-one mentorship (usually an analyst or associate "buddy" plus a senior sponsor), speaker sessions, networking events, and a final project presented to senior people in week nine.
- Eligibility on both postings: graduating between January 2028 and July 2028, penultimate year of study. No degree subject is specified.
- Top performers get a full-time offer into the Global Private Bank Analyst Program, a three-year programme with promotion to Associate through an assessment centre.

Which one should you pick?

Choose Advisor if...	Choose Investment Solutions if...
You enjoy people more than spreadsheets, you are comfortable asking for things, and you like the idea of running a book of relationships one day.	You read market news for fun, you like being the person who explains why something happened, and you would rather be right than liked.
Your CV shows sales, fundraising, society leadership, hospitality, sports captaincy, anything client-facing.	Your CV shows investment society, a trading or research project, a quantitative degree, CFA Level 1 or similar, a portfolio you actually run.
Your HireVue stories are about persuading, organising and recovering from a "no".	Your HireVue stories are about analysing, deciding with incomplete information, and explaining something complex simply.

You can apply to both. J.P. Morgan's careers site allows multiple applications, but the firm's advice is to apply for the programme you fit best. If you apply to both, make the two applications genuinely different: the answers are read by the same recruiting team.

Part 8. A day in the life of each intern

These timelines are built from the job postings, the firm's own description of a private banker's day, and accounts from analysts on the programme. Exact times vary by team. Hours are typically 8am to about 6.30pm, later before a big client meeting or your final project.

Advisor intern: a Tuesday in week five

07:45 — **Read before anyone speaks to you**
Overnight markets, the FT, the Private Bank's daily note. You will be asked "anything interesting today?" and silence is noticed.

08:15 — **Morning meeting (team huddle)**
The team runs through clients being seen this week, money moving in or out, and any market event that means a client should get a call.

09:00 — **Prospect research**
A banker asks: "Who in the UK has sold a business for over £50m in the last six months?" You use news, Companies House, deal databases and the investment bank's deal flow to build a list with notes on each: sector, likely liquidity, who introduces them.

11:00 — **Build a pitch book**
A 15-page deck for a first meeting: who we are, what we would do for this family, a sample portfolio, lending ideas, planning ideas. You pull slides from the investor and wealth advisor and make it one coherent story. Analysts check every number.

13:00 — **Lunch and learn**
Intern programme session, for example "How lending works in the Private Bank" or a senior banker on how they built their book.

14:00 — **Sit in on a client review**
A quarterly review with an existing family. You take notes, watch how the banker steers the meeting and hands off to the investor, and afterwards you draft the follow-up email and the list of actions (open a new account, size a loan, send the alternatives paper).

16:00 — **Onboarding and admin**
A new client is joining. You help gather the "know your customer" documents and chase the internal teams. Unglamorous, essential.

17:30 — **Your summer project**
Typical brief: "Identify an underserved client segment in the UK and propose how we would win it." You present it in week nine.

18:30 — **Networking drinks or an intern event. Or home.**

Investment Solutions intern: the same Tuesday

07:30 — **Markets first**
Overnight moves in equities, bonds, currencies. What the Fed or Bank of England said. The Private Bank's Chief Investment Office note.

08:00 — **Investment morning call**
Strategists and specialists across EMEA on one call: the house view, any change to recommended positioning, which clients are affected.

08:45 — **Portfolio checks**
Which client portfolios have drifted from their target allocation after yesterday's move? Which have too much cash? You run the reports and flag the ones that need a conversation. This is where you learn what "asset allocation" means in practice.

10:00 — **Research task from an investor**
"A client wants 10% in private credit. Compare our two funds and one external fund: fees, liquidity terms, track record, risks. Two pages by Thurs
You use fund documents, the Asset Management due-diligence team, and Bloomberg. Then you write it so a non-expert client could follow it.

12:30 — **Lunch with the market strategy team**
The people who write the house view. Ask how they decide; interviewers love an intern who understood the process, not just the output.

14:00 — **Client review, same meeting as the Advisor intern**
You prepared the performance pages: what the portfolio returned, versus what, why, and what we propose to change. The investor presents, you watch the client's questions. Afterwards you update the proposal and produce the trade list for client sign-off.

16:00 — **Product and market work**
Help the alternatives team prepare the client slides for a new fund launch; or back-test a structured note idea; or update a model portfolio.

17:30 — **Your summer project**
Typical brief: "Build a recommended allocation for a £25m client with a given goal and defend it," or a stock or fund pitch to a panel.

18:30 — **Same drinks, same event. Same people, different notebooks.**

The honest picture of an intern's real value

Nobody expects a summer intern to bring in a £20m client or to set the house view. You are judged on four things: do you turn up prepared; is your work accurate (numbers checked, names spelled right); can people put you in front of a client without worrying; and do you ask good questions and then remember the answers. The final project and the informal "would I want this person on my team" votes from analysts and associates decide the offer.

Part 9. The screening machine: the whole pipeline

In plain English

J.P. Morgan gets far more student applications than any human team could read. So it uses software to sort them, in stages. Each stage removes people. Your job is to be obviously worth keeping at every stage, and to get there early, because the postings say classes are filled on a rolling basis. Two outside companies run most of the early stages: **Oracle** (the application system) and **HireVue** (the video interview and, in many cycles, game-based tests via pymetrics, now owned by Harver).

1. Online application on Oracle Recruiting Cloud (jpmc.fa.oraclecloud.com)
Email-only sign-up, CV upload and parsing, profile fields, eligibility and prescreening questions, work-authorisation question, programme choice.
Removes: anyone outside the graduation window, ineligible to work, incomplete, or who fails a "knockout" question. Software, instant.

2. Recruiter screen inside Oracle
Campus recruiters view the applicant list: filters, sortable columns, optional AI fit ratings (0 to 5 on education, experience, skills, profile).
Removes: weak or generic CVs, wrong year, poor fit with the posting's language. Human decision, informed by the software's sort order.

3. pymetrics games (used in many J.P. Morgan campus cycles; not always for every programme)
About 12 short games, 25 to 30 minutes. Measures traits (risk appetite, attention, planning, fairness) and compares your pattern to successful staff.
Removes: profiles far from the target pattern or inconsistent play. Software. Cannot be "studied" but can be done badly by rushing or gaming.

4. HireVue one-way video interview
Usually 3 to 5 questions, about 30 seconds to prepare and 90 to 120 seconds to answer, one retake on some questions. Done within days of the invite.
Removes: unstructured, generic, low-content answers. AI scores the transcript and sorts into bands; recruiters watch the top band first.

5. Business review and final round (assessment centre or "superday" style interviews, in person or video)
Two to four interviews of 30 to 45 minutes with analysts up to managing directors on the London Private Bank teams. Competency and motivation focused, plus markets and "what would you tell a client" questions; often a short case or group exercise. Humans only.

6. Offer, background checks, contract

Figure 6. The pipeline. Stages 1, 3 and 4 are decided mainly by software; stages 2 and 5 by people. J.P. Morgan does not publish which stages apply to each programme or the pass rates; the sequence is assembled from the firm's own guidance and consistent candidate reports from 2024 to 2026 cycles.

How long it takes

Postings opened on 31 August 2026 and close on 1 November 2026, but places are filled on a rolling basis. Candidate reports put the whole process at roughly six to ten weeks from submission to offer, faster at peak. In practice, people who apply in the first two weeks of a posting being live are competing for a full class; people who apply in the last week are competing for whatever is left.

Part 10. Oracle Recruiting Cloud, inside the system

What it is

Oracle is one of the world's largest software companies. Its "Fusion Cloud Human Capital Management" (HCM) product runs the whole HR life of an employee: hiring, payroll, performance, leave. Oracle Recruiting Cloud (ORC) is the hiring module of that suite. JPMorgan Chase runs its HR on Oracle HCM (its careers site is hosted at jpmc.fa.oraclecloud.com, and the firm advertises engineering jobs to maintain its Oracle HCM platform), so every application to J.P. Morgan anywhere in the world lands in the same system.

Why J.P. Morgan uses it

- **Scale and one system.** Hundreds of thousands of applications a year across 66 countries, and once you are hired the same record becomes your employee file. Fewer systems means fewer errors and easier audits, which matters to a regulated bank.
- **Configurable process.** Each programme can have its own questions, knockout rules, stages and approvers, while the firm keeps one set of governance and data-protection rules.
- **Integration.** ORC plugs into outside tools such as HireVue, background-check firms and job boards. Your tracking link (utm_source=Trackr on the URL you were given) is recorded as the "source" of your application, which is how the firm measures where good candidates come from.
- **AI features it can switch on.** Oracle now ships candidate matching, AI fit ratings, "suggested candidates" for a requisition, and an applicant screening agent with fraud and AI-generated-profile detection. These are optional and off by default; J.P. Morgan does not say publicly which ones it has enabled.

What happens to your application, step by step

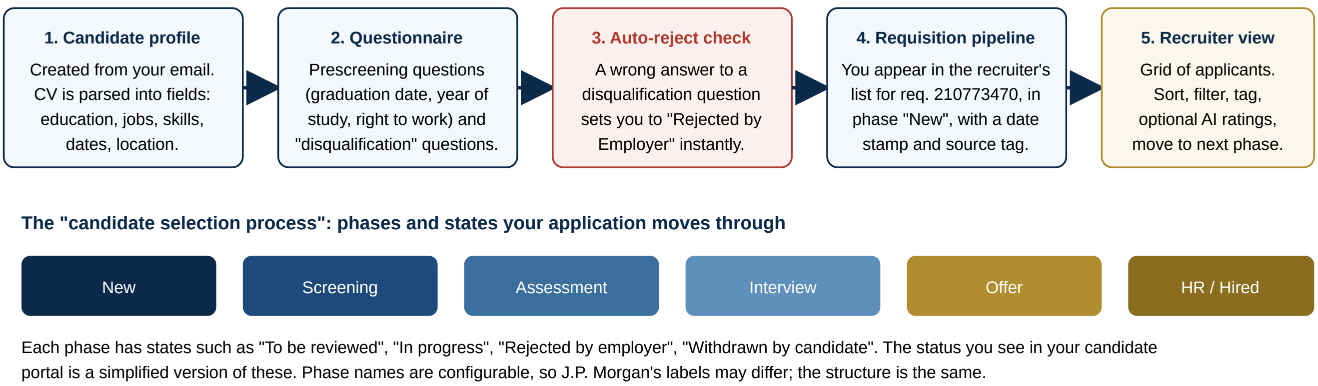

Figure 7. The Oracle side. Steps 1 to 3 are automatic. The phase strip is Oracle's standard structure; J.P. Morgan's exact configuration is not public.

How Oracle "ranks" candidates, honestly

There is no single number that puts you first, second or third in a queue. What exists is:

1. **Hard filters.** Disqualification questions and eligibility fields. These are binary. Get one wrong (for example a graduation date outside January to July 2028) and no human sees you.
2. **Sort order.** Recruiters open a grid. By default it tends to be date-ordered, newest or oldest first, and they work through it in batches. Early applicants are seen while the class is still empty.

3. **Optional AI fit rating.** If enabled, Oracle's generative AI compares the parsed CV and profile against the requisition text and produces bars from 0 to 5 for education, experience, skills and profile, plus a short explanation. Recruiters can sort by these. The comparison is against the *words in the job posting*, which is why mirroring the posting's language matters.
4. **Tags and flags.** Referral source, campus event attendance, prior spring-week participation, and internal notes. A "referred by employee" tag or a note from a banker who met you at an event is the closest thing to being moved up the line.
5. **Authenticity checks.** Oracle's 2026 release adds AI detection of fraudulent or AI-generated profiles with a confidence score. Whether J.P. Morgan has this on is unknown, but it is one more reason to write your own answers.

> **Use this**
>
> Oracle is not the judge. It is the filing cabinet and the sorting hat. Your aim in Oracle is simple: be complete, be early, be parseable, and match the posting's language so that any automatic rating and any human skim both come out well.

Part 11. pymetrics and HireVue, inside the systems

pymetrics (now part of Harver)

pymetrics was a New York start-up that turned neuroscience experiments into short games. Harver bought it in 2022. J.P. Morgan has used it as an early screen for most campus programmes since about 2019 to reduce reliance on CVs and universities. Candidate reports in 2025 and 2026 still show it in the flow for many J.P. Morgan programmes; some programmes go straight from application to HireVue. Expect it, and do not be surprised if it does not appear.

What it looks like	What is going on underneath
About 12 games, 25 to 30 minutes, played once on a laptop: balloons you pump for money, digits to remember, arrows to react to, a tower puzzle, a money-sharing game.	Each game records hundreds of data points: reaction times, how much risk you took, when you stopped, how you responded to feedback, how fair you were. These map to roughly 90 traits such as attention, planning, risk tolerance, generosity and learning from mistakes.
You get a trait report afterwards.	Your pattern is compared to a "success profile" built from existing J.P. Morgan employees who do well in that role family. It is a fit score, not a mark out of 100. There are no right answers, but there are inconsistent ones: the system checks for implausible patterns and for gaming.
Cannot be retaken within the cycle; the same result is reused for other J.P. Morgan applications that season.	Best approach: play once, rested, on a laptop with a mouse, quiet room, no advice from the internet on "what to click". Behave as you would at work: read the instructions, be deliberate, do not rush, do not agonise.

HireVue

HireVue is a Utah company founded in 2004 that pioneered the "one-way" video interview: you record answers to pre-set questions, nobody is on the other end, and the recording is scored later. It bought Modern Hire in 2023 and Hireguide in March 2026, so it now also sells game-based assessments and structured live-interview tools. Its clients include most large banks. It is the stage most people are frightened of, and the one where preparation pays off most.

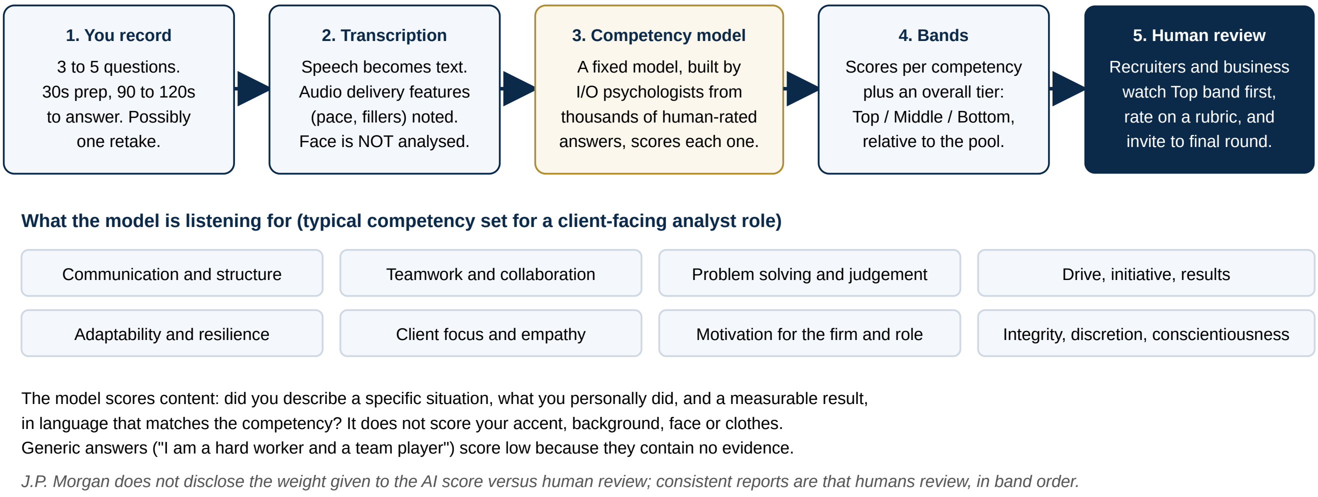

Figure 8. How a HireVue answer becomes a decision. Facial analysis was removed from HireVue scoring in 2021.

The questions J.P. Morgan actually asks (Private Bank flavour)

Prompts rotate from a pool but the themes are stable across cohorts: why J.P. Morgan; why the Private Bank and this track; a time you worked in a team under pressure; a time you persuaded someone or handled a difficult person; a time you failed or received tough feedback; something in markets that interests you and why; how you would explain a complex idea to someone with no background; what you would do if a client asked for something you thought was wrong. Prepare eight to ten stories that cover the competency set above, each with a number in it.

Part 12. How to be at the front of the line: the three gates

Straight answer to "is it my CV?"

At gate one, yes, it is almost entirely your CV and application form. At gate two, it is your recorded answers, not your CV. At gate three, it is you in a room. Nobody is "number one in the line" across the whole process; you win each gate separately. The good news is that each gate is mechanical enough to prepare for.

Gate 1: Oracle

"Are you eligible and clearly relevant?"

Decided by
Eligibility fields, CV parsing, posting-language match, timing.

You control
Apply in the first week. Exact dates. ATS-safe CV. Mirror the posting's words. Complete every field.

Kills you
Wrong grad year, .edu email, gaps.

Gate 2: pymetrics + HireVue

"Do you behave and talk like our best?"

Decided by
Trait fit; transcript content scored against competencies; band placement.

You control
Structure (situation, action, result), specifics and numbers, competency words, pace, no fillers, first 15 seconds.

Kills you
Generic answers, rambling, reading a script.

Gate 3: People

"Would I put you in front of a client?"

Decided by
Bankers and investors on the London teams, plus campus recruiting.

You control
Knowing the business (this guide), a market view, questions that show curiosity, and calm under pushback.

Kills you
Confusing PB with IB or Chase; no view.

Figure 9. Three gates, three different judges. Prepare for each on its own terms.

Gate 1 checklist: the application and CV

- ☐ Apply in the first week you can. Both postings went live on 31 August 2026 and are "filled on a rolling basis". Every week of delay is a smaller class to compete for.
- ☐ Use a personal email you will keep for years. The posting explicitly says not to use a ".edu"-style university address; UK ".ac.uk" addresses are best avoided for the same reason.
- ☐ Enter graduation date as a month between January and July 2028 and confirm you are in your penultimate year. If your course structure is unusual (placement year, integrated masters), make the dates on the form and the CV agree.
- ☐ One-page CV, single column, standard headings (Education, Experience, Leadership and Activities, Skills), no tables, no text boxes, no icons, no photo, no two-column layouts. Save as PDF with real text (not a scanned image) or as .docx. Parsers read top to bottom, left to right.
- ☐ Put dates in the same format everywhere ("Jun 2025 to Sep 2025"). Put the institution and degree on their own line. Parsers extract these into fields; if they fail, your AI rating shows "no data".
- ☐ Mirror the posting's vocabulary in your bullets where it is true: "client relationships", "financial markets and macro-level economic trends", "research and analysis", "developing solutions", "working in teams", "confidential information", "fast-paced". Any automatic fit rating compares your text to that text.
- ☐ Every bullet: action verb, what you did, a number. "Grew society membership from 40 to 110 by running a three-week campaign" beats "Responsible for membership".
- ☐ For the Advisor track, lead with anything client-facing or sales-like. For Investment Solutions, lead with markets, research and numbers. If you apply to both, the CVs should differ in ordering and emphasis.
- ☐ Fill in every optional field on the form. Recruiters filter on fields; empty fields cannot be filtered into anything.

- ☐ Record the source honestly. If a J.P. Morgan employee has agreed to refer you, get the referral logged before you submit; referrals are a tag recruiters see.
- ☐ Do not use AI to write the free-text answers wholesale. Oracle's newer releases include AI-generated-profile detection, and recruiters recognise the style. Use AI to check, not to write.

Gate 2 checklist: pymetrics and HireVue

- ☐ pymetrics: laptop, mouse, morning, rested, quiet. Play as yourself. Do not follow "click this to look risk-tolerant" advice; the consistency checks exist for exactly that.
- ☐ HireVue: complete it within 48 hours of the invite, not on the deadline. It is a signal of keenness and it gets you into the review pile earlier.
- ☐ First 15 seconds decide whether the reviewer keeps listening. Open with the answer ("The time I most clearly changed someone's mind was...") not with context.
- ☐ Structure every answer: situation in one sentence, what you personally did in three, the measurable result in one, what you learned in one. Aim for 90 seconds of content, not the full time.
- ☐ Use the competency's own words once, naturally: "we collaborated", "I took the initiative", "I adapted", "I prioritised the client".
- ☐ Cut fillers ("um", "like", "basically"). The audio features are scored. Record yourself and count them.
- ☐ Camera at eye level, look at the lens, plain background, front lighting, headphones for clean audio. Dress as you would for a client meeting.
- ☐ Prepare specific "why J.P. Morgan Private Bank" content from Parts 4 and 5 of this guide: the UK growth plan, the alternatives push, the AI tools. Nobody else in the pool will mention Connect Coach or the Manchester expansion.

Gate 3 checklist: the humans

- ☐ Have a one-minute market view ready: what is happening with rates, one theme you find interesting (AI capex, private credit, UK growth), and what a wealthy client should think about it.
- ☐ Know the difference between the Private Bank, J.P. Morgan Wealth Management and the investment bank cold.
- ☐ Have two questions for each interviewer that only someone who read the annual letter would ask.
- ☐ Expect a "what would you tell a client who wants to put everything in one stock?" question. The answer is about diversification, listening to the goal behind the request, and being willing to say no politely.

Things outside the software that move you up the queue

- **Events.** J.P. Morgan runs campus and virtual events in September and October. Attendance is recorded against your profile and recruiters use it as a filter.
- **Referrals and warm contacts.** A current analyst who met you and puts a note in the system, or a formal referral, is the single strongest non-CV signal at gate one and gate two. Use LinkedIn to find London Private Bank analysts from your university and ask for 15 minutes.
- **Talent Network.** Join it on the careers site; it is a low-cost signal and you get invitations.
- **Consistency.** Your LinkedIn, CV, application form and HireVue should tell one story. Recruiters check.

Part 13. Action plan for the next 14 days

Day	Do
1	Decide your primary track using the table in Part 7. Write down, in one sentence each, why that track and why J.P. Morgan Private Bank. If they are not specific to this firm, rewrite them using Parts 4 and 5.
2	Rebuild your CV to the Gate 1 checklist. One page, single column, numbers in every bullet, posting vocabulary where true. Make a second version re-ordered for the other track if you will apply to both.
3	Run both CVs through a plain-text test: copy the PDF text into a text editor and check that every date, institution and title survives in order. Fix anything that breaks.
4	Create your profile on the J.P. Morgan careers site with a personal email. Complete every field. Join the Talent Network. Check for upcoming London or virtual events and register.
5	Submit the primary application. Do not wait for the second CV to be perfect; rolling means early beats perfect.
6 to 7	Write eight to ten stories mapped to the competencies in Figure 8. Each with situation, your action, a number, a lesson. Record one answer on your phone; count fillers; re-record.
8	Read the current Guide to the Markets and the Private Bank's latest outlook. Write a one-minute market view. Practise saying it to someone who knows nothing about finance.
9	Submit the second application if applying to both, with the re-ordered CV and different free-text answers.
10	Find three London Private Bank analysts or associates on LinkedIn (ideally from your university). Send short, specific messages asking for 15 minutes. Ask them what the team is actually working on this autumn.
11 to 12	Play a free pymetrics-style practice set once so the interface is familiar, then stop. Do five HireVue mock answers with a timer.
13	Re-read Parts 3, 6 and 7 of this guide until you can draw Figure 2 and Figure 4 from memory on a blank page.
14	Check your application status in the portal. Watch your email (including spam) for the assessment invite; complete pymetrics and HireVue within 48 hours of receiving them.

One paragraph to remember if you forget everything else

J.P. Morgan is the biggest US bank, run on a fortress balance sheet, with three businesses: the consumer bank, the investment bank, and Asset & Wealth Management. The Private Bank is the part of AWM that looks after families with roughly £10m or more, earning a fee on their assets and interest on their loans, and it is growing fast in the UK. The Advisor intern trains to be the banker who wins and keeps clients; the Investment Solutions intern trains to be the investor who builds their portfolios. To get in, be early and complete in Oracle, structured and specific on HireVue, and knowledgeable and calm with the humans.

Glossary

Term	Meaning
Assets under management (AUM)	Money the firm makes investment decisions on. "Assets under supervision" or "client assets" is broader and includes money it only holds or advises on.
Asset allocation	How a portfolio is split between types of investment (shares, bonds, cash, private markets, property). The biggest driver of returns and risk.
Alternatives	Investments other than listed shares, bonds and cash: private equity, private credit, real estate, infrastructure, hedge funds. Usually less liquid, often higher fees, sold as diversification and higher return.
Active ETF	An exchange-traded fund where a manager picks holdings rather than tracking an index. J.P. Morgan is the leader in this format.
Assessment centre / superday	The final round: several interviews and often a case or group exercise in one day.
ATS (applicant tracking system)	Software that stores and sorts applications. Oracle Recruiting Cloud is J.P. Morgan's ATS.
Banker / Client Advisor	The Private Bank person who owns the client relationship. The Advisor track leads here.
CET1 ratio	Common equity tier 1: the bank's core capital as a share of its risk-weighted assets. Higher means safer. J.P. Morgan's is 14.6%.
CIO (Chief Investment Office)	In the Private Bank, the team that sets the "house view" on markets and builds model portfolios.
Competency	A named behaviour an employer wants (teamwork, drive, judgement). Interview questions and HireVue scores are organised around them.
Discretionary vs advisory	Discretionary: the bank manages the portfolio day to day within agreed rules. Advisory: the bank recommends, the client decides each time.
Family office	A private company a very wealthy family sets up to manage its own money and affairs. A major Private Bank client type.
Flows / net new money	Money clients add minus money they withdraw. The main growth measure in wealth and asset management.
HireVue	The one-way recorded video interview platform, and its parent company.
Investor / Investment Specialist	The Private Bank person who builds and explains portfolios. The Investment Solutions track leads here.
KYC / onboarding	"Know your customer": the legal checks and paperwork before a client can open accounts. Analysts and interns do a lot of it.
Liquidity event	When someone turns an illiquid asset (a company) into cash, for example by selling it. The moment private banks compete hardest for a new client.
Net interest income (NII)	Interest earned on loans minus interest paid on deposits and borrowing.
Pitch book	A slide deck used to win a client or present an idea.
pymetrics	Game-based behavioural assessment, now owned by Harver.

Requisition	Oracle's word for a job opening. Each posting has a number (210773470, 210774281).
ROTCE	Return on tangible common equity: profit divided by shareholders' tangible capital. The main profitability measure for banks. J.P. Morgan's was 20% in 2025.
Securities-based lending	A loan secured against an investment portfolio, so the client gets cash without selling.
UHNW / HNW	Ultra-high-net-worth (typically $30m+ or £10m+ depending on the bank) and high-net-worth (roughly $1m+). The Private Bank targets UHNW and the upper HNW band.
