

DEEP DIVE, VOLUME 2

J.P. Morgan, past the brochure

Five years of 10-K filings, four Investor Days and five shareholder letters, read for the thinking behind the numbers. The competitors, with their own figures. And the two Private Bank seats in London, explained down to the organisation chart and the unit economics.

Companion to the "Zero-to-ready guide". Assumes no finance background; every technical term is explained the first time it appears and again in the glossary.

Roles: 2027 Global Private Bank Advisor (req. 210773470) and Investment Solutions (req. 210774281) Summer Internships, London.

Prepared 8 September 2026 from primary sources: SEC Form 10-K FY2021 to FY2025, Investor Day decks and transcripts 2022 to 2025, shareholder letters 2021 to 2025, competitors' FY2025 results, and trade press. Sources at the end.

Contents

1. **Part 1** What actually makes J.P. Morgan different (the non-generic version)

3. **Part 3** The thinking: what the firm tells its owners, 2021 to 2026
4. **Part 4** The four bets, and the macro view behind them
5. **Part 5** The Private Bank's machinery, and where each track sits
6. **Part 6** How a client is actually served: the process both tracks plug into
7. **Part 7** The competition: who else wants the same clients
8. **Part 8** The UK battlefield
9. **Part 9** Putting it to work: what to say, what to ask, what to avoid
10. **Glossary** Technical terms used in this document
11. **Sources**

How this document is different from the first one

The first guide told you what the firm is and how the application works. This one is about why. It reads the documents the firm writes for its owners rather than for candidates, checks the promises against the results, puts competitors' numbers next to J.P. Morgan's, and works out from job descriptions and investor materials what the two internship tracks really are. Where the evidence is thin or contested, it says so. Every "Use this in an interview" box contains a sentence that almost no other candidate will say.

Part 1. What actually makes J.P. Morgan different (the non-generic version)

Every candidate says "global reach", "strong brand", "fortress balance sheet" and "great culture". Interviewers have heard those words thousands of times. What follows are seven differences that can each be defended with a number from a filing or an investor presentation, and each has a consequence for what you would do in the London Private Bank.

Figure 1. Seven differences with numbers attached. Each is expanded, with sources, in the parts that follow.

The one-sentence version of the firm's own theory of itself

The firm believes that holding more capital than it needs makes it the buyer in every crisis, that spending more than rivals in every downturn makes it the winner in every recovery, and that in wealth management the only measure that cannot be faked is whether clients keep sending new money. Everything else in this document is detail on those three beliefs.

Use this in an interview

"What convinced me it was J.P. Morgan rather than a peer was three numbers: a 37% margin in the Private Bank against 25% to 29% at the closest rivals, \$553bn of net new client money in 2025 against \$356bn at the next best, and adviser headcount up 50% since 2021 while UBS shed advisers. Margin funds training, flows prove clients trust the advice, and a growing adviser base means the analyst programme is the pipeline, not a courtesy."

Part 2. What five years of 10-K filings actually say

In plain English

A 10-K is the long, legally binding annual report every US-listed company files with the regulator (the SEC). Unlike the glossy annual report, it has no photos and every number is audited. If you want to know what a company really thinks, you read the parts written by lawyers: the business description, the risk factors, and the segment tables. This section is built from the five JPMorgan Chase 10-Ks for 2021 to 2025, read side by side, so you can see what changed and what never changes.

The firm in five rows

Firmwide	2021	2022	2023	2024	2025
Revenue, managed (\$bn)	125.3	132.3	162.4	180.6	185.6
Net income (\$bn)	48.3	37.7	49.6	58.5	57.0
Return on tangible common equity	23%	18%	21%	22%	20%
CET1 capital ratio (standardised)	13.1%	13.2%	15.0%	15.7%	14.6%
Total assets (\$tn)	3.74	3.67	3.88	4.00	4.42
Employees	271,025	293,723	309,926	317,233	318,512
Employees in EMEA	24,260	27,514	29,583	30,729	31,030
Next-year expense guidance (\$bn)	~77	~81	~90	~95	~105

Source: Form 10-K for each fiscal year, Item 7 (MD&A) and Item 1. Revenue on the "managed" basis the firm uses for segments. Expense guidance is the outlook given in each filing for the following year.

Three things a competitor's analyst would notice. First, revenue grew by almost half in five years while headcount grew by less than a fifth: the firm is getting more out of each person. Second, the CET1 ratio (spare capital as a share of risky assets) was pushed up to 15.7% and then allowed to fall back to 14.6% as the firm bought back \$50bn of its own shares in 2025. That is the fortress balance sheet in numbers: build it when the rules are uncertain, release it when they are clearer. Third, the expense number has risen every single year, through a rate shock in 2022 and a banking crisis in 2023. Other banks cut costs in bad years. J.P. Morgan states a bigger number and calls it investing through the cycle.

Asset & Wealth Management in five rows, and why the Private Bank line matters most

AWM revenue by business, \$bn (10-K segment tables)

Source: 10-K Asset & Wealth Management segment results, "Revenue by line of business". The firm renamed Wealth Management to Global Private Bank in Q1 2021.

Figure 2. AWM revenue split. The business you are applying to is now the larger half of the division.

Asset & Wealth Management	2021	2022	2023	2024	2025
Net revenue (\$bn)	17.0	17.7	19.8	21.6	24.1
of which Global Private Bank (\$bn)	7.7	8.9	10.7	11.4	12.4
Pre-tax income (\$bn)	6.3	5.8	6.9	7.2	8.6
Pre-tax margin: AWM / Asset Mgmt / Private Bank	37 / 35 / 39%	33 / 30 / 35%	35 / 31 / 38%	34 / 31 / 35%	36 / 35 / 37%
Return on equity	33%	25%	31%	34%	40%
Assets under management (\$tn)	3.11	2.77	3.42	4.05	4.79
Client assets (\$tn)	4.30	4.05	5.01	5.93	7.12
Net client asset flows (\$bn)	389	49	490	486	553
Private Bank client advisors	2,738	3,137	3,515	3,775	4,101
Private Bank loans / deposits (\$bn, year end)	218 / 282	214 / 233	228 / 233	236 / 248	266 / 257
EMEA: AWM revenue (\$bn) / client assets (\$bn)	3.6 / 687	3.2 / 610	3.4 / 740	3.6 / 841	4.0 / 1,035
AWM compensation as % of AWM revenue (derived)	33.6%	35.7%	35.9%	37.0%	35.9%

How to read those numbers like an insider

- **2022 is the tell.** Markets fell hard, AUM dropped by \$350bn, and net flows almost stopped (\$49bn versus \$389bn the year before). Yet Private Bank revenue still rose 16%, because higher interest rates

widened the margin on client deposits and loans. That is why the Private Bank is structurally more resilient than a pure asset manager: it has a bank inside it.

- **The adviser line is the strategy.** Client advisors went from 2,738 to 4,101, a 50% increase in four years, and every 10-K from 2023 onwards attributes AWM's expense growth to "continued growth in private banking advisor teams". Revenue per Private Bank adviser stayed around \$3m even as the headcount grew, which means the new advisers are not diluting productivity. Your internship exists because of this line.
- **Compensation is a third of revenue.** AWM pays out roughly 36 cents of every revenue dollar in compensation, higher than the firmwide 29 cents, because this is a people business. Derived compensation per AWM employee reached about \$291k in 2025.
- **EMEA is one sixth of the division and growing faster than the whole.** EMEA client assets rose from \$687bn to \$1.03tn, a 51% increase, while EMEA revenue only rose 13%. Translation: the asset base has been built and the revenue is expected to follow. That is the gap the London hiring push is meant to close.
- **The loan book is the newest lever.** Private Bank loans jumped from \$236bn to \$266bn in 2025 alone, the biggest one-year rise in the period. Lending to existing wealthy clients (mortgages, loans against portfolios) is where the growth in the "bank inside the private bank" now comes from.

What the 10-K says the Private Bank is, in its own words

The description has not changed in five years: the Global Private Bank "provides retirement products and services, brokerage, custody, estate planning, lending, deposits and investment management to high net worth clients". Notice what is absent. There is no dollar minimum anywhere in five filings. The firm never describes the Private Bank's strategy in the 10-K; it describes only its products. All of the strategy language lives in the shareholder letters and investor days (Part 3). The single most important sentence for a candidate is the one that appears every year: "The majority of AWM's client assets are in actively managed portfolios." The firm is betting that paying humans to pick investments beats index funds, and that its clients will keep paying for that.

The wording that changed, year by year

Figure 3. What was added or removed in each 10-K. Counting the word "AI" is a crude tool, but going from one mention in 2021 to thirty in 2025 is not noise.

Use this in an interview

"I read the last five 10-Ks side by side. The Private Bank overtook Asset Management as the bigger revenue line in 2022 and is now \$12.4bn. Advisers went from 2,700 to 4,100 with revenue per adviser holding around \$3m, so the hiring is not diluting productivity. EMEA client assets passed \$1tn in 2025 while EMEA revenue lagged, which tells me the region is at the stage where the assets have been gathered and the job is now to deepen the relationships. That is the work I want to learn."

Case study: First Republic, the deal that shows how the firm thinks

On 1 May 2023 First Republic, a San Francisco bank built around wealthy clients and their advisers, failed. J.P. Morgan bought it from the US deposit insurer the same weekend. The 10-K numbers: \$192bn of assets acquired, including \$153bn of loans, for \$68bn of consideration, part of it a \$50bn note to the insurer at 3.4% interest. Because the assets were worth more than the price, the firm booked a "bargain purchase gain" of \$2.8bn, with further settlement gains of \$103m in 2024 and \$628m in 2025. The wealth angle: \$145bn of First Republic client investment assets came across, First Republic deposits were moved into AWM in late 2023, and Private Bank revenue rose 20% that year partly on the acquired loans.

Why it matters to you: it is the third time in fifteen years (after Bear Stearns and Washington Mutual in 2008) that the firm has been the buyer of last resort. It could only do that because of the capital it holds, which only exists because it refuses to run the balance sheet hot. And it chose a wealth-focused bank, with \$1.5bn of intangibles including wealth management client relationships, at exactly the moment it was doubling its adviser count. Strategy and opportunism are the same thing at this firm.

What the risk factors reveal about the competition it fears

- The 10-K never names a wealth management competitor. It fears categories: "online automated algorithmic-based investment advice", "cryptocurrency, including stablecoins", "tokenized securities", and non-banks that lobby for "exemptions from regulatory requirements".
- The 2025 filing adds a risk that "competitors are able to deploy AI more quickly". That is a firm spending nearly \$20bn a year on technology worrying about being outrun.
- Talent is a standing risk: "competition for qualified personnel is intense". From 2025 it also lists "workforce displacement" from automation and AI. Both sides of that sentence are relevant to someone joining in 2027.
- Basel III "endgame" capital rules have been in limbo since 2023 in the US and delayed to 2027 in the UK. Uncertain capital rules are why the firm held a 15.7% CET1 ratio in 2024 and why lending to private bank clients, which uses capital, is managed carefully.

Part 3. The thinking: what the firm tells its owners, 2021 to 2026

In plain English

Twice a year the firm explains itself to the people who own it. In spring, Jamie Dimon publishes a long letter to shareholders. In May, at Investor Day, each division head stands up with slides and is questioned by analysts. Mary Erdoes has done the Asset & Wealth Management session every year. These are the only documents where the firm says what it is trying to do and why. This section is built from the 2022, 2023, 2024 and 2025 Investor Day transcripts and decks and the 2021 to 2025 shareholder letters, read in order.

The operating model in four words

Every Investor Day since 2020 has opened with the same slide: the firm is "complete, global, diversified and at scale". Erdoes repeats it for her division: "We are complete. We are global. We are diversified. And we are at scale." Complete means the firm does every product a client might need, so it never has to send a client elsewhere. Global means it is in the room in 150-plus countries. Diversified means when trading is bad, wealth management or cards is good. At scale means the fixed costs (technology, research, compliance) are spread over more revenue than any rival's. The whole strategy is a set of consequences of those four words.

Figure 4. The logic chain the firm draws for investors. Each box is a phrase the firm uses; the numbers are from the 10-K, Investor Day decks and letters.

The phrases, and where they actually come from

Phrase	Who, when	What it really means
"Fortress balance sheet"	Dimon, for two decades. Erdoes: "fortress principles" applied to "our clients' balance sheet" (2023)	Hold more capital and liquidity than required so that a crisis is an opportunity, not a threat. In the Private Bank: lend only against collateral, never chase yield.
"Invest through the cycle"	Dimon letters from 2021; Barnum at every Investor Day	Keep spending on technology, hiring and offices in bad years. Barnum's caveat: "It is not carte blanche for solving every problem by adding resources."
"Clients vote with their flows"	Erdoes, Investor Day 2023 onwards	The only scoreboard that matters in wealth management is net new money. Positive every year for 22 years, "80% of the last 80 quarters".
"North Star is alpha"	Erdoes, 2022	Investment performance comes first; "we obsess about every single basis point" (2025). 83% of ten-year fund assets above peer median.
"We don't buy books of business. We seed books of business."	Erdoes, 2022	The apprenticeship model: grow advisers internally rather than paying up for rivals' teams. This is the sentence that explains your internship.
"It's our client, not my client"	Erdoes 2022-25; Dimon: "if I ever see bean counting of credits ... We cannot have it"	No individual owns a relationship. That is why pay is discretionary rather than a grid, and why the bank can move you between teams.
"JPMorganize"	Erdoes, 2022; "that's our secret sauce" (2023)	New hires are trained by front-line advisers until they think like the firm. Training hours per new Private Bank hire were up 5.6 times in 2023 versus 2019.
"Microcosm of the firm"	Erdoes every year; Dimon adds "with the highest returns"	AWM has a bank, an asset manager and an advice business inside it, so it behaves like a miniature JPMorgan Chase. AWM's revenue is "60% fees, 40% interest, like a good 60/40 portfolio".
"Path to \$10 trillion"	Erdoes, Investor Day 2025	Client assets from about \$6tn to more than \$10tn beyond 2030: equities \$2tn, fixed income \$1.5tn, active ETFs \$1tn, Private Bank \$5tn, alternatives \$1tn.
"The four are the killer"	Erdoes, 2025 (often paraphrased as "four killer channels")	Four ways to sell alternatives: institutions (60% of the world's largest), the Private Bank (\$2bn deployed a month), independent advisers (70% covered), and Chase branches.
"Navy SEALs or Delta Force"	Dimon, 2025 letter (April 2026), not Erdoes	Small teams with authority to act. Paired with "You must kill bureaucracy all the time and relentlessly" (2024 letter).
"Empty tombstone"	Erdoes, 2024	"The deal that sometimes you don't do. It's maybe the best advice for clients." Telling a client not to do something is a product.

"No joy work"	Erdoes quoting Julie Harris, 2024	Rote work is being automated "at every front". AI is framed as giving advisers "two to four hours back in their day".
"Best, not the biggest"	Dimon 2023 letter; Erdoes 2024	AWM is number five in assets but number one in flows. The firm would rather win the new money than be the largest pile of old money.

Promised versus delivered: the test of whether the words mean anything

AWM's official targets have not changed since 2020: long-term flows of 4% of assets, revenue growth of 5%, pre-tax margin above 25%, return on equity above 25%. They look unambitious next to the results because the firm keeps them that way on purpose. Erdoes in 2024: "Our goal is to always under-promise and over-deliver." In 2025: "I don't want anyone on the management team to have anything else in their head except for growth."

AWM target (since 2020)	Target	2021	2022	2023	2024	2025
Revenue growth	5%	8%	2%	7%	9%	12%
Long-term AUM flows as % of assets	4%	19%	5%	12%	9%	~5%
Pre-tax margin	25%+	37%	33%	35%	34%	36%
Return on equity	25%+	33%	25%	31%	34%	40%

Sources: AWM Investor Day decks 2022, 2024 and 2025 (target slide), 10-K FY2025. The 2025 flows figure is derived from long-term flows of about \$209bn on year-start AUM of \$4.05tn.

Investor Day	What Erdoes promised	What happened
May 2022	"Double our advisors over the next five years." New advisers break even "in year three or earlier", pay back "in year five". Expense outlook \$11.9bn.	Expenses \$11.8bn ("we did better than we told you"). 2022 was the worst market in a decade; flows fell to \$49bn but the division still made 25% ROE. Advisers passed 3,000. Doubling from 2,738 would mean 5,500 by 2027; the count was 4,101 at end-2025, so the pace is behind the headline promise but still 50% up.
May 2023	Expenses \$12.3bn including \$2.2bn of investment. Alternatives growth of 50% "should be readily repeatable". Flows running at "about \$1 billion a day".	Record \$490bn of flows, "number one of publicly listed peers". Client assets passed \$5tn. Expenses \$12.6bn because of First Republic. Advisers 3,515, a 12% compound growth rate since 2021.
May 2024	Expenses \$14.0bn, investment \$2.4bn. Advisers "will continue to grow at the same rate for the next three years". Active ETFs from \$180bn to "over a trillion over the next decade". Every new hire gets "prompt engineering training".	Expenses \$14.0bn, exactly on target. Revenue \$21.6bn, flows \$486bn, advisers 3,775. Active ETF assets \$162bn (second in the world) with \$58bn of flows (first).
May 2025	"Path to \$10 trillion." Expenses \$15.0bn; investment \$2.7bn, "our largest investment spend ever". Connect Coach to about 17,000 users by year end.	Client assets \$7.1tn (+20%), revenue \$24bn, pre-tax income \$9bn, ROE 40%, flows \$553bn. Advisers 4,101. Active ETFs \$250bn, first in the world. Connect Coach reported at 12,000 users in the letter, below the 17,000 target.

Use this in an interview

"What convinced me was the gap between the targets and the results. The division has promised 5% revenue growth and 25% margins every year since 2020 and delivered 7 to 12% growth and 33 to 37% margins. The one number that lagged was adviser doubling: from 2,700 in 2021 the firm reached 4,100 by 2025, up 50%, not 100%. That tells me they would rather grow advisers at a pace they can train properly than hit a headline, which is consistent with 'we seed books of business, we don't buy them'."

Part 4. The four bets, and the macro view behind them

Strip the Investor Day decks down and AWM is making four bets. Each one has a number attached and each one changes what you will do in London.

Bet 1: Active management wins

"North Star is alpha." \$500m a year on research, 15,000 company meetings, 500 career analysts, "1 billion data points per day".

Evidence: 83-90% of 10-year assets above peer median every year 2021-25; #1 in active flows globally; "half of the positive flows in the industry over the last three years".

For you: the house view and the CIO portfolios are the product. Solutions interns work on them; Advisor interns sell them.

Bet 2: Alternatives go mainstream

"This is going to define the next decade of the asset management business" (2025). Alts \$353bn (2021) to \$560bn (2025), target \$1tn.

Evidence: \$2bn deployed a month in the Private Bank; 850+ external managers; nearly half of top-200 clients' assets in alts; industry \$19tn to \$38tn by 2029 with \$6tn from individuals moving to 5%.

For you: expect alternatives in every pitch. Learn what a feeder, an evergreen fund and a capital call are before you start.

Bet 3: Technology makes each adviser bigger

Firm tech spend about \$18bn (2025), \$19.8bn planned for 2026. AWM's own tech about \$1bn. 200,000+ LLM Suite users. 63,000 technologists.

Evidence: SpectrumIQ automates 75% of equity and 85% of FX trading; Connect Coach cut research time 90%; Sales Assist +20% gross sales; daily trades doubled to 28m "with no stress".

For you: "no joy work" is being removed, so the intern's value is judgement and client sense, not formatting. Learn LLM Suite fast.

Bet 4: International, "while some competitors retreat"

Slide title, 2024. International Private Bank assets 2.8x in ten years. 350 bankers added since 2019; single-coverage model 8 to 18 markets.

Evidence: EMEA revenue +14%, AUM +25%, advisers +9% (year to June 2025). Relationship managers 1,000+ with a target of about 1,900. Share "low single-digit" in several European countries (Tejpaul).

For you: London is the hub of this bet. The UK team says it is "in hiring mode": 30 people a year, double the business by 2031.

Figure 5. The four bets, each with the firm's own evidence and what it means for an intern in London.

Bet 4 in detail: the international private bank, because that is your business

- **The argument.** Daniel Pinto, then President, at the 2024 Investor Day: international private banking is "a substantially fragmented business everywhere". The firm's own share of the combined active asset management and private banking revenue pools is about 2% (2025 deck). Adam Tejpaul, who runs the International Private Bank: "in terms of where the biggest opportunity is to grow market share, it's very much within the European franchise". Nobody dominates, so an American bank with the largest balance sheet can take share by hiring.
- **The playbook.** Onshore, multi-hub rather than London-only: offices added or expanded in Munich, Hamburg, Berlin, Edinburgh and Glasgow, Manchester in 2023, Leeds recruiting in 2025. Switzerland assets of \$56bn to double by 2030 with staff up 30% in 2025. Middle East headcount from 370 to about 500 with revenue to double by 2030.
- **Why "while others retreat" is not just a boast.** The years 2023 to 2026 saw Credit Suisse absorbed by UBS, Citi restructuring its wealth arm, HSBC reorganising, and several UK wealth managers sold or taken private (Part 7 has the detail). J.P. Morgan hired through all of it, including from Coutts, HSBC and Citi in the UK.
- **The London leadership change.** Oliver Gregson, who ran the UK for nearly a decade, left in February 2025 to run Schrodgers' wealth business. Maricé Brown, who previously ran Mexico and before that a Silicon Valley team focused on founders and IPO planning, took over in June 2025. Her background is first-generation wealth and succession planning. That is a deliberate fit with a UK plan built on entrepreneurs in Manchester, Leeds and the Midlands rather than old money in Mayfair.

Dimon's macro thinking, year by year, so you can trace it

Document	What he said	What happened next
2021 letter (Apr 2022)	"Persistent inflation will require rising interest rates and a massive but necessary shift from quantitative easing to quantitative tightening." Rates "could be significantly higher than markets expect".	US inflation peaked at 9% in June 2022; the Fed raised rates from near zero to over 5% within 18 months. He was early and right.
Investor Day, May 2022	"Strong economy, big storm clouds." Two weeks later, at a conference: a "hurricane" may be coming.	2022 was the worst year for a balanced portfolio in decades, but the US economy did not go into recession. Half right.
2022 letter (Apr 2023)	Deficits of \$3.1tn, \$2.8tn and \$1.4tn: "you simply cannot have this level of spending and say that it's not inflationary". From "a savings glut to scarce capital".	Inflation stayed above target through 2023 and 2024. Deficits kept rising.
2023 letter (Apr 2024)	"Prepared for a very broad range of interest rates, from 2% to 8% or even more." "One of the most treacherous geopolitical eras since World War II." Soft-landing odds "a lot lower" than the 70-80% priced.	Rates stayed higher for longer than markets expected in early 2024. Geopolitics worsened.
2024 letter (Apr 2025)	"Our largest risk is geopolitical risk." "Recent tariffs will likely increase inflation." "The most perilous and complicated geopolitical and economic environment since World War II."	Tariffs became the story of 2025.
Investor Day, May 2025	Stagflation odds "probably two times of what the market thinks"; "the largest peacetime deficit we've ever had, almost 7% of GDP"; "an extraordinary amount of complacency"; "I never believed that Europe was as bad as people were saying."	Still playing out. The Europe comment matters for a London applicant: the CEO is on record as being less bearish on Europe than the market.
2025 letter (Apr 2026)	"The current war in Iran and the broader hostilities in the Middle East"; oil shocks "may lead to stickier inflation and ultimately higher interest rates than markets currently expect". AI adoption "far faster than prior technological transformations, like electricity or the internet".	The current environment. If asked for a view in interview, this is the baseline you are being compared against.

The pattern

Dimon's macro record is consistently more cautious than the market on inflation, rates and deficits, and consistently right about direction while sometimes early on timing. For a private bank this is not a forecast, it is a posture: build portfolios that survive "2% to 8%" rates rather than betting on one path. The Private Bank's 2026 Outlook themes (AI, fragmentation, inflation) are the house translation of his letter.

How the firm talks about AI, because interviewers will

- 2022 letter: "more than 300 AI use cases", 900 data scientists, 600 machine-learning engineers, "#1 on the Evident AI Index".
- 2023 letter: "more than 2,000 AI/ML experts", over 400 use cases, AI "possibly as transformational as ... the printing press, steam engine, electricity, computing and the Internet".
- Investor Day 2024: Pinto puts AI value at "\$1 billion to \$1.5 billion"; Erdoes describes "no joy work" and "we've taken Michael Cembalest's brain ... now you can query it".
- Investor Day 2025: LLM Suite has "over 200,000 users"; "about 100 GenAI solutions in production"; Connect Coach live for 4,600 private banking advisers first; a Harvard Business School case on the firm's AI is "required curriculum".
- 2025 letter (April 2026): "We will not put our heads in the sand. We will deploy AI." And, plainly: "AI will definitely eliminate some jobs, while it enhances others." The 10-K adds a new risk factor on "agentic AI" the same year.
- What Erdoes says about you specifically: interns and new hires get "prompt engineering training as a core skill", Python training, and "we want them to be thinking like technologists".

Part 5. The Private Bank's machinery, and where each track sits

In plain English

The Private Bank is two machines bolted together. One machine faces the client: teams of bankers and specialists who win families and look after them. The other machine faces the markets: a large product organisation that decides what the bank thinks about markets, builds the portfolios and funds, negotiates with outside managers, and trades. The Advisor track trains you for the first machine. The Investment Solutions track trains you for the second. Most candidates do not know the second machine exists, which is why the roles feel confusing.

How the two machines connect

The engine publishes the house view every month, runs the discretionary portfolios, sources the private-market funds and prices the structured notes. The client teams take those to families, gather the assets ("flows"), and send back what clients are asking for. Investors on the client teams are the hinge: they translate the engine's output into one family's portfolio. A Solutions analyst may be seconded to sit next to those investors, which is why the two tracks are sometimes described as the same thing. They are not: one is trained to face the client, the other to build what the client is sold.

Sources: J.P. Morgan people pages and job postings; 2025 Investor Day AWM transcript; 10-K FY2025. Names as of September 2026.

Figure 6. The organisation chart that the job postings do not draw for you.

Why the London postings read the way they do

The firm's Asia careers page says full-time analysts "become an integral part of our investment solutions or integrated teams". That sentence is the key: "integrated teams" is the firm's name for the client-facing teams, and "investment solutions" is set against it. The full-time Investment Solutions posting says the same: you work "with product specialists on an investment solutions team or with a team of client advisors and bankers", and Solutions analysts "get involved with conducting research and analysis, using proprietary models, assist with product development and portfolio construction". Until the 2026 cycle this London track

was simply called "Solutions"; the firm renamed it "Investment Solutions" globally. The Advisor posting, by contrast, says you "assist in client acquisition and relationship management across investment, credit, banking, and estate planning services". Acquisition is the word to notice.

The two seats compared, properly this time

	Advisor track	Investment Solutions track
Where you sit	On a UK market team at 60 Victoria Embankment, next to a client advisor. Manchester and Edinburgh also hire for the full-time version.	In the investment engine: CIO, market strategy, equities, fixed income, alternatives, structured products or brokerage, or seconded to the investors on a client team.
What you produce	Prospect research, pitch books, balance-sheet analyses, meeting prep, onboarding files, follow-ups, "Connect" CRM records.	Research notes, portfolio construction and stress tests, model updates, product materials, trade support, manager due-diligence summaries.
What you are trained to become	A Client Advisor (EMEA title) or Banker (US title): the relationship owner who is measured on flows, i.e. net new money.	A specialist: portfolio manager, strategist, alternatives or structured products specialist, or an Investor on a client team.
Rhythm of the day	Client calendar. Peaks before meetings and around onboarding; long days on the banker analyst side (forum reports of 12-plus hours are common).	Market hours. Morning call, Bloomberg screens, model runs; forum reports of 60 to 75 hours a week with weekends usually free.
Licences and exams (UK)	Client-facing advice needs a regulator-recognised Level 4 qualification. The standard route is the CISI Investment Advice Diploma; the IMC is also common at the firm.	Same regulatory framework where you touch clients; CFA is widely pursued and is listed as "preferred" even for Client Advisor postings.
Pay signal (London, indicative)	Forum and aggregator figures put first-year analyst base at about £60k plus relocation, with bonus on top; total in the low-to-mid £70ks. Treat as an estimate.	Broadly the same base at analyst level. Forum consensus: more stable pay, but capped below top bankers at senior levels.
Ceiling	Highest. A senior client advisor with a large book is among the best-paid people in the Private Bank. US forum figures for MDs range from \$400k to \$1m.	Lower ceiling, broader exits: asset management, family-office investment teams, manager research, multi-asset roles.
What selects for you	"Demonstrated aptitude for sales and client relationship management" (US posting). Interviewers ask you to sell things and to design a portfolio from your own market view.	A real investment view, comfort with numbers, ability to explain complex things simply. Interviews probe your views on rates, equities and asset classes.

The full-time programme both tracks feed into

- **Length:** the current postings describe a two-year Analyst Program (older international postings said three). Top performers move to Associate; at Associate you choose the banker route or the investor route.

- **Training:** a regional orientation, then "a five-week immersive global training program" in New York with incoming analysts from around the world, then continuous training. At the 2025 Investor Day the firm said internally grown advisers now get three times the training hours and four times the teaching time from top advisers compared with 2019.
- **The firm's own thesis about you:** Erdoes told investors in May 2025 that "half of our new advisers come from growing them from within", up from a third in 2019, and that "25-year-olds that are coming online" are "just as productive as our 30- to 35-year-old mid-career hires". The median third-year Associate's flows productivity rose 3.4 times between 2019 and 2024. This is the clearest statement that the analyst programme is the main pipeline for the adviser growth in the 10-K, and it is why your internship is a serious hiring decision for them.
- **Ladder:** Analyst, Associate, Vice President, Executive Director, Managing Director. Team Heads and Region Heads run markets. Forum accounts put Associate at three to four years and VP at about three.

How the money works in the seat

The Private Bank pays salary plus a discretionary bonus at every level. It does not use a "grid" (a percentage payout on the revenue an adviser personally generates), which is how brokerages and many US wealth firms pay. The firm's own compensation disclosure says bonuses "are not related directly to the sale of any specific product" and that managers use scorecards with "no prescribed relationship" to pay. In practice the scorecard for an adviser is dominated by flows, and the Investor Day literally labels adviser productivity as "Productivity (flows)". For you this means three things: the firm can afford to invest in training you for years before you produce; it can move you between teams without breaking a personal P&L; and your ceiling depends on the book you eventually build rather than on a payout formula.

The unit economics of one client team (illustrative, built from 10-K and Investor Day figures)

Where the revenue comes from (Private Bank, 2025 10-K logic)

Fees on managed assets, brokerage, alternatives, planning	Net interest on \$266bn loans	Net interest on \$257bn deposits
---	-------------------------------	----------------------------------

Every extra \$10m a client moves in is worth roughly \$50k to \$100k a year in fees at typical private-bank pricing, for as long as it stays. That is why "flows" is the scorecard, and why a banker will spend a year courting a founder before the sale of their company.

Derived figures; the firm reports the inputs, not the per-adviser outputs. Fee pricing is a typical industry range, not a J.P. Morgan disclosure.

Figure 7. Why one good adviser is worth so much to the firm, and why it will pay to train you for years.

Part 6. How a client is actually served: the process both tracks plug into

In plain English

A family does not walk in and buy "a portfolio". They go through a process that the firm has industrialised: understand the whole balance sheet, sort the money into buckets by purpose, set a long-term mix, implement it with the firm's building blocks, layer borrowing on top, then review. The Advisor analyst lives in the first two steps and in packaging the rest. The Solutions analyst lives in the building blocks.

1. Discover the whole balance sheet (Client Advisor + Wealth Advisor)

Assets, liabilities, income, spending, business interests, tax residence, family structure, what keeps them awake. In the UK this now includes the end of the non-dom regime (April 2025) and inheritance tax changes on business assets and pensions, which changed many families' plans overnight.

2. Sort into goals-based buckets and stress-test (Wealth Plan)

Liquidity (cash for life's shocks), Lifestyle (reliable income for how they live), Legacy (for children and philanthropy), Growth (long-term capital). Wealth Plan projects the family's path under many market scenarios. Advisor interns learn this tool early because it is the spine of every pitch.

3. Set the strategic asset allocation (Investor, using the engine's Long-Term Capital Market Assumptions)

An Investment Policy Statement records the target mix, e.g. 45% equities, 25% bonds, 20% alternatives, 10% cash, and the limits. The 30-year LTCMA return forecasts come from the Asset Management side of the firm. The biggest driver of long-run outcomes is decided here, not in stock picking.

4. Implement with the building blocks (the Investment Solutions engine)

Discretionary: CIO-managed portfolios (50+ PMs, \$560bn+, customisable by geography, exclusions and alternatives; PMs must invest their own pay in them). Advisory/brokerage: the client keeps decision rights; the investor brings ideas from the monthly Global Investment Strategy "View". Alternatives: 850+ external managers, feeder and evergreen funds, \$2bn deployed a month; nearly half of the top 200 clients' assets are in alternatives. Structured notes issued by J.P. Morgan; GIO bespoke cross-asset ideas for the largest families. Tactical tilts follow the house view.

5. Layer on lending and banking (Lending specialist + Client Service)

Mortgages, loans secured on the portfolio so nothing has to be sold, specialty lending on art, aircraft or sports teams. Deposits, payments, custody.

6. Review, monitor, prompt (everyone, increasingly with Connect Coach)

Quarterly reviews validate objectives and performance; exception monitoring flags drift; Connect Coach now pushes "next best actions" to advisers each morning (which clients lack European equities, which stocks just hit highs, sample talking points). Reviews generate the next round of flows.

Synthesised from J.P. Morgan's goals-based investing pages, the CIO process page, Investment Specialist and Investment Professional job descriptions, and the 2025 Investor Day.

Figure 8. The six-step service process. Gold steps are where Advisor-track work concentrates; blue steps are the Solutions engine.

The house view right now, so you can talk about it

The Private Bank's 2026 Outlook is titled "Promise and Pressure" and is built on three themes: artificial intelligence, geopolitical fragmentation, and inflation. The monthly Global Investment Strategy View in 2026 has been overweight US equities, emerging markets, gold, defence and security, utilities and infrastructure, and short-dated bonds, neutral on Europe, and cautious on software and long-dated bonds, while pushing clients "beyond the 60/40" into infrastructure, hedge funds and structured products. Grace Peters, co-head of Global Investment Strategy, described the themes as "a fundamental shift in how economies operate"; Stephen Parker, her co-head, said investors "must navigate private markets with care, prioritizing manager selection and access". If an interviewer asks for your market view, you will do well to know the firm's view first and then say where you agree or disagree and why.

The intern's summer, reconstructed from people who did it

- A training week (New York for many cohorts, London induction for the UK track) built around "immersive simulations and role-play scenarios focused on client engagement".
- Advisor-side interns report prospect research, data entry into Connect, building presentations, sitting in on calls, and studying "how geopolitical events and market volatility affect investment portfolios". Client contact is limited until you are licensed.
- Solutions-side interns (and their Asset Management equivalents) report daily morning strategy calls, note-taking on client calls, building decks, and pitches to the team.
- Structured programme elements the firm lists: one-to-one mentorship, skills workshops, senior speaker events, networking. A final presentation to senior leaders is standard across the firm's summer programmes, though the London Private Bank postings do not describe it explicitly.
- Erdoes has said interns now receive "prompt engineering training as a core skill" alongside Python and LLM training. Expect to use LLM Suite.

What interviewers on both tracks have actually asked (candidate reports)

- "Design a portfolio for our client based on your current market outlook."
- "What is going on in the markets or the economy that would affect clients?" followed by "why J.P. Morgan, why the Private Bank".
- Views on rates, growth versus value, and what the central banks will do next.
- "Sell me this piece of artwork" and short brainteasers on the Advisor side.
- The London format reported on Glassdoor: HireVue with three timed questions (30 seconds to prepare, two minutes to answer), then two or three 30-minute interviews with VPs and Executive Directors with "heavy emphasis on commercial awareness". One candidate went from HireVue to Super Day invitation in seven days.

Use this in an interview

For Advisor: "I understand the Private Bank measures advisers on flows and that half of new advisers are now grown internally. I want to be one of those, starting by learning the balance-sheet discovery and Wealth Plan process that every pitch is built on." For Investment Solutions: "I understand Investment Solutions is the engine behind the client teams: the CIO, the strategy group, alternatives and structured products. I want to learn how the house view becomes a portfolio, and I have my own view on [rates / gold / European equities] that I would like to test against yours."

Part 7. The competition: who else wants the same clients, and how they compare

In plain English

A £20m family in London can choose from three kinds of bank. American "bulge bracket" firms (J.P. Morgan, Goldman Sachs, Morgan Stanley, Citi, Bank of America) sell global reach, an investment bank next door and a big balance sheet. Swiss and European houses (UBS, Pictet, Julius Baer, Lombard Odier, Rothschild) sell discretion, heritage and cross-border booking. UK domestic banks and wealth managers (Coutts, Barclays, HSBC, Rathbones, Evelyn, St James's Place) sell the brand on the high street and lower minimums. The tables below use each firm's most recent full-year results so that the comparison is on numbers, not slogans.

The global peer set on the two numbers that matter: margin and new money

Pre-tax margin, wealth / asset management division, FY2025

Net new client assets, FY2025, \$bn (definitions differ by firm)

Figure 9. J.P. Morgan's division is both the most profitable and the fastest-gathering in the peer set. Morgan Stanley has more wealth assets; nobody has more new money.

Each global rival in one honest paragraph

Firm	Where they are and what they are doing	How J.P. Morgan compares, with numbers
Morgan Stanley	The biggest US wealth manager: about \$8tn of wealth assets and \$9.3tn including Investment Management, crossing \$10tn combined in mid-2026. Strategy is a three-channel funnel: adviser-led, E*TRADE self-directed, and workplace share plans ("Morgan Stanley at Work"). Over half of one recent quarter's new assets came from stock-plan IPO proceeds. Sold its onshore UK, UAE and Italian private wealth businesses to Credit Suisse in 2013; London today is an ultra-high-net-worth international desk, not a domestic private bank.	More assets, lower margin (29.3% versus 36%), and flows of \$356bn against J.P. Morgan's \$553bn. Almost no UK private bank. The nearest US analogue for scale, the furthest for London relevance.
Goldman Sachs	The purest ultra-high-net-worth peer: \$10m minimum, average account around \$75m, London private wealth office since 1970. Assets under supervision \$3.6tn, wealth client assets about \$1.9tn. After the failed consumer push (Marcus, Apple Card) it retreated to its core in 2023; the CEO said "We tried to do too much too quickly". AWM pre-tax earnings fell 15% in 2025 to a 25% margin; new targets are about 30%. Wins many "best UHNW" awards.	Same client floor, a third of the size, and 11 points less margin. No consumer bank, no Chase pipeline, no comparable lending book. The rival a London founder is most likely to also be talking to.
UBS	The largest wealth manager by invested assets (\$4.75tn) after swallowing Credit Suisse. Still integrating: Swiss account migration finishing in early 2026, \$10.7bn of \$13.5bn cost savings done, UHNW migrations delayed because "integration teams were overworked". Lost 132 advisers managing \$52bn in 2025; adviser count fell to 9,420. EMEA invested assets \$778bn. In the UK it is chasing the £2m to £5m "private clients" segment; its UK head left in March 2026 with no successor named.	UBS is bigger but shrinking in advisers while J.P. Morgan grows them; flows are a fifth of J.P. Morgan's; margin around 25%. This is the firm the "while some competitors retreat" slide is really about.
Bank of America (Merrill, Private Bank)	\$4.8tn of client balances, about 28% margin, 21,000 net new relationships in 2025, and a strategy of referring its 9.5 million consumer clients upward rather than hiring externally. No UK or European private bank; the non-US Merrill business was sold to Julius Baer in 2012.	Similar US scale, eight to ten points lower margin, no international presence, and it does not disclose adviser numbers. Irrelevant to a London candidate except as proof that the "refer up from the retail bank" model works, which is exactly what Chase does for J.P. Morgan.

Citi Wealth	Being rebuilt by Andy Sieg (ex-Merrill) since 2023: revenue \$8.6bn (+14%), margin about 22%, 2,300 advisers, "25% of the world's billionaires", 30% of revenue from Asia. Sold its trust business, outsourced \$80bn of portfolios to BlackRock, plans 500 hires and 2026 job cuts. Citi Private Bank London sits in Canary Wharf.	A fifth of J.P. Morgan AWM's revenue, 14 points less margin, half the advisers. The most similar sales pitch ("global network") with the least stable platform. J.P. Morgan hired Citi's London financial-institutions head in 2025.
HSBC	Reorganised on 1 January 2025 into four businesses; Global Private Banking now sits inside "International Wealth and Premier Banking". Wealth balances \$2.1tn, of which \$1.2tn is Asia. The UK is small in wealth terms: about \$0.1tn of balances and \$0.3bn of fee income against Hong Kong's \$0.5tn and \$2.2bn. Opened a Mayfair flagship wealth centre and a Leeds office in 2025.	Asia-led and mass-affluent-led. Not competing at the £10m-plus level in the UK in a serious way, but it is the bank many UK entrepreneurs already use, which is why J.P. Morgan hired HSBC's Midlands private banking veteran.

Part 8. The UK battlefield

Who is actually in London, positioned by client minimum and scale

Figure 10. The UK market map. J.P. Morgan sits alone in the top-right: the largest platform at the highest minimum. Coutts and Barclays fight over £3m to £10m; Goldman is the only firm at the same floor.

What has happened in the UK market since 2025

Event	What it means for J.P. Morgan in London
Coutts raised its minimum from £1m to £3m and NatWest bought Evelyn Partners for £2.7bn (completed June 2026)	The UK's strongest domestic brand is consolidating and moving upmarket, but its combined £127bn is a fraction of J.P. Morgan's book and its target client is still below the £10m floor. Coutts won Euromoney's UK domestic and UHNW awards in 2026, so brand-wise it is the one to beat.
Lloyds took full control of Schroders Personal Wealth (Oct 2025); Schroders exited UK advice; EFG and Brooks Macdonald sold units to Canaccord	The middle of the UK market is being sold, merged and rebranded. Rivals distracted by integration is the environment "while some competitors retreat" describes.
Julius Baer opened Manchester, Leeds, Glasgow and a Belfast team, while writing off CHF 606m on the Signa collapse and losing 25% of profit in 2025	The one Swiss house copying J.P. Morgan's regional playbook, with a weaker balance sheet and a regulator (FINMA) enforcement action in the background. J.P. Morgan's loan loss rate is one basis point.
UBS's UK head left in March 2026 with no successor; UBS lost 132 advisers globally in 2025	The biggest wealth manager in the world is a hiring pool, not a growth threat, in London right now.
Non-dom regime abolished 6 April 2025; worldwide inheritance tax after 10 of 20 years' residence; business and agricultural relief cut from April 2026; pensions into the inheritance tax net from April 2027; new £2m-plus property surcharge from 2028	The single biggest change to UK private banking in a generation. HMRC data show about 9,000 non-doms left in 2024-25 before the abolition; the more alarming forecasts (a net 16,500 millionaires leaving) are contested. Two consequences: some clients are moving to Dubai, Switzerland or Italy, which favours banks that can book them anywhere (J.P. Morgan has Dubai, Geneva, Zurich and Milan); and every remaining wealthy family needs new planning, which is fee-earning work for wealth advisers and the reason the "Discover" step in Part 6 got harder.
UK wealth is still growing: about \$1tn of financial wealth, 2.43 million dollar millionaires, but only about 27,900 people	The ultra-high-net-worth pool J.P. Morgan fishes in is small and growing slowly. That is why the UK plan is about winning share from rivals (hiring their bankers) and reaching entrepreneurs before they sell (Manchester, Leeds, Midlands) rather than waiting for wealth to appear in London.

over \$30m, up 12% in five years, the slowest of the large European economies	
Private markets and fee pressure: research forecasts \$10m clients paying about 66 basis points by 2026 and 83% of \$5m-plus clients paying under 1%; private-market retail share heading from 16% to 22% of a \$60tn-plus market by 2032	Fees on plain portfolios keep falling; fees on alternatives do not. The alternatives push is a margin defence as much as a product story, and it is the argument for why the Investment Solutions engine matters.

So why is J.P. Morgan the best place to learn this business? The evidence, not the brochure

1. **Highest margin in the peer set.** 36% in AWM and 37% in the Private Bank, against 29% at Morgan Stanley, 28% at Bank of America, 25% at Goldman and UBS, and about 22% at Citi. Margin is what pays for training, technology and patience with a junior.
2. **Most new money, for longest.** \$553bn of net flows in 2025 versus \$356bn at Morgan Stanley and \$101bn at UBS, and 22 consecutive positive years. The scorecard the firm chose ("clients vote with their flows") is the one it leads.
3. **Growing advisers while rivals shed them.** Private Bank advisers up 9% in 2025 and 50% since 2021; UBS down 383 in the year; Merrill with net departures. A firm adding seats is a firm that needs to fill them from the analyst programme.
4. **The only one with all three engines on one balance sheet.** A top-ranked private bank, a top-five active asset manager that is number one in flows, and the world's largest investment bank. Erdoes: "there aren't any investment bankers that want to take a private banker to a meeting except for inside JPMorgan Chase." That is the founder-liquidity-event machine in one sentence.
5. **Alternatives leadership confirmed by outsiders.** Best for alternatives at Euromoney in 2025 and 2026 and at PWM in 2025; \$2bn deployed a month; 850 external managers. The product the whole industry is moving to is already the firm's strength.
6. **Technology at a scale no wealth-only firm can match.** About \$18bn a year firmwide, 63,000 technologists, LLM Suite on 200,000 desktops, Connect Coach rolled to private bankers first. Euromoney's best digital private bank in 2026.
7. **EMEA momentum with London as hub.** Revenue up 14%, assets up 25%, advisers up 9% in the year to June 2025; Europe's Best International Private Bank 2026; a stated UK plan to double regional business by 2031.

And the weaknesses a good interviewer will respect you for knowing

- **The UK brand is thinner than Coutts, Barclays or HSBC.** The 2025 and 2026 UK-specific awards went to Coutts, Barclays, Arbuthnot, EFG and Standard Chartered. Tejpaul concedes "low single-digit market shares" in several European countries. J.P. Morgan is the challenger in the UK, not the incumbent.
- **It is still a US firm.** International assets were \$751bn of roughly \$3tn of Private Bank assets in 2024. UBS's EMEA book alone is about the size of J.P. Morgan's whole international private bank.
- **The £3m to £10m segment is left to others.** The \$10m floor means Coutts, Barclays, UBS and Julius Baer own the entry point where many entrepreneurs first choose a bank. Chase UK and J.P. Morgan Personal Investing (the renamed Nutmeg, which lost £40m in 2024 and over £200m cumulatively) are the firm's answer, and it is not yet working.
- **Conduct record.** \$348m and \$200m regulatory penalties for trade surveillance failures (2024), a \$151m SEC settlement including wealth-client fiduciary failures (2024), and the Epstein-related settlements (2023). A candidate who says "first-class business in a first-class way" without knowing these will sound naive.
- **Flows depend on markets and IPOs.** Fourth-quarter 2025 flows were down 8% year on year; 2025 market gains of \$633bn exceeded net flows. The adviser hiring push raises expenses before the new advisers produce.
- **The UK non-dom exodus cuts both ways.** The firm can follow clients to Dubai or Geneva, but so can every Swiss rival, and a smaller UK ultra-wealthy pool makes the London growth target harder.

Part 9. Putting it to work: what to say, what to ask, what to avoid

Twelve things almost no other candidate will say (each with its source in this document)

1. "The Private Bank overtook Asset Management as the bigger revenue line in 2022 and has stayed ahead: \$12.4bn against \$11.7bn in 2025." (Part 2)
2. "In 2022 the markets fell, AWM flows dropped to \$49bn, and Private Bank revenue still rose 16% because of the deposit and loan margin. That is why I think of it as a bank first." (Part 2)
3. "Revenue per adviser held at about \$3m while the adviser count rose 50%, so the hiring is not diluting productivity." (Parts 2 and 5)
4. "EMEA client assets passed \$1tn in 2025 while EMEA revenue grew only 13% over five years. The region has gathered the assets and now needs to deepen the relationships. That is the job I want to learn." (Part 2)
5. "The AWM targets have been 5% growth and 25% margin since 2020 and the division has beaten them every year. The one place it lagged was doubling advisers, which I read as choosing training quality over the headline." (Part 3)
6. "'We don't buy books of business, we seed books of business' is the sentence that explains why the analyst programme exists." (Part 3)
7. "Half of new advisers are now grown internally, up from a third in 2019, and Erdoes says the 25-year-olds are as productive as mid-career hires." (Part 5)
8. "I understand Investment Solutions to be the engine behind the client teams: the CIO with \$560bn of discretionary assets, the strategy group, alternatives and structured products. The Advisor track is the client-facing team. I want the [engine / team] because..." (Part 5)
9. "The 2025 10-K added a risk factor on agentic AI disintermediating the bank. The firm is spending nearly \$20bn a year on technology and still lists being outrun on AI as a risk. I find that honesty more convincing than the marketing." (Part 2)
10. "The 'while some competitors retreat' slide is really about UBS, which lost 383 advisers in 2025, and Citi, which is restructuring. J.P. Morgan hired from Coutts, HSBC and Citi in the UK in the same period." (Parts 4, 7, 8)
11. "The non-dom abolition cuts both ways: some clients move to Dubai or Geneva where the firm can follow them, and every remaining family needs new planning, which is fee-earning work." (Part 8)
12. "I know the firm's weaknesses in the UK: the brand is thinner than Coutts, the £3m to £10m segment is left to others, Personal Investing is still loss-making, and the 2024 surveillance penalties happened. I would rather join the challenger with the best economics than the incumbent." (Part 8)

Questions worth asking an interviewer (they reveal that you read the source documents)

- "The UK plan is 30 hires a year. How much of that is client advisers versus investors and specialists, and where do analysts fit in that mix?"
- "Connect Coach was rolled out to private bankers first. How has it changed what a first-year analyst spends their day on?"

- "With the £10m floor, how does the London team think about entrepreneurs who are at £5m today but will have a liquidity event in three years?"
- "Half of new advisers are grown internally. What does the path from analyst to a first book look like in the UK specifically?"
- "After the non-dom changes, which client segments has the UK team found most active: leavers who need cross-border booking, or stayers who need restructuring?"
- For Investment Solutions: "Which of the engine's teams do London Solutions analysts typically sit with, and how much of the work is producing the house view versus implementing it for specific clients?"

Mistakes that a reader of this document should never make

Mistake	Correct version
Calling J.P. Morgan Wealth Management and the Global Private Bank the same thing	Wealth Management is in the consumer bank (Chase, roughly \$250k to a few million). The Global Private Bank is in AWM, \$10m-plus.
Saying "Navy SEAL teams" is Erdoes' idea	It is Dimon's phrase from the 2025 letter (April 2026), paired with "kill bureaucracy".
Quoting "four killer channels" as if it were a slogan	Erdoes said "the four are the killer" about the four distribution channels for alternatives. Say it as a paraphrase.
Claiming the firm has "under 1% market share" in Europe	Not in any retrieved document. The firm's own figures are a 2% share of the combined active asset management and private banking revenue pools, and Tejpaul's "low single-digit" shares in several European countries.
Describing the Investment Solutions intern as "the investor on the client team"	Mostly it is the product and markets organisation (Wealth Management Solutions). Some Solutions analysts are seconded to investors on client teams, which is where the confusion comes from.
Saying the analyst programme is three years	Current postings say two years, with the five-week global training in New York. Older international postings said three.
Naming Pablo Alvarez-Alonso as EMEA CEO	The EMEA CEO of the Private Bank is Pablo Garnica (full name Pablo Garnica Alvarez-Alonso), based in Madrid, reporting to Adam Tejpaul, who runs the International Private Bank, under David Frame, global CEO of the Private Bank.
Treating the "\$10m minimum" as a UK-published figure	The \$10m floor was reported in the US in 2021; the £10m UK figure comes from third-party guides. The firm's own UK pages publish no minimum. Say "around £10m" and move on.
Quoting Connect Coach at 17,000 users	17,000 was the target given at Investor Day 2025; the 2025 letter reports 12,000. Use the lower, reported figure.

If you only remember one page

J.P. Morgan's wealth business is the most profitable and fastest-growing in its peer set because it is a bank, an asset manager and an investment bank pointed at the same families, funded by a balance sheet that lets it hire and buy when rivals cannot. The Private Bank is now the larger half of that division, is growing its advisers by growing them internally, and has made London the hub of an explicit international expansion. The Advisor track trains you to be one of those advisers, measured on flows. The Investment Solutions track trains you to build what those advisers sell. The firm's own documents, not its marketing, say all of this. Quote them.

Glossary of technical terms used in this document

Term	Meaning
10-K	The audited annual report a US-listed company must file with the SEC. Legally binding, no marketing. Sections: Business (Item 1), Risk Factors (Item 1A), Management's Discussion (Item 7), financial statements.
Investor Day	An annual presentation in May where each division head shows targets and results to analysts and takes questions. Transcripts and slides are public.
Managed basis (revenue)	The firm's presentation of revenue that adds back tax-equivalent adjustments so segments can be compared. Slightly higher than reported revenue.
Pre-tax income / pre-tax margin	Profit before tax; margin is that profit divided by revenue. The best single measure of a division's efficiency.
Return on equity (ROE) / ROTCE	Profit divided by the capital shareholders have in the business. ROTCE strips out intangible assets. Banks target mid-teens; AWM makes 40%.
CET1 ratio	Common equity tier 1 capital as a share of risk-weighted assets. The core regulatory measure of how much loss a bank can absorb.
Net interest income (NII) / non-interest revenue (NIR)	Interest earned minus interest paid; and everything else (fees, trading, commissions).
Assets under management (AUM) / client assets / assets under supervision (AUS)	Money the firm invests on a client's behalf; the broader total including assets it holds in custody or advises on; and the firm's own term for that broader total.
Net flows / net new assets / net new money	Money clients add minus money they withdraw, excluding market movements. The key growth measure in wealth management.
Bargain purchase gain	An accounting gain booked when a buyer pays less than the fair value of what it acquires, as with First Republic.
Basel III endgame	The final round of international bank capital rules, still unfinalised in the US and delayed to 2027 in the UK.
Discretionary vs advisory (or brokerage)	Discretionary: the bank manages the portfolio within agreed rules. Advisory/brokerage: the client decides each move on the bank's advice.
Strategic vs tactical asset allocation	Strategic: the long-term target mix set from 10-to-30-year return assumptions. Tactical: short-term tilts around it based on the monthly house view.
Long-Term Capital Market Assumptions (LTCMA)	J.P. Morgan Asset Management's annual forecasts of returns, risks and correlations for every asset class over 10 to 15 years. The input to strategic allocation.
Investment Policy Statement	The written document recording a client's objectives, target allocation and constraints.
Alternatives / private markets	Investments outside listed shares, bonds and cash: private equity, private credit, real estate, infrastructure, hedge funds.
Feeder fund / evergreen fund / capital call	A vehicle that pools many clients into one large fund; a fund with no fixed end date that clients can enter and exit periodically; a demand for a client to send money they committed to a fund.

Active ETF / SMA	An exchange-traded fund run by a manager rather than tracking an index; a separately managed account, a portfolio held directly in the client's name and customisable.
Structured note	A bond issued by the bank whose payout depends on a formula linked to markets, e.g. capital protection plus a share of equity upside.
Securities-based lending	A loan secured on an investment portfolio so the client gets cash without selling.
Single coverage vs partner coverage	One adviser acting as both banker and investor for a client, versus a banker and an investor working as a pair. The firm has extended single coverage from 8 to 18 international markets.
Grid (compensation)	A payout formula giving an adviser a fixed percentage of the revenue they generate. Used by brokerages; not used in the Private Bank, which pays salary plus discretionary bonus.
Non-dom	A UK tax status for residents domiciled elsewhere that sheltered foreign income; abolished 6 April 2025 and replaced by a four-year foreign income and gains regime.
Liquidity event	The moment an illiquid asset, usually a company, turns into cash. The point at which private banks compete hardest for a new client.
Wealth Management Solutions (WMS)	J.P. Morgan's product and investment organisation (2,500-plus people) that serves the Private Bank and Chase's advisers: CIO, strategy, alternatives, brokerage, structured products.
Connect / Connect Coach / LLM Suite / SpectrumIQ	The Private Bank's client-management workstation; the AI layer on it that suggests next actions; the firm's general-purpose generative AI platform; the AI system that analyses securities and automates trading in Asset Management.
