TECHNICAL GUIDE · PREPARED 12 OCTOBER 2026

What you will learn in KKR Client Solutions

The technical skills inside the KCS seat, from fund plumbing to portfolio construction, co-investment syndication and the rules of distribution, each tied to a real KKR fund, a real client problem or a live news story. Built to answer one application question better than anyone else: "What do you hope to learn whilst interning at KKR?"

Target: KKR London 2027 Summer Internship (6 Jun to 29 Jul 2027), Client Solutions ("KCS"), via SEO London Alternative Investments
Applications close: 18 October 2026 · rank six teams 1 to 6
Method: seven research workstreams, about 380 public sources, every figure tagged with a source ID and a confidence level (Confirmed, Reported, Inferred)
Companions: the KCS Deep Dive (the role and team) and the Complete Interview Pack (the firm and all six teams)

Built only from public information. Not produced by, endorsed by or affiliated with KKR or SEO London. Check any figure against its source before quoting it.

Part 0 · The question, and three answers nobody else will write 4
What the question is really testing 4
Three answers, each under 1,000 characters 4
Anatomy of Version A: where every claim comes from 5
How the guide is built 7
Part 1 · What KCS actually does, as a set of technical problems 8
One seat, three problems 8
Problem one: the client's problem 9
Problem two: the product's problem 12
Problem three: the firm's problem 14
The matching engine 15
Three solutions, built step by step 17
How the KKR seat differs technically from the same job elsewhere 20
Part 2 · Module 1: The plumbing of private markets products 23
1. The vehicle menu: eleven ways to own the same kind of asset 23
2. Drawdown mechanics: commitment, call, fee, return 26
2b. The distribution waterfall, worked in full 28
3. Evergreen mechanics: how K-PEC actually works 31
3b. The evergreen fee stack and the repurchase plan, worked 33
3c. The rest of the K-Series: three more legal answers 35
4. Interval funds: the public-private blend 37
5. Liquidity mismatch and the toolkit 39
6. The same strategy, three wrappers: KKR infrastructure 42
Part 3 · Module 2: Thinking like the client: portfolio construction and performance 45
Liabilities first: what "enough" means to each client 45
Strategic asset allocation and KKR's Total Portfolio Approach 48
Commitment pacing: why you cannot just "buy 10% private equity" 51
Reading performance like an LP 56
Evergreen performance: a different clock 61
Insurance clients: capital, matching and Global Atlantic 63

Capstone: a private markets plan for a UK DC megafund 67

Part 4 · Module 3: Learning a strategy well enough to explain it: infrastructure and asset-based credit 70

A1. What infrastructure is, technically 70

A2. The risk ladder: core, core-plus, value-add, and KKR's vehicles on it 72

A3. KKR's themes and the European deals behind them 74

A4. How an infrastructure asset makes money: cash yield versus total return 75

A5. What an LP asks about infrastructure 79

A6. The infrastructure pitch a KCS analyst helps build 80

B1. Asset-based finance: lending against pools, not companies 81

B2. Why insurers want ABF, and how it reaches Core Plus+ 84

C. Private equity briefly: one deal, a flagship and an evergreen owner 86

D1. How a KCS junior learns a strategy in a week 87

D2. The one-page strategy brief, filled in for GII V 89

Part 5 · Module 4: The machine room: co-investment, diligence, distribution rules and the tools 90

Co-investment and syndication: how a deal is shared 90

Information walls: inside information and wall-crossing, step by step 94

The diligence machine: DDQs, RFPs and operational due diligence 96

Side letters, MFN elections and the 2025 ILPA reporting templates 98

How a junior drafts a DDQ answer 100

Distribution rules a KCS junior applies every day 101

The tools and the record 105

A worked week-three task: five DDQ answers on GII V 107

Part 6 · The news, turned into lessons 110

How to read this part 110

Fundraising: two flagship closes 111

Wealth and liquidity 113

Distribution and coverage 115

The rules changing the market 118

The firm itself, and the house view 120

Using the news in a 1,000-character answer 121

Part 7 · What only KKR teaches, and how to say it 122

The uniqueness test 122

An eight-week learning map (illustrative) 123
The follow-up questions your answer will trigger 124
The one-paragraph version for an interview 125
Part 8 · Glossary 126
How to use the glossary 126
Part 9 · Source table 132
How to read this table 132
WS2 · The firm (S1-S69) 132
WS1 · KCS function (S70-S139) 135
WS1B · Team map (S140-S199) 140
WS3 · Competitors (S200-S259) 144
WS4 · Industry and regulation (S260-S329) 147
WS5 · Live news (S330-S369) 151
WS6 · Interview intelligence (S370-S419) 154
WS7 · Technical mechanics (S420-S489) 156

PART 0

The question, and three answers nobody else will write

"What do you hope to learn whilst interning at KKR?" 1,000 characters. Start here, then read the modules to own every word.

What the question is really testing

A learning question is a disguised knowledge question. Most applicants answer it with soft goals: "exposure to a world-class firm", "develop my communication skills", "learn about private markets". Those sentences tell the reader nothing they can check. A strong answer names **specific technical things** that only exist inside this seat, shows you already understand enough to know what you do not know, and ties each item to KKR rather than to the industry INFERRED.

Specific

Name a fund, a vehicle, a mechanism. "K-INFRA's quarterly 5% repurchase limit" beats "how evergreen funds work".

Only here

Tie it to something KKR's structure creates: one P&L, KCS with Capital Markets, flagship and K-Series sharing deals.

Honest

Say "learn", not "contribute expertise". Show curiosity with enough precision to prove you did the work.

Three answers, each under 1,000 characters

All three are written from facts in this guide. Character counts include spaces and were checked by script. Pick one, then make it yours: change at least a few words so it sounds like you, and re-count after editing. If the form counts line breaks, keep it as one paragraph.

VERSION A: THE TECHNICAL SPINE (RECOMMENDED) · 947 CHARACTERS INCLUDING SPACES

I hope to learn how one client team turns the whole of KKR into the right answer for each client. First, the plumbing: why the same infrastructure team reaches a pension through a closed-end fund like GII V, but a private bank client through K-INFRA, with monthly NAV, a performance fee over a hurdle and redemptions capped at 5% a quarter, and what this year's private credit redemption queues taught the industry about setting expectations. Second, how clients decide: commitment pacing, DPI against IRR, and how KKR's Total Portfolio Approach turns "buy fund X" into "build a private markets programme". Third, what only KKR's structure shows: how KCS and Capital Markets syndicate co-investment to clients, and how information walls hold while it happens. Under one P&L, the team can recommend what fits the client rather than what one fund needs. I want to leave able to explain any KKR product precisely, because at KKR trust is the product.

VERSION B: THE LONDON AND PRIVATE WEALTH ANGLE · 889 CHARACTERS INCLUDING SPACES

In London, I hope to learn how private markets are opened to new investors without breaking promises made to existing ones. KKR's K-Series has grown to $42bn, and in Europe K-PRIME must work within AIFMD II's liquidity rules and the FCA's Consumer Duty, while UK pensions move towards private assets under the Pension Schemes Act. I want to understand the technical side: how an evergreen vehicle shares deals with KKR's flagship funds, how NAV, fees and quarterly redemption limits are set, and how a private bank's due diligence team tests all of it. I also want to learn the institutional craft: answering DDQs accurately, building client materials, and seeing how KCS works with Capital Markets on co-investment. Most of all, I want to learn to explain a complex product to someone trusting it with other people's money, which Henry Kravis's "like and trust" puts at the centre of KKR.

VERSION C: PERSONAL HOOK, THEN TECHNICAL (FILL THE BRACKETS; ABOUT 260 CHARACTERS FREE) · 734 CHARACTERS INCLUDING SPACES

When I [your example: explained X to Y / kept Z running under pressure], I learned that [one-line lesson]. KCS is where that becomes the whole job, and I want to learn its technical core. First, how KKR packages one strategy for different clients: infrastructure through GII V for a pension, or through K-INFRA, with monthly NAV and quarterly redemption limits, for a private bank client. Second, how clients think: commitment pacing, DPI versus IRR, and KKR's Total Portfolio Approach. Third, how co-investment moves from Capital Markets to KCS clients behind information walls, which KKR's one-P&L structure makes possible. I want to leave able to explain any KKR product accurately to someone trusting it with other people's money.

Anatomy of Version A: where every claim comes from

Every phrase in Version A is something you can defend for twenty minutes in an interview. This table maps each one to its evidence and to the module in this guide that teaches it.

Phrase in the answer	The fact behind it	Learn it in
"one client team turns the whole of KKR into the right answer for each client"	KCS "seeks to 'connect the dots' across all businesses at KKR" [S141]; KCS has 300+ executives and was formed in 2009 [S103, S141].	Part 1
"the same infrastructure team reaches a pension through a closed-end fund like GII V"	Global Infrastructure Investors V closed at $19.2bn on 3 August 2026, KKR's largest infrastructure fund [S430, S176].	Parts 2 and 4
"but a private bank client through K-INFRA"	K-INFRA owns infrastructure assets through joint ventures with KKR vehicles including GII II to V and the Diversified Core Infrastructure Fund [S421].	Part 2
"monthly NAV, a performance fee over a hurdle and redemptions capped at 5% a quarter"	K-INFRA: 1.25% fee on month-end NAV; 12.5% performance participation over a 5% hurdle with high-water mark; quarterly repurchases capped at 5% of NAV [S421].	Part 2
"this year's private credit redemption queues"	K-FIT paid about 80% of Q1 2026 repurchase requests, then 100% in Q2 [S338]; industry-wide wealth investors asked to withdraw about $20.8bn from private credit funds in Q1 [S337].	Parts 2 and 6

Phrase in the answer	The fact behind it	Learn it in
"commitment pacing, DPI against IRR"	Standard LP toolkit; distributions have stayed low for years, which is why DPI now dominates LP conversations: Bain puts distributions below 15% of NAV for four years running [S262].	Part 3
"KKR's Total Portfolio Approach"	KKR papers on TPA, February and July 2026 (McVey, McNellis, Olinger) [S435, S436].	Part 3
"how KCS and Capital Markets syndicate co-investment to clients"	KCS mandate: "work in partnership with Capital Markets in the syndication/distribution of product" [Advert]; KCM capital markets fees about $930m in 2025, not offset against fund fees [S425].	Part 5
"how information walls hold while it happens"	Capital markets work can involve material non-public information; walls and wall-crossing procedures separate it (method; see Part 5) INFERRED.	Part 5
"Under one P&L"	KKR's proxy deck: "One P&L and compensation pool" [S5].	Part 1
"at KKR trust is the product"	Kravis: "people do business with those they like and trust"; the Walter Industries story [S384].	Part 7

DON'T WRITE THIS

- A K-PEC or K-INFRA **minimum investment**: not in the filings read.
- That KKR has an **ELTIF or a UK LTAF**: no evidence was found.
- A KKR "**40/30/30**" portfolio: KKR publishes no such model; its wealth model portfolios work out at about 45/25/30 and 30/40/30 stocks, bonds and private assets [S435, S436].
- "KKR is the largest" or "leads private wealth": Blackstone and Apollo are larger, and Blackstone leads wealth [S213, S215].
- Anything you cannot explain if asked "what do you mean by that?"

How the guide is built

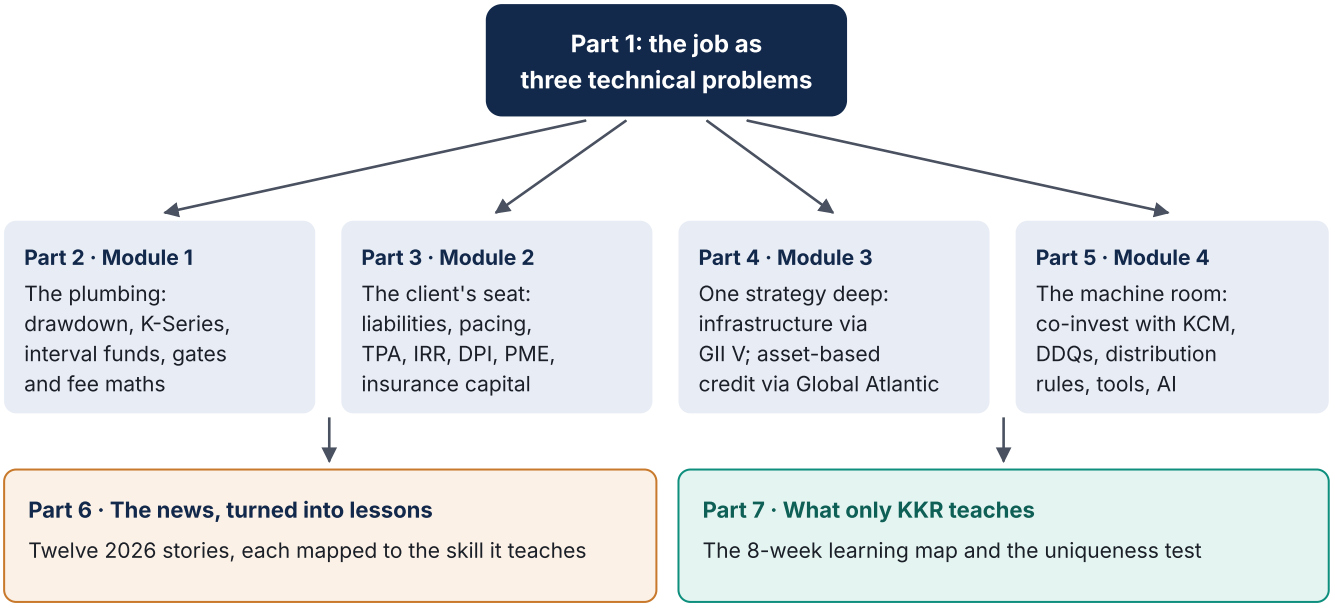

Figure 1. The guide at a glance. Part 1 frames the seat; four technical modules fill it; Parts 6 and 7 tie it to KKR in 2026 and to what is unique.

HOW TO USE THIS GUIDE IN ONE EVENING

Read Part 0 and Part 7 first (30 minutes). Pick your answer version. Then read only the modules behind the phrases you kept, so you can survive three follow-up questions on each. The rest is for the interview.

PART 1

What KCS actually does, as a set of technical problems

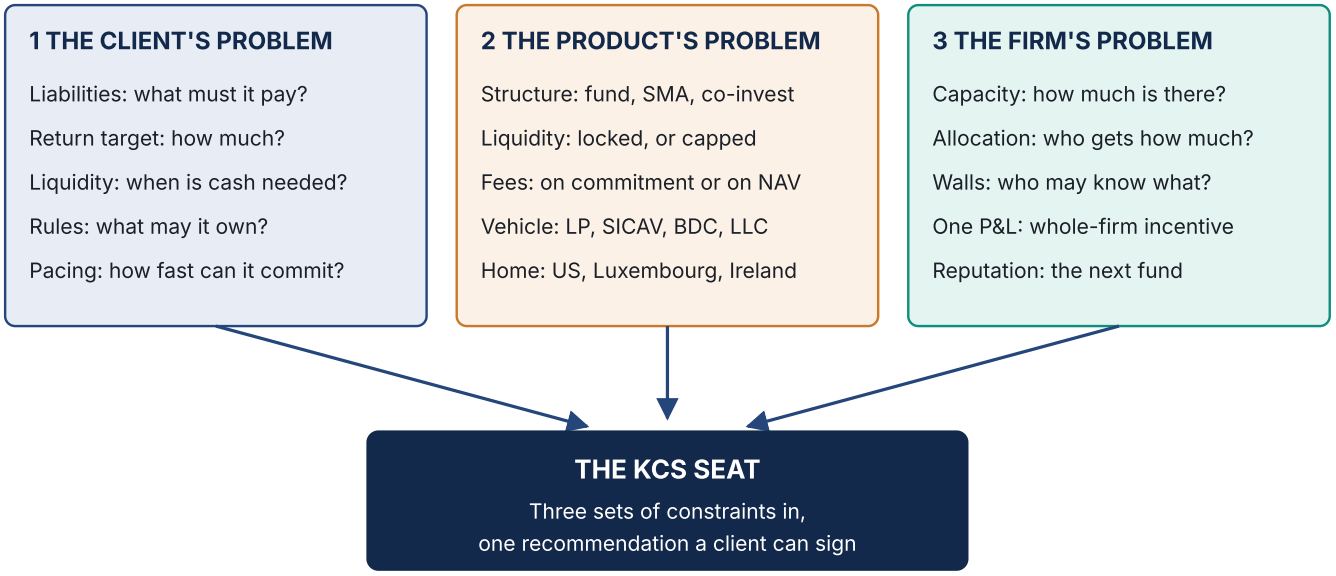

Forget the job title. A KCS desk is where three hard problems meet: what the client can own, what the product can promise, and what the firm can give. Learning to solve all three at once is the technical skill this seat teaches.

One seat, three problems

Most descriptions of client solutions sound like sales. The technical reality is closer to engineering. Every time a client gives KKR money, three sets of constraints have to fit together:

- **The client's problem.** A pension fund, a sovereign wealth fund, an insurer or a wealthy family each has bills to pay (liabilities), a return it needs, a date it needs cash back, rules about what it may own, and a speed at which it can commit new money.
- **The product's problem.** Each KKR product has a legal wrapper, a liquidity promise, a fee formula, a home country and a size. These cannot be changed for one client without affecting every other client in the same vehicle.
- **The firm's problem.** KKR has finite deal capacity, many clients who want the same deal, legal walls around inside information, and one shared profit pool that rewards selling the right thing over selling anything.

KKR's own job text frames the seat exactly this way. KCS "seeks to 'connect the dots' across all businesses at KKR, from our Private Equity investing teams to Infrastructure, Real Estate, Credit, Capital Markets and Insurance-Funded Strategies" [S141] CONFIRMED. It is "primarily organized around two specialized focus areas: Sales/Relationship Management and Product/Strategy Management" [S141] CONFIRMED. Relationship managers own the client's problem. Product strategists own the product's problem. The firm's problem is owned by everyone, which is why a junior who understands it stands out INFERRED.

Owned by: relationship managers (1), product strategists (2), everyone including the junior (3). Labels are the author's framing.

Figure 2. Three problems meet in one seat. Read across the top: each column is a separate discipline with its own vocabulary. The KCS seat is where they have to agree. Source: KCS structure from KKR's Frankfurt KCS intern posting [S141]; the three-problem framing is the author's INFERRED.

WHAT YOU WILL LEARN

To read any investment request as a constraint problem with three parts, and to say which part is binding. That is the habit that turns "sales support" into structured problem solving.

WHERE YOU MEET IT AT KKR

In the London analyst duties: "Collaborating with various internal divisions globally to answer client requests (Product teams, Investment teams, Operations, Finance, Legal, Compliance, Risk)" [S101] CONFIRMED. Each division in that list owns a piece of one of the three problems INFERRED.

ONLY AT KKR

KKR runs "1 firm with 1 compensation approach" (CFO Robert Lewin) [S207] CONFIRMED, and its asset management costs sit in "a single expense pool" [S70] CONFIRMED. So the firm's problem is not someone else's P&L to argue with: it is the same pool the client team is paid from. That changes what a junior is taught to optimise INFERRED.

SAY IT IN ONE LINE

"I want to learn how KCS turns a client's liabilities, a product's liquidity terms and the firm's capacity into one answer, because that is where the technical work in fundraising really sits."

Problem one: the client's problem

Every institutional client can be described by five numbers or rules. Learn these five and you can read any client in minutes.

Constraint	Plain English	The technical question
Liabilities	The money the client owes in future: pensions to retirees, insurance claims, a government's future spending.	How long until the money is needed (duration), and is it fixed or linked to inflation?
Return target	The return needed to meet those liabilities.	Which assets can reach it after fees, and with how much risk?
Liquidity	How much cash must be available, and when.	What share of the portfolio can be locked up for 10+ years?
Regulation	The rules the client itself lives under.	Can it legally hold this asset, in this vehicle, from this country?
Pacing	The speed at which it can sign new commitments.	How much must it commit each year to reach a target allocation, given that drawdown funds call money slowly?

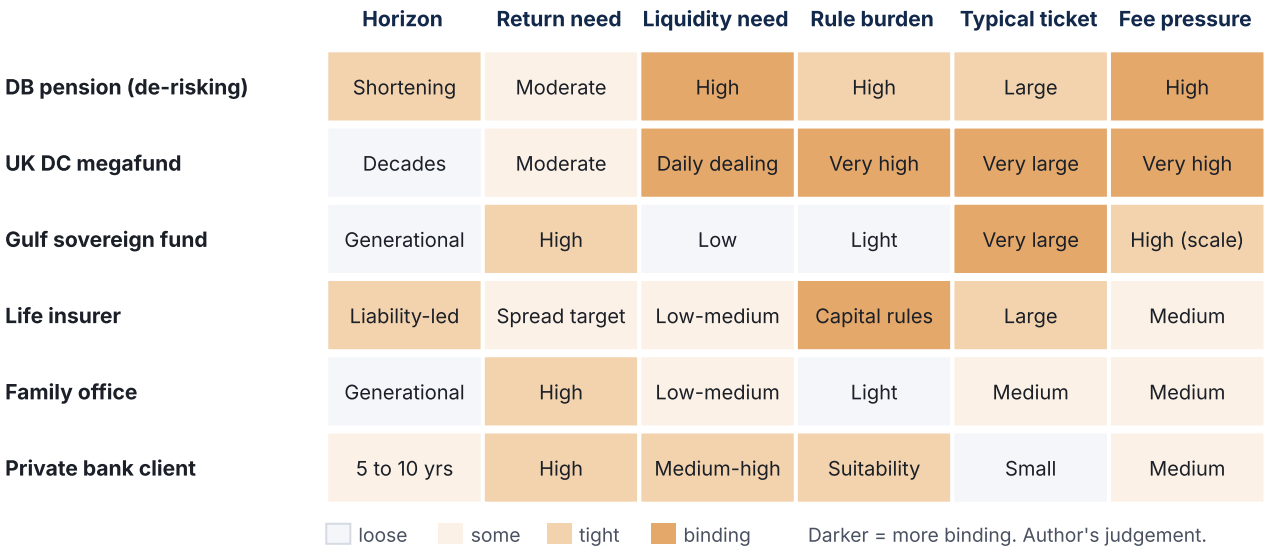

Figure 3. Six client types, six constraints. Notice that the binding constraint differs by row: liquidity for a de-risking pension, daily dealing and fees for a DC scheme, ticket size for a sovereign, capital rules for an insurer, suitability for a private bank client. All cells are the author's judgement INFERRED; the facts behind each row follow below.

The six client types, constraint by constraint

Defined benefit (DB) pension. A DB scheme promises a fixed pension, so its liabilities are known and shrink as members retire. KKR's institutional page offers corporate pensions "consultative advice to corporations who are considering the benefits and challenges associated with de-risking their defined benefit plans" [S81] CONFIRMED. Its signature technical trap is the **denominator effect**: listed shares are repriced daily, private assets only quarterly, so a market fall makes the private share look too big and freezes new commitments [S323] REPORTED. S&P Global found 174 of 298 pension funds over-allocated to private equity in Q1 2025 [S324] REPORTED. Bain cites an ILPA survey in which 53% of LPs said undrawn commitments limit new private equity commitments [S262] CONFIRMED.

WORKED EXAMPLE: THE DENOMINATOR EFFECT (ILLUSTRATIVE NUMBERS)

A £10bn pension targets 15% in private markets: £1.5bn private, £8.5bn listed. Listed markets fall 20%: £8.5bn × 0.8 = £6.8bn. Private marks lag and stay at £1.5bn. New total £8.3bn. Private share = 1.5 ÷ 8.3 = **18.1%**, above the 15% target, although the scheme bought nothing.

Formula in words: private share = private value ÷ (private value + listed value). Only the denominator moved. The scheme's committee now pauses commitments, and KKR's next fundraise meets a "not this year". A KCS junior who can run this sum for a client's published asset mix can predict which clients will be quiet before the relationship manager asks INFERRED.

UK defined contribution (DC) megafund. DC savers own their pots, the default fund is priced and dealt in daily, and fees are scrutinised INFERRED. The Pension Schemes Act 2026 (Royal Assent 29 April 2026) requires large multi-employer DC schemes to have a default fund of at least £25bn by 2030, with a transition route for schemes of £10bn that can reach £25bn by 2035 [S346] CONFIRMED. It also gives the government a reserve power, usable once and not before 1 January 2028, to require up to 10% of the default fund in "qualifying assets" (private equity, private credit, infrastructure, land, unlisted shares), of which no more than 5% UK-specific; trustees can opt out if compliance is "likely not to be in the best interests of members" [S346] CONFIRMED. This mirrors the voluntary Mansion House Accord of 13 May 2025: 17 providers covering about 90% of active DC savers pledged 10% of default funds to private markets by 2030, at least 5% in the UK [S315] CONFIRMED.

Gulf sovereign wealth fund. Generational horizon, little need for cash, very large tickets. Global SWF put Gulf sovereign assets at about $5.7tn and found they "have shown no sign of slowdown (yet)" through the 2026 Iran war, apart from Qatar's QIA, which slowed [S365] REPORTED. KKR's 10-K warns that sovereign funds and public pensions show "an increased preference for alternatives to traditional fund structures, such as separately managed accounts" and are "consolidating their capital with fewer alternative asset managers" [S70] CONFIRMED. The binding constraint is not liquidity: it is getting enough size, at low enough fees, with enough control INFERRED.

Life insurer. An insurer invests policyholders' premiums to pay future claims, so its assets must match the timing of its liabilities (asset-liability management, ALM) and it holds regulatory capital against every asset. KKR's insurance client team offers "fully integrated balance sheet solutions that combine KKR's leading asset origination capabilities, deep capital markets access … liability structuring solutions, and expert insights into global regulatory frameworks, asset allocation, portfolio construction, and ALM" [S104] CONFIRMED. An insurance product strategist role requires knowledge of "RBC, Solvency II" (the US and EU insurance capital regimes) [S105] CONFIRMED. Third-party insurers are 11% of KKR's AUM and Global Atlantic's own balance sheet another 22% [S71] CONFIRMED.

Family office. A private investment company for one wealthy family. Light regulation, long horizon, often a preference for deal-by-deal choice. KKR's family capital page lists "Co-Investment Opportunities", "Customized Portfolio Solutions", "Bespoke Separately Managed Accounts", "Two-Way Sourcing Dialogues" and "Comprehensive Debt Solutions" [S84] CONFIRMED. The last two are unusual: the family is treated as a deal partner and a borrower as well as an investor INFERRED.

Private bank client. An individual investing through a bank. The binding constraint is suitability: the distributor must check the product fits the client. KKR's 10-K says MiFID II, AIFMD and the ELTIF Regulation "contain requirements for, among other things, marketing, investor suitability assessments, and conflicts of interest management" that also apply to "distributors, placement agents and other intermediaries" [S70] CONFIRMED. In the UK, the high-net-worth exemption for financial promotions uses £100,000 income or £250,000 net assets (restored on 27 March 2024) [S307] CONFIRMED. In the US, K-Series is built for accredited investors, "$1 million and up in net worth" (Scott Nuttall) [S76] REPORTED.

WHAT YOU WILL LEARN

To profile any client on five constraints, compute the denominator effect and a commitment pacing gap, and identify the single binding constraint before anyone opens a pitch book.

WHERE YOU MEET IT AT KKR

KKR's investor base spans "65 countries" and runs from pensions to sovereigns, insurers, endowments and individuals [S70] CONFIRMED. The Singapore KCS intern brief includes "conducting market and client research" and "preparing client briefing materials" [S107] CONFIRMED: the five-constraint profile is that briefing, done properly INFERRED.

ONLY AT KKR

Private wealth (18% of AUM) is now larger than pensions (14%), and insurance in total is about a third [S71] CONFIRMED; the one-third sum is INFERRED. A London junior sees all six rows of the grid in one team, not one or two. A single-strategy firm's IR team typically meets mainly the top three rows INFERRED.

SAY IT IN ONE LINE

"I want to learn to read a client the way KKR's insurance team describes it, through liabilities, capital rules and ALM, and then do the same for a pension, a sovereign and a private bank client."

Problem two: the product's problem

A KKR product is a set of five design dials. Turning one dial for one client changes the deal for everyone else in the vehicle, which is why "customised" usually means a different vehicle, not a different term INFERRED.

Dial	Options on KKR's shelf, with sourced examples
Structure	Closed-end drawdown fund (North America Fund XIV, Global Infrastructure Investors V); separately managed account (SMA, a fund of one); co-investment in a single deal; strategic multi-asset partnership; insurance sidecar (Global Atlantic's Ivy vehicles, $62bn) [S70, S84, S85, S200] CONFIRMED.
Liquidity	Drawdown funds: none until exits. Infrastructure and real estate drawdown funds run 10 to 13 years; credit 8 to 10 (up to 12); core private equity up to 25 years; open-ended vehicles have no end date [S2] CONFIRMED. Evergreen funds: typically up to 5% of the fund per quarter [S278] REPORTED. Capital Group KKR interval funds: repurchase offers of up to 10% of shares quarterly at NAV [S92] CONFIRMED.
Fees	Drawdown private equity: 1.0% to 2.0% of committed capital in the investment period, then 0.75% to 1.50% of invested capital. Drawdown infrastructure and real estate: 0.75% to 1.50%. Open-ended vehicles including K-Series: 0.50% to 1.25%. Carry: 10% to 20% of profits after a 6% to 8% hurdle [S2] CONFIRMED. K-PEC and K-INFRA main share classes: 1.25% a year of NAV [S111, S112] CONFIRMED. Capital Group KKR Core Plus+: 0.84% total expense ratio [S92] CONFIRMED.
Vehicle	K-PEC is a US LLC; K-PRIME is a Luxembourg SICAV and FCP, the non-US twin "with similar objectives and strategies"; K-FIT is a US business development company (BDC) [S111, S113] CONFIRMED.
Jurisdiction	KKR's EU AIFM (the regulated manager) is KKR Alternative Investment Management Unlimited Company, authorised in Ireland; outside the US KKR relies on "private placement exemptions and marketing registrations" under AIFMD in Europe and the UK's FSMA and AIFM Regulations [S70] CONFIRMED.

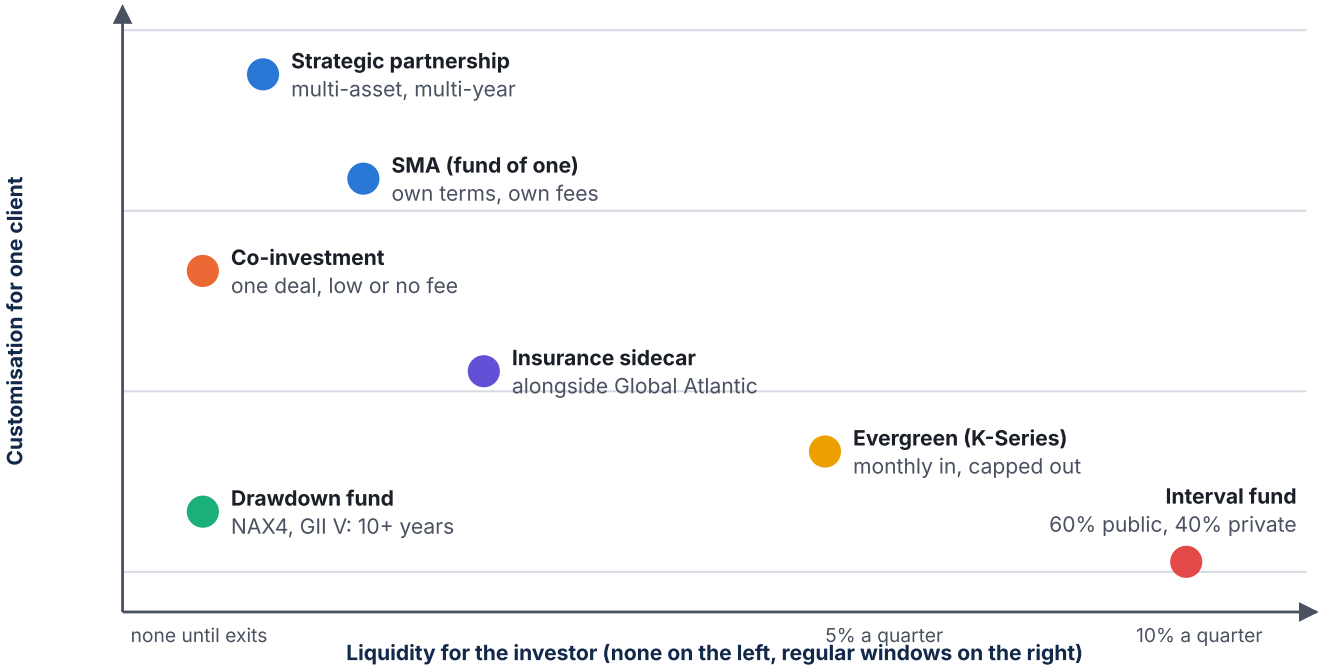

Figure 4. The vehicle map. Moving right buys the investor liquidity; moving up buys control. Nothing sits top-right: a vehicle cannot be both bespoke to one client and liquid for thousands. Positions are the author's schematic INFERRED; liquidity terms from KKR's 10-K [S2], AltsWire on evergreen caps [S278] and the Capital Group release [S92].

WORKED EXAMPLE: SAME STRATEGY, TWO WRAPPERS, TWO FEE BILLS (ILLUSTRATIVE NUMBERS)

Drawdown fund. A client commits $100m to a private equity fund charging 1.5% on commitments in the investment period (inside KKR's 1.0% to 2.0% range [S2]). Year 1 fee = $100m × 1.5% = $1.5m, even if only $20m has been called. Fee as a share of money actually invested = 1.5 ÷ 20 = 7.5% in year 1, falling as capital is called.

Evergreen fund. The same client buys $100m of an evergreen PE vehicle at 1.25% of NAV (K-PEC's main classes [S111]). The money is invested at once, so the fee is $1.25m on $100m working from day one.

Lesson: "1.5% versus 1.25%" is the wrong comparison. The right one is fee per dollar actually invested, over time, plus the cost of holding cash while waiting for capital calls. A KCS junior who can show that table to a private bank's product committee is doing product strategy, not admin INFERRED.

WHAT YOU WILL LEARN

The five dials of a fund product, how each changes cash flows and fees, and why a liquidity promise must be matched by the assets inside. You learn to price a product on the client's cash flows, not its headline rate.

WHERE YOU MEET IT AT KKR

Matt Yates in London is "Head of EMEA Product Development" and runs product management for K-PRIME and K-PEC [S133] CONFIRMED. Amy Lesch's global product team covers "product origination and management across private equity, infrastructure, real estate, insurance, and credit" [S121] CONFIRMED.

ONLY AT KKR

One strategy can be sold through every column of the vehicle map. In Q2 2026 real assets capital came from "Helix Digital Infrastructure, K-Series Infrastructure, Asia Infrastructure III and Global Infrastructure Investors V" [S74] CONFIRMED : platform, evergreen and drawdown wrappers on the same asset class in one quarter. Blackstone also runs infrastructure in several wrappers (BXINFRA) [S213], so the claim is about seeing all wrappers plus an owned insurer and KCM from one desk, not about wrappers alone INFERRED .

SAY IT IN ONE LINE

"I want to learn why the same infrastructure strategy is sold as GII V, as K-Series Infrastructure and as a platform like Helix, and how the wrapper changes fees, liquidity and who can buy it."

Problem three: the firm's problem

The client wants the best deal; the product has fixed terms; the firm has to decide what it can offer at all. Four technical issues sit here.

1. **Capacity.** A fund has a size and an investment period. North America Fund XIV shows $21.9bn committed, investing April 2025 to April 2031; GII V $18.6bn, July 2024 to July 2030 [S1] CONFIRMED. Co-investment capacity depends on deal flow, not on demand.
2. **Allocation.** When ten clients want one co-investment, someone decides the split. KKR Capital Markets "provides syndication services for co-investments in transactions participated in by KKR, our investment vehicles, Global Atlantic, and third-party clients" [S70] CONFIRMED. If clients do not take it up, "we may be required to fund the remaining commitment" [S70] CONFIRMED. Allocation errors are costly: in 2015 the SEC found KKR had misallocated more than $17m of broken-deal expenses to its flagship funds rather than to co-investors, and KKR paid nearly $30m [S20] CONFIRMED.
3. **Information walls.** KCM handles financing and securities, so people can be "wall-crossed" onto live deals and must not use or pass on inside information INFERRED. Amy Lesch sits on KKR's "Global Conflicts and Compliance Committee" [S121] CONFIRMED.
4. **Most-favoured-nation (MFN) terms.** Side letters give large LPs extra rights; an MFN clause lets other LPs claim terms given to similar or smaller LPs INFERRED. One concession can therefore spread across a whole fund.

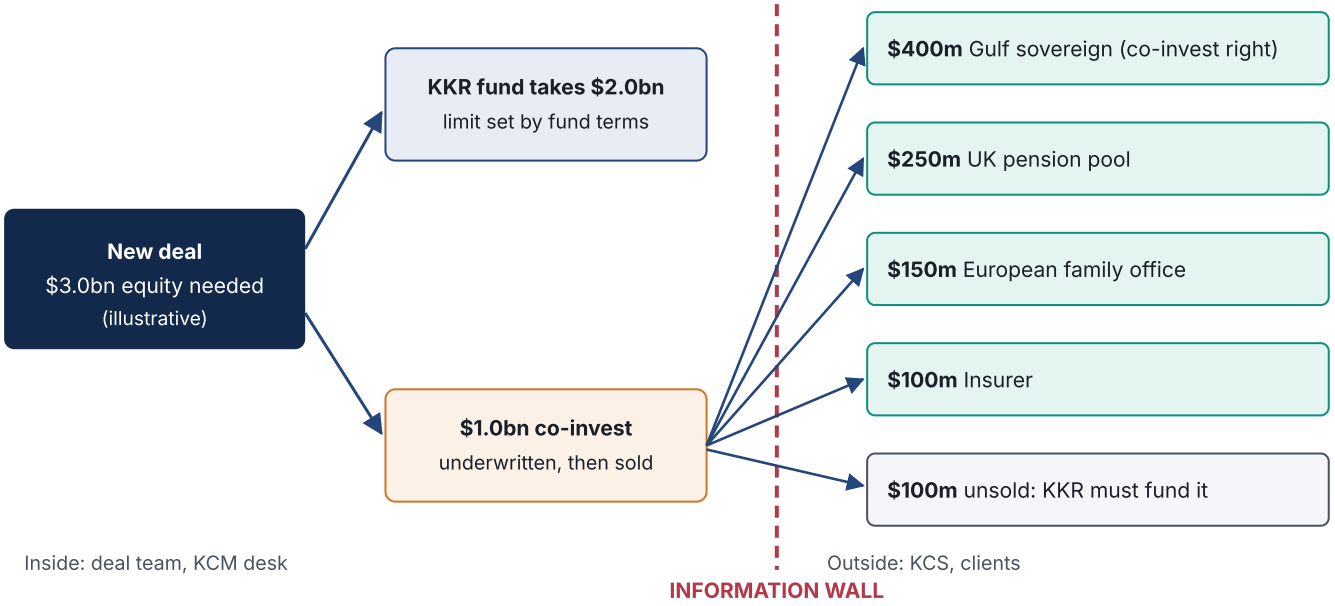

Figure 5. The firm's problem in one deal. Follow the $1.0bn on the right: it is promised before it is sold. Clients cross the wall only after confidentiality and compliance steps, and whatever is left unsold stays with KKR. All amounts illustrative; mechanism from KKR's 10-K on KCM syndication and the funding of unsold commitments [S70] CONFIRMED; wall procedure INFERRED.

WHAT YOU WILL LEARN

How capacity, allocation policy, inside-information walls and MFN clauses limit what a client can be offered, and why fair allocation is a legal duty, not a courtesy.

WHERE YOU MEET IT AT KKR

The KCS mandate says "Work in partnership with Capital Markets in the syndication/distribution of product" (KCS team description, brief). In Europe, Mark Danzey is both "European Head of KKR's Capital Markets team" and "European Head of Institutional Client Solutions" [S156] CONFIRMED.

ONLY AT KKR

Blackstone (BXCM) and Apollo (Apollo Capital Solutions) also own capital markets arms [S214, S220] CONFIRMED, so the capability is not unique. What is unusual is that KKR writes the KCM link into the client team's own description and gives one European leader both hats [S156] CONFIRMED. The comparison is INFERRED. A junior here sees allocation from both sides of the wall's procedures.

SAY IT IN ONE LINE

"I want to learn how KCS and Capital Markets decide who gets a co-investment, because that is where client service, capacity and compliance meet in one decision."

The matching engine

Put the three problems together and the KCS job becomes a repeatable procedure. Think of it as an engine with four gates. Hard constraints come first because they are yes or no; soft preferences come last because they are trade-offs INFERRED.

1. **Can they own it?** Rules and jurisdiction: client classification, marketing permissions, vehicle type.
2. **Can they hold it?** Liquidity and horizon: lock-up versus the client's cash needs.
3. **Can they size it?** Ticket, minimums, pacing and KKR's capacity.
4. **Should they want it?** Net return, fees, fit with the rest of the portfolio, the house view.

In symbols: **Solution = best by score (Shelf ∩ Allowed ∩ Holdable ∩ Sizeable)**. The ∩ means "products that pass every gate". KKR's macro team argues for scoring the whole portfolio, not one sleeve: its Total Portfolio Approach is "a governance and investment framework that seeks to improve capital allocation by allowing investors to evaluate opportunities across the total portfolio rather than through static asset class silos" [S90] CONFIRMED.

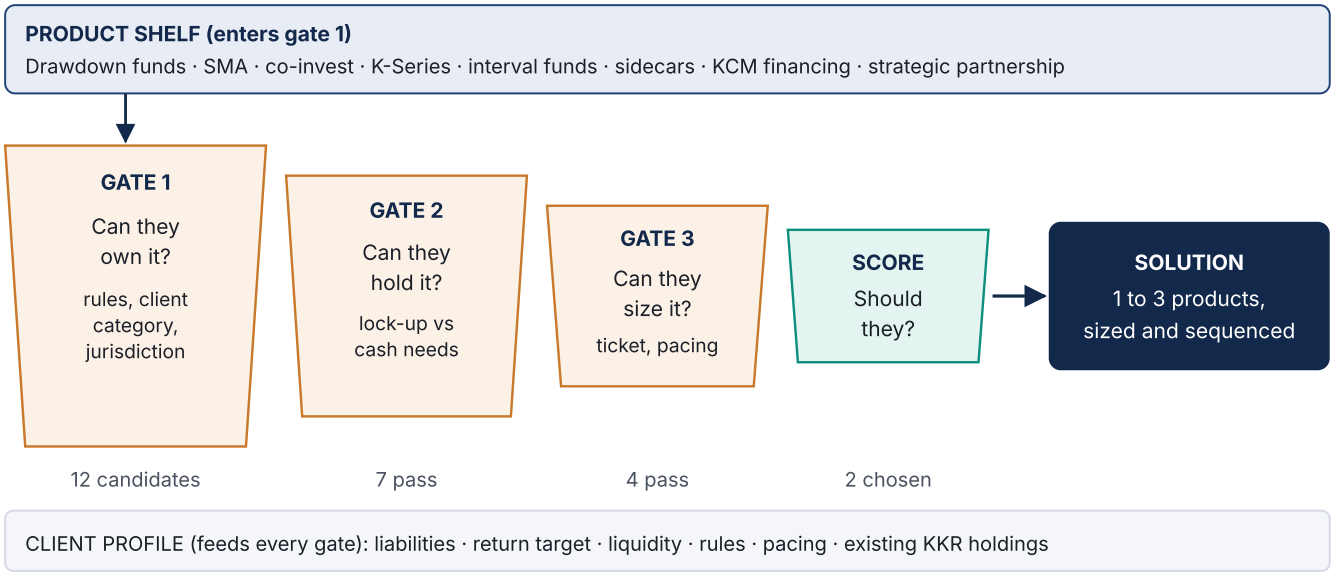

Figure 6. The matching engine. Hard gates first, then a score. The counts under each gate show how fast a shelf shrinks for a real client; they are illustrative. The procedure is the author's model of the KCS job INFERRED; the shelf is KKR's, from its 10-K and product pages [S70, S84, S85].

WHAT YOU WILL LEARN

A disciplined order of questions: eligibility, then liquidity, then size, then preference. It stops the classic junior mistake of pitching the best-performing fund to a client who cannot legally or practically hold it.

WHERE YOU MEET IT AT KKR

KKR's 10-K lists what fundraising competition turns on: "investment performance, investor liquidity and willingness to invest, investor reputation ... duration of relationships, quality of services, and pricing and fund terms, including fees" [S70] CONFIRMED. That list is the engine's scoring sheet.

ONLY AT KKR

Most firms' engines have a short shelf. KCS supported 24 strategies by 2020, up from 4 in 2008 [S94] REPORTED, and its shelf now adds K-Series, Capital Group vehicles, Ivy sidecars and KCM financing. The longer the shelf, the more the gates matter, and the more a junior learns from running them INFERRED.

SAY IT IN ONE LINE

"I want to learn how KCS filters a 20-plus strategy shelf down to the two products a client can actually own, hold and size."

Three solutions, built step by step

Three archetypal clients follow. They are **illustrative composites**, not real KKR clients. Every fact about KKR products, markets and rules is sourced; every client number is invented for the exercise and labelled.

Archetype A. A Gulf sovereign wanting a strategic partnership plus co-investment

Client (illustrative)	A Gulf sovereign fund planning a $2.0bn programme with KKR over three years. Wants fewer, deeper manager relationships, lower blended fees, direct deal exposure, and themes tied to national priorities.
Binding constraint	Size and fees, not liquidity. The 10-K's warning about sovereigns preferring SMAs and consolidating managers describes this client [S70] CONFIRMED.
KKR products that fit	**GII V**: Core+ infrastructure, North America and Western Europe, $19.2bn final close on 3 August 2026, investments include Gulf Data Hub [S334] CONFIRMED. **Helix Digital Infrastructure**: $10bn+ initial capital, Kuwait Investment Authority a founding investor [S3] CONFIRMED. **Co-investment** via KCM syndication [S70]. **Customised portfolio**: KKR Solutions' team is "focused on strategic partnerships and other bespoke private market solutions" [S85] CONFIRMED. **Asia**: "We want to own more Asia at this point in the cycle" [S361] CONFIRMED; Asian Fund V is raising [S332] CONFIRMED.
What the junior does	Builds the blended fee table below; keeps the co-investment pipeline log and confidentiality tracker; prepares the meeting brief on the client's published themes; drafts the quarterly partnership report INFERRED, based on the duties in [S101, S107].

Gulf sovereign
$2.0bn programme
(illustrative)

Sleeve	Size	Fee (assumed)	$m a year
Fund: GII V-type drawdown	$800m	1.25%	10.0
SMA / partnership	$600m	0.90%	5.4
Co-investment sleeve	$400m	0.00%	0.0
Thematic platform	$200m	1.00%	2.0
Total and blended rate	**$2,000m**	**0.87%**	**17.4**

Bars drawn to scale on size. All sizes and fees illustrative; the drawdown fee sits inside KKR's 0.75% to 1.50% range for infrastructure [S2].

Figure 7. Archetype A: a blended-fee partnership. Notice how the zero-fee co-investment sleeve pulls the blended rate below any single fund's fee. That is the sovereign's lever, and the reason co-investment allocation (Figure 4) matters so much to it. Illustrative numbers; fee range from KKR's 10-K [S2] CONFIRMED.

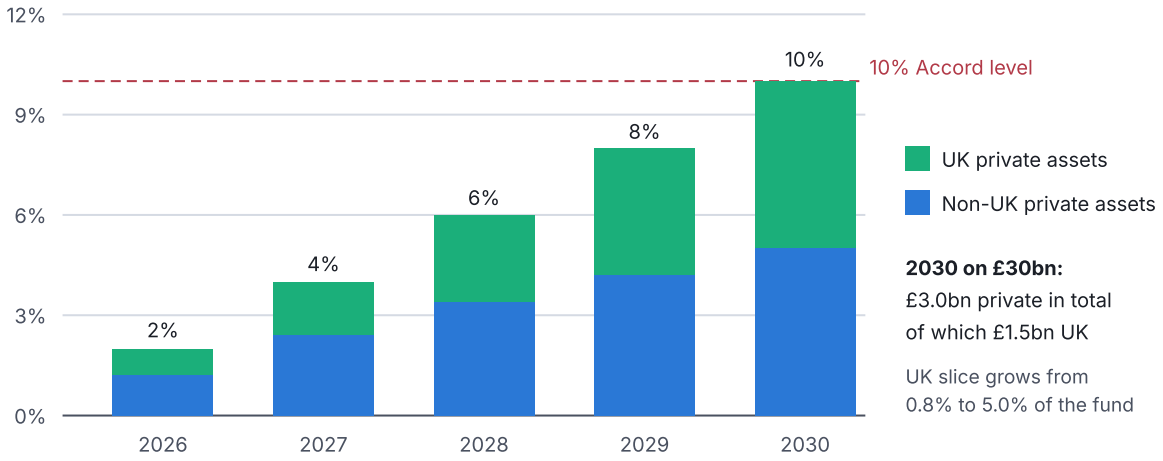

The formula: blended fee = Σ (size of sleeve × fee of sleeve) ÷ total size = 17.4 ÷ 2,000 = 0.87%. The trade-off KCS manages is that every fee point given away on the SMA is earned back only if the sovereign stays for the next vintages INFERRED.

ONLY AT KKR

KKR can wrap fund, SMA, co-investment, a platform like Helix and a reinsurance sidecar into one relationship, with one European leader spanning KCM and institutional clients [S156, S200] CONFIRMED. It has localised coverage too: an Abu Dhabi office opened in November 2025 [S184] CONFIRMED and two Middle East KCS leaders were made MD from 1 January 2026 [S165] CONFIRMED.

Archetype B. A UK DC megafund under the Pension Schemes Act 2026

Client (illustrative)	A master trust with a £30bn default fund, 2% in private markets today, committed under the Mansion House Accord to 10% by 2030 with at least 5% in the UK. The Accord itself is sourced [S315] CONFIRMED; the scheme is invented.
Binding constraints	Daily dealing and fee scrutiny INFERRED; the 10% and 5% caps that the Act's reserve power mirrors [S346] CONFIRMED; trustees' duty to act in members' best interests [S346].
Products that fit and why	A UK wrapper able to hold illiquid assets: the Long-Term Asset Fund (LTAF), opened to DC default and retail use from 3 July 2023 [S305] CONFIRMED. I found no named KKR LTAF in the research, so treat any KKR LTAF as a question to ask, not a fact [Gap]. Underlying exposure: infrastructure (GII V; the open-ended Diversified Core Infrastructure Fund, $14.9bn committed [S175] CONFIRMED); UK real assets KKR already owns, such as the 50:50 Norfolk Vanguard offshore wind partnership with RWE [S181] CONFIRMED and Mirastar UK logistics [S184] CONFIRMED; private credit.
What the junior does	Builds the glidepath below; maps which KKR assets count as "UK"; drafts the RFP or tender answers with the CAPS team [S106, S146]; prepares consultant materials for EMEA consultant relations (Daniel Valladares) [S132] CONFIRMED.

Labels above bars = total private share. All values illustrative, fund size held flat for clarity.

Figure 8. Archetype B: a glidepath to 10% with a 5% UK floor. The UK slice (green) must grow faster than the rest to hit half the private book by 2030. Because drawdown funds invest commitments over several years, commitments must run ahead of this line INFERRED. Illustrative numbers; 10% and 5% levels from the Mansion House Accord [S315] and the Pension Schemes Act 2026 [S346] CONFIRMED.

WORKED EXAMPLE: THE PACING GAP (ILLUSTRATIVE NUMBERS)

Target private NAV in 2030 = 10% × £30bn = £3.0bn. Today = 2% × £30bn = £0.6bn. Gap = £2.4bn. If a drawdown fund has invested only about half of a commitment after two years, the scheme must commit roughly £2.4bn ÷ 0.5 ≈ £4.8bn by 2028 to be invested by 2030. An evergreen or LTAF route invests on day one, so the commitment equals the target. That arithmetic, not fashion, is why DC schemes ask for evergreen wrappers INFERRED.

ONLY AT KKR

KKR already designs a DC product elsewhere: with Capital Group it announced a target-date fund for US 401(k) plans in December 2025 [S363] REPORTED. A London junior can study how a US DC product was built while the UK market forms. Note the honest limit: no KKR UK DC mandate or LTAF was found in public sources [Gap].

Archetype C. A European private bank distributing K-PRIME

Client (illustrative)	A Swiss or UK private bank wants an evergreen private equity fund for its discretionary and advisory clients, with monthly subscriptions and limited periodic redemptions.
Binding constraints	Suitability and target market checks under MiFID II, AIFMD and ELTIF rules [S70] CONFIRMED; client classification thresholds in the UK [S307] CONFIRMED; the bank's own reputation if redemption windows are capped INFERRED.
Product that fits and why	**K-PRIME**, the Luxembourg SICAV and FCP twin of K-PEC [S111] CONFIRMED, product-managed from London [S133] CONFIRMED. About 85% of K-Series sits in private equity and infrastructure [S76] REPORTED. The UK precedent: Quilter Cheviot offers KKR's evergreen private equity strategy to UK clients from January 2026 [S177] CONFIRMED.
What the junior does	Drafts adviser FAQs on liquidity; prepares onboarding and KYC packs [S101]; supports the bank's due diligence; organises adviser education sessions, which KKR runs as "KKR Academies" for about 100 advisers at a time [S207] CONFIRMED.

Money and information flows

Subscriptions flow left, into the fund, on dealing dates. Redemptions flow right, inside a periodic cap set by the fund.

Reporting (NAV, factsheets, risk disclosures) flows right. Client questions flow left, and KCS answers them through the bank.

KCS sits on the first two arrows: Global Wealth Solutions covers the bank; London product team runs K-PRIME.

Figure 9. Archetype C: the distribution chain. KKR never meets most end clients. Each red gate is a legal check owned by a different party, and the KCS job is to make the bank's checks easy and accurate. Vehicle from the K-PEC 10-K [S111]; distributor duties from KKR's 10-K [S70]; GWS and product roles [S124, S133] CONFIRMED; gate placement INFERRED.

ONLY AT KKR

K-PRIME's product management sits in London [S133] CONFIRMED and the head of Global Wealth Solutions for EMEA and Asia Pacific, Markus Egloff, is London-based [S124] CONFIRMED. About 40% of recent K-Series activity comes from outside the US [S3] CONFIRMED. Blackstone's wealth business is far larger (about $324bn versus K-Series $42bn) [S216] REPORTED [S200] CONFIRMED, so the honest pitch is "a fast-growing wealth product run from London", not "the leader".

WHAT YOU WILL LEARN

To build a solution end to end: profile, binding constraint, product fit, blended fees, pacing, and the distribution gates. Three archetypes cover most of what a London desk sees.

WHERE YOU MEET IT AT KKR

The London analyst covers "private equity, infrastructure, real estate, private and liquid credit strategies" for "EMEA based institutional & family capital clients" [S101] CONFIRMED ; GWS International covers private banks from London, Zurich and Dubai [S150, S153, S151] CONFIRMED .

SAY IT IN ONE LINE

"I want to learn how the same KKR platform is packaged three ways: a fee-blended partnership for a sovereign, a glidepath for a UK DC megafund, and an evergreen fund a private bank can sell suitably."

How the KKR seat differs technically from the same job elsewhere

Five other seats do versions of this work. The table compares what each one physically touches. Facts are sourced; the "junior learns" row is the author's judgement.

	KKR KCS	Blackstone ICS / Private Wealth	Apollo Client & Product Solutions	Placement agent	IR at a single-strategy GP	Bank private wealth desk
Product breadth	PE, infra, real estate, credit, insurance-funded, K-Series, KCM deals [S141]	RE, PE, credit and insurance, multi-asset [S213]	Equity, credit, real assets [S223]	Many GPs, one mandate at a time INFERRED	One strategy family INFERRED	Third-party shelf, buyer side INFERRED
Balance sheet	About $30bn own and employee capital; Strategic Holdings segment [S201]	Closer to capital-light [S214] INFERRED	Principal Investing segment [S220]	None	GP commitment only INFERRED	Bank's own, not for funds INFERRED
Insurer	Owns Global Atlantic, $220bn [S200]	Partner model; sold Resolution Life stake [S214]	Owns Athene, $416bn perpetual [S220]	No	Rarely	No
Capital markets link	KCM link written into KCS mandate; joint EMEA leader [S156]	BXCM in PE segment [S214]	Apollo Capital Solutions, $277m Q2 fees [S220]	Adviser, no deals of own	Usually none	Bank's markets arm
Wealth vehicles	K-Series $42bn; Capital Group interval funds [S200, S92]	About $324bn wealth AUM; BREIT, BCRED, BXPE, BXINFRA [S216, S213]	Global Wealth, $3bn raised Q2; AAA [S220]	Some feeder work INFERRED	Rare	Distributes others' funds, feeders such as iCapital [S321]
London intern seat	KCS is one of six London 2027 teams (brief)	Two 2027 London seats: Private Wealth; RE ICS [S217, S218]	No London 2027 CPS posting found (research gap)	Varies	Varies	Varies

	KKR KCS	Blackstone ICS / Private Wealth	Apollo Client & Product Solutions	Placement agent	IR at a single-strategy GP	Bank private wealth desk
Junior learns	Matching across all wrappers, insurer and KCM	Deepest wealth machine; RE ICS is one asset class	Credit plus retirement services depth	Many GPs' terms; LP mapping	One fund in great depth	Suitability from the buyer side

WHERE KKR DOES NOT LEAD

Size: Blackstone $1.35tn and Apollo $1.05tn versus KKR $796bn [S213, S220, S200] CONFIRMED. Wealth: Blackstone about $324bn private wealth AUM with 357 dedicated professionals [S215, S216] REPORTED. Insurance: Athene-related $416bn versus Global Atlantic $220bn [S220, S200] CONFIRMED, and KKR said in July 2026 it will "allocate a little bit less capital to insurance" [S207] CONFIRMED. Q2 2026 fundraising: Blackstone $68.3bn, Brookfield $77bn, Apollo $60bn, KKR $34bn [S213, S235, S220, S200] CONFIRMED; definitions differ. In-house capital markets is not unique [S214, S220] CONFIRMED.

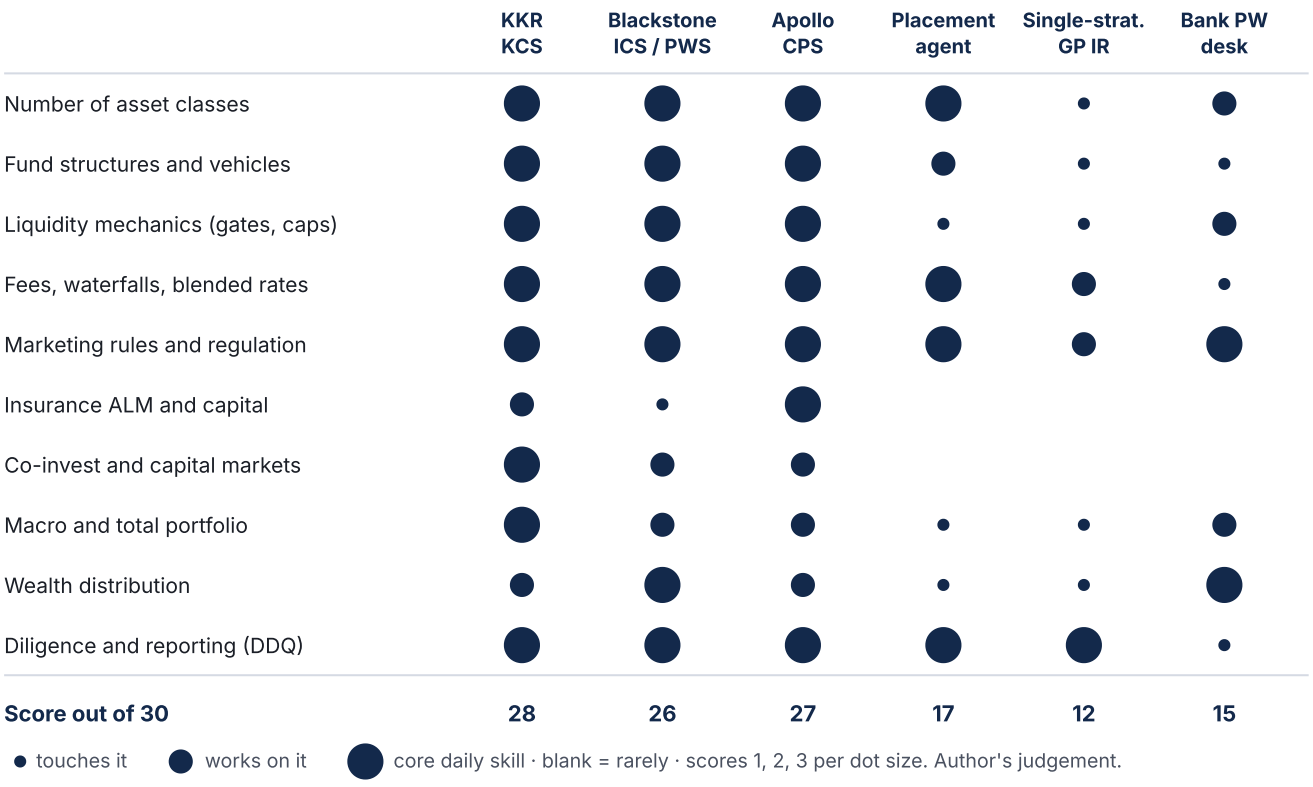

Figure 10. The learning surface: author's judgement, not data. Read down a column to see how many technical domains a junior in that seat would touch. Apollo's seat is close to KCS on breadth; KCS edges it on the explicit KCM link and on macro portfolio work, and trails Blackstone and Apollo on wealth and insurance scale respectively. Every dot is INFERRED; the facts behind them are in the table above.

WHAT YOU WILL LEARN

How the same job title means different technical training in different seats, and how to argue for KKR on mechanism (breadth of wrappers, owned insurer, KCM link, one P&L) rather than on size.

WHERE YOU MEET IT AT KKR

KCS's description asks juniors to "Apply integrated approach by leveraging all KKR executives and capabilities globally" (brief). The Frankfurt intern coordinates RFP answers "including underlying portfolio statistics, marketing materials and presentation decks" with "strategies teams, client services, the RFP team" [S141] CONFIRMED .

ONLY AT KKR

The combination is the point: one client team selling funds, an owned insurer, a balance-sheet holdings segment and an in-house capital markets business, under one compensation pool. Apollo has funds, an insurer and capital solutions but no Strategic Holdings-type segment; Blackstone has funds and BXCM but no owned insurer [S200, S201, S214, S220] INFERRED . Do not claim KKR is biggest at any one of them.

SAY IT IN ONE LINE

"I want to learn client solutions at KKR because the seat touches every wrapper, an owned insurer and Capital Markets under one P&L, so a summer there teaches the whole matching problem, not one corner of it."

PART 2

Module 1: The plumbing of private markets products

Every KKR product is a pipe that carries money from a client to a deal and back. This module takes the pipes apart: who can use each one, when money moves, who gets paid in what order, and what happens when too many people want their money back at once.

Part 1 showed that a KCS desk matches a client's constraints to a product's terms. This part is the product side in full mechanical detail. By the end you should be able to take any KKR vehicle, say what legal box it sits in, draw how cash flows through it, compute its fees for a year, and explain what happens in a bad quarter. That is the vocabulary every product specialist, relationship manager and analyst in KCS uses every day INFERRED.

1. The vehicle menu: eleven ways to own the same kind of asset

A **vehicle** (or "wrapper") is the legal container investors put money into. The assets inside can be similar: companies, power grids, loans, buildings. What changes from wrapper to wrapper is four things: **who is allowed in**, **when cash moves**, **how fees are charged** and **how (and whether) you can get out**. KKR's 10-K describes the range: drawdown private equity funds with management fees of 1.0% to 2.0% of committed capital during the investment period, drawdown infrastructure and real estate funds at 0.75% to 1.50%, and open-ended vehicles (core infrastructure, core+ real estate, evergreen direct lending, K-Series) at 0.50% to 1.25% [S2] CONFIRMED. Here is the menu, from most locked-up to most liquid.

Wrapper	What it is in one line	Live KKR example
Closed-end drawdown LP fund	Investors promise money; KKR calls it over years, invests, sells, and returns cash. Fixed life.	Global Infrastructure Investors V (GII V), $19.2bn final close, 3 Aug 2026 [S430] CONFIRMED; North America Fund XIV, about $23bn [S335] CONFIRMED; European Fund VI, $7.5bn committed (about $8bn reported close) [S175, S185] CONFIRMED
Parallel fund	A legally separate twin that invests side by side with the main fund, in fixed proportions, for investors who need a different legal or tax form.	Generic structure INFERRED. CalPERS reports a holding in "KKR European Fund V (USD)" [S117] CONFIRMED, which suggests a currency-specific vehicle alongside the main fund INFERRED.
Feeder fund	A pooling vehicle: many small investors buy into the feeder; the feeder makes one large commitment to the main fund.	"KKR FS Income Trust iCapital Offshore Access Fund SPC" on EDGAR [S114] CONFIRMED; K-PRIME's "Feeder-I" sub-fund investing into a master FCP [S429] REPORTED
Separately managed account (SMA)	A "fund of one": a single large client with its own terms.	"Bespoke Separately Managed Accounts" for families [S84] CONFIRMED; ABF Partners II raised about $1bn of SMAs beside a $5.6bn fund [S433] REPORTED
Co-investment vehicle	Lets a client put extra money into one specific deal next to the fund, usually at low or no fee.	Syndicated by KKR Capital Markets (KCM) [S425] CONFIRMED
Evergreen operating company ("conglomerate") LLC	No end date; buys stakes in deals through joint ventures and is legally an operating company, not a fund.	K-PEC (private equity), K-INFRA (infrastructure) [S420, S421] CONFIRMED

Wrapper	What it is in one line	Live KKR example
Business development company (BDC)	A US lending vehicle regulated under the 1940 Act framework; pays out its income.	K-FIT and K-FITS (private credit) [S422, S423] CONFIRMED
Registered closed-end fund	A 1940 Act registered fund, publicly offered, that buys back shares by discretionary tender.	KREST (real estate) [S424] CONFIRMED
Luxembourg SICAV	A European open-ended investment company, supervised by Luxembourg's CSSF.	K-PRIME, the non-US twin of K-PEC [S429] REPORTED; "similar objectives and strategies" [S111] CONFIRMED
US interval fund	A registered fund that *must* offer to buy back 5% to 25% of its shares every quarter.	Capital Group KKR Core Plus+, Multi-Sector+, U.S. Equity+ [S426, S427] CONFIRMED
Open-ended core fund (institutional)	No end date, but long lock-ups; aimed at steady, lower-risk assets.	Diversified Core Infrastructure Fund (DCIF) [S432] CONFIRMED
Insurance sidecar	Third-party equity that reinsures a share of the insurance business Global Atlantic writes.	The "Ivy" vehicles: $62bn of IV-related AUM at Q2 2026 [S440] CONFIRMED

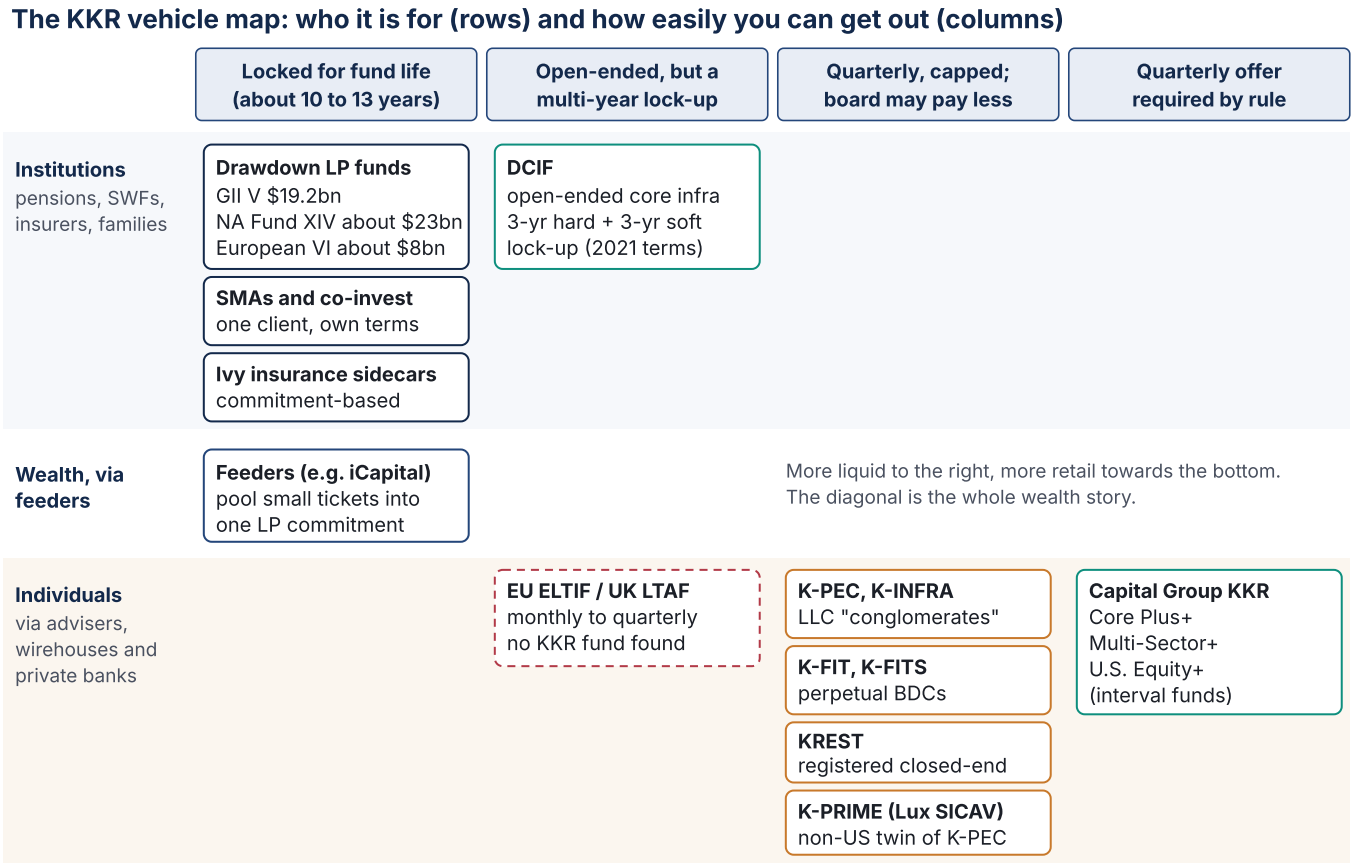

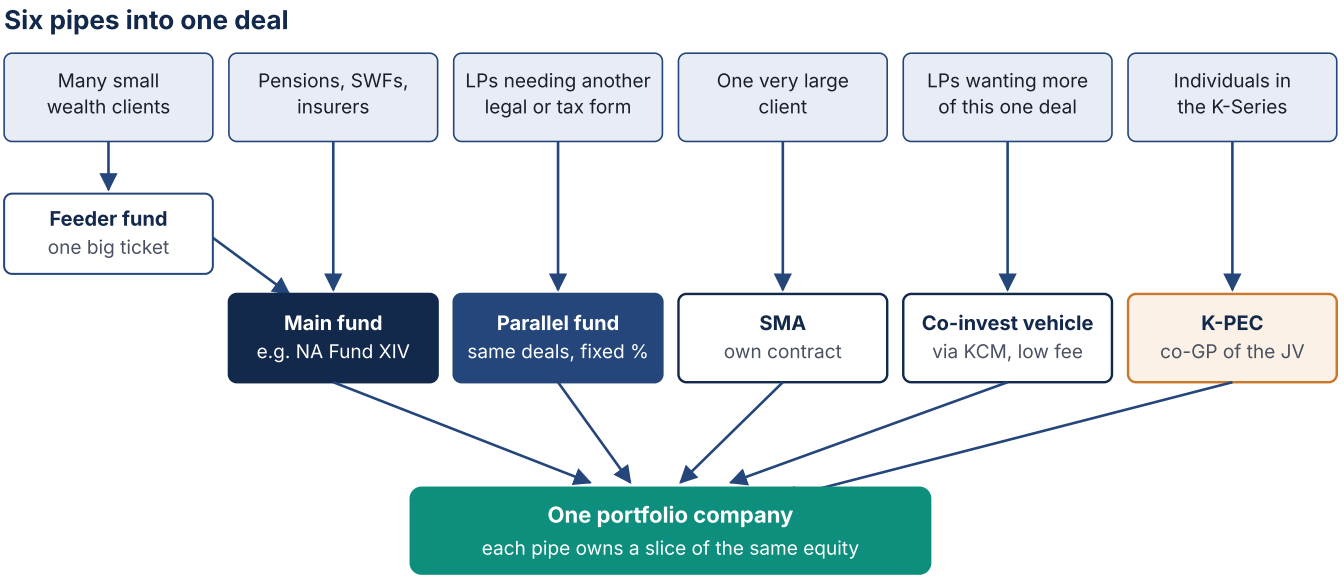

Figure 11. The vehicle map. Institutional money sits top left (locked, drawdown); individual money sits bottom right (evergreen, some liquidity). Fund sizes: GII V [S430], NA XIV [S335], European VI [S185]; structures from the K-Series filings [S420, S421, S422, S424], K-PRIME [S429] REPORTED, interval funds [S426, S427], DCIF [S432], Ivy [S425]. No KKR ELTIF or LTAF was found in the sources. Column placement is the author's INFERRED.

How the institutional pieces fit around one deal

The top-left corner is not one product but a family. One KKR deal can be funded by five different pipes at once. The main fund and any parallel funds take their fixed shares. Feeders sit *above* the main fund and simply pass money through. SMAs invest next to the fund under their own contract. Co-investors buy

extra pieces of that one deal. Since 2023 a sixth pipe exists: K-PEC (or K-INFRA in infrastructure) joins the deal as a *co-general partner* of a deal-level joint venture alongside the flagship fund [S420, S421] CONFIRMED.

Generic structure for feeder, parallel fund and SMA [Inferred]. K-PEC as co-general partner alongside the flagship fund: K-PEC 10-K [S420].

Figure 12. Six pipes into one deal. The client chooses the pipe; the deal team sees one pool of equity. KCS's job is matching each client to the right pipe, and KCM syndicates the co-investment piece [S425] CONFIRMED. Structure drawn by the author INFERRED.

Three wrappers that look odd until you see why they exist

Co-investment is a profit engine, not a giveaway. Since 2014 KKR's fund agreements "typically require us to share 100% of any monitoring, transaction, and break-up fees that are allocable to a fund" with fund investors, but "transaction fees earned in our capital markets business are not shared with fund investors" [S425] CONFIRMED. So when KCS places a slice of a deal with a co-investor, the co-investor pays a low fee, but the deal can generate KCM fees that fund investors do not offset [S425] INFERRED. KCM earned $930m of capital markets transaction fees in 2025 [S425] CONFIRMED. Industry-wide, PitchBook tracked $37.5bn of co-investment fundraising in the 12 months to June 2026 [S260] CONFIRMED.

SMAs are where the biggest clients are going. KKR's 10-K warns that sovereign wealth funds and public pension funds "continue to demonstrate an increased preference for alternatives to traditional fund structures, such as separately managed accounts" [S70] CONFIRMED.

Insurance sidecars turn equity into balance sheet. The Ivy vehicles are "commitment-based structures with third-party investors" that "participate alongside Global Atlantic through reinsurance" during their investment periods, and are supervised by the Bermuda Monetary Authority [S425] CONFIRMED. At Q2 2026 KKR described "$6 billion of dry powder that we think translates to north of $60 billion of buying power on the liability side" [S440] CONFIRMED. That is roughly $1 of investor equity supporting $10 of insurance liabilities [S440] INFERRED.

WHAT YOU WILL LEARN

To classify any product by four questions (who may buy, when cash moves, how fees are charged, how you exit) and place it on the map in Figure 1. Once you can do that, a new product is a variation, not a mystery.

WHERE YOU MEET IT AT KKR

A KKR Global Wealth Solutions posting asks for "depth of expertise across alternative assets classes in both private and registered structures (interval funds, BDCs, REITs)" [S103] CONFIRMED. In London, Matt Yates is "Head of EMEA Product Development" and runs product management for K-PRIME and K-PEC [S133] CONFIRMED.

ONLY AT KKR

Most managers have drawdown funds, SMAs and an evergreen range. KKR adds two pipes few rivals combine with them: a capital markets desk whose co-investment fees sit outside the fund offset [S425], and an owned insurer whose sidecars take third-party equity [S425, S440]. Blackstone and Apollo also have in-house capital markets [S214, S220] CONFIRMED, so the honest claim is the combination on one shelf, not any single pipe INFERRED.

SAY IT IN ONE LINE

"I want to learn the whole KKR product shelf as one map, from GII V's drawdown fund to K-INFRA's monthly NAV, so I can explain why the same infrastructure asset sits in five different wrappers."

2. Drawdown mechanics: commitment, call, fee, return

Step 1: the commitment

An institution signs the Limited Partnership Agreement (LPA, the fund's contract) and **commits**, say, $100m. No cash moves yet. The commitment is a legally binding promise to pay when asked INFERRED. KKR's 10-K describes this model: commit now, and KKR calls the money over the investment period [S70] CONFIRMED. Investment periods are long: North America Fund XIV invests from April 2025 to April 2031, GII V from July 2024 to July 2030, and European Fund VI from June 2022 to June 2028 [S1] CONFIRMED. Infrastructure and real estate drawdown funds have fund terms of 10 to 13 years [S2] CONFIRMED.

Step 2: the capital call

When KKR agrees a deal, the fund sends each LP a **capital call notice** (a drawdown notice): "please wire X by date Y". X is the LP's percentage of the fund times the cash needed. If a $10bn fund needs $400m for a deal plus $25m of fees and expenses, an LP with a $100m commitment (1% of the fund) wires $4.25m (illustrative numbers). The money not yet called is the **uncalled commitment**, also called "dry powder". KKR reported $142.7bn of uncalled commitments across the firm at 30 June 2026 [S1] CONFIRMED.

KEY TERM

Uncalled commitment: commitment minus everything called so far. For an LP it is a liability (cash it must keep ready). For KKR it is future fee-paying capital. For a KCS pacing conversation, it is the number that decides how much more a client can commit this year INFERRED.

A real fund, read like an LP statement

KKR's 10-Q fund table gives the live state of European Fund VI at 30 June 2026: commitment $7,513m, uncalled $1,795m, invested $5,719m, remaining fair value $7,269m [S175] CONFIRMED. Read it the way an LP would. Called so far is about $7,513m minus $1,795m, roughly $5,718m, or 76% of commitments INFERRED. Remaining fair value of $7,269m against $5,719m invested is about 1.27x on paper, before any distributions already made INFERRED (the table does not separate realised proceeds).

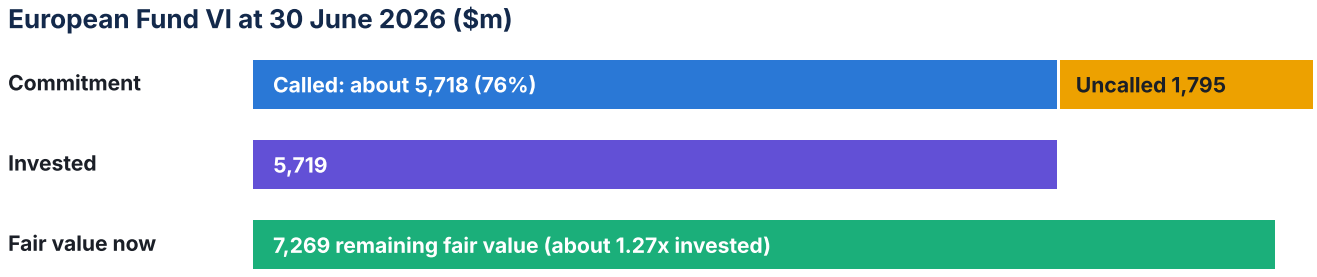

Figure 13. A live drawdown fund in three bars. A quarter of the promise is still uncalled four years into the investment period. Source: KKR 10-Q fund table [S175], as of 30 Jun 2026 CONFIRMED; derived figures INFERRED.

Step 3: the management fee and its base

The fee *base* matters as much as the rate. KKR's drawdown private equity funds charge 1.0% to 2.0% of **committed** capital during the investment period, then 0.75% to 1.50% of **invested** capital afterwards [S2] CONFIRMED. Worked example, illustrative numbers within those ranges:

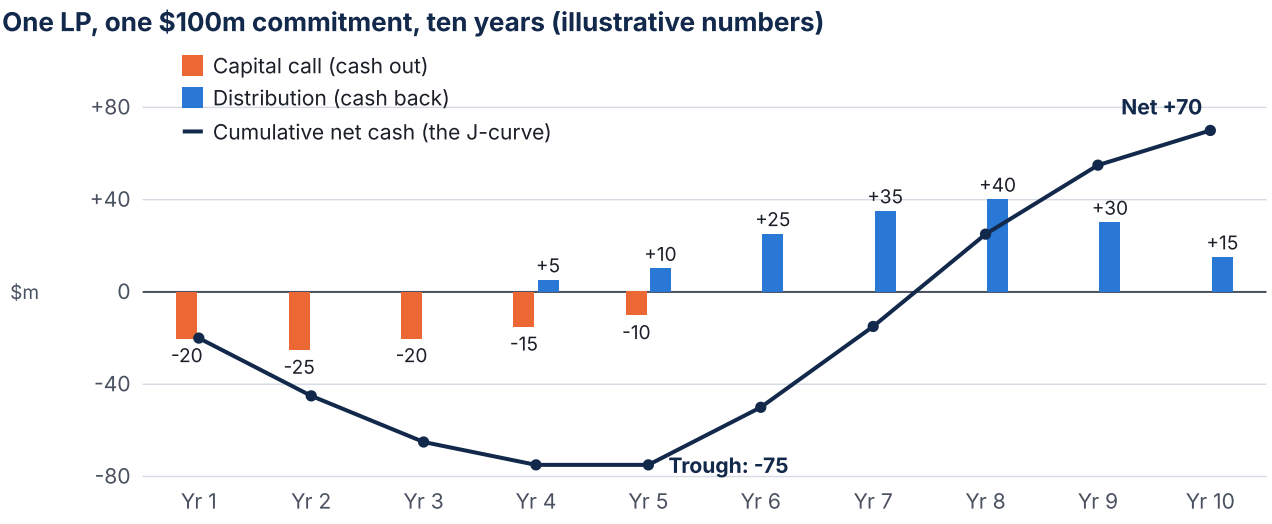

Phase	Formula	LP with $100m commitment
Investment period (6 years)	rate × commitment = 1.5% × $100m	$1.5m a year, $9.0m over 6 years, even in year 1 when only $20m is called
Year 1 effective rate	fee ÷ cash called = $1.5m ÷ $20m	7.5% of the cash actually at work
After investment period	rate × invested capital = 1.0% × $60m still invested	$0.6m a year, falling as assets are sold

This is why large LPs negotiate the base as hard as the rate, and why fees on uncalled money show up in every institutional fee discussion INFERRED. It also explains a KKR-level number: committed capital that is not yet paying fees is "shadow" revenue that switches on when the fund starts its investment period [S1, S2] INFERRED.

Fee offsets. Portfolio companies can pay transaction or monitoring fees. Under KKR's post-2014 fund agreements, 100% of such fees allocable to the fund are shared with fund investors, in practice by reducing the management fee [S425] CONFIRMED.

Recycling. Many LPAs let the GP re-use ("recycle") early proceeds, for example from a deal sold within the investment period, instead of distributing them, which lets more than 100% of commitments be invested over the fund's life INFERRED (general practice; KKR's specific recycling terms are not in the sources). KKR's portfolio construction team makes the client-side version of the point: investors should use "recycled distributions" in pacing, noting that "annual distributions have historically averaged approximately 10-30% of NAV" [S436] CONFIRMED.

Step 4: the lifetime cash profile (the J-curve)

Called 90 of 100; 10 never called. Paid back 160. Multiple on called cash 1.78x. All numbers illustrative.

Figure 14. The J-curve. The LP is out of pocket for about seven years; the deepest point (minus 75) comes in years 4 to 5, after most calls and before most exits. This is why DPI (cash actually returned) is the number LPs watch most closely today [S262] CONFIRMED. All flows illustrative, shaped to KKR's stated six-year investment periods and 10 to 13 year fund terms [S1, S2].

Step 5: the GP commitment

KKR also puts its own money in, so it shares the outcome. At 31 December 2025, KKR and its employees had about $30bn invested in or committed to KKR funds and companies: about $15bn funded from the balance sheet, $10bn more committed from it, $4bn of personal investments and $1bn more personally committed [S12] CONFIRMED. For GII IV, about $1bn came from KKR's balance sheet, affiliates and employees [S431] REPORTED; for DCIF, KKR committed at least $500m [S432] CONFIRMED. KKR says the *relative* size of GP commitments has declined as funds grew [S2] CONFIRMED. LPs test this in ILPA's due diligence questionnaire, whose section 10 is "Alignment of Interests" [S444] CONFIRMED.

2b. The distribution waterfall, worked in full

When the fund sells a company, cash flows down a "waterfall": a fixed order of who is paid first. KKR's carried interest is typically 10% to 20% of fund profits, "usually after a 6% to 8% preferred return (hurdle) with a catch-up to the general partner" [S2] CONFIRMED. The four tiers of a **European (whole-of-fund) waterfall** are:

1. **Return of capital.** 100% to LPs until they have back everything they paid in.
2. **Preferred return (hurdle).** 100% to LPs until they have earned, say, 8% a year compounding on that capital.
3. **GP catch-up.** 100% (in a "full" catch-up) to the GP until the GP has 20% of all profit paid so far.
4. **Split.** Everything after that: 80% to LPs, 20% to the GP.

The worked example (illustrative numbers)

A $1,000m fund calls all its money on day one and receives all its proceeds in year 5. Terms: 8% compounding hurdle, 20% carry, 100% catch-up. These are within KKR's stated ranges [S2] but are not any specific fund's terms.

Tier	Formula in words and symbols	Proceeds $1,800m
1 Return of capital	min(proceeds, capital) = min(1,800, 1,000)	LP 1,000.0; 800.0 left
2 Preferred return	capital × (1.08^5 minus 1) = 1,000 × 0.4693	LP 469.3; 330.7 left
3 Catch-up	GP takes C so that C = 20% × (469.3 + C), so C = 469.3 × 0.2 ÷ 0.8	GP 117.3; 213.4 left
4 Split	80% / 20% of what is left	LP 170.7; GP 42.7
Totals	Check: profit 800 × 20% = 160	**LP 1,640.0 (1.64x); GP 160.0**

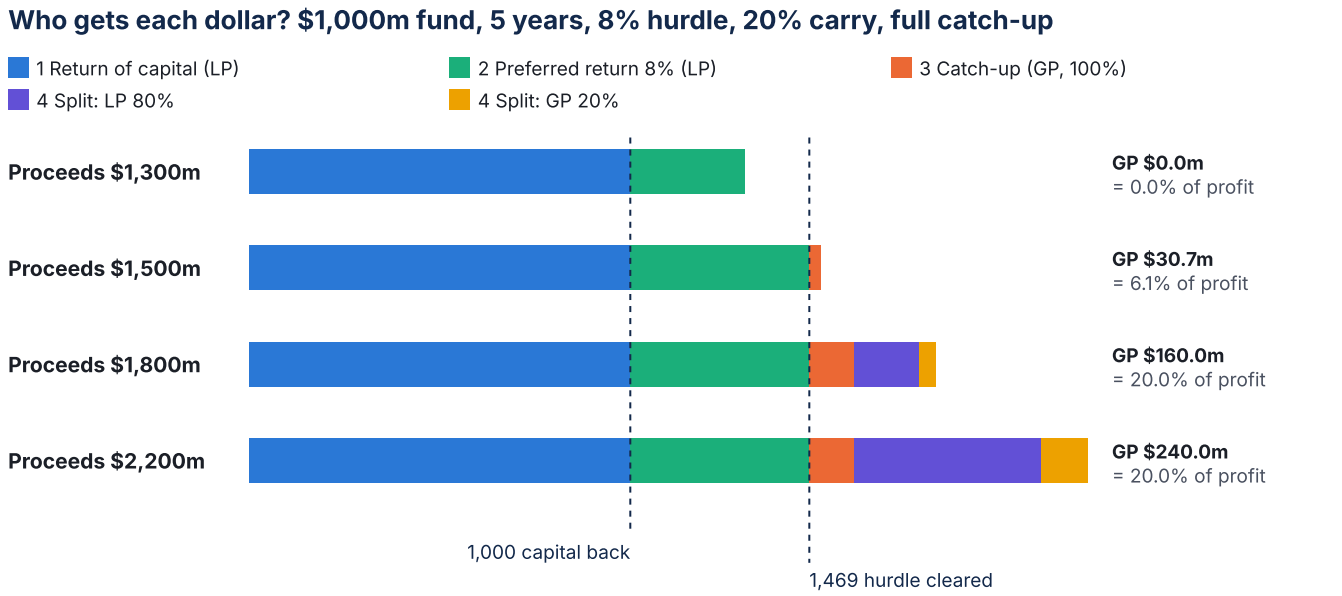

Figure 15. The European waterfall at four outcomes. Below the 1,469 line KKR earns nothing; just above it KKR takes 100% (catch-up); beyond about 1,587 every outcome splits exactly 80/20 of profit. Terms are illustrative, within KKR's stated ranges of 10% to 20% carry after a 6% to 8% hurdle [S2] CONFIRMED.

Read the chart from top to bottom. At $1,300m the hurdle is not met, so KKR earns nothing. At $1,500m KKR is inside the catch-up and has only 6.1% of profit. From the point where catch-up ends (about $1,587m) KKR has exactly 20% of profit, which is the point of a full catch-up: it makes the hurdle a *timing* protection for LPs, not a permanent discount on carry INFERRED.

The American (deal-by-deal) contrast and the clawback

An **American waterfall** runs the tiers deal by deal, so the GP can receive carry on an early winner before the fund as a whole has made money. ILPA has long favoured whole-of-fund waterfalls plus a **clawback**, the GP's duty to hand back carry it turns out not to have earned; ILPA Principles 2.0 (2011) added a Clawback appendix [S317] CONFIRMED. Worked example, illustrative numbers: the same $1,000m fund invests $500m in deal A and $500m in deal B on day one.

Same two deals, two waterfalls (illustrative, $m, 8% hurdle, 20% carry)

	American: deal by deal	European: whole fund
Year 0 500 into A, 500 into B	LPs pay in 1,000	LPs pay in 1,000
Year 2: A sells for 1,000 (profit 500)	LP 900 = 500 capital + 83 hurdle + 317 split. **GP 100** paid now	LP 1,000: all capital back first **GP 0** (fund not yet in profit)
Year 5: B sells for 250 (loss of 250)	LP 250. GP 0 (deal B lost money)	LP 200 = 166 hurdle + 34 split **GP 50** = 42 catch-up + 8 split
Totals before clawback	**LP 1,150 | GP 100** GP has 40% of fund profit	**LP 1,200 | GP 50** GP has 20% of fund profit
Clawback at fund end fund profit = 250	GP is entitled to 20% × 250 = 50, so it hands back 50. **After clawback: LP 1,200 | GP 50**	Nothing to hand back: carry was never paid early

Figure 16. Deal-by-deal pays the GP earlier; the clawback squares it at the end. Both columns end at LP 1,200 and GP 50. The difference is who holds 50 of cash for three years, and whether the GP can still pay it back. Simplifications: unpaid hurdle does not compound after year 2; real clawbacks are often limited to after-tax carry. All numbers illustrative INFERRED.

This happened at KKR. In Q4 2025 KKR repaid $344m of carried interest on Asian Fund II (a 2013 vintage, $5.8bn fund); net of amounts recouped from current and former employees, the clawback cut net realised performance income by $207m [S2, S4] CONFIRMED. CalPERS reports a 1.0% net IRR and 1.0x multiple on its $350m commitment to that fund [S117] CONFIRMED. A clawback is not theory; it is a line in KKR's 2025 results INFERRED.

WHAT YOU WILL LEARN

To trace a drawdown fund's cash from commitment to clawback: fee base by phase, the four waterfall tiers with the catch-up formula C = H × carry ÷ (1 minus carry), and why deal-by-deal timing changes value even when final splits match.

WHERE YOU MEET IT AT KKR

Every flagship raise: GII V ($19.2bn, with investors from "pension plans, sovereign wealth funds, insurance companies, asset managers, private wealth platforms, and family offices") [S430] CONFIRMED. Clients re-up on the evidence of waterfalls like Asian Fund II's [S2, S117].

ONLY AT KKR

Any GP can teach the textbook waterfall. KKR's filings let you check it against live numbers: the European Fund VI fund table [S175], a real $344m clawback [S2], and LP-reported returns from CalPERS [S117]. Learning from a firm that has just paid a clawback teaches why LPs insist on whole-of-fund terms INFERRED.

SAY IT IN ONE LINE

"I want to be able to walk a pension fund through a drawdown fund's life, from the capital call to the catch-up to KKR's own Asian Fund II clawback, in numbers rather than adjectives."

3. Evergreen mechanics: how K-PEC actually works

A drawdown fund needs a $10m-plus cheque, a ten-year lock and an operations team to answer capital calls. Individuals cannot do that. An **evergreen** fund solves it: no end date, money goes in once, fully invested, and a limited amount can come out each quarter INFERRED. K-PEC, KKR Private Equity Conglomerate LLC, is the flagship. It is a Delaware LLC formed on 6 December 2022 that began operations on 1 August 2023 [S420] CONFIRMED.

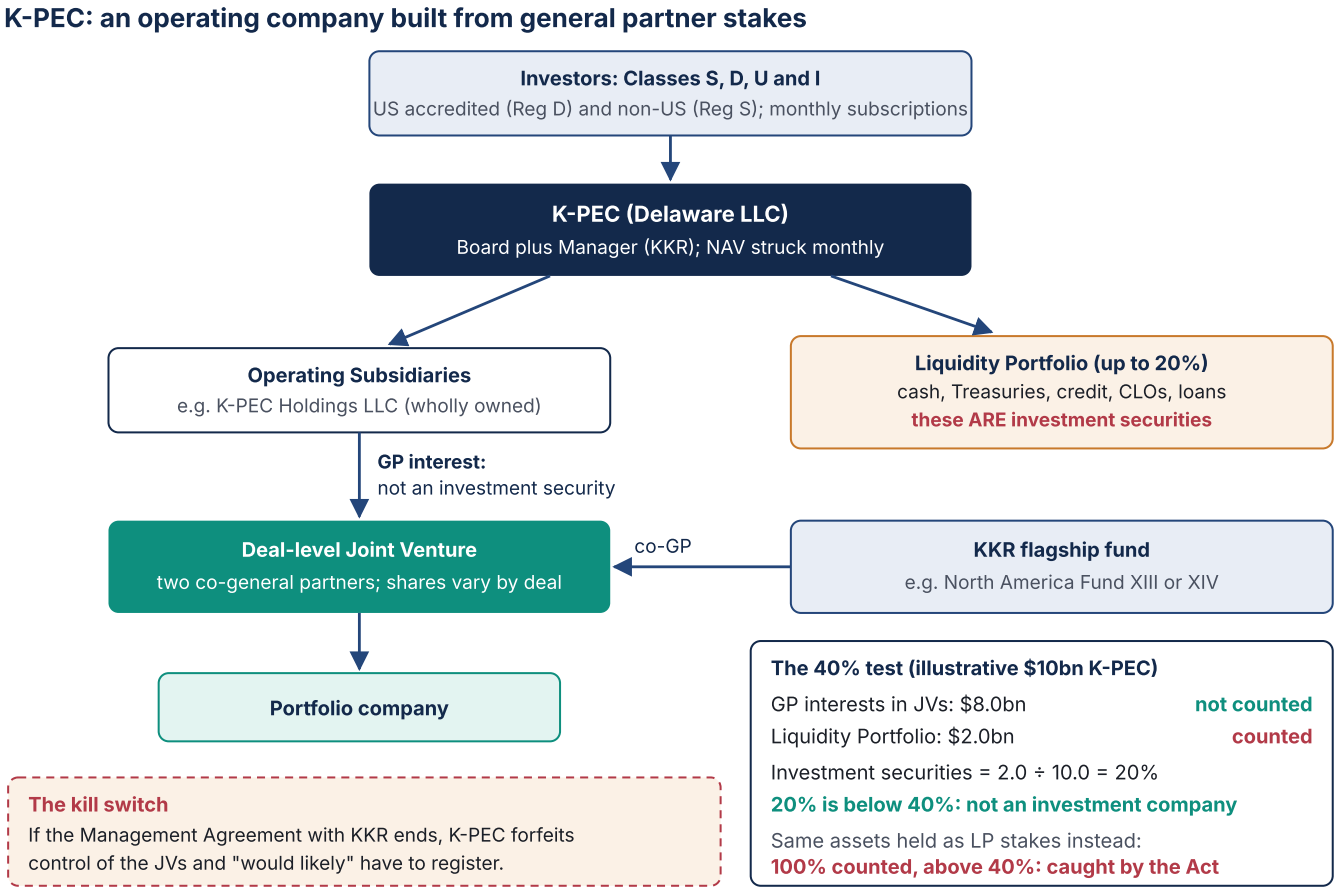

Figure 17. The conglomerate structure. The whole design exists so that K-PEC's main asset is a general partner interest, which is not an investment security. Target mix about 80% portfolio companies and up to 20% Liquidity Portfolio. Source: K-PEC 10-K FY2025 [S420] CONFIRMED, filed 26 Mar 2026. The $10bn split is illustrative; K-PEC's actual NAV was $9.93bn at 31 Dec 2025.

The legal puzzle: why K-PEC is not an "investment company"

The US Investment Company Act of 1940 regulates funds that hold securities. If K-PEC were caught by it, the Act would restrict its leverage, its dealings with KKR affiliates and its fee structure [S420] CONFIRMED. The Act has two tests, and K-PEC's 10-K explains how it passes each [S420] CONFIRMED:

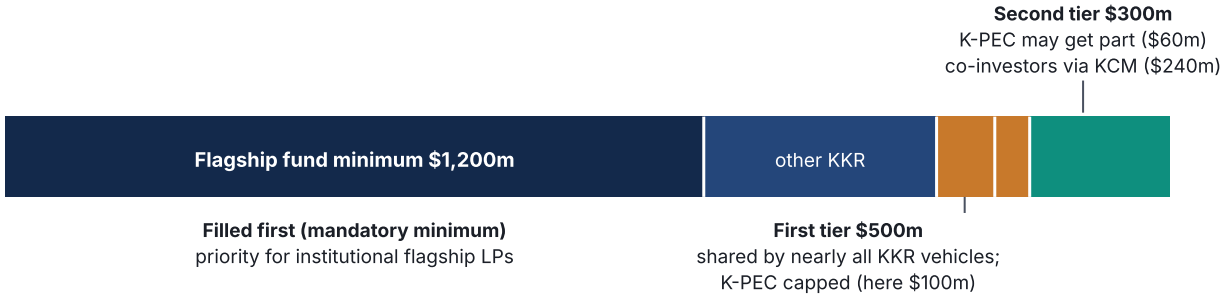

- **Test 1, "primarily engaged".** A company is an investment company if it is "engaged primarily ... in the business of investing, reinvesting or trading in securities". K-PEC says that "through its Joint Ventures, the Company is primarily engaged in the businesses of its Joint Ventures, namely, the business of owning and controlling portfolio companies."
- **Test 2, the "40% test".** A company is an investment company if "investment securities" exceed 40% of its total assets (excluding government securities and cash). K-PEC's main assets are wholly owned Operating Subsidiaries (for example K-PEC Holdings LLC). Those subsidiaries hold *general partner* interests in each deal-level Joint Venture, and "such general partner interests are not 'investment securities'." The only investment securities sit in the liquidity sleeve, which K-PEC keeps below 40%.

In plain English: a limited partner owns a passive stake (a security); a general partner runs the partnership (an operating business). By making K-PEC a **co-general partner** of each deal, alongside the KKR flagship fund, KKR turned a fund into an operating company, an old-style conglomerate [S420] INFERRED. The structure has teeth: if the Management Agreement with KKR ends, K-PEC must "forfeit our controlling interest in any Joint Venture, which would likely require us to register as an investment company" [S420] CONFIRMED.

Allocation: who gets the deal first

K-PEC co-invests with KKR's flagship private equity funds, but it is at the back of the queue. Its 10-K says: "the Company does not benefit from any mandatory minimum purchase rights or minimum purchase thresholds. As such the Company will not benefit from any priority acquisition allocation." Flagship funds have a mandatory minimum that is filled first. K-PEC is then offered a "first tier" alongside nearly all KKR vehicles "up to a capped amount", and may then be offered part of any "second tier" [S420] CONFIRMED. The institutional flagship LP gets first call; the wealth vehicle fills in behind INFERRED.

Splitting a $2,000m equity cheque (illustrative numbers)

K-PEC total here: $100m + $60m = $160m, 8% of the deal. Tier order: K-PEC 10-K [S420]. Amounts illustrative.

Figure 18. Flagships first, wealth vehicle second. The orange slivers are K-PEC. The tier order is K-PEC's disclosed policy [S420] CONFIRMED; sizes are invented to show the mechanism. Capital Group's U.S. Equity+ also buys co-investments alongside K-PEC [S427] CONFIRMED, so it competes for the teal slice INFERRED.

K-PEC also bought stakes in two companies in 2025 ($165.5m) "from affiliated KKR-sponsored investment vehicles alongside the relevant flagship private equity vehicle as part of a sale and purchase between successive fund vintages" [S420] CONFIRMED. That is the kind of related-party transfer ILPA's due diligence questionnaire probes in its section on GP-led secondaries [S444] INFERRED.

NAV: how the price is struck every month

NAV (net asset value) is the value of everything the fund owns minus what it owes, divided by shares. For K-PEC, the Manager "determines the NAV of our Shares monthly" and an Administrator computes the per-share figure [S420] CONFIRMED. All portfolio companies are **Level III**, meaning there is no market price, so value comes from models and comparables; K-PEC discloses that a 10% fall in their fair value would cut net assets by $898.6m [S420] CONFIRMED. The price investors deal at is the **Transactional NAV**, which differs from accounting (GAAP) NAV mainly because GAAP books the lifetime cost of distribution fees up front: $9.932bn Transactional versus $9.495bn GAAP at 31 December 2025 [S420] CONFIRMED, a gap of $437m INFERRED.

Subscribing: you buy dollars, not shares

K-PEC runs "a continuous private offering of our Shares on a monthly basis" [S420] CONFIRMED. An investor subscribes a dollar amount and only learns the share count afterwards: a subscription accepted on 1 September is priced at the 31 August Transactional NAV [S420] CONFIRMED. Worked example using the Class I NAV per share at 31 December 2025, $33.80 [S420] CONFIRMED:

Step	Class I (no load)	Class S (illustrative full load)
Cheque	$100,000	$100,000
Upfront sales load and dealer-manager fee	none	up to 3.00% + 0.50%, capped at 3.50% [S420]: $3,500
Invested at $33.80	2,958.6 shares	$96,500 ÷ 33.80 = 2,855.0 shares
Ongoing distribution and servicing fee	none	0.85% of NAV a year (0.60% + 0.25%), paid to KKR Capital Markets as dealer-manager [S420]

How the load is applied in practice depends on the selling agreement; the table shows the maximum. The share classes map to sales channels: Class S through brokers who take a commission, Class D through fee-based advisers, Class I through institutional or advisory accounts INFERRED (the 10-K does not define the channel per class).

3b. The evergreen fee stack and the repurchase plan, worked

The two fees

Management fee: 1.25% a year of month-end NAV for Classes S, D, U and I, paid monthly. The early "R" classes pay 1.00% for 60 months from 1 August 2023, then 1.25% [S420] CONFIRMED. **Performance Participation Allocation** (the evergreen version of carry): "15.0% of the Total Return attributable to Investor Shares subject to a 5.0% annual Hurdle Amount and a High Water Mark, with a 100% Catch-Up", measured and paid annually and accrued monthly [S420] CONFIRMED.

> **KEY TERMS**
>
> **Hurdle:** the return investors keep before KKR shares in any gain (here 5% a year). **Catch-up:** once over the hurdle, KKR takes 100% of the next slice until it has 15% of the whole return. **High-water mark:** KKR earns nothing on gains that only recover earlier losses (the 10-K's "Loss Carryforward Amount") [S420] CONFIRMED (plain-English gloss INFERRED).

One year, worked (illustrative numbers)

An investor holds $1,000,000 of Class I at the start of the year. The portfolio gains $200,000 before fees. Average NAV during the year is about $1,100,000.

Step	Formula	Amount
Management fee	1.25% × average NAV ≈ 1.25% × 1,100,000	$13,750
Total Return before performance allocation	200,000 minus 13,750	$186,250 (18.6%)
Hurdle (investor keeps)	5% × 1,000,000	$50,000
Catch-up (100% to KKR)	C = 15% × (50,000 + C), so C = 7,500 ÷ 0.85	$8,824
Split of the rest, 85 / 15	186,250 minus 58,824 = 127,426; KKR 15%	KKR $19,114; investor $108,312
KKR's performance allocation	Check: 15% × 186,250	**$27,938**

Step	Formula	Amount
Investor keeps	186,250 minus 27,938	**$158,312 (15.8%)**

For comparison, K-PEC's actual 2025 total return was 16.81% for Class I and 14.80% for Class D; inception-to-date annualised return for Class I was 12.94% since September 2023 [S420] CONFIRMED. Now the two edge cases. If the Total Return is 4%, it is below the hurdle and KKR takes nothing. If it is 5.5% ($55,000), the investor keeps the first $50,000 and KKR takes all $5,000 above it, because that slice is inside the catch-up zone INFERRED. In a year after a loss, say minus $100,000, the next $100,000 of gain is a recovery under the high-water mark and attracts no performance allocation [S420] (numbers illustrative).

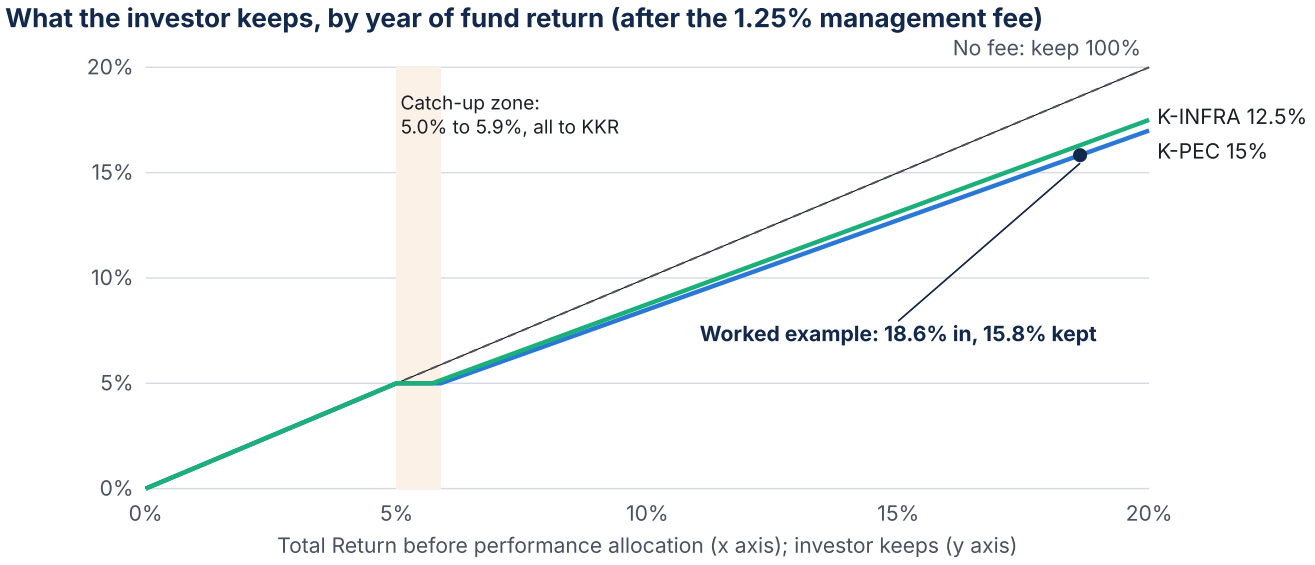

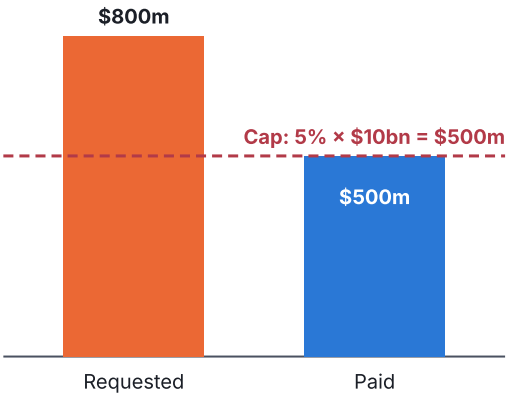

Figure 19. The evergreen fee curve. Below 5% the investor keeps everything; between 5.0% and about 5.9% (K-PEC) or 5.7% (K-INFRA) KKR takes every extra dollar; above that the investor keeps 85% (K-PEC) or 87.5% (K-INFRA). Terms: K-PEC 10-K [S420], K-INFRA 10-K [S421] CONFIRMED. Curve and worked point are the author's arithmetic, before the high-water mark is applied INFERRED.

The repurchase plan: the exit door and its size

K-PEC lets investors sell shares back quarterly, but the door is narrow [S420] CONFIRMED:

- **The cap (gate):** total repurchases of "no more than 5.0% of our aggregate NAV ... per calendar quarter". The Board can repurchase less, or nothing.
- **Early Repurchase Fee:** 5.0% of NAV on shares held under 24 months, kept by the fund for the remaining holders; it may be waived on death, disability or divorce.
- **Overflow:** if requests exceed 5%, the Board may run a tender for "Excess Shares" "at or about a 10% discount to the most recent NAV". This is unusual: a paid exit valve above the gate INFERRED.
- **Minimum balance** after a partial repurchase: $1,000.

A crowded quarter, worked (illustrative $10bn fund)

Pro-rata = 500 ÷ 800 = 62.5% of each request

Investor A, shares held 18 months	
Asks to sell	$1,000,000
Accepted: × 62.5%	$625,000
Less 5% early repurchase fee	minus $31,250
Cash received	**$593,750**
Not accepted this quarter	$375,000
If the Board runs an overflow tender at about 10% below NAV: 375,000 × 0.9	$337,500

Fee and discount stay in the fund, which is what protects investors who do not ask to leave.

Live check: K-FIT, Q1 2026
6.3% of shares asked to leave; cap 5%
5.0 ÷ 6.3 = 79%, reported as "about 80%" [S338]

Figure 20. Gate, pro-rata, fee, overflow. Terms from the K-PEC 10-K [S420] CONFIRMED; the fund size and requests are illustrative. K-FIT figures from Bloomberg Law, 6 Jul 2026 [S338] REPORTED; the 79% is the author's check INFERRED. Note K-FIT's cap is on shares outstanding, K-PEC's on NAV.

In practice K-PEC's door has been barely used so far: 2025 repurchases were about $26.4m net of early repurchase fees against $9.9bn of NAV [S420] CONFIRMED, roughly 0.3% for the year INFERRED. The fund also has a third-party revolving credit facility upsized to $1.0bn in March 2026, with recourse borrowing capped at 30% of total assets [S420] CONFIRMED; a credit line is a further buffer between a redemption request and a forced sale INFERRED.

3c. The rest of the K-Series: three more legal answers

K-INFRA uses the same conglomerate design for infrastructure. It owns "Infrastructure Assets" through Joint Ventures with Global Infrastructure Investors II to V, Asia Pacific Infrastructure Investors I to III, DCIF and the Global Climate Fund. Target mix about 85% infrastructure (no more than 15% non-OECD) and 15% liquidity. Fees: 1.25% of NAV plus 12.5% of Total Return over a 5% hurdle, with a high-water mark and 100% catch-up. Repurchases quarterly, capped at 5% of NAV, 5% fee within 24 months. Distributions are quarterly, and the 10-K warns they "may and are expected to exceed our earnings and cash flow from operating activities" [S421] CONFIRMED. K-INFRA can also buy "Warehoused Assets" that KKR or a bank bought first, "at cost, or cost plus an interest rate or carrying cost" [S421] CONFIRMED: the same buy-then-syndicate engine KCM runs for institutional co-investors INFERRED.

K-FIT takes the opposite legal route. It *is* inside the 1940 Act framework, as "an externally managed, non-diversified, closed-end management investment company that has elected to be regulated as a business development company", and is a RIC for tax, paying no corporate tax if it distributes its income [S422] CONFIRMED. Its adviser, FS/KKR Advisor, is jointly operated by KKR Credit and an affiliate of Future Standard (formerly FS Investments) [S422] CONFIRMED. Rules: at least 60% of assets in first lien senior secured loans to US middle-market companies; up to 30% in asset-based finance and subordinated loans; quarterly tender for "up to 5% of our Common Shares outstanding"; a 2% Early Repurchase Deduction within 12 months [S422] CONFIRMED. Its fee is income-based, worked below.

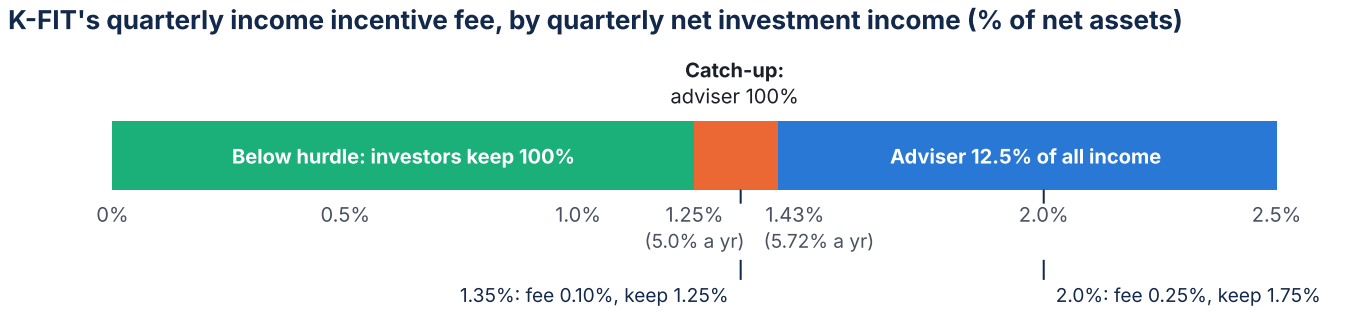

Figure 21. A BDC's fee is charged on income, quarter by quarter. Hurdle 1.25% a quarter (5.0% annualised), 100% catch-up to 1.43% (5.72%), then 12.5% of all income; plus a separate 12.5% fee on cumulative realised capital gains net of losses, and a 1.25% base fee. Source: K-FIT 10-K FY2025 [S422] CONFIRMED; worked points are illustrative INFERRED.

Why the catch-up ends at 1.43%: the adviser has caught up when its fee equals 12.5% of all income, so (I minus 1.25) = 0.125 × I, which gives I = 1.25 ÷ 0.875 = 1.4286% INFERRED. K-FIT's leverage limit is the BDC rule of 150% asset coverage, meaning assets must be at least 1.5 times debt, which allows debt of up to roughly 2x equity [S422] CONFIRMED ("2x" is INFERRED). At 31 December 2025 it had total assets of $2.75bn and shareholders' equity of $1.54bn [S422] CONFIRMED, so liabilities of about $1.21bn, or about 0.8x equity, well inside the limit INFERRED.

KREST is a third answer: a *registered* closed-end fund under the 1940 Act (the N-2 cover ticks "Registered Closed-End Fund", not "Interval Fund"). It invests at least 80% of net assets in real estate. Minimum initial investment is $10,000 for Classes S, D and U and $1,000,000 for Class I, with $500 subsequent; it is the only K-Series vehicle with a published minimum in the sources. Fees: 1.25% of average daily net assets plus 12.5% of quarterly "Portfolio Operating Income", with no incentive fee on capital gains. It "intends, but is not obligated, to conduct quarterly tender offers for up to 5.0% of the aggregate NAV", and admits repurchases "have in the past been and may in the future be oversubscribed" [S424] CONFIRMED.

	K-PEC	K-INFRA	K-FIT	KREST
Legal form	Delaware LLC "conglomerate", outside 1940 Act	Same design	BDC under the 1940 Act framework; RIC	Registered closed-end fund (1940 Act)
Management fee	1.25% of NAV	1.25% of NAV	1.25% of net assets	1.25% of net assets
Performance fee	15% over 5% hurdle, HWM, 100% catch-up	12.5% over 5% hurdle, HWM, 100% catch-up	12.5% of income over 5% (catch-up to 5.72%) + 12.5% of realised gains	12.5% of operating income; none on gains
Exit door	Quarterly, 5% of NAV; 5% fee < 24 months; overflow tender about 10% below NAV	Quarterly, 5% of NAV; 5% fee < 24 months	Quarterly tender, 5% of shares; 2% < 12 months	Quarterly tender up to 5% of NAV, discretionary
Fund-level leverage cap	30% recourse	30% recourse	150% asset coverage	33 1/3% borrowing
Size	$9.93bn NAV (Dec 2025)	$6.47bn NAV (Dec 2025)	$1.54bn equity (Dec 2025)	about $1.53bn estimated average net assets
2025 return	Class I 16.81%	Class I 10.13%	Not in sources	Not in sources
Minimum	Not in filings	Not in filings	Not in sources	$10,000 (S, D, U); $1m (I)

Sources: S420, S421, S422, S424 CONFIRMED. K-FITS, the "Select" sibling, had $1.006bn of shareholders' equity at 30 June 2026 [S423] CONFIRMED. K-Series AUM in total was $42bn at 30 June 2026 [S330] CONFIRMED.

WHAT YOU WILL LEARN

To explain the 40% test in one breath, to price a monthly subscription, to compute a year's performance allocation with hurdle, catch-up and high-water mark, and to work a pro-rated quarter with early repurchase fees and an overflow tender.

WHERE YOU MEET IT AT KKR

London product management for K-PRIME and K-PEC [S133] CONFIRMED; the UK launch of KKR's evergreen private equity strategy with Quilter Cheviot from January 2026 [S177] CONFIRMED; and KKR's earnings, where K-Series private equity performance fees (about $160m in Q2 2026) now sit in Fee Related Earnings [S332] CONFIRMED.

ONLY AT KKR

Evergreen private equity is not unique to KKR: Blackstone's BXPE raised $2.4bn in Q2 2026 alone [S213] CONFIRMED. What is specific is the co-general-partner Joint Venture route around the 40% test, explained in K-PEC's own 10-K [S420], and a London team that manages both the US LLC and its Luxembourg twin [S133]. Learning both at once shows how one strategy is rebuilt for two legal systems INFERRED.

SAY IT IN ONE LINE

"I want to understand how K-PEC turns a buyout fund into an operating company through co-GP joint ventures, and how its 5% quarterly door, hurdle and catch-up actually feel to the adviser whose client owns it."

4. Interval funds: the public-private blend

An **interval fund** is a US registered fund that continuously sells shares and, under SEC Rule 23c-3, adopts a "fundamental policy" (changeable only by a shareholder vote) to make **quarterly repurchase offers** for a set share of its stock. Capital Group KKR Core Plus+ commits to offers of "between 5% and 25% of its outstanding shares at net asset value" and "currently expects to offer to repurchase 10%"; oversubscribed offers are pro-rated [S426] CONFIRMED. The key contrast: an interval fund *must* make the offer every quarter; a K-Series board *may* repurchase less or nothing [S420, S426] INFERRED.

Why blend public and private?

A fund that promises 10% liquidity a quarter cannot hold only assets that take months to sell. So the blend is the liquidity engine. Core Plus+ allocates "approximately 60% of its net assets to public debt assets (to be managed by the investment adviser) and approximately 40% to private credit assets (to be managed by the sub-adviser)"; the adviser is Capital Research and Management Company and the sub-adviser KKR Credit Advisors (US) LLC, paid "solely by the investment adviser out of the investment adviser's fees" [S426] CONFIRMED. The minimum is "normally $1,000 per account", the management fee 0.61%, and total expenses after a 0.30% waiver range from 0.84% (F-3, R-6) to 1.54% (A-2) [S426] CONFIRMED.

A simple stress test shows why the private share stops at 40% (illustrative numbers) INFERRED:

Vehicle (stylised)	Liquid sleeve	Maximum quarterly exit	Quarters of maximum exits the liquid sleeve covers with no new money
Core Plus+ style interval fund, $1bn	60% = $600m	10% = $100m (expected offer)	6
U.S. Equity+ style interval fund, $1bn	60% = $600m	5% = $50m	12
K-PEC style evergreen, $1bn	up to 20% = $200m	5% = $50m (board may pay less)	4

The arithmetic ignores rebalancing, inflows and the credit line, but it shows the trade-off clearly: firmer liquidity costs private exposure INFERRED. Capital Group's own warehouse makes the launch work: a financing provider pre-bought private credit; once the fund reaches $150m of net assets it must buy up to $2m of those assets, rising to $8m at $400m and up to 2% of net assets at $500m [S426] CONFIRMED. That is how a new fund starts with a seasoned private portfolio INFERRED.

U.S. Equity+: a fund that owns K-PEC

Capital Group KKR U.S. Equity+ is also an interval fund, with "approximately 60% of its net assets in publicly traded equity securities and approximately 40% of its net assets in private equity securities". The 40% is split: "Normally, the fund expects to invest approximately 30% of its net assets in K-PEC and approximately 10% of its net assets in co-investments" alongside K-PEC or other KKR private equity vehicles. It buys K-PEC units monthly like any investor, and its K-PEC stake can only be redeemed through K-PEC's 5%-per-quarter plan. It makes quarterly offers "for 5% of its outstanding shares under ordinary circumstances", and charges a fund-level management fee of 0.350% [S427] CONFIRMED. A third-party analysis says it opened on 2 March 2026 [S364] REPORTED (low-authority source).

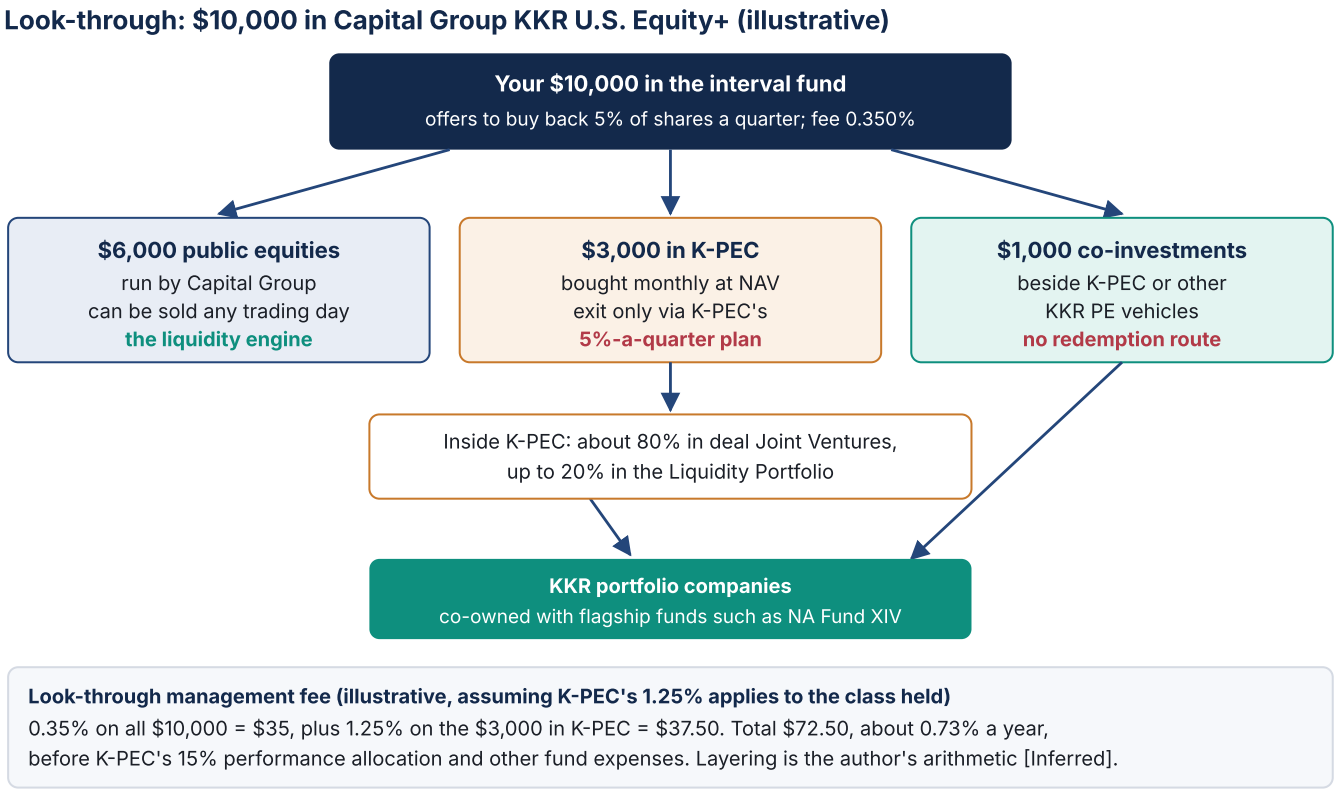

Figure 22. A retail fund built from KKR parts. Two liquidity promises are stacked: the interval fund's 5% quarterly offer sits on top of K-PEC's own 5% quarterly cap. The 60/30/10 split and the 0.350% fee are from the U.S. Equity+ N-2/A, 19 Feb 2026 [S427] CONFIRMED; K-PEC's internals from [S420]; dollar figures and fee layering illustrative INFERRED.

WHAT YOU WILL LEARN

How Rule 23c-3 turns liquidity into a legal promise, how to size the liquid sleeve that backs it, and how to look through a fund-of-KKR product to the underlying deals, fees and exit doors.

WHERE YOU MEET IT AT KKR

The Capital Group partnership: Nuttall said it extends KKR's "reach and our distribution relationships", adding that Capital Group has "relationships with 220,000 of the 300,000 advisers in the United States" [S362] REPORTED. KKR's 10-K notes the Capital Group equity product "invests in a K-Series private equity vehicle" [S70] CONFIRMED.

ONLY AT KKR

Other alternatives firms partner with traditional managers, so the concept is not unique; the Capital Group pairing is KKR's alone [S210, S201] CONFIRMED (uniqueness of the pairing INFERRED). Seeing K-PEC used as an ingredient inside someone else's interval fund is a rare view of the same product from both ends INFERRED.

SAY IT IN ONE LINE

"I want to learn why Capital Group KKR U.S. Equity+ can only put 40% into private equity, and what it means that a third of that 40% is redeemable only through K-PEC's own quarterly door."

5. Liquidity mismatch and the toolkit

The core problem of every semi-liquid fund in one sentence: **the assets take years to sell, but the investors can ask for money every quarter**. If everyone asks at once, the fund must either sell assets cheaply (hurting those who stay), pay some investors and not others, or say no. Each tool below is a rule decided in advance about which of those happens INFERRED.

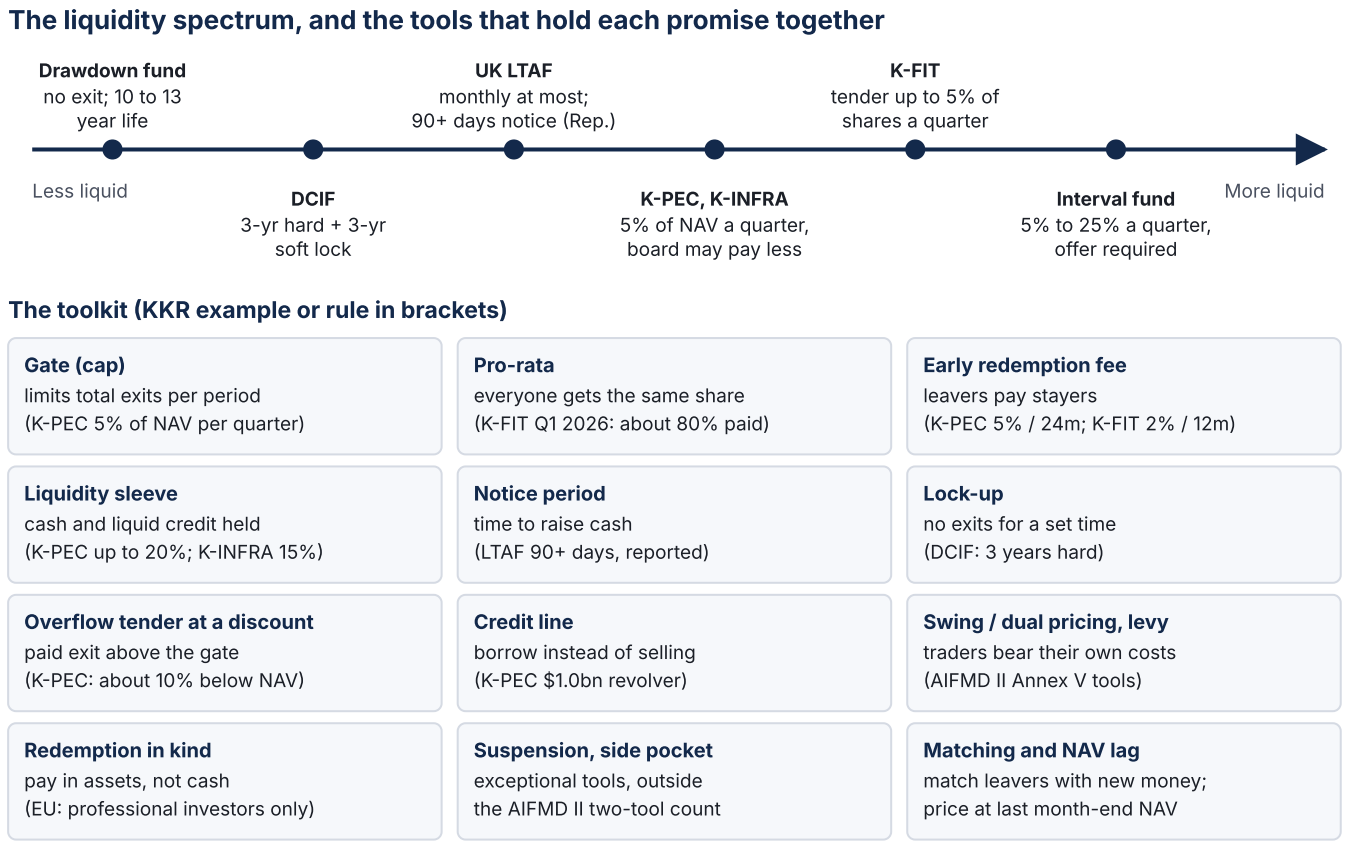

Figure 23. Each step to the right needs more tools. Positions on the line are qualitative. Terms: K-PEC [S420], K-INFRA [S421], K-FIT [S422] and its Q1 2026 queue [S338] REPORTED, interval funds [S426], DCIF [S432], LTAF [S451] REPORTED, AIFMD II tools [S449, S450], ELTIF matching [S447]. Placement and grouping are the author's INFERRED.

The tools one by one

- **Gate.** A cap on total exits per period. Without it, the first investors to leave get cash from the liquid sleeve and those who stay end up owning only illiquid assets INFERRED.
- **Pro-rata.** If requests exceed the gate, everyone gets the same fraction. In the crowded quarter worked above, 62.5%.
- **Redemption fee.** Charged to leavers and kept in the fund. It compensates stayers for the cost of raising cash and discourages short-term money [S420] INFERRED.
- **Liquidity sleeve.** Cash and tradable credit held to meet exits; it drags returns in good times, which is why it is capped at about 15 to 20% in the K-Series [S420, S421] CONFIRMED.
- **NAV lag.** K-PEC strikes NAV monthly from Level III models and deals at the prior month-end price [S420]. If markets fall sharply mid-month, a leaver may exit at a stale, higher price. Funds that trade on NAV are exactly where operational due diligence focuses: Cambridge Associates stresses open-end and evergreen funds "where transactions are based on the fund's NAV" and that "Fee calculations rely on accurate valuations" [S458] CONFIRMED.

The live example: K-FIT's queue in Q1 2026

In Q1 2026 investors in K-FIT "tried to redeem 6.3% of shares in the prior quarter, causing the fund to prorate requests at about 80%"; in Q2 requests fell to 1.65% and were paid in full [S338] REPORTED. The arithmetic checks: 5% cap ÷ 6.3% requested = 79% INFERRED. It was part of an industry wave: private credit redemption requests topped $20bn in Q1 2026 [S337] REPORTED. Apollo Debt Solutions received

requests of 11.2% and honoured 5%, Blue Owl enforced a 5% cap, and Blackstone's BCRED paid 100% of record requests of 7.9% of NAV [S278] REPORTED. Partners Group said requests at its Delaware private equity evergreen fund would be "slightly above the 5%" limit [S339] REPORTED.

Two lessons for a client team. First, a gate working as designed is not a default: it is the contract doing what it said. Second, the reputational cost lands on whoever set expectations at the point of sale INFERRED. KCS juniors are the people who draft the investor letters and adviser FAQs when a queue forms INFERRED.

The European and UK rulebooks

AIFMD II (EU). Open-ended alternative investment funds must select "at least two appropriate LMTs" (liquidity management tools) from points 2 to 8 of Annex V: redemption gates, extension of notice periods, redemption fees, swing pricing, dual pricing, anti-dilution levies and redemption in kind. Suspension and side pockets sit outside the count as exceptional tools. "This cannot be done by selecting only dual and swing pricing", and redemptions in kind are for professional investors only [S449] CONFIRMED [S450] REPORTED. The Level 2 rules (Commission Delegated Regulation (EU) 2026/465) apply from 16 April 2026; funds constituted before that date are "deemed to comply with the RTS until 16 April 2027" [S449] CONFIRMED. ESMA recommends, but does not require, "at least one quantitative LMT and one Anti-Dilution Tool" [S448] CONFIRMED. Worked example (illustrative): gate plus notice period is a valid pair; swing pricing plus dual pricing is not.

ELTIF 2.0 (EU). The redemption rules (Delegated Regulation (EU) 2024/2759, in force 26 October 2024) set no fixed minimum holding period; redemptions more often than quarterly must be justified; a notice period under 3 months must be explained to the regulator; and matching exiting with incoming investors is allowed under a policy [S447] CONFIRMED. The maximum redemption is sized by one of two methods [S447] CONFIRMED:

Method	Rule from the RTS example	Worked: €500m fund with €100m of liquid assets (illustrative)
Annex I: frequency + notice period	Quarterly with 3 months' notice: up to 33.3% of liquid assets	0.333 × €100m = €33.3m a quarter, 6.7% of NAV
Annex II: frequency + minimum liquid assets	Quarterly with at least 20% liquid assets: up to 50%	0.50 × €100m = €50m a quarter, 10% of NAV

The liquid-asset base also includes cash flows forecast prudently over 12 months [S447] CONFIRMED. The ELTIF market reached about €34bn at end-2025 with 189 new ELTIFs since 2024 [S302] REPORTED.

SOURCE UNCERTAIN

UK LTAF. Secondary sources describe the Long-Term Asset Fund as open-ended with dealing no more often than monthly and a notice period of at least 90 days [S451] REPORTED; the FCA rulebook (COLL 15) itself was not read. The LTAF has been open to retail investors as a Restricted Mass Market Investment since 3 July 2023 [S305] CONFIRMED. An FCA speech in May 2026 put LTAF assets at £7.5bn, up from £5bn in under a year [S452] REPORTED. No KKR ELTIF or LTAF was found in the sources; EQT launched an evergreen infrastructure ELTIF in April 2026 [S464] REPORTED.

WHAT YOU WILL LEARN

To diagnose a liquidity mismatch, choose and size the tools (gate, pro-rata, fee, sleeve, notice, matching), and map them to the rulebook in each market: SEC Rule 23c-3, AIFMD II Annex V, the ELTIF RTS and the LTAF.

WHERE YOU MEET IT AT KKR

K-FIT's Q1 2026 pro-rating [S338]; K-PRIME in Luxembourg, which the sources describe as an open-ended Part II UCI [S429] REPORTED, so its toolkit sits under European rules INFERRED; and the FCA's Consumer Duty, under which a UK distributor of a KKR fund needs target market and fair value information from KKR [S452] REPORTED (link to KKR INFERRED).

ONLY AT KKR

KKR runs the full range of doors on one shelf: mandatory quarterly offers (Capital Group interval funds), discretionary 5% plans with an overflow tender (K-PEC), a BDC tender (K-FIT), and multi-year institutional lock-ups (DCIF) [S420, S422, S426, S432]. A London seat also adds the EU and UK rulebooks. Few places let a junior compare all of these from the same desk INFERRED.

SAY IT IN ONE LINE

"After K-FIT paid about 80% of requests in Q1 2026 and 100% in Q2, I want to learn how a client team explains a gate before the queue forms, not after."

6. The same strategy, three wrappers: KKR infrastructure

Put everything together on one asset class. KKR manages about $120bn of infrastructure equity, "up from just $13 billion in 2019", with about 160 dedicated infrastructure executives [S430] CONFIRMED. The same team sells that exposure through three very different wrappers. KKR itself counts them together: GII V contributes to "approximately $45 billion raised across KKR's latest infrastructure vehicle vintages globally", a figure that includes infrastructure perpetual vehicles such as K-INFRA [S430] CONFIRMED.

The three wrappers, row by row

The full-page figure below sets them side by side; here is how to read it.

Who each serves. GII V is for institutions that can commit for a decade and manage capital calls; its investor list includes "private wealth platforms" too, which typically enter through feeders [S430] CONFIRMED (feeder route INFERRED). DCIF is for institutions that want steady, yield-like infrastructure with "low volatility and strong downside protection" and are willing to accept a three-year hard lock [S432] CONFIRMED. K-INFRA is for individuals who need a monthly price and some quarterly liquidity [S421] CONFIRMED.

Why the fees differ. The institutional open-ended core fund charges 0.6% to 0.8% with carry only on cash yield; the wealth vehicle charges 1.25% plus 12.5% over 5% [S421, S432] CONFIRMED. The wealth price pays for things institutions do themselves: monthly valuation and administration, the liquidity sleeve, adviser education, and distribution through platforms INFERRED. KKR's own fee table shows the same split across products: open-ended vehicles at 0.50% to 1.25% versus drawdown infrastructure at 0.75% to 1.50% [S2] CONFIRMED.

One infrastructure team, three price lists

KKR infrastructure: about $120bn of equity, about 160 executives, 100+ investments [S430]

	GII V closed-end drawdown fund Core+, N. America and W. Europe	DCIF open-ended core fund institutional, OECD only	K-INFRA evergreen LLC conglomerate for individuals
SIZE	**$19.2bn final close** 3 Aug 2026; KKR's largest infrastructure fund [S430] $18.6bn committed in 10-Q [S1]	**Size not in sources** KKR committed at least $500m (2021) [S432]	**$6.47bn Transactional NAV** 31 Dec 2025; 2025 subscriptions $2.84bn [S421]
WHO IT SERVES	Pension plans, sovereign wealth funds, insurers, asset managers, private wealth platforms and family offices [S430]	Institutions; e.g. Cliffwater advised Rhode Island to commit up to $100m (2021) [S432]	Individuals: US accredited (Reg D) and non-US (Reg S); Classes S, D and I [S421]
WHAT IT HOLDS AND TARGETS	Over $9bn committed already: FiberCop, Metronet, Enilive, Sempra Infrastructure, Global Technical Realty and others [S430]	Water, power and gas networks, digital, renewables, contracted transport; target net return 7% to 9% a year [S432]	About 85% infrastructure via JVs (max 15% non-OECD), about 15% liquidity; 2025 Class I return 10.13% [S421]
MANAGEMENT FEE	Drawdown infra range in the 10-K: 0.75% to 1.50% [S2]; GII V's own rate not in sources; base is committed or invested	**0.8% of NAV** (commitments under $200m); 0.6% for 6 years for early $50m to $200m tickets [S432]	**1.25% of month-end NAV** (D, I, S); early classes 1.00% for 60 months from 1 June 2023 [S421]
PERFORMANCE FEE	KKR carry range 10% to 20% after a 6% to 8% hurdle, with GP catch-up [S2]; fund-specific terms not sourced	None for 6 years; then 5% of asset-level cash yield, above a 4% minimum cash yield hurdle [S432]	**12.5% of Total Return** over a 5% hurdle, high-water mark, 100% catch-up [S421]
LIQUIDITY	None. Investment period Jul 2024 to Jul 2030 [S1]; fund terms typically 10 to 13 years [S2]	3-year hard lock-up, then 3-year soft lock-up with a 5% early redemption fee; then open-ended [S432]	Quarterly repurchases capped at 5% of NAV; 5% fee within 24 months [S421]
MINIMUM AND CASH PROFILE	Minimum not in sources. Capital calls, then distributions as assets sell	No minimum in sources. Pitched as "buy simplicity and hold simplicity" [S432]	Minimum not in filings. Quarterly distributions, which may exceed earnings [S421]

The same assets, shared through Joint Ventures

K-INFRA co-owns assets with GII II to V, Asia Pacific Infrastructure Investors I to III, DCIF and the Global Climate Fund [S421]

One year at an 8% gross asset return, $10m in each (illustrative numbers, fees only, expenses ignored)

DCIF: 8.0% minus 0.8% fee, no performance fee in years 1 to 6: keep about 7.2% ($720,000).

K-INFRA Class I: 8.0% minus 1.25% = 6.75% Total Return; above the 5.71% catch-up end, so KKR takes 12.5% of 6.75% = 0.84%: keep about 5.9% ($590,600).

GII V style drawdown: a 1.0% fee on a $10m commitment with only $5m called is 2.0% of the money at work.

Figure 24. Same strategy, three wrappers. Read across each row: the institution buys lower fees with less liquidity; the individual buys a monthly NAV and a quarterly door with a higher fee. Sources: GII V release, 3 Aug 2026 [S430]; KKR 10-Q vehicle table [S1]; KKR 10-K fee ranges [S2]; DCIF terms from a Cliffwater memo of 11 May 2021, which may have changed [S432]; K-INFRA 10-K FY2025 [S421]. Worked returns illustrative INFERRED.

Why the performance fee is lower than K-PEC's. K-INFRA's 12.5% versus K-PEC's 15% matches the lower expected return of infrastructure [S421] CONFIRMED (interpretation INFERRED). K-INFRA's 2025 Class I return was 10.13% against K-PEC's 16.81% [S420, S421] CONFIRMED.

Why it matters to a client conversation. A family office asking "should I buy KKR infrastructure?" is really asking three questions: can you meet capital calls for six years, can you accept a multi-year lock, or do you need a quarterly door? The answer picks the wrapper, and the wrapper sets the fee INFERRED.

WHAT YOU WILL LEARN

To present one strategy in three wrappers side by side, explain every row of the trade-off (fee base, carry design, lock-up, door, cash profile), and match the wrapper to a client's liquidity and operational capacity.

WHERE YOU MEET IT AT KKR

The London infrastructure product team, which includes a specialist for "infra for individuals" [S150] CONFIRMED; GII V's investor base [S430]; and K-INFRA's Joint Ventures with GII and DCIF [S421]. Daniel Valladares moved from the infrastructure product team to Head of EMEA Consultant Relations [S132] CONFIRMED, the people who read memos like Cliffwater's [S432].

ONLY AT KKR

At KKR the three wrappers are literally linked: K-INFRA's 10-K names GII II to V and DCIF as its Joint Venture partners [S421] CONFIRMED, and GII V's $45bn platform figure counts the perpetual vehicles alongside the drawdown funds [S430] CONFIRMED. Rivals also sell infrastructure in several wrappers (EQT's evergreen ELTIF, for one [S464] REPORTED); what you learn at KKR is how one asset is shared across all three by contract INFERRED.

SAY IT IN ONE LINE

"I want to learn to put GII V, DCIF and K-INFRA side by side and explain to a client why the same infrastructure costs 0.8% in one wrapper and 1.25% plus 12.5% in another, and when each price is fair."

MODULE 1 IN ONE PARAGRAPH

A private markets product is a contract about four things: who may buy, when cash moves, how fees are charged and how you get out. Drawdown funds answer with commitments, capital calls, a fee on committed capital and a whole-of-fund waterfall with a clawback. Evergreen funds answer with a monthly NAV, a fee on NAV, a hurdle with catch-up and high-water mark, and a narrow quarterly door. Interval funds add a legal promise of liquidity and pay for it with a large public sleeve. When too many people head for the door, gates, pro-rating, fees and notice periods decide who bears the cost. KKR runs every one of these pipes, and often runs them into the same deals INFERRED.

PART 3

Module 2: Thinking like the client: portfolio construction and performance

Before KKR can sell a client anything, someone has to understand the client's whole portfolio better than the client's own spreadsheet does. This module teaches that spreadsheet: liabilities, allocation, pacing, performance maths and insurance capital, each with numbers you can redo by hand.

Part 1 profiled six client types on five constraints. This module goes one level down and puts formulas on them. Every section follows the same pattern: the mechanism from zero, a worked example with numbers, a diagram, then where the same mechanism shows up in real KKR material. Numbers marked "illustrative" are invented to teach the arithmetic; every other number carries its source.

FIVE WORDS YOU NEED BEFORE YOU START

Liability: money a client must pay out in future (pensions, insurance claims, a family's spending). **Asset allocation:** the split of a portfolio between types of investment. **Commitment:** a promise to give a private fund money when it asks. **NAV (net asset value):** what a holding is worth today on the manager's valuation. **Benchmark:** the yardstick a result is compared against.

Liabilities first: what "enough" means to each client

An investment professional's first question is never "what will make the most money?" It is "what does this money have to do, and when?" The answer is set by the client's **liabilities**. Return and liquidity targets are derived from them, not chosen freely.

Two jobs a portfolio can do

Liability matching means owning assets whose cash flows or values move with what you owe. If a pension must pay £50m in 2035, a government bond that pays £50m in 2035 removes that risk: whatever interest rates do, the asset and the bill move together. **Return seeking** means owning assets expected to grow faster than the liabilities, such as shares or private equity, accepting that their value swings. Every institutional portfolio is a blend of the two. The blend is the single most important decision a client makes, and it decides how much room there is for private markets INFERRED.

KEY TERMS

Funding ratio: assets divided by the present value of liabilities. 100% means the client can pay every promise today. **Present value:** what a future payment is worth today once you discount it at an interest rate. **LDI (liability-driven investment):** a strategy, mostly with bonds and interest rate hedges, that makes assets move with liabilities. **Liquidity budget:** how much cash the client must be able to raise, how quickly, in a bad month.

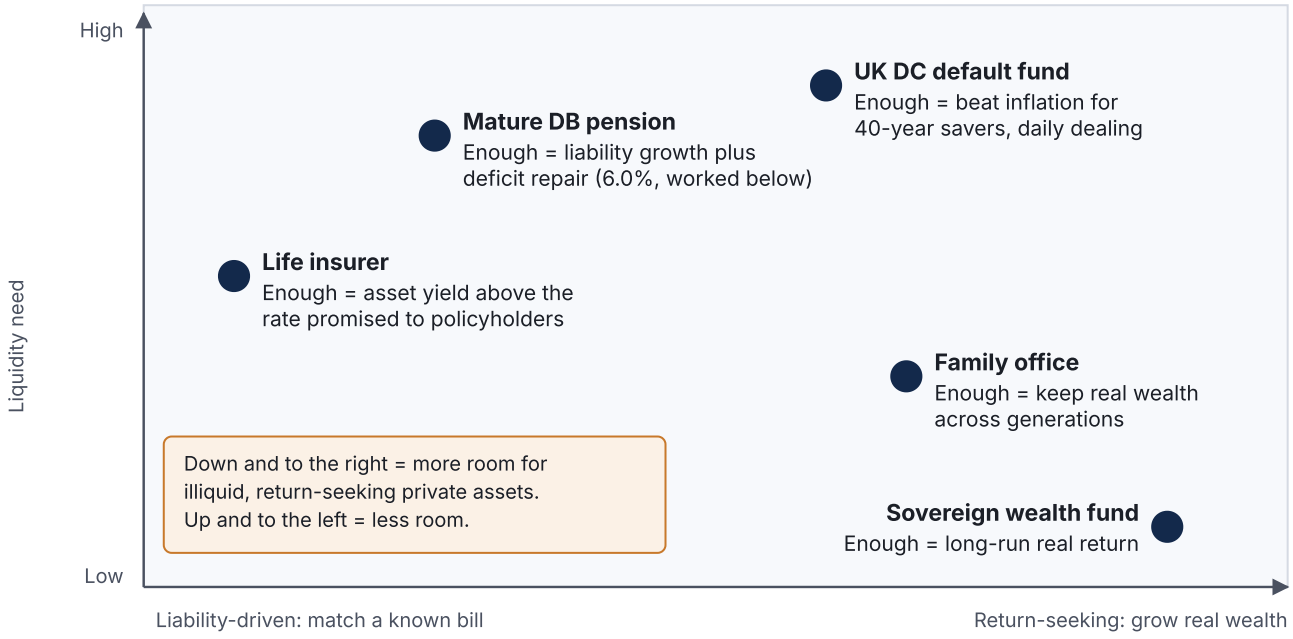

Figure 25. Where each client sits. The horizontal axis is how far the client's goal is "pay a known bill" versus "grow wealth"; the vertical axis is how much cash it may need at short notice. Positions are the author's judgement for typical clients of each type INFERRED; real clients vary.

Worked example 1: a DB pension's "enough return" (illustrative numbers)

A UK company pension has £1.0bn of assets. Its promises to members are worth £1.1bn in present value. Assume its liabilities grow 5% a year (interest on the promises plus new accrual, net of payments; illustrative).

1. **Funding ratio** = assets ÷ liabilities = 1.0 ÷ 1.1 = **90.9%**. The deficit is £100m.
2. **Goal:** be fully funded in 10 years with no extra cash from the employer. Assets must reach the liabilities' future value: $1.0 \times (1 + r)^{10} = 1.1 \times 1.05^{10}$.
3. Divide both sides by 1.0 and take the tenth root: $1 + r = 1.05 \times 1.1^{1/10} = 1.05 \times 1.00958 = 1.0601$.
4. **"Enough return" = 6.0% a year.** Of that, 5.0 points just keep pace with the liabilities and about 1.0 point repairs the deficit.

The lesson: this scheme does not need 12%. It needs 6.0% with as little chance as possible of a big miss. If it hedges most of its liabilities with bonds that earn roughly the 5% liability growth, the remaining "growth" assets have to earn the extra. Private markets compete for that small growth slice, which is why a mature DB scheme is a shrinking buyer of private equity and a natural buyer of contracted, income-producing assets such as core infrastructure or investment-grade private credit INFERRED. KKR's own institutional page offers corporate pensions "consultative advice to corporations who are considering the benefits and challenges associated with de-risking their defined benefit plans" [S81] CONFIRMED.

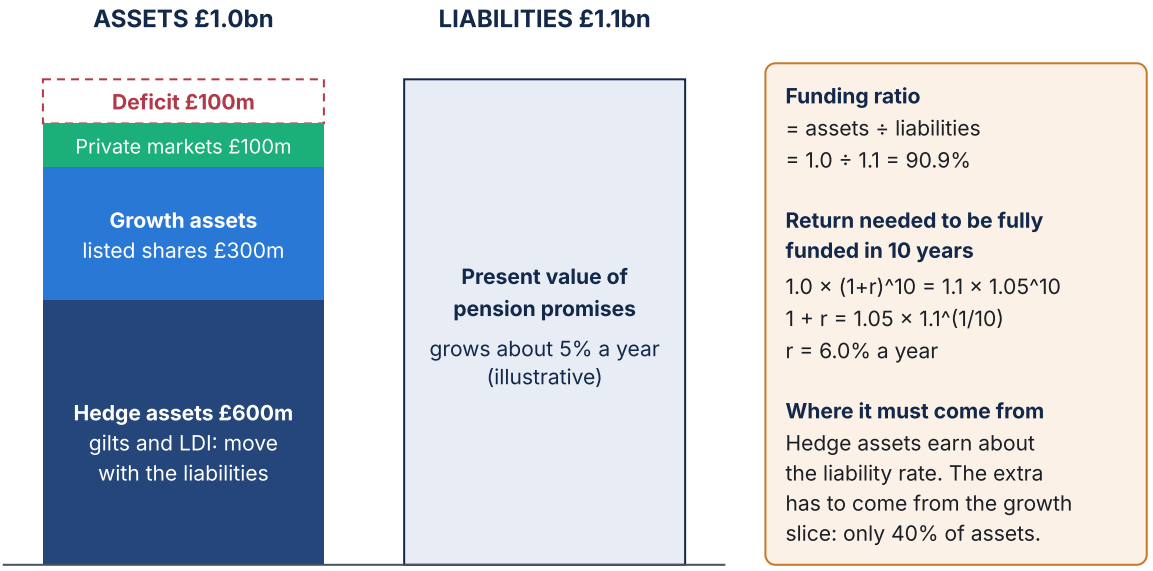

Figure 26. A DB pension balance sheet, liability first. Read from right to left: the liabilities fix the return target (6.0%), the hedge assets neutralise most interest rate risk, and private markets compete for a slice of the growth bucket. All numbers illustrative INFERRED.

The five clients, side by side

Client	"Enough return" is set by	"Enough liquidity" is set by	Private markets job
DB pension (mature, de-risking)	Liability growth plus deficit repair (6.0% above) INFERRED	Monthly pension payments; collateral for interest rate hedges INFERRED	Income assets that match long liabilities; less PE over time. KKR offers DB "de-risking" advice [S81] CONFIRMED
UK DC default fund	Real growth for savers 20 to 40 years from retirement INFERRED	Daily pricing and dealing of the default fund INFERRED; fees closely watched	Up to 10% of default funds in private assets by 2030, at least 5% UK, under the Mansion House Accord [S315] CONFIRMED
Life insurer	Asset yield minus the rate credited on policies, per unit of regulatory capital INFERRED	Predictable claims; surrender risk on some products INFERRED	Investment-grade private credit and ABF; CIOs list "Asset-liability matching, illiquidity limits, regulatory capital, reinvestment risk" as concerns [S438] CONFIRMED
Sovereign wealth fund	Long-run real return for future generations INFERRED	Low, unless the state needs cash in a shock. Some Gulf states reviewed investments during the 2026 Iran war [S366] REPORTED	Large tickets, co-investment, SMAs; preference for "separately managed accounts" and fewer managers [S70] CONFIRMED
Family office	Preserve and grow real wealth; often a tax lens INFERRED	Family spending and opportunistic deals INFERRED	Co-investment, bespoke SMAs, "Two-Way Sourcing Dialogues" [S84] CONFIRMED

Worked example 2: a liquidity budget (illustrative numbers)

The same £1.0bn pension pays £60m of pensions a year (£5m a month). Its hedges can demand cash collateral if gilt yields jump; assume a stress call of £80m. It also has £70m of unfunded private commitments that could be called within a year. Stress cash need = 60 + 80 + 70 = **£210m**. Assets it can sell within a month at a fair price: cash £20m plus listed shares £300m plus a share of the gilts not tied up as collateral, say £100m: £420m. **Liquidity coverage** = 420 ÷ 210 = **2.0x**. If the board's rule is "at least 1.5x", the scheme can afford more illiquid assets only until coverage falls to 1.5x: it could move up to £105m more into private assets, assuming that money comes from the listed shares (each £1 moved cuts liquid assets by £1: 420 − 1.5 × 210 = 105). This is the sum a KCS junior should be able to do before suggesting a commitment size INFERRED.

WHAT YOU WILL LEARN

To derive a client's required return and liquidity budget from its liabilities: funding ratio, required return to close a deficit, liquidity coverage under stress. Then to say how much room that leaves for private markets, before any product is mentioned.

WHERE YOU MEET IT AT KKR

KKR's institutional client segments are corporate pensions, public pensions, sovereign wealth funds, insurers, endowments and foundations [S81] CONFIRMED. Pensions and other institutions are 14% of KKR's AUM, sovereigns 12%, third-party insurers 11% and Global Atlantic's balance sheet 22% (31 Dec 2025) [S71] CONFIRMED. Each segment brings a different definition of "enough".

ONLY AT KKR

KKR runs an insurer (Global Atlantic) on its own balance sheet, so liability-first thinking is not theory inside the firm: Global Atlantic's $220bn of AUM must match real annuity promises (30 Jun 2026) [S1] CONFIRMED. A KCS team that sells to pensions and insurers sits next to colleagues who manage liabilities every day. Most fund managers have no liabilities of their own to learn from INFERRED.

SAY IT IN ONE LINE

"I want to learn to start from a client's liabilities, to work out the return and liquidity they actually need, and only then ask which KKR strategy fits."

Strategic asset allocation and KKR's Total Portfolio Approach

Strategic asset allocation (SAA) from zero

Most institutions run a **strategic asset allocation**: the board fixes a long-term target weight for each asset class ("bucket"), say 50% listed equity, 30% bonds, 8% private equity, 6% infrastructure, 6% real estate. Each bucket has its own team, its own benchmark and a tolerance band (for example 6% to 10% for private equity). When a bucket drifts outside its band, the client buys or sells to rebalance. SAA is simple to govern: the board can see at a glance whether the portfolio is "on policy" INFERRED.

The weakness is that buckets are defined by legal form, not by risk. A private credit loan, a listed high-yield bond and a slice of infrastructure debt can carry very similar risks yet sit in three buckets with three benchmarks. An opportunity that fits no bucket (a capital solutions deal, a reinsurance sidecar) may have no home at all INFERRED.

The Total Portfolio Approach (TPA): what KKR actually published

KKR's Multi-Asset Strategies team published "The Total Portfolio Approach: A Practical Framework" in February 2026, by Henry H. McVey, David McNellis and Christian Olinger [S435, S462] CONFIRMED. A follow-up, "The Dog Has Caught the Bus: The Total Portfolio Approach", appeared in July 2026, adding Amy Dai as an author [S436] CONFIRMED. McVey is Head of Global Macro & Asset Allocation and CIO of KKR's Balance Sheet; McNellis is Co-Head of Global Macro and Head of Portfolio Construction and Multi-Asset Strategies for Private Markets [S436] CONFIRMED.

- **Definition.** TPA is "a whole-portfolio decision and governance framework that evaluates investment opportunities across Public and Private Markets based on their contributions to total portfolio

objectives, rather than within static asset-class sleeves" [S435] CONFIRMED.

- **Governance.** "The board sets a reference portfolio (for instance, 70% Public Equity/30% Fixed Income) and risk appetite ... and delegates allocation authority to the CIO within a total portfolio risk budget" [S435] CONFIRMED.
- **The contrast table.** SAA uses fixed asset-class targets, many benchmarks and diversification "Through asset classes"; TPA uses dynamic weights, a "Single reference portfolio and risk budget" and diversification "Through risk factors" [S435] CONFIRMED.
- **The analogy KKR uses with clients:** TPA is "zero-based budgeting for portfolio construction ... if every investment had to earn its place in the portfolio today, how would capital be allocated?" [S436] CONFIRMED.
- **The on-ramp:** a "minimum viable TPA", which "can include centralizing portfolio-level functions, strengthening in-house portfolio construction and relative-value capabilities, refreshing views more frequently, and piloting TPA through a dedicated sleeve that has clear risk and liquidity guardrails" [S435] CONFIRMED.

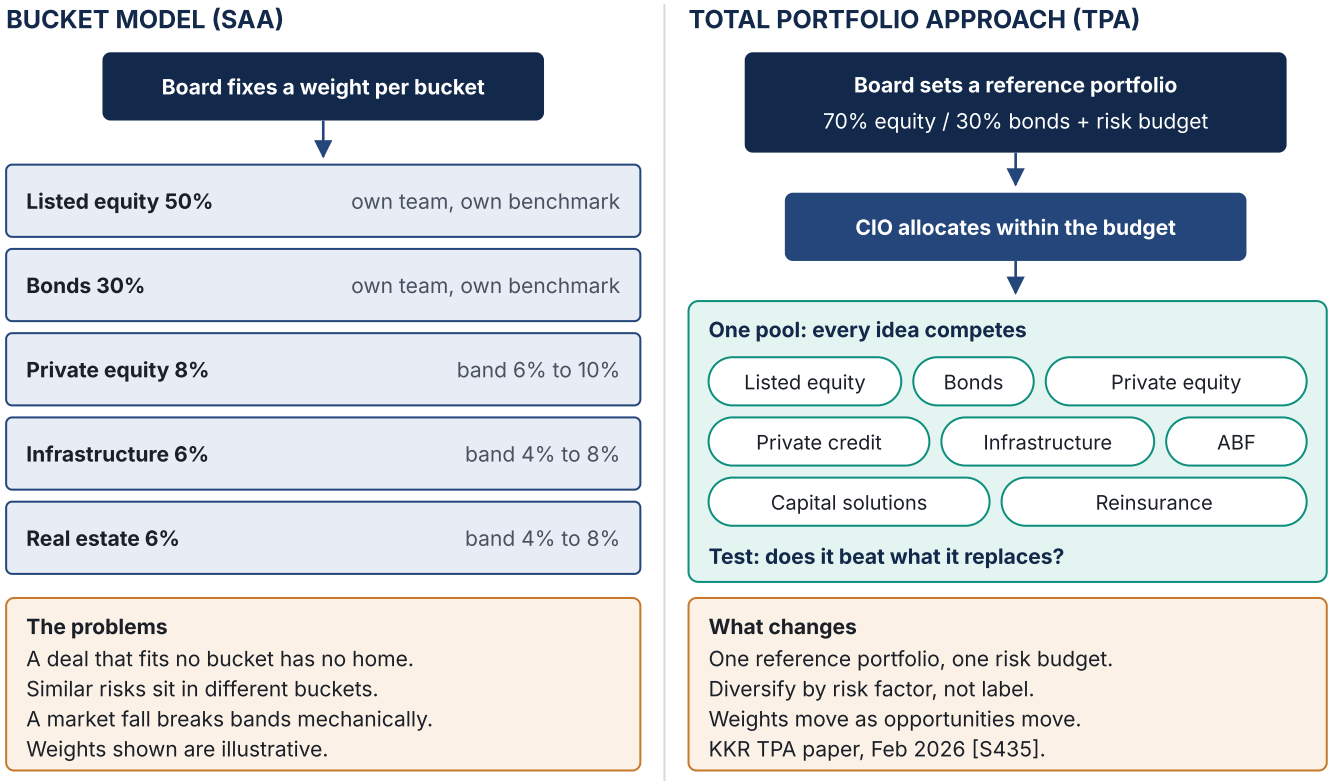

Figure 27. Bucket model versus total portfolio model. Left: the board's weights are the decision. Right: the board's reference portfolio and risk budget are the decision, and every candidate, including categories "such as Capital Solutions and Reinsurance" that "don't fit cleanly into buckets", competes for capital [S435] CONFIRMED. Bucket weights on the left are illustrative.

Worked example 3: the TPA "funding rule" (illustrative numbers)

The core TPA move is to ask what an investment *replaces*. Suppose analysis shows a private credit fund behaves, in risk terms, like 30% listed equity plus 70% bonds (an illustrative factor mix, not a KKR estimate). Assume expected returns of 7.0% for listed equity and 4.5% for bonds.

1. **Fund it from its twin.** To add £100m of private credit without changing the portfolio's risk, sell £30m of equity and £70m of bonds.
2. **Its hurdle is the twin's return:** 0.30 × 7.0% + 0.70 × 4.5% = 2.10% + 3.15% = **5.25%**.

3. **Value added:** if the private credit is expected to earn 8.0% after fees, the gain is (8.0% − 5.25%) × £100m = **£2.75m a year**, for roughly the same risk, paid for with illiquidity.
4. **The SAA contrast:** in a bucket model the same loan sits in an "alternatives" bucket, measured against its own peer benchmark, and nobody checks what it displaced.

KKR's paper runs the grown-up version: an optimiser matches the factor exposures of a "70% Equities/30% Bonds reference portfolio" while allowing "up to 30% of total portfolio capital to be allocated to Private Markets" and "up to 10% total portfolio leverage" [S435] CONFIRMED.

Why TPA matters for private markets in particular

KKR argues TPA gives private markets investors "improved liquidity management, steadier commitment pacing, better vintage diversification, and greater flexibility through drawdowns and denominator effects" [S435] CONFIRMED. The July paper lists three hard problems for private assets inside TPA: the opportunity set and relative value; risk measurement, because "Investors often commit capital before knowing the exposures they will ultimately own"; and dynamism, meaning illiquidity [S436] CONFIRMED. Its answers include strategy-level benchmarks, public comparables, pacing with recycled distributions, and "secondaries and liquidity facilities available during dislocations" [S436] CONFIRMED. It also gives the key pacing input: "Across private market strategies, annual distributions have historically averaged approximately 10-30% of NAV" [S436] CONFIRMED. You will use that number in the next section.

KKR's model portfolios: how much private, in KKR's own published numbers

For financial advisers, KKR's Global Macro & Asset Allocation team publishes three illustrative model portfolios on kkr.com/wealth, built from Burgiss, Bloomberg and NCREIF data, with "No specific KKR products referenced" [S437] CONFIRMED. The arithmetic of their weights gives 45% equity / 25% bonds / 30% private for the Growth model, and 30% / 40% / 30% for the Income and Capital Preservation models [S437] INFERRED.

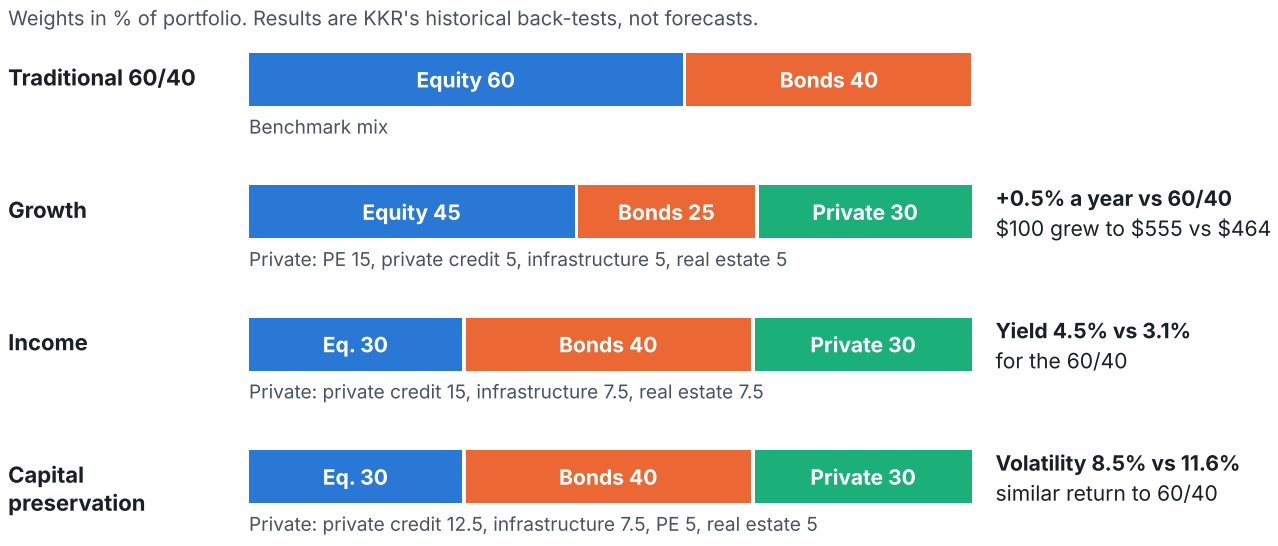

Figure 28. KKR's three published model portfolios against a 60/40. Each moves 30% into private markets; they differ in what is sold to pay for it. Growth "maintain[s] 70% of the portfolio in liquid assets". Source: KKR wealth model portfolios page [S437], data 2005/2006 to 2024, accessed Oct 2026 CONFIRMED; weight totals derived INFERRED.

GET THIS RIGHT

KKR publishes **no "40/30/30"** model. If anyone (or any summary you read) says KKR recommends 40% equity / 30% bonds / 30% private, correct it: the published models are 45/25/30 (Growth) and 30/40/30 (Income and Capital Preservation) [S437] CONFIRMED; totals derived INFERRED. The common thread is 30% in private markets for a balanced portfolio. KKR's case also rests on two claims on the same page: stock-bond correlations "have risen meaningfully, reducing the diversification benefits that once anchored the 60/40", and "the number of publicly listed U.S. companies has declined by nearly 50%" since 2000 [S437] CONFIRMED.

WHAT YOU WILL LEARN

How institutions decide weights (SAA, bands, rebalancing), how TPA replaces buckets with a reference portfolio and a risk budget, and how to compute an investment's hurdle from what it displaces. Also how KKR translates the same logic into adviser-friendly model portfolios.

WHERE YOU MEET IT AT KKR

The two TPA papers [S435, S436] and the TPA FAQ page [S463] are client-facing content: KKR says the TPA analogy "consistently resonated with clients" [S436] CONFIRMED. The model portfolios sit on kkr.com/wealth next to the "Alternatives Unlocked" courses [S437, S465] CONFIRMED.

ONLY AT KKR

KKR's TPA authors also run the firm's own balance sheet (McVey is its CIO) [S436] CONFIRMED, and KKR says portfolio-level exposure observations "inform future deployment decisions, including where to lean in and where to syndicate through co-investment" [S436] CONFIRMED. So the framework KCS takes to clients is also how KKR allocates its own capital. Elsewhere, TPA papers usually come from consultants or asset owners who do not originate the private assets themselves INFERRED.

SAY IT IN ONE LINE

"I want to understand how a CIO decides what earns a place in a total portfolio, using KKR's own Total Portfolio Approach work, so I can explain why a private allocation belongs there, not just what it is."

Commitment pacing: why you cannot just "buy 10% private equity"

With listed shares, deciding on a 10% weight and owning 10% are the same day's work. With a private fund they are years apart. A client **commits** money; the fund **calls** it in instalments as deals are found (typically over 3 to 5 years for KKR's drawdown funds [S70] CONFIRMED); it **distributes** cash as assets are sold; and the client's actual exposure is the **NAV** in between. So the client controls commitments, but its target is set in NAV. Converting one into the other is called **commitment pacing**, and the standard tool is a 2002 model from Yale INFERRED.

The Takahashi-Alexander ("Yale") model

Dean Takahashi and Seth Alexander published "Illiquid Alternative Asset Fund Modeling" in the *Journal of Portfolio Management* in 2002 [S454] CONFIRMED. It is "a discrete-time deterministic model" (it steps year by year and has no randomness) with six inputs: "RC (rate of contribution), CC (capital commitment), L (life of the fund), B (bow factor describing changes on the rate of distribution over time), G (annual growth

rate), and Y (yield percentage)" [S454] CONFIRMED. In words: each year the fund calls a share of what is still uncalled; the NAV grows; a rising share of the NAV is paid out, and the bow sets how back-loaded that payout is [S455] REPORTED.

THE FOUR EQUATIONS, IN SYMBOLS AND IN WORDS

1. Calls: $C_t = RC_t \times (CC - PIC_{t-1})$. "This year's call = the call rate × the commitment not yet paid in." PIC is paid-in capital to date.

2. Distribution rate: $RD_t = \max[\, Y \,, (t \div L)^B \,]$. "The share of NAV paid out rises with the fund's age; a bigger bow B keeps it low for longer." Y is a floor for income-paying assets.

3. Distributions: $D_t = RD_t \times NAV_{t-1} \times (1 + G)$. "Pay out that share of last year's NAV after this year's growth."

4. NAV: $NAV_t = NAV_{t-1} \times (1 + G) + C_t - D_t$. "Grow it, add what came in, take off what went out."

The six inputs are from the source [S454] CONFIRMED; this written-out form is the widely used textbook version INFERRED.

Worked example 4: one £100m commitment, step by step (illustrative numbers)

Inputs: CC = £100m; L = 10 years; B = 2.5; G = 10% a year; Y = 0; call rates RC = 25% in year 1, 33.3% in year 2, then 50% of whatever remains each year after.

Year	Call C_t	NAV after growth	$RD_t = (t/10)^{2.5}$	Distribution D_t	NAV_t	Paid in to date
1	25% × 100 = 25.0	0 × 1.1 = 0.0	0.003	0.0	0 + 25.0 − 0 = **25.0**	25.0
2	33.3% × 75 = 25.0	25.0 × 1.1 = 27.5	0.018	0.018 × 27.5 = 0.5	27.5 + 25.0 − 0.5 = **52.0**	50.0
3	50% × 50 = 25.0	52.0 × 1.1 = 57.2	0.049	0.049 × 57.2 = 2.8	57.2 + 25.0 − 2.8 = **79.4**	75.0
4	50% × 25 = 12.5	79.4 × 1.1 = 87.3	0.101	0.101 × 87.3 = 8.8	87.3 + 12.5 − 8.8 = **91.0**	87.5
5	50% × 12.5 = 6.25	91.0 × 1.1 = 100.1	0.177	0.177 × 100.1 = 17.7	100.1 + 6.25 − 17.7 = **88.6**	93.75

Run the same four equations to year 10 and the fund pays back £148.5m in total, 1.49 times the money paid in. But look at the NAV column: **it never reaches £100m**. It peaks at £91.0m in year 4 and then shrinks, because distributions start before the last calls arrive. A client that wants £100m of exposure cannot get it by committing £100m once.

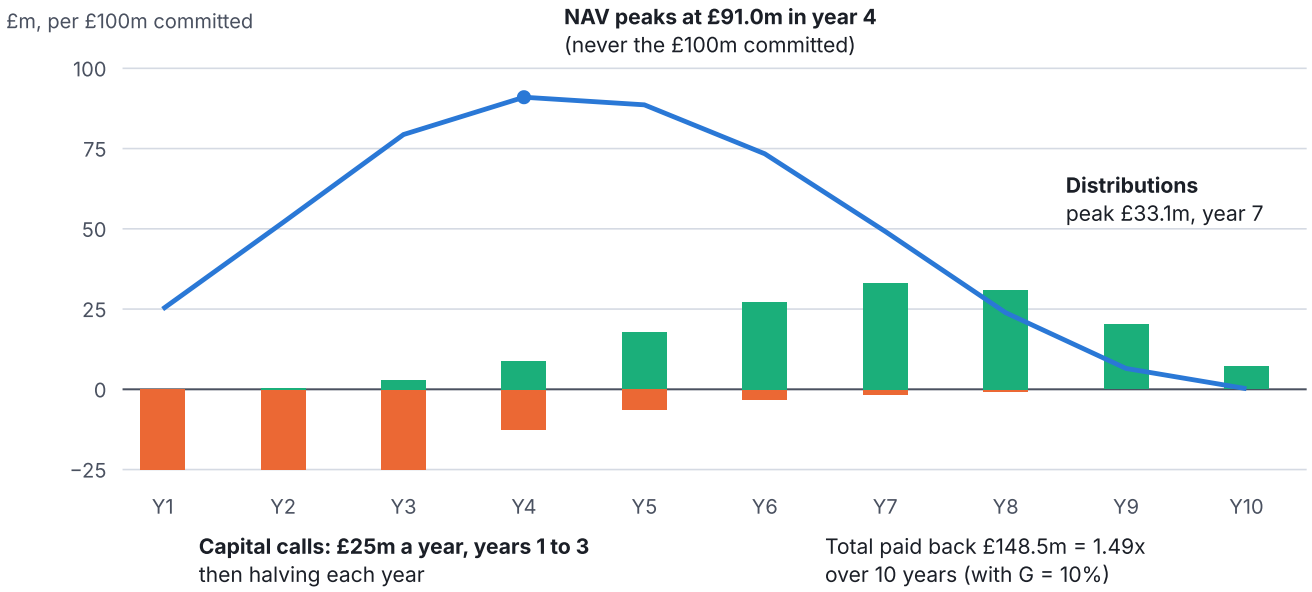

Figure 29. The life of one commitment. Orange bars below the line are cash the client sends; green bars above are cash it gets back; the blue line is its exposure (NAV). Inputs: RC 25%, 33%, then 50%; B = 2.5; G = 10%; L = 10. Model structure from Takahashi and Alexander [S454]; all numbers illustrative INFERRED.

Worked example 5: a five-year pacing plan (illustrative numbers)

A client with a £10bn portfolio wants 10% (£1.0bn) in private equity NAV. It has none today. Assume the portfolio stays at £10bn and every commitment behaves like the fund above. How much should it commit each year? Try £300m a year and run the model for each vintage (a "vintage" is the year a fund starts investing).

Year	New commitment	Calls (all vintages)	Distributions	Net cash out	Private NAV	NAV as % of £10bn	Unfunded commitments
1	300	75.0	0.0	75.0	75.0	0.75%	225.0
2	300	150.0	1.5	148.5	231.0	2.31%	375.0
3	300	225.0	9.9	215.1	469.2	4.69%	450.0
4	300	262.5	36.4	226.1	742.2	7.42%	487.5
5	300	281.2	89.5	191.7	**1,008.1**	**10.08%**	506.2

How each cell is built: year 3's NAV of £469.2m is three vintages added together: vintage 1 at age 3 (3 × 79.4 = 238.2), vintage 2 at age 2 (3 × 52.0 = 156.0) and vintage 3 at age 1 (3 × 25.0 = 75.0). Calls and distributions are summed the same way. All figures £m, illustrative.

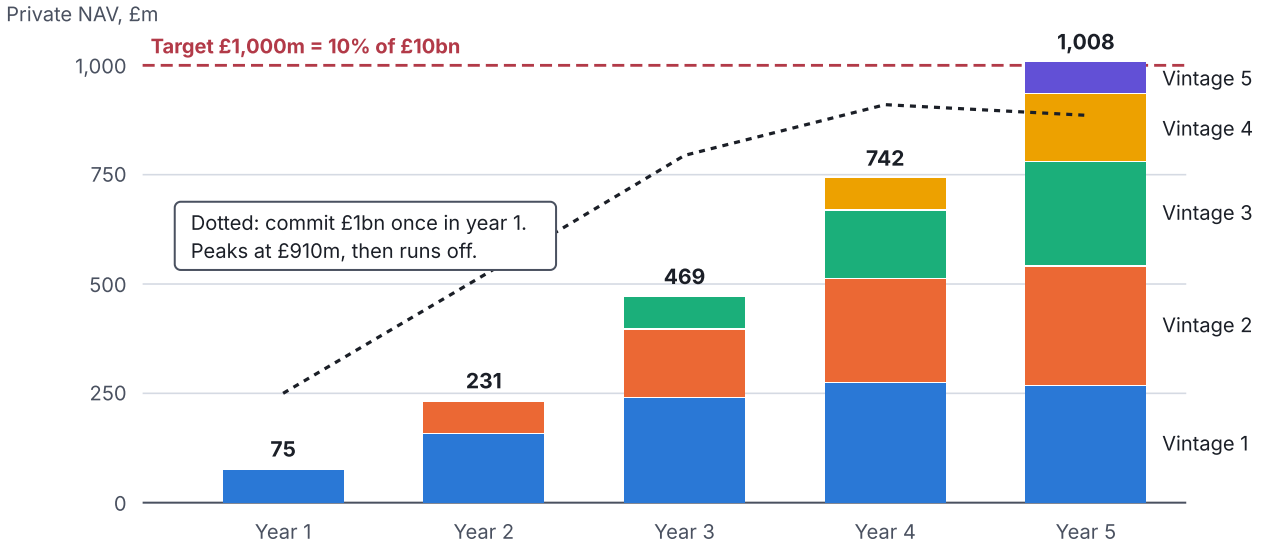

Figure 30. Building exposure one vintage at a time. Committing £300m a year reaches the £1bn target in year 5 with five vintages layered on top of each other. The dotted line shows the "just buy 10%" mistake: one £1bn commitment peaks below target and then shrinks. Illustrative numbers from the single-commitment model above INFERRED.

Over-commitment and the commitment ratio

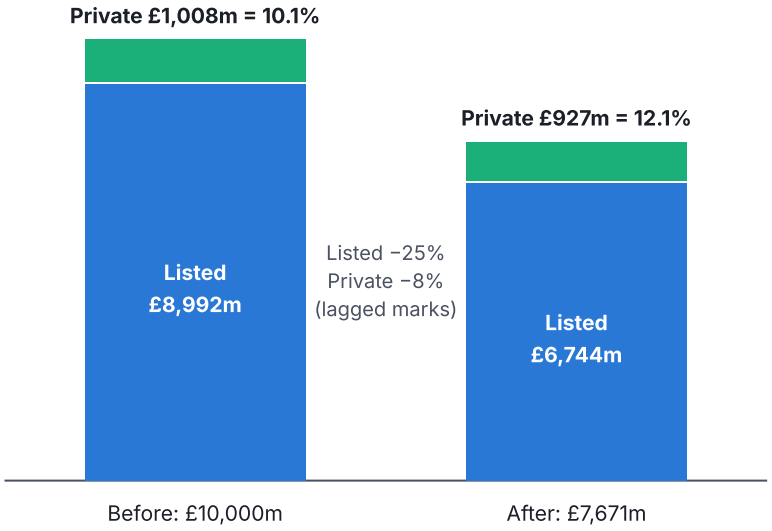

Look at year 5 of the plan: the client has signed £1.5bn of commitments to hold £1.0bn of NAV, and £506m is still uncalled. **Over-commitment** is the deliberate practice of committing more than the NAV target, because some of the money will not be called for years and some will already have come back INFERRED. Two ratios keep it honest:

- **Commitment ratio** = total commitments ÷ target NAV = 1,500 ÷ 1,000 = **1.5x** in the plan.
- **Unfunded cover** = liquid assets ÷ unfunded commitments. The unfunded £506m is a real promise: if all of it were called in a bad year, the client must pay from its liquid assets. A client with £2bn of cash and bonds has cover of about 4x.

The steady-state check uses KKR's own figure. If distributions run at 10% to 30% of NAV a year [S436] CONFIRMED, a £1.0bn private book returns roughly £100m to £300m a year. To hold NAV flat, new calls must replace that, which is why mature programmes commit every year rather than in bursts INFERRED. KKR's TPA paper argues for "steadier commitment pacing" and "better vintage diversification" for exactly this reason [S435] CONFIRMED.

Worked example 6: the denominator effect, now with pacing (illustrative numbers)

Part 1 showed the basic denominator effect. Here it is with the pacing plan's year-5 numbers, so you can see what it does to next year's commitment.

The arithmetic
Listed: 8,992 × 0.75 = 6,744
Private: 1,008 × 0.92 = 927
Total: 6,744 + 927 = 7,671
Private share: 927 ÷ 7,671
= 12.1% (band 8% to 12%)

Committed exposure
(NAV + unfunded) ÷ total
= (927 + 506) ÷ 7,671
= 18.7%

Nothing was bought. The band breaks anyway, so next year's £300m is at risk.

Figure 31. The denominator effect hits a pacing plan. Listed assets are repriced at once; private marks fall less and later. The private share rises from 10.1% to 12.1% and, counting promises not yet called, to 18.7%. Illustrative numbers INFERRED; mechanism per [S323] REPORTED.

The client now has three choices, each with a cost. (1) **Pause commitments.** Cheap today, but it leaves a hole in the vintage sequence that shows up as missing NAV five years later. (2) **Sell fund stakes in the secondary market.** Evercore reported high-quality buyout interests clearing at around 90% of NAV in H1 2026 [S267] CONFIRMED; selling £200m at 90% crystallises a £20m loss. (3) **Widen the lens.** KKR's TPA paper models a hypothetical 40% public equity drawdown that mechanically makes private assets look overweight, and argues a total portfolio risk budget gives "greater flexibility through drawdowns and denominator effects" [S435] CONFIRMED. This is not a textbook problem: S&P Global found 174 of 298 pension funds over-allocated to private equity in Q1 2025 [S324] REPORTED, and 53% of LPs in an ILPA survey said undrawn commitments limit new private equity commitments [S262] CONFIRMED.

WHAT YOU WILL LEARN

To run the Takahashi-Alexander model by hand, turn a NAV target into a yearly commitment budget, size over-commitment and unfunded cover, and predict when the denominator effect will freeze a client's next commitment.

WHERE YOU MEET IT AT KKR

Every flagship fundraise depends on clients' pacing budgets: North America Fund XIV closed at about $23bn in April 2026 [S459] REPORTED and Global Infrastructure Investors V at $19.2bn in August 2026 [S430] CONFIRMED. KKR's TPA papers name "pacing and recycled distributions" as a core private markets tool [S436] CONFIRMED.

ONLY AT KKR

KKR raises drawdown funds and evergreen funds in the same asset classes, so a KCS team can offer a client two routes to the same exposure: a paced commitment programme, or an evergreen vehicle such as K-INFRA that is invested from the day money arrives (about 85% infrastructure assets, 15% liquidity portfolio) [S421] CONFIRMED. Learning when each route wins needs a shelf with both, which few managers have at KKR's scale INFERRED.

SAY IT IN ONE LINE

"I want to learn commitment pacing properly, the Yale model, over-commitment and the denominator effect, because a client's 'yes' to a KKR fund is really a yes to a five-year cash flow plan."

Reading performance like an LP

A KCS team spends much of its life presenting performance, and clients' due diligence teams spend theirs taking it apart. ILPA's due diligence questionnaire has a whole section on track record [S444] CONFIRMED, and ILPA's 2025 Performance Template standardises IRR and TVPI/MOIC, gross and net, "with and without the impact of fund-level subscription facilities" [S445] CONFIRMED. This section teaches each measure, then shows how each one can flatter or mislead.

IRR: the return that cares about timing

The **internal rate of return** is the single annual interest rate that makes all of a fund's cash flows, in and out, worth exactly zero today.

FORMULA

$0 = \Sigma\ CF_t \div (1 + IRR)^t$. In words: discount every cash flow back to day 0 at the rate IRR; IRR is the rate at which the money you put in and the money you got out cancel exactly. Calls are negative CF, distributions positive, and any remaining NAV is treated as a final positive flow.

Worked example 7 (illustrative). An LP pays £100m at year 0 and £50m at year 1, receives £60m at year 2 and £150m at year 4. There is no algebraic shortcut, so you try rates:

- At 10%: $-100 - 50 \div 1.10 + 60 \div 1.10^2 + 150 \div 1.10^4 = -100 - 45.45 + 49.59 + 102.45 =$ **+6.59**. Positive, so the true rate is higher.
- At 15%: $-100 - 43.48 + 45.37 + 85.76 =$ **−12.35**. Negative, so the rate is lower.
- Straight-line between them: 10% + 5% × 6.59 ÷ (6.59 + 12.35) = **11.7%**. A spreadsheet's IRR function gives 11.6%.

The timing trap

IRR rewards speed, as the figure after the multiples below shows. Return money early and IRR jumps even if total profit is small. Delay the call with a credit line and IRR jumps again even though the LP pays interest. Neither makes the LP richer. So an LP never reads IRR alone: it reads it next to the multiples below INFERRED.

The multiples: TVPI, DPI, RVPI and MOIC

FORMULAS

DPI (distributions to paid-in) = cumulative distributions ÷ paid-in capital. "How much cash have I actually had back?" **RVPI** (residual value to paid-in) = current NAV ÷ paid-in. "How much is still on paper?" **TVPI** (total value to paid-in) = DPI + RVPI. **MOIC** (multiple on invested capital) is the same idea measured on the money put into deals, usually gross of fees, often deal by deal (standard industry definitions) INFERRED.

Worked example 8. Take the fund from the pacing section at the end of year 6: paid in £96.9m, distributed £57.0m to date, NAV £73.4m. DPI = 57.0 ÷ 96.9 = **0.59x**. RVPI = 73.4 ÷ 96.9 = **0.76x**. TVPI = 0.59 + 0.76 = **1.35x**. In words: the LP has had 59p back for every £1 paid in, and the manager values what is left at another 76p.

Figure 32. Three ways IRR can mislead. Fund A beats Fund B on IRR but makes a third of the profit. Fund A with a subscription credit line (the fund borrows first and calls LPs later) nearly doubles its IRR while the LP's multiple falls. This is why ILPA's template reports returns with and without subscription facilities [S445] CONFIRMED. Cash flows illustrative INFERRED.

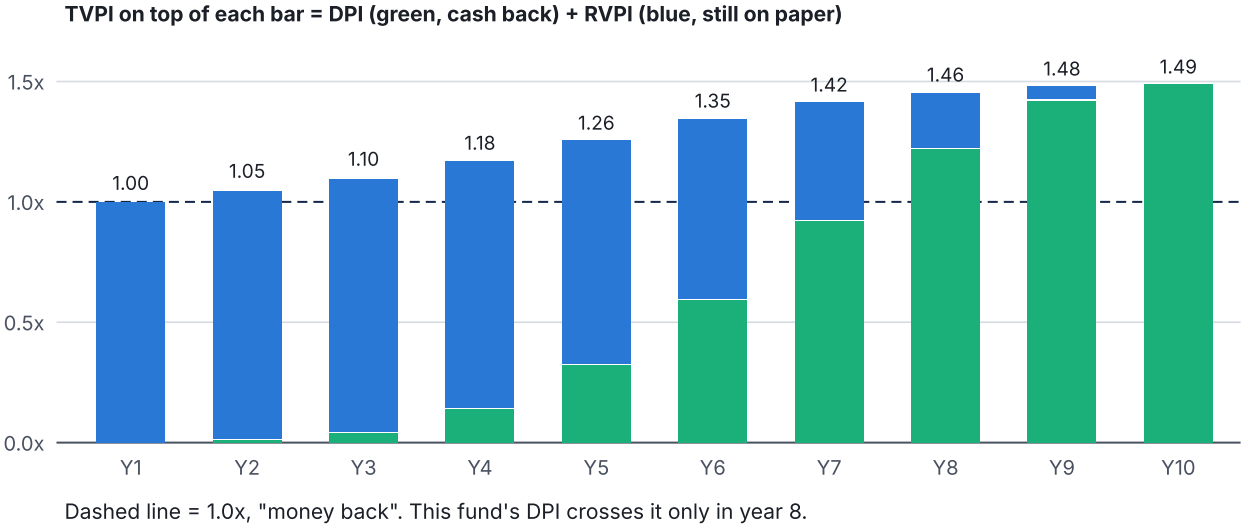

Figure 33. How a fund's value turns from paper into cash. Early on, TVPI is almost all RVPI: the manager's valuation. DPI only dominates late. Same illustrative fund as the pacing model INFERRED.

Gross versus net: the fee drag, worked

Gross returns are what the deals earned. **Net** returns are what the LP kept after management fees, fund expenses and carried interest. The gap is the price of the manager. Drawdown funds traditionally charge a management fee of about 1.5% to 2% a year and carried interest of about 20% above a hurdle, often 8% (standard industry terms; exact terms vary by fund) INFERRED. KKR's evergreen K-PEC uses a different formula: 1.25% a year of NAV and 15% of total return above a 5% hurdle, with a high-water mark and a 100% catch-up [S420] CONFIRMED.

Worked example 9 (illustrative, simplified). An LP commits and pays in £100m over the fund's life. Management fees take £12m in total, so £88m goes into deals. The deals return 2.2 times their cost. Assume a single 5-year holding period, the 8% hurdle is cleared, and a full catch-up gives the manager 20% of all profit.

1. Gross value = 88 × 2.2 = **£193.6m**. Gross MOIC = **2.20x**.
2. Profit over everything the LP paid = 193.6 − 100 = £93.6m. Hurdle check: $100 \times 1.08^5 = 146.9 < 193.6$, so carry is due.
3. Carry = 20% × 93.6 = **£18.7m**. LP receives 193.6 − 18.7 = **£174.9m**. Net TVPI = **1.75x**.
4. Over five years: gross IRR = $2.20^{1/5} - 1$ = **17.1%**; net IRR = $1.749^{1/5} - 1$ = **11.8%**. Fee drag = **5.3 points a year**.

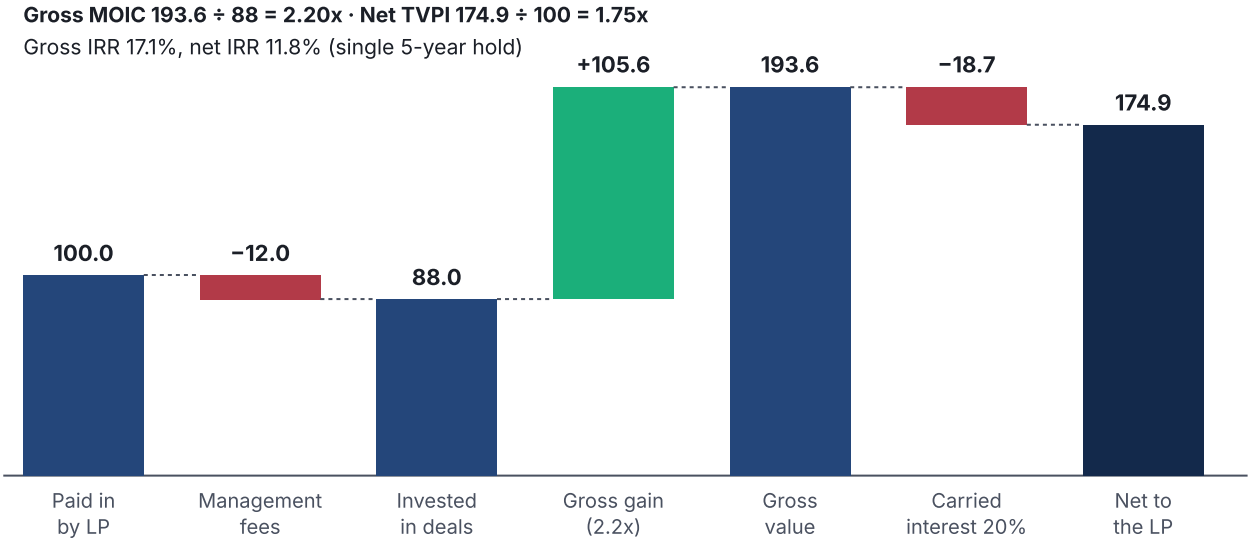

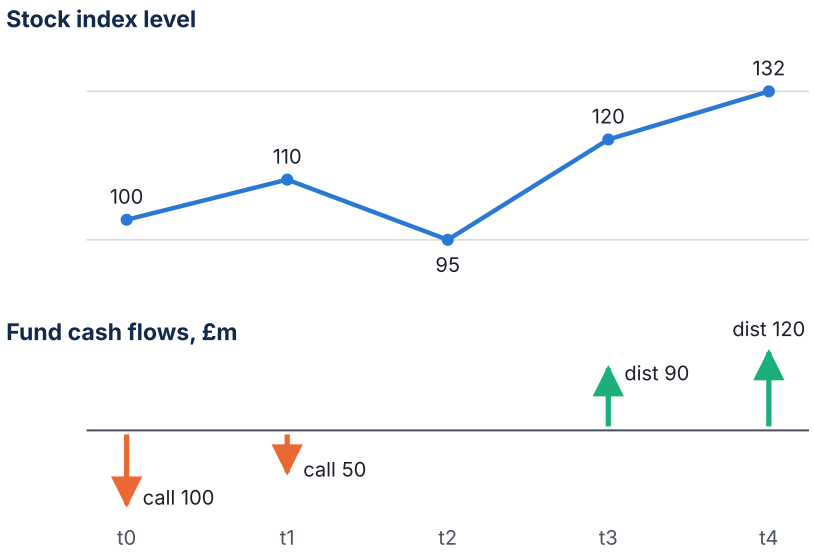

Figure 34. From gross to net, £m. Fees shrink the base that compounds; carry takes a share of the gain. Together they turn 2.20x into 1.75x. Illustrative and simplified (no fund expenses, no fee offsets) INFERRED.

PME: did the fund beat the stock market?

An 11% IRR is good or bad only relative to what the same money would have made in listed shares. Kaplan and Schoar's **public market equivalent** (2003 working paper, 2005 *Journal of Finance*) answers that. In their words: "The PME measures the discounted value of the cash outflows of the fund relative to the discounted value of the cash inflows (all net of fees), where discounting is undertaken using the total return to the S&P 500" [S453] CONFIRMED. Above 1.0 means the fund beat the index INFERRED. Their research found average net returns roughly equal to the S&P 500, with large dispersion and strong persistence between a manager's successive funds [S453] REPORTED.

FORMULA

KS-PME = $[\ \Sigma\ D_t \div I_t\ ] \div [\ \Sigma\ C_t \div I_t\ ]$. In words: convert every distribution and every call into "units of the index" by dividing by the index level on that date, then compare units out with units in. (Remaining NAV counts as a final distribution.)

Distributions in index units
90 ÷ 120 + 120 ÷ 132
= 0.750 + 0.909 = 1.659

Calls in index units
100 ÷ 100 + 50 ÷ 110
= 1.000 + 0.455 = 1.455

KS-PME = 1.659 ÷ 1.455 = 1.14

Check: calls put in the index would be worth 192 at t4; the fund's cash, grown the same way, is worth 219. 219 ÷ 192 = 1.14 again.

Fund: TVPI 1.40x, IRR 11.0%. Beat the index by 14% in total.

Figure 35. A Kaplan-Schoar PME on a four-flow fund. Dividing each cash flow by the index level on its date asks: "how many units of the market did I give up, and how many did I get back?" Formula from Kaplan and Schoar [S453] CONFIRMED; all numbers illustrative INFERRED.

Vintage years and quartiles

A fund's **vintage** is the year it started investing. Funds of the same vintage bought in the same market, so they are ranked against each other, not against funds from other years. A **quartile** splits that peer group into four: "top quartile" means the best 25% of funds of that vintage on a chosen measure (net IRR, TVPI or PME). Two traps follow. First, the same number can rank very differently in two vintages. Second, a young fund's quartile is mostly RVPI, so it can move a lot before the fund is finished INFERRED.

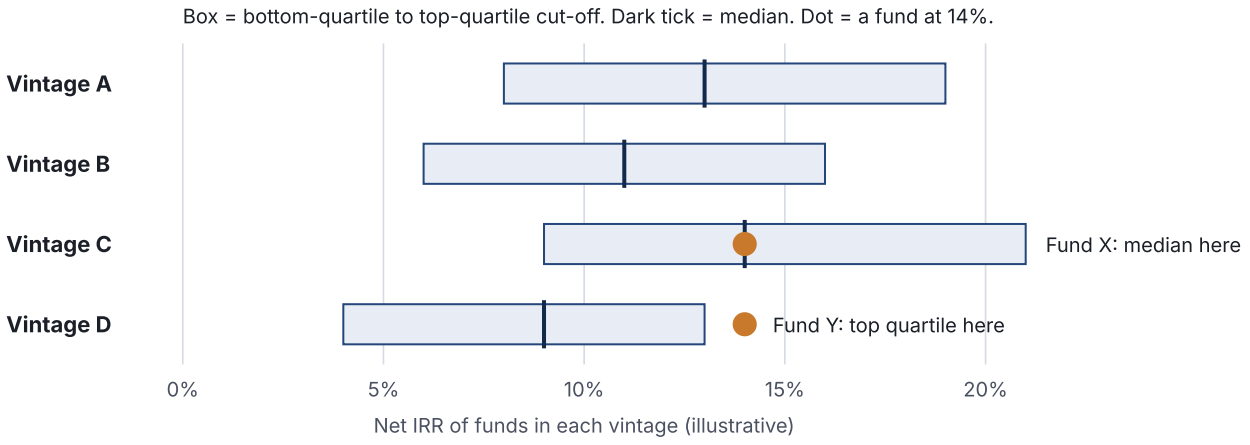

Figure 36. Same 14% IRR, different verdict. Each box spans the bottom-quartile to the top-quartile cut-off for one vintage; the dark tick is the median. A 14% fund is merely median in vintage C but top quartile in vintage D. All numbers illustrative INFERRED.

Why DPI dominates in 2025-26

For a decade, LPs ranked managers mainly on IRR and TVPI. Since 2022 exits have slowed, cash has not come back, and DPI has become the most-watched number [S262] CONFIRMED. The evidence, provider by provider (each defines the base differently, so do not add them up):

- Bain: distributions as a share of NAV were about 14% in 2025, below 15% for four years running [S262] CONFIRMED.

- McKinsey's 2026 report, via Dakota: distributions fell to 6% of AUM versus a 2015 to 2019 average of 16% [S261] REPORTED.
- PitchBook: almost $5 trillion sits in funds 7 or more years old, 39% of total NAV (December 2025) [S260] REPORTED. Bain counts about 32,000 unsold portfolio companies worth about $3.8tn [S262, S326] CONFIRMED.
- Bain cites an ILPA survey: 53% of LPs said undrawn commitments limit new PE commitments [S262] CONFIRMED.

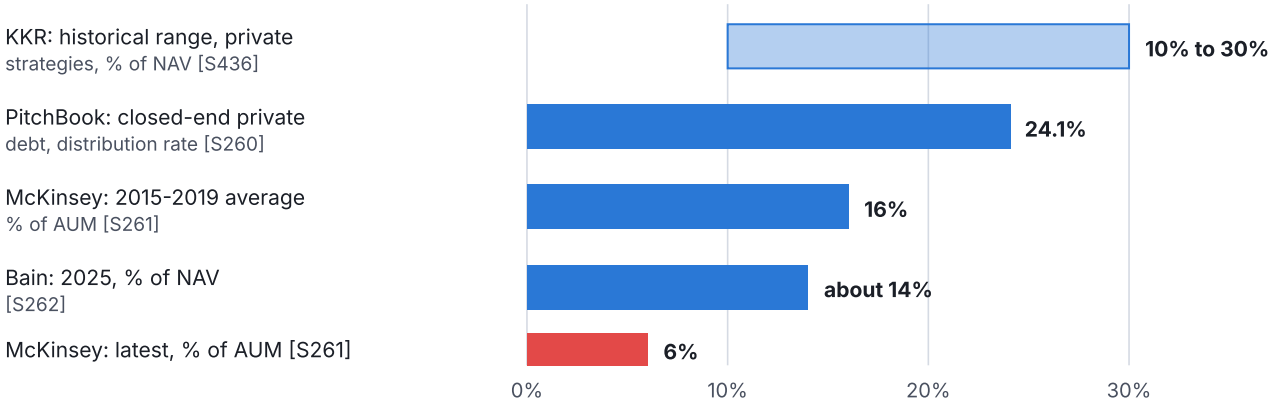

Figure 37. Distributions: the long-run norm versus now. Bases differ (NAV, AUM, fund type), so compare each bar only with its own history: the McKinsey pair is the cleanest before-and-after. Sources: KKR GMAA Jul 2026 [S436] CONFIRMED; PitchBook 2025 data [S260] REPORTED; McKinsey 2026 via Dakota [S261] REPORTED; Bain Feb 2026 [S262] CONFIRMED.

What this means at KKR: an exit is now a client-service event as much as an investment one. When Aon agreed to buy USI Insurance Services from KKR and co-investors for about $17bn including debt in August 2026, coverage put the price at about 6x KKR's original equity [S354] REPORTED. A realisation like that turns RVPI into DPI for every LP in the fund, and becomes evidence in the next fundraise INFERRED. The KCS question to ask is not "what is the IRR?" but "how much of the TVPI is cash?"

WHAT YOU WILL LEARN

To compute IRR by trial and error and spot timing and credit-line effects; to split TVPI into DPI and RVPI; to walk gross to net through fees and carry; to compute a Kaplan-Schoar PME; and to rank a fund correctly within its vintage.

WHERE YOU MEET IT AT KKR

ILPA DDQ 2.0 sections 14 (Track Record) and 15 (Accounting/Valuation) [S444] CONFIRMED; the ILPA Performance Template for funds starting from 1 January 2026, with first delivery four full quarters later [S445] CONFIRMED; and every fundraise update after an exit such as USI [S354] REPORTED.

ONLY AT KKR

KKR reports performance for both drawdown funds (IRR, multiples) and evergreen K-Series vehicles (total returns by share class) [S420, S421] CONFIRMED. A KCS junior has to explain both families to the same clients, sometimes in the same meeting. That pushes you to understand what each number measures, not just to quote it INFERRED.

SAY IT IN ONE LINE

"I want to learn to read a track record the way an LP's due diligence team does: IRR next to DPI, gross next to net, and every number against a public market equivalent."

Evergreen performance: a different clock

KKR's K-Series funds have no end date. Investors buy in monthly at NAV and can ask to sell quarterly, up to a cap (5% of NAV per quarter for K-PEC) [S420] CONFIRMED. There are no capital calls and no final distribution, so IRR and DPI do not fit. Evergreen funds report a **total return** per share class instead.

THREE FORMULAS

Total return for a period = (NAV per share at end + distributions paid − NAV per share at start) ÷ NAV per share at start.

Chain-linking: a yearly return is built from monthly ones: $(1 + r_{Jan}) \times (1 + r_{Feb}) \times \ldots \times (1 + r_{Dec}) - 1$. This is a **time-weighted return**: it ignores when investors added or withdrew money, so it measures the manager, not the investor's timing.

Distribution rate = annualised distribution per share ÷ current NAV per share. It is a cash yield, not a return.

Worked example 10 (illustrative). Three months of NAV moves: +1.0%, −0.5%, +2.0%. Quarter return = 1.010 × 0.995 × 1.020 − 1 = **2.505%**, slightly more than the 2.5% you get by adding; over twelve months the gap grows. Now an infrastructure-style share class: NAV starts the year at £25.00, pays £0.30 a quarter, ends at £24.60. Distribution rate = (4 × 0.30) ÷ 24.60 = **4.9%**. Total return = (24.60 + 1.20 − 25.00) ÷ 25.00 = **3.2%**. A 4.9% payout on a 3.2% return means part of the cash came from capital. K-INFRA's own 10-K warns that its distributions "may and are expected to exceed our earnings and cash flow from operating activities" and may be paid from borrowings or offering proceeds [S421] CONFIRMED.

The real numbers: K-PEC and K-INFRA in 2025

Vehicle (NAV, 31 Dec 2025)	Share class	2025 total return	Since inception, a year	Distributions
K-PEC, private equity ($9.93bn)	I	16.81%	12.94% (since Sep 2023)	None ever paid
	R-I (early-bird)	16.79%	13.22% (since Aug 2023)	
	U	15.78%	n/a	
	D	14.80%	n/a	
K-INFRA, infrastructure ($6.47bn)	I	10.13%	10.06%	Quarterly since Jan 2024
	R	10.17%	n/a	
	S	9.15%	n/a	

Source: K-PEC 10-K FY2025 [S420] and K-INFRA 10-K FY2025 [S421] CONFIRMED. "n/a" means not extracted in the research, not zero.

Why do classes of the same fund earn different returns? Mainly fees. Classes S and U pay an ongoing 0.85% of NAV a year to the dealer-manager (0.60% distribution plus 0.25% servicing), class D pays 0.25%, and class I pays none [S420] CONFIRMED. The I-minus-U gap in K-PEC is 16.81 − 15.78 = 1.03 points,

close to the 0.85% trail plus its knock-on effect on the performance fee INFERRED. The I-minus-D gap (2.01 points) is larger than D's 0.25% trail can explain; the timing of when D shares were first issued may matter, and the 10-K would need reading class by class INFERRED. Lesson: always quote the class.

Why evergreen returns and drawdown IRRs are apples and oranges

A drawdown fund's IRR is **money-weighted**: it measures only the money the fund has called, while it is invested. An evergreen total return is **time-weighted** and applies to all the money from day one, including a liquidity sleeve held in cash and credit (up to about 20% for K-PEC, about 15% for K-INFRA) [S420, S421] CONFIRMED. A drawdown LP's uncalled commitment sits elsewhere earning less, and the IRR ignores that.

Worked example 11 (illustrative). The same assets grow 10% a year. Investor 1 commits £100 to the drawdown fund from the pacing section and holds the uncalled money and distributions in cash at 4%. Investor 2 puts £100 into an evergreen fund holding the same assets. After five years:

- Drawdown: NAV £88.6 + cash £48.5 = **£137.1**. The fund's IRR on called capital is a perfect **10.0%**, but the committed £100 grew only **6.5% a year**.
- Evergreen, fully invested: 100×1.10^5 = **£161.1** (10.0% a year).
- Evergreen with a 15% liquidity sleeve at 4%: $100 \times (0.85 \times 1.10^5 + 0.15 \times 1.04^5)$ = **£155.1** (9.2% a year).

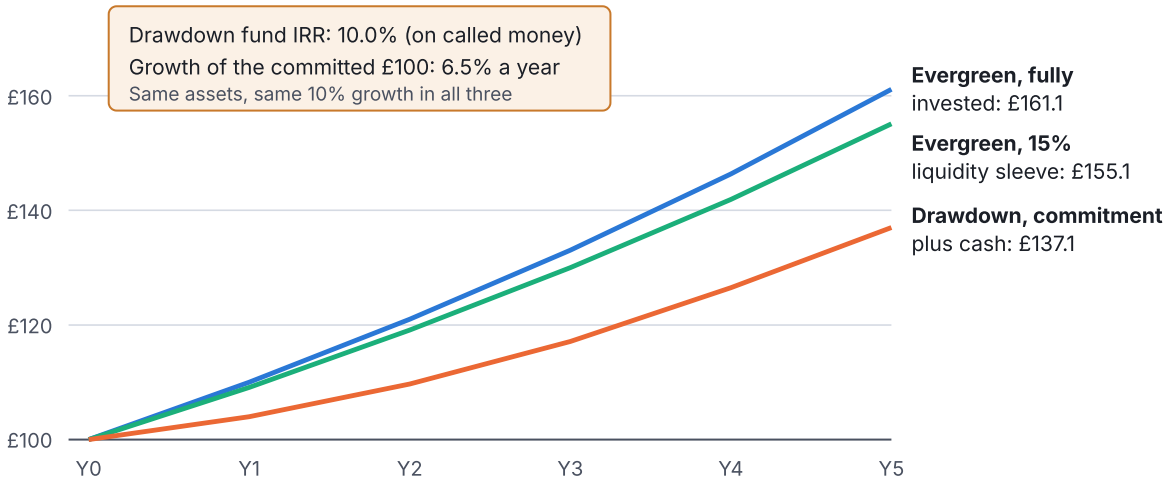

Figure 38. Same assets, three results. The drawdown fund reports the highest-looking return (10.0% IRR) while its investor ends with the least money, because uncalled cash earned 4%. Evergreen returns are lower than the asset return only by the drag of the liquidity sleeve and fees. Illustrative numbers, gross of fees INFERRED.

Four more differences to name when a client compares the two: fees are charged on NAV in evergreen funds but often on commitments in drawdown funds (K-PEC [S420] CONFIRMED; the drawdown norm INFERRED); evergreen NAVs are set monthly by the manager under board-approved policies, which is why operational due diligence focuses on valuation governance "where transactions are based on the fund's NAV" [S458] CONFIRMED; liquidity is real but capped, and in Q1 2026 K-FIT received requests for 6.3% of shares and paid about 80% of them, then paid in full in Q2 [S338] REPORTED; and evergreen investors who join late buy at today's NAV, so they do not get the early J-curve but also do not get the early discount INFERRED.

WHAT YOU WILL LEARN

To compute time-weighted total returns and distribution rates, to read share-class returns net of trail fees, and to explain to a client why a 10% IRR and a 10% evergreen return do not deliver the same wealth.

WHERE YOU MEET IT AT KKR

K-Series AUM reached $42bn at 30 June 2026, up from $25bn a year earlier [S330, S332] CONFIRMED. K-PEC and K-INFRA publish class-by-class returns in their 10-Ks [S420, S421] CONFIRMED. In London, Matt Yates is responsible for "ongoing product management of KKR's Evergreen Private Equity vehicles, K-PRIME and K-PEC" [S133] CONFIRMED.

ONLY AT KKR

KKR's evergreen vehicles hold the same deals as its flagships through joint ventures: K-PEC is co-general partner alongside funds such as North America Fund XIII or XIV [S420] CONFIRMED. So a KCS junior can compare a drawdown fund and an evergreen fund that own overlapping companies, and see the measurement difference cleanly, without the noise of different portfolios INFERRED.

SAY IT IN ONE LINE

"I want to learn to explain evergreen and drawdown performance on a like-for-like basis, so a client comparing a K-Series return with a flagship IRR understands what each number actually measures."

Insurance clients: capital, matching and Global Atlantic

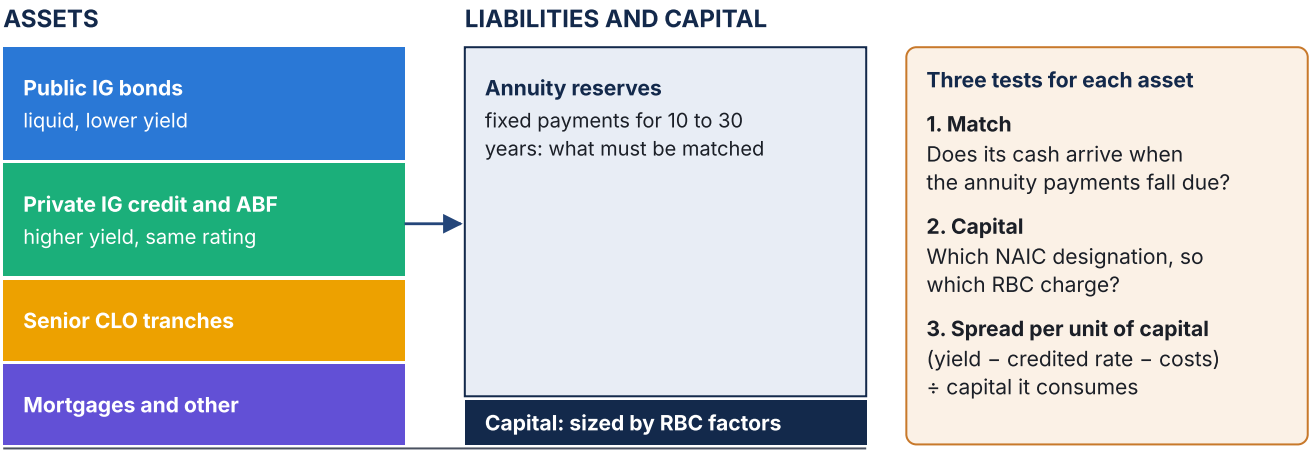

Insurers are a third of KKR's AUM when Global Atlantic's balance sheet (22%) and third-party insurers (11%) are added together (31 Dec 2025) [S71] CONFIRMED; the sum is INFERRED. They think about investments differently from anyone else, because every asset uses up regulatory capital.

How a life insurer makes money, from zero

A customer pays a lump sum for an **annuity**: a promise of fixed payments for years. The insurer invests the money in bonds and loans. Its profit is the **spread**: asset yield minus the rate it credits to the customer minus costs. Three constraints bind every investment decision INFERRED:

1. **Matching.** Asset cash flows should arrive when the annuity payments are due (asset-liability management, ALM). Self-amortising assets help: KKR describes asset-based finance (ABF) investors receiving "front-loaded principal payments plus interest, similar to the way homeowners make their mortgage payments" [S434] CONFIRMED.
2. **Capital.** US life insurers hold risk-based capital (RBC) against each asset. "The determination of RBC is based on the NAIC designation of the assets"; and the designation "depends on the applicable NRSRO rating" (a recognised credit rating) [S425] CONFIRMED. The NAIC moved from 6 to 20 bond designation categories with year-end 2021 factors [S461] REPORTED.
3. **Liquidity.** Enough to pay claims and surrenders without forced selling INFERRED.

So an insurer wants assets that are investment-grade rated (low capital charge) but pay more than public bonds with the same rating. Private investment-grade credit and ABF are built for that: the capital rule is from [S425] CONFIRMED, the preference is INFERRED.

Block sizes are illustrative. RBC = risk-based capital; NAIC = US insurance regulators' association; IG = investment grade; ABF = asset-based finance; CLO = collateralised loan obligation.

Figure 39. An insurer's balance sheet and the three tests. Capital is a thin slice under large liabilities, so an asset's capital charge matters as much as its yield. The NAIC-designation rule is from KKR's 10-K [S425] CONFIRMED; layout and sizes are illustrative INFERRED.

Worked example 12: capital charges with real NAIC numbers

KKR's digest of the NAIC's Spring 2026 meeting (Andrew Phillips, 7 April 2026) gives these factors [S439] CONFIRMED. Multiply each by $100m to see the capital an insurer would hold:

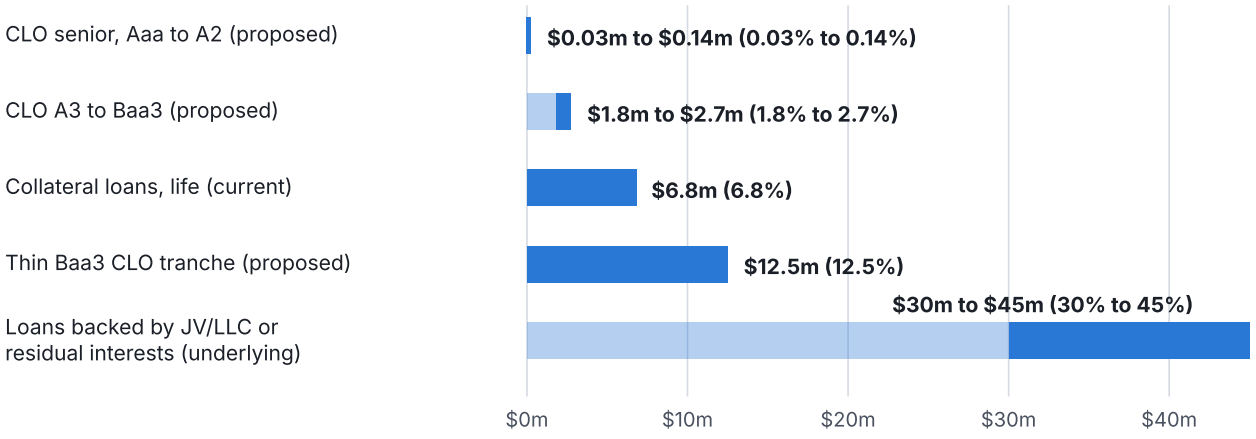

Figure 40. Capital held per $100m invested, by asset. Solid bars mark the range; pale bars show the floor of the range. A thin Baa3 tranche "thinner than 4%" would face "a 12.5% charge"; NAIC targets year-end 2026 for CLO factors and likely year-end 2027 for a look-through on collateral loans. Source: KKR, NAIC Spring 2026 highlights, 7 Apr 2026 [S439] CONFIRMED.

Now the decision. Suppose (illustrative yields) a private ABF note designated in an A3-to-Baa3-type band pays 2.0% over the insurer's liability cost and needs about 2.7% capital, while a loan backed by a residual interest pays 4.0% over liability cost but needs 30% capital. **Spread per unit of capital**: 2.0 ÷ 2.7 = **0.74** versus 4.0 ÷ 30 = **0.13**. The lower-yielding asset is more than five times better use of capital. This is why KKR's insurance content leads with capital, and why the NAIC's stated principle of "equal capital for equal risk" [S439] CONFIRMED matters commercially: each factor change re-ranks the menu INFERRED.

What insurers say they want: the 2026 KKR Insurance CIO Survey

Published 2 October 2026, the survey covers about 50 US insurers with nearly $2.6tn of AUM [S438] CONFIRMED. "Nearly 80% expect to maintain or accelerate their pace of private capital investment, while 91% plan to maintain or increase credit exposure", and "Every major Private Credit category is a net add in the survey, led by Asset-Based Finance" [S438] CONFIRMED. Their concerns: "Asset-liability matching, illiquidity limits, regulatory capital, reinvestment risk" [S438] CONFIRMED. The full deck is available via "your Relationship Manager", i.e. through KCS [S438] CONFIRMED. KKR's NAIC digest similarly ends with "reach out to your relationship manager or kkrinsurance@kkr.com" [S439] CONFIRMED: regulatory analysis is used as a client-coverage tool.

Global Atlantic: client, capital source and laboratory

Global Atlantic (GA) is KKR's retirement and life insurer, fully owned since KKR bought the remaining 37% for about $2.7bn, completed 2 January 2024 [S2, S11] CONFIRMED. At 30 June 2026 it had $220bn of AUM, of which $164bn was credit [S1] CONFIRMED. For KCS it plays three roles at once [S425, S440] INFERRED:

- **A client of KKR's investing teams:** GA's balance sheet is 22% of KKR's AUM [S71] CONFIRMED.
- **A source of products KCS sells:** GA-sponsored sidecars raise third-party capital (below), and GA generates capital markets fees [S440] CONFIRMED. CFO Robert Lewin described the Arctos acquisition as a way to "create flow for Global Atlantic" [S440] CONFIRMED.
- **A source of insight for insurer clients:** KKR's Global Insurance Client Solutions team offers "fully integrated balance sheet solutions" combining origination, capital markets access, "liability structuring solutions" and regulatory expertise [S104] CONFIRMED. Lewin on the cycle: in volatile markets "spreads are going to expand ... less competition on the liability side", and KKR has "real linkage between liability origination and asset origination" [S440] CONFIRMED.

The Ivy vehicles, explained simply

KKR's 10-K: "we also sponsor investment vehicles raised from third-party capital, such as the Ivy investment vehicles, to participate alongside Global Atlantic's institutional and individual market activities ... As of December 31, 2025, $58 billion of Global Atlantic AUM is provided by these Global Atlantic sponsored vehicles" [S425] CONFIRMED. They are "commitment-based structures with third-party investors" that participate "through reinsurance" in business GA writes during the vehicles' investment periods, and they are regulated by the Bermuda Monetary Authority [S425] CONFIRMED. By Q2 2026 IV-related AUM was "$62 billion ... up from approximately $50 billion just a year ago", with "$6 billion of dry powder that we think translates to north of $60 billion of buying power on the liability side" [S440] CONFIRMED.

The risk the investor takes is real: the 10-K notes a vehicle may "fail or refuse to fund their portion", and GA's remedy is against the vehicle, "but not directly against their shareholders or lenders" [S425] CONFIRMED. For KKR the economics are fees from "IV-related vehicles" plus GA-related capital markets fees "which we think can reach hundreds of millions annually over time"; total insurance economics were $2bn net of compensation over the last twelve months [S440] CONFIRMED.

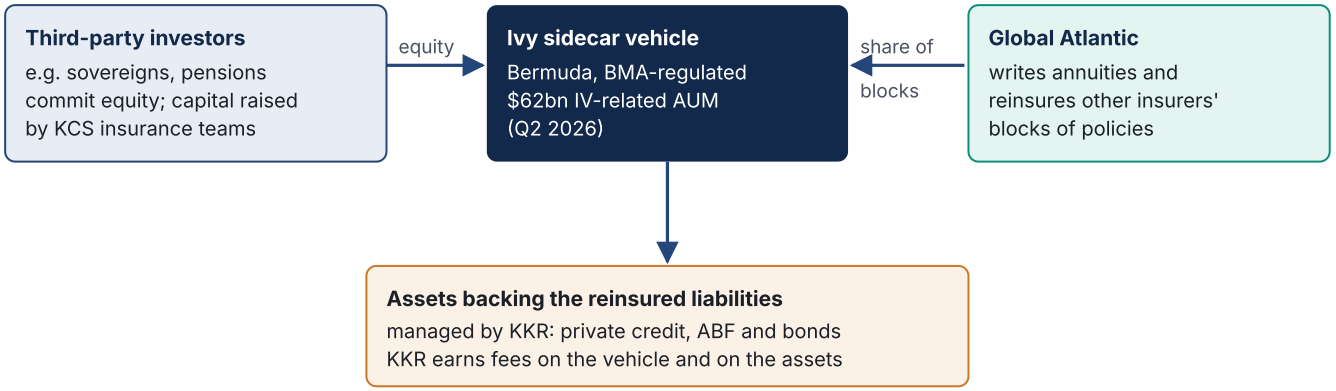

Figure 41. How an Ivy sidecar works. The investor's equity lets Global Atlantic write more business than its own capital allows; the vehicle takes a share of each block through reinsurance. Facts from KKR's 10-K [S425] and Q2 2026 call [S440] CONFIRMED; layout is the author's INFERRED.

WORKED EXAMPLE 13: THE SIDECAR'S LEVERAGE (ILLUSTRATIVE EXCEPT THE $6BN AND $60BN)

KKR says $6bn of dry powder translates to "north of $60 billion of buying power on the liability side" [S440] CONFIRMED: about $1 of equity per $10 of liabilities. Suppose the assets backing those liabilities earn 1.0% a year more than the liabilities cost (illustrative). Each $1 of equity then earns $10 × 1.0% = **$0.10 a year, about 10%**, before costs and on top of whatever the equity's own assets earn. The same leverage cuts the other way: if the spread turned negative by 1.0%, the equity would lose about 10% a year. That is the underwriting risk the investor is paid for INFERRED.

WHAT YOU WILL LEARN

To think like an insurance CIO: match liability cash flows, look up the capital charge, and rank assets by spread per unit of capital. To explain a reinsurance sidecar and its 10-to-1 leverage in plain words.

WHERE YOU MEET IT AT KKR

Darryl Herrick, Head of Global Insurance Client Solutions and President of Global Atlantic Re, "helping manage the third-party reinsurance sidecar platform" [S127] CONFIRMED; Whitney Sparks's team raises "third-party capital to support KKR's Insurance business" [S128] CONFIRMED; the 2026 Insurance CIO Survey [S438] and NAIC updates [S439].

ONLY AT KKR

Few managers own a large insurer outright, write its liabilities, originate the assets that back them, and raise third-party sidecar capital alongside it. At KKR a KCS insurance conversation can draw on all four. You learn insurance capital from the inside of a working insurer, not from a textbook [S425, S440] INFERRED.

SAY IT IN ONE LINE

"I want to learn why an insurer will take a lower yield for a lower capital charge, and how Global Atlantic and the Ivy vehicles turn that logic into products KCS raises money for."

Capstone: a private markets plan for a UK DC megafund

This exercise pulls the module together. It is the kind of analysis a London KCS team could prepare before meeting a large UK workplace pension. The scheme is hypothetical and all its numbers are illustrative; the rules and KKR facts are sourced.

Step 1: the client and its constraints

Scheme M (hypothetical) is a multi-employer defined contribution master trust. Its default fund is £30bn in 2027, growing to an assumed £40bn by 2030 from contributions and returns. Members are young on average, so contributions exceed withdrawals (illustrative). Its constraints:

- **Scale rule.** Under the Pension Schemes Act 2026 (Royal Assent 29 April 2026), large multi-employer DC schemes need at least one default fund of £25bn or more by 2030, with a transition route for schemes of £10bn that can reach £25bn by 2035 [S346] CONFIRMED. Scheme M already qualifies.
- **Allocation pledge and reserve power.** The voluntary Mansion House Accord (13 May 2025): 17 providers pledged at least 10% of DC default funds in private markets by 2030, with at least 5% in the UK [S315] CONFIRMED. The Act's reserve power, usable once and not before 1 January 2028, could require up to 10% in "qualifying assets", no more than 5% UK-specific, with a trustee opt-out where compliance is "likely not to be in the best interests of members" [S346] CONFIRMED.
- **Liquidity.** The default fund is priced and dealt daily INFERRED. So private assets must sit in a vehicle that the daily fund can hold.
- **Vehicle rules.** The UK Long-Term Asset Fund (LTAF) was opened to DC default and self-select use when PS23/7 recategorised LTAF units from 3 July 2023 [S305, S306] CONFIRMED. LTAFs deal no more often than monthly with at least 90 days' notice for redemptions [S451] REPORTED. LTAF AUM was about £7.5bn in May 2026 [S452] REPORTED.
- **Fees and value.** DC fees are closely scrutinised, so low-fee routes (co-investment, SMAs, evergreen at scale) matter INFERRED.

Step 2: the allocation (illustrative)

Sleeve (of the £4.0bn private target in 2030)	Share	£bn	Why, in liability terms	Possible KKR building blocks
Infrastructure	35%	1.40	Inflation-linked, contracted cash flows; long horizon matches young members	GII V, Core+, North America and Western Europe [S430]; KKR's 50% of Norfolk Vanguard offshore wind, 3.1GW, agreed Jan 2026 [S357] REPORTED
Private credit incl. ABF	30%	1.20	Income, amortising cash flows, lower volatility	ABF Partners II, $6.5bn incl. SMAs [S433] REPORTED
Private equity	25%	1.00	Long-run growth for members decades from retirement	Flagship funds and co-investment; UK take-privates such as the DCC approach with ECP [S356] REPORTED
Real estate and other	10%	0.40	Diversification; land is a "qualifying asset" [S346]	Real estate strategies (not detailed in this research)
UK-specific: 50% of the sleeve		**2.00**	= 5% of a £40bn fund: meets the Accord's "at least 5% UK" and sits within the Act's 5% UK cap [S315, S346]; arithmetic INFERRED	

Step 3: vehicle choice and pacing

KKR has no confirmed UK LTAF or EU ELTIF in the research [S429, S464] (gap), so the route has to be built INFERRED. A realistic structure: Scheme M (or its provider) runs its own LTAF; KKR manages a **segregated mandate** (a separately managed account) inside it, which commits to KKR drawdown funds and takes co-

investments; a portion goes into semi-liquid or evergreen-style exposure that is invested from day one. KKR's 10-K notes institutions' "increased preference for ... separately managed accounts or specialized investment vehicles" [S70] CONFIRMED.

Pacing, worked. Split the 2030 target: 40% (£1.6bn) through evergreen-style exposure built by subscriptions, 60% (£2.4bn) through drawdown commitments. Using the single-commitment model from the pacing section, a commitment made each year from 2027 to 2030 will, at end-2030, be at ages 4, 3, 2 and 1, worth 91.0 + 79.4 + 52.0 + 25.0 = 247.4% of one year's commitment. Annual commitment needed = 2.4 ÷ 2.474 = **about £0.97bn a year**, so roughly £3.9bn committed in four years to hold £2.4bn of NAV, with about £1.6bn still uncalled (paid-in by then: 87.5% + 75% + 50% + 25% of one year's commitment). That is over-commitment in action (illustrative).

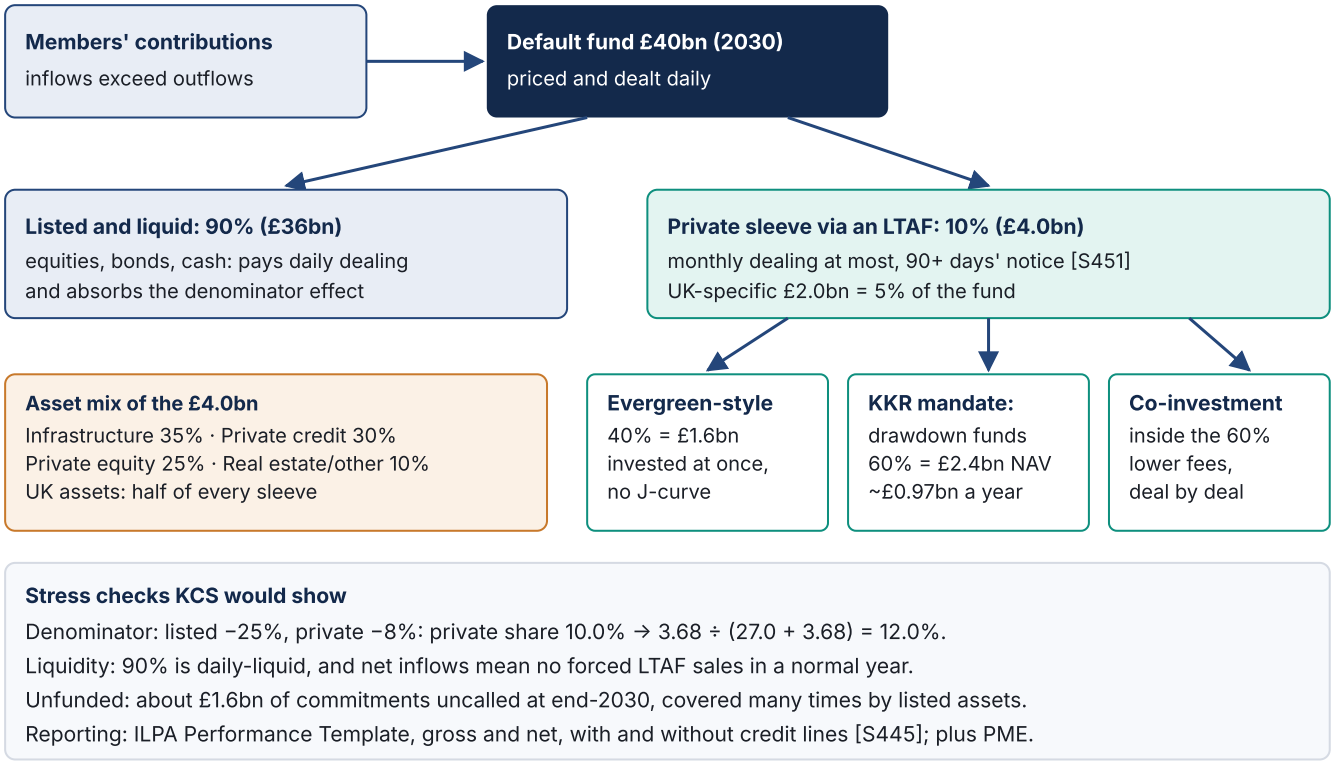

Figure 42. Scheme M's private markets plan on one page. The default fund stays daily-dealt; the private 10% sits in an LTAF holding three routes to exposure. Rules from [S346, S315, S451]; scheme, mix, sizes and stresses are illustrative INFERRED.

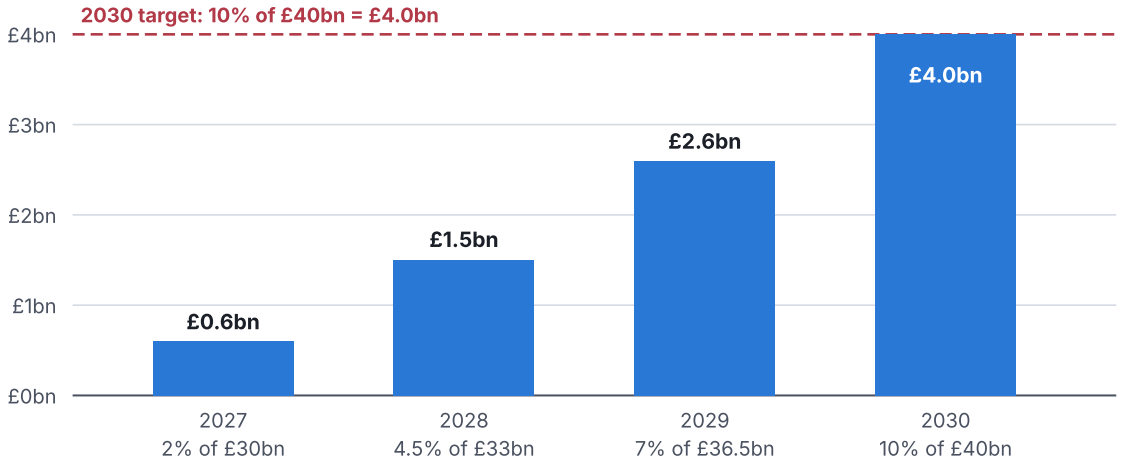

Figure 43. Scheme M's glide path to 10%. The private sleeve must grow faster than the fund itself, which is why a mix of immediate (evergreen-style) and paced (drawdown) exposure is used. Fund sizes and percentages are illustrative INFERRED.

Step 4: what KCS would actually present

Slide	Content	Technique from this module
1. Your objectives	Member outcomes, 10%/5% UK targets, daily dealing, fee budget	Liabilities first; "enough return" for a 40-year saver
2. Portfolio fit	What each sleeve replaces in the listed portfolio and its hurdle	TPA funding rule; KKR's 30% private model portfolios as a reference point [S437]
3. Structure	LTAF plus KKR mandate, evergreen-style and co-invest routes	Vehicle rules [S305, S451]; SMA preference [S70]
4. Pacing	Commitment schedule 2027-2030, NAV build, unfunded	Takahashi-Alexander model; over-commitment
5. Stress tests	Denominator, liquidity, redemption queue	Denominator worked example; evergreen caps [S420]
6. Reporting	Net IRR, TVPI, DPI, PME; evergreen total returns by class	Performance section; ILPA template [S445]
7. Why KKR	UK and European assets, infrastructure scale, ABF, TPA work	About $120bn of infrastructure equity managed [S430] CONFIRMED; TPA papers [S435, S436]

WHAT YOU WILL LEARN

To combine liabilities, allocation, vehicle rules, pacing and stress testing into one client plan, and to turn it into a seven-slide story a relationship manager can take into a trustee meeting.

WHERE YOU MEET IT AT KKR

The UK client universe is consolidating into a few £25bn+ DC megafunds and six LGPS pools holding over £400bn [S346] CONFIRMED [S347] REPORTED. KKR's London platform includes the DCC approach and Norfolk Vanguard [S356, S357] REPORTED; Daniel Celeghin leads New Markets and Sales Partnerships including Defined Contribution retirement [S136] CONFIRMED.

ONLY AT KKR

The plan needs infrastructure at scale, private credit and ABF, private equity, a TPA framework and both drawdown and evergreen know-how, all of which KKR has on one platform. Its US work with Capital Group on a target-date fund for defined contribution plans [S363] REPORTED is a live template for putting private assets into daily-dealt retirement money. Whether that template transfers to UK LTAFs is an open question worth asking in interview INFERRED.

SAY IT IN ONE LINE

"I want to learn how to build a private markets plan for a UK DC megafund under the Pension Schemes Act, from liabilities to pacing to the LTAF wrapper, because that is where London's next decade of client demand will come from."

MODULE 2 IN ONE PARAGRAPH

Liabilities set "enough". Each investment must beat what it replaces. Pacing turns NAV targets into commitments; watch the denominator. Read IRR with DPI, gross with net, against a PME and a vintage. Evergreen returns run on a different clock. Insurers rank assets by spread per unit of capital.

PART 4

Module 3: Learning a strategy well enough to explain it: infrastructure and asset-based credit

A KCS junior is not paid to know every asset. They are paid to explain one strategy so clearly that a pension trustee, an insurer and a private bank can each decide. This module takes the two strategies KKR is raising hardest in 2026, infrastructure and asset-based finance, and rebuilds them from the cash flows up.

Every claim below is tied to a source in the research files. Numbers marked "illustrative" are invented to teach a mechanism and are not KKR data. Where the research is silent, the text says so.

A1. What infrastructure is, technically

WHAT YOU WILL LEARN

To describe any infrastructure asset by five properties (how it is paid, how it tracks inflation, how long it lasts, how much capital it eats, and who carries the price risk), and to tell a concession from a merchant asset in one sentence.

KKR's research files describe infrastructure as "essential physical assets (power, data centres, roads, fibre)" that earn "long-term contracted or regulated cash flows" [S269] REPORTED. That phrase hides five separate technical properties. An LP (limited partner, the investor in a fund) will test each one.

Property	Plain English	Why an investor cares
1. Contracted or regulated revenue	Someone has agreed in advance what the asset will be paid: a regulator, a government, or one big customer (the "offtaker") on a long contract.	Cash flows can be forecast years ahead, so the asset can carry more debt and the equity is less volatile INFERRED.
2. Inflation linkage	Prices in the contract or regulated return rise with an inflation index, fully or partly.	KKR's own 2026 mid-year outlook says inflation has a higher "resting heart rate" and portfolios need more links to nominal GDP [S360] CONFIRMED. Infrastructure is one answer INFERRED.
3. Long asset life	A wind farm, fibre network or pipeline works for decades.	Long life matches long liabilities (pensions, annuities). It also means the exit price depends on cash flows far in the future INFERRED.
4. Capex intensity	Capex (capital expenditure) is money spent building or upgrading the asset. Infrastructure needs a lot of it up front.	Norfolk Vanguard needs "more than $15bn" of total spending before it operates [S357] REPORTED. Whoever funds capex earns the return, which is why KKR is invited in INFERRED.
5. Who carries price risk	Either the contract fixes the price (concession, contracted, regulated) or the asset sells at the market price (merchant).	This one property decides most of the risk and return. Figure below.

KEY TERMS

Concession: a government grants a company the right to build or run an asset (a toll road, an airport) for a fixed number of years, then the asset goes back to the state. **Merchant:** the asset sells its output (electricity, capacity) at whatever the market pays that day, with no long contract. **Offtaker:** the customer who buys the output under a contract. **Contract for Difference (CfD):** a UK government contract that tops up a power generator's income when the market price is below an agreed "strike price" and takes back the excess when the market is above it. The CfD explanation is a general description INFERRED ; that Norfolk Vanguard won CfDs is [S357] REPORTED .

Who carries the price risk? Four ways an infrastructure asset gets paid

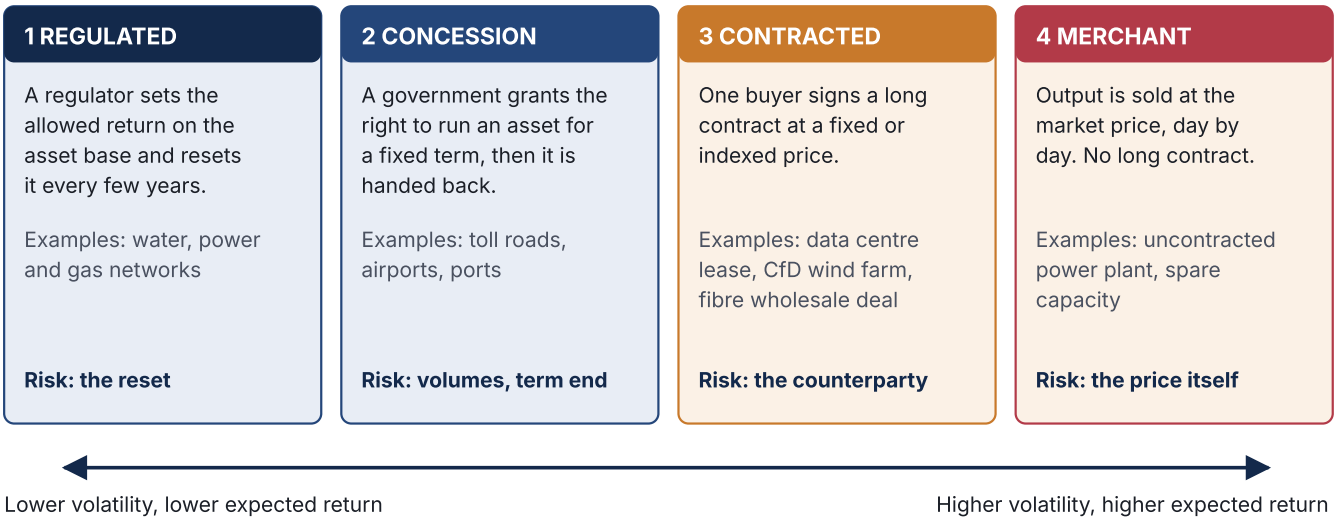

Figure 44. The revenue model decides the risk. Read left to right: as the contract gets weaker, the owner carries more of the price, and should expect more return. Real assets often mix columns (a data centre is contracted for space but may pass power costs through). Categories and examples are a general framework INFERRED ; the definition of infrastructure is from [S269].

KKR describes what its European infrastructure team buys in exactly these terms: "digital infrastructure (fibre, data centres, towers), energy transition (wind, solar), transport", on a platform launched in 2008 [S192] CONFIRMED . The open-ended core fund's sector list, from a 2021 consultant memo, adds the regulated end: "water, wastewater, electricity and gas distribution, digital, renewables, contracted transport, energy transition", OECD countries only [S432] CONFIRMED .

WHERE YOU MEET IT AT KKR

In London KCS, four people work on infrastructure product: Rory Smith, James Hewitt (infrastructure and Climate Transition), Larisa Svintsitski and Pablo Arribas (infrastructure for individuals) [S150] CONFIRMED . It is the largest product cluster in London KCS [S150] CONFIRMED .

ONLY AT KKR

A textbook teaches the four revenue models. At KKR you would see one team own a CfD wind farm (Norfolk Vanguard), contracted data centres (Global Technical Realty) and a fibre network (FiberCop) at once [S181, S182, S430] CONFIRMED , so you learn to compare them inside one portfolio rather than one at a time INFERRED .

SAY IT IN ONE LINE

"I want to learn to read an infrastructure asset by who carries the price risk, because that single fact explains why a CfD wind farm and a merchant power plant sit at opposite ends of the same fund."

A2. The risk ladder: core, core-plus, value-add, and KKR's vehicles on it

WHAT YOU WILL LEARN

The industry's four-rung ladder for infrastructure risk, and how KKR uses different vehicles (an open-ended core fund, a drawdown flagship, a climate fund and an evergreen wealth vehicle) to sell different rungs to different clients.

Infrastructure managers sort strategies by how much of the return comes from steady cash today versus growth and building tomorrow. **Core** means operating assets with contracted or regulated income: most of the return is cash yield. **Core-plus** adds some growth (expansion, re-contracting, bolt-ons). **Value-add** takes construction, repositioning or platform-building risk. **Opportunistic** or development means building new assets or businesses where most of the return is capital gain. These labels are industry convention INFERRED; KKR's own documents use two of them directly.

- **DCIF (Diversified Core Infrastructure Fund).** Open-ended (no end date), started December 2020 [S175] CONFIRMED. The consultant memo calls it "an open-ended fund that will focus on critical core infrastructure investments with low volatility and strong downside protection", targeting 7% to 9% net [S432] CONFIRMED.
- **GII V.** A drawdown fund (investors commit and KKR calls the money over time), investing July 2024 to July 2030 [S1] CONFIRMED. KKR labels it "Core+" [S430] CONFIRMED, not value-add. A flagship drawdown fund takes more growth and development risk than DCIF, so it sits a rung or more higher INFERRED.
- **Global Climate Transition Fund.** Started July 2024 [S175] CONFIRMED; James Hewitt's London KCS role covers "Climate Transition" [S150] CONFIRMED. Its return target is not in the research [Gap].
- **K-INFRA.** The evergreen vehicle for individuals. It owns slices of assets through joint ventures with the other funds [S421] CONFIRMED, so it spans the ladder. About 85% infrastructure, about 15% liquid assets, at most 15% outside the OECD [S421] CONFIRMED.
- **Helix Digital Infrastructure.** Launched June 2026 for AI data centres, power and connectivity for hyperscalers (the largest cloud companies), led by former AWS CEO Adam Selipsky with NVIDIA and Vistra as partners [S3] CONFIRMED. A new platform sits at the development end INFERRED.

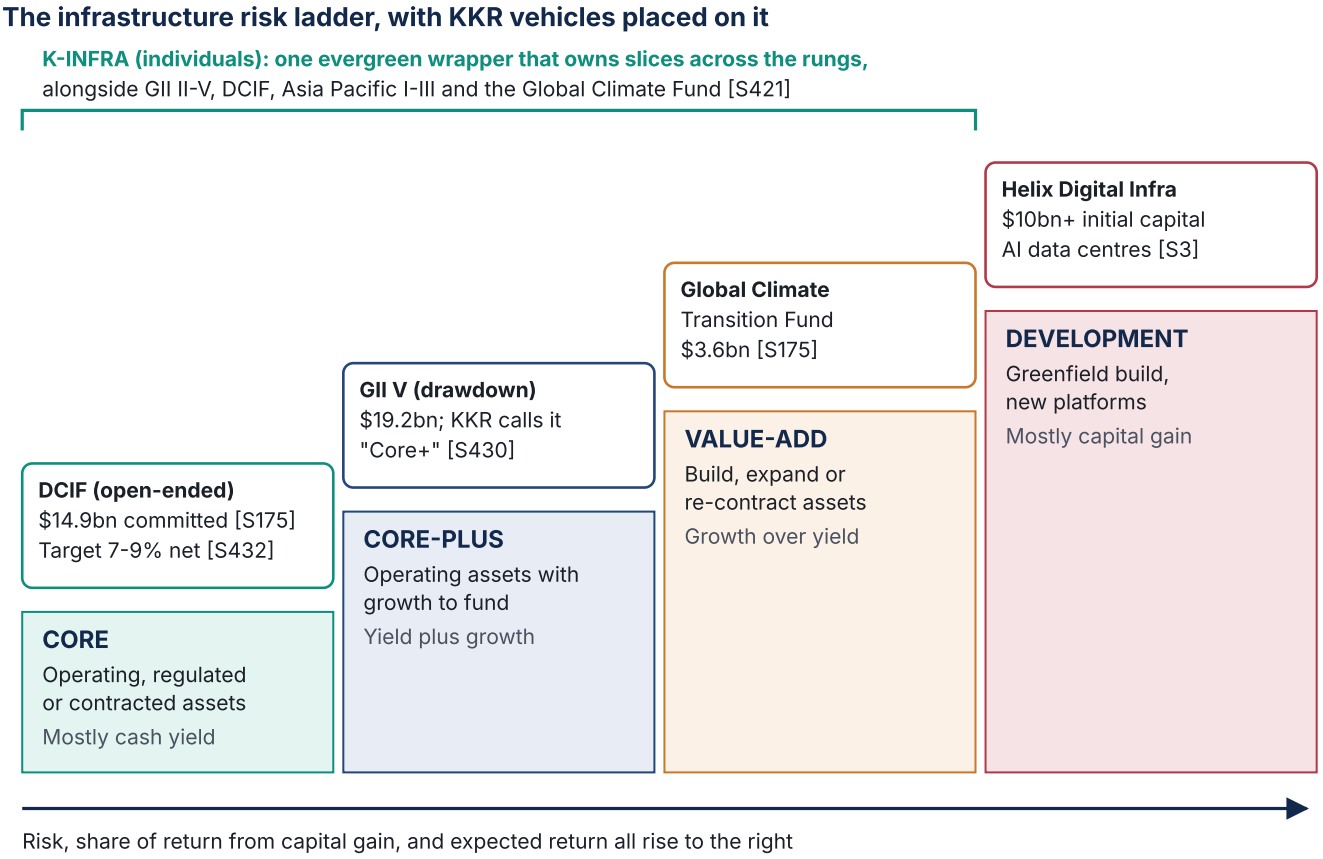

Figure 45. One platform, four rungs, five wrappers. DCIF's "core" label and target come from the consultant memo [S432]; GII V's "Core+" label is KKR's own [S430]. Placing the Climate fund and Helix on higher rungs is the author's reading of their mandates INFERRED. K-INFRA spans the ladder because it co-owns assets with the other funds [S421]. Commitments at 30 Jun 2026 [S175]; Helix at launch, Jun 2026 [S3].

Same team, different wrappers: what changes for the client

	DCIF (institutional, open-ended)	GII V (institutional, drawdown)	K-INFRA (individuals, evergreen)
Who buys	Pensions such as Rhode Island (Cliffwater recommended up to $100m) [S432]	"pension plans, sovereign wealth funds, insurance companies, asset managers, private wealth platforms, and family offices" [S430]	US accredited and non-US individuals via share classes S, D, I [S421]
Management fee	0.8% of NAV; 0.6% for early $50m to $200m commitments for six years [S432] (2021 terms)	Not public. KKR's 10-K range for drawdown infrastructure: 0.75% to 1.50% [S2]	1.25% of month-end NAV [S421]
Performance fee	None for six years, then 5% of asset-level cash yield above a 4% cash yield hurdle [S432]	Not public [Gap]	12.5% of total return over a 5% hurdle, high-water mark, 100% catch-up [S421]
Liquidity	Three-year hard lock-up, then three-year soft lock-up with 5% early redemption fee [S432]	None: money returns as assets are sold. Fund terms 10 to 13 years [S2]	Quarterly repurchases capped at 5% of NAV; 5% fee within 24 months [S421]
Size	$14.9bn committed [S175]	$19.2bn final close [S430]	$6.47bn NAV at 31 Dec 2025; Class I 10.13% return in 2025 [S421]

Notice what DCIF's performance fee is paid on: cash yield, not total return. That choice tells the client the manager is paid to deliver steady distributions, which is what a core investor wants [S432] INFERRED. The memo is from 2021 and the terms may have changed [S432]; it also contains factual slips (it says KKR was

"founded in 1996"; KKR was founded in 1976), a reminder that consultant documents need checking [S432] CONFIRMED.

WHERE YOU MEET IT AT KKR

K-INFRA's 10-K lists every fund it co-invests with [S421]. When a private bank asks "is this the same as the institutional fund?", the London KCS answer (Pablo Arribas covers infrastructure for individuals [S150]) is: same assets, alongside those funds, different wrapper, fees and liquidity INFERRED.

ONLY AT KKR

Few managers sell one infrastructure team through a core open-ended fund, a flagship drawdown fund, a climate fund, an evergreen wealth vehicle and a new AI platform at once [S175, S421, S3]. Learning which client belongs on which rung is a skill you can only practise where all the rungs exist INFERRED.

SAY IT IN ONE LINE

"I want to understand why KKR sells the same infrastructure team as DCIF at 0.8% with carry on cash yield, and as K-INFRA at 1.25% with 12.5% over a 5% hurdle, and which client each one is built for."

A3. KKR's themes and the European deals behind them

WHAT YOU WILL LEARN

To connect a macro theme to a fund to a named asset in three steps, the chain every infrastructure pitch is built on.

KKR's 2026 mid-year outlook calls "Security of Everything" a capital allocation decision covering "defence, cyber, data, shipping lanes, food, water, energy and critical minerals", and in Europe favours "infrastructure, defence, grids, energy systems, logistics" [S360] CONFIRMED. CFO Robert Lewin named "AI, digital and energy infrastructure, defence" among four growth drivers [S3] CONFIRMED. Infrastructure has doubled since KKR's April 2024 Investor Day [S3] CONFIRMED. KKR now manages about $120bn of infrastructure equity, "up from just $13 billion in 2019", with about 160 dedicated infrastructure executives and more than 100 investments [S430] CONFIRMED.

FROM THE INTERNSHIP ADVERT

KKR's own 2027 London team description says the Infrastructure group "invests in companies with tangible assets centred around the key investment themes of energy transition, digitisation and industrial infrastructure out of a global $17bn fund and an open-ended core infrastructure strategy as well as a newly launched Climate strategy" [Advert]. Note the "$17bn fund" predates GII V's $19.2bn final close in August 2026 [S430]: quoting the newer number shows you are current. KKR's other documents confirm the same themes [S192].

Two details on the map below matter more than the headline sizes. First, the TotalEnergies stake was funded by "an insurance account managed by KKR" [S180] CONFIRMED: Global Atlantic's balance sheet now buys infrastructure next to third-party funds, which changes what KCS sells to insurers INFERRED. Second, Vincent Policard, Co-Head of European Infrastructure, framed the RWE deal as "our conviction in the long-term importance of UK renewables" [S181] CONFIRMED, which links directly to UK pension reforms that create a few very large domestic buyers [S346, S347] CONFIRMED.

Three themes, six assets: KKR infrastructure in Europe, 2025-2026

ENERGY TRANSITION	DIGITALISATION	TRANSPORT AND OTHER
Norfolk Vanguard E and W (UK) 50:50 JV with RWE, Jan 2026 3.1GW offshore wind; won UK Contracts for Difference Over $15bn total capex; operation 2029 and 2030 [S181, S357]	**Global Technical Realty** European data centres Extra $1.5bn equity with Oak Hill, Jan 2026; nearly $2bn committed in total Also a GII V asset [S182, S430]	**Rail leasing platform** With Green Mobility Partners, Dec 2025 Trains leased to operators on multi-year contracts (lease model: Inferred) [S184]
TotalEnergies portfolio (EU) 50% of a EUR 1.8bn EV portfolio, Aug 2026 1.2GW in DE, ES, FR, PL Funded by "an insurance account managed by KKR" [S180]	**FiberCop (Italy)** Fibre network built from Telecom Italia assets A GII V asset 10-K notes an EU Commission investigation [S430, S2]	**GII V's other named assets** Altitude III, EDF power solutions N. America, Enilive, Gulf Data Hub, Metronet, Sempra Infra, The Parking Spot [S430]

Grouping into themes is the author's [Inferred]. Norfolk Vanguard closing was expected summer 2026 and is not confirmed [S357].

Figure 46. The deal map a London KCS analyst would know by heart. Each card is one KKR release. GII V had committed over $9bn across the nine assets in the bottom right and centre at its final close [S430]. Sources on each card; as of 11 Oct 2026.

WHERE YOU MEET IT AT KKR

The GII V release was issued from New York and London and quotes Brandon Donnenfeld, the infrastructure business's Chief Development Officer, a client-facing fundraising role [S430] CONFIRMED . In Q2 2026, real assets inflows came from "Helix Digital Infrastructure, K-Series Infrastructure, Asia Infrastructure III and Global Infrastructure V" [S74] CONFIRMED .

ONLY AT KKR

At KKR the same theme reaches clients through several doors: GII V for institutions, K-INFRA for individuals, Helix for a sovereign co-founder (Kuwait Investment Authority [S3]), and an insurance account for TotalEnergies [S180]. You learn how one thesis is cut for different balance sheets INFERRED .

SAY IT IN ONE LINE

"I want to learn to take a house view like 'Security of Everything' and walk a client from it to GII V and then to a named asset like Norfolk Vanguard, in three steps."

A4. How an infrastructure asset makes money: cash yield versus total return

WHAT YOU WILL LEARN

To build an equity cash flow from revenue down (the "waterfall"), to compute cash yield and debt service cover, and to split a total return into the part paid in cash and the part paid at exit.

Step 1: the cash-flow anatomy of a wind farm

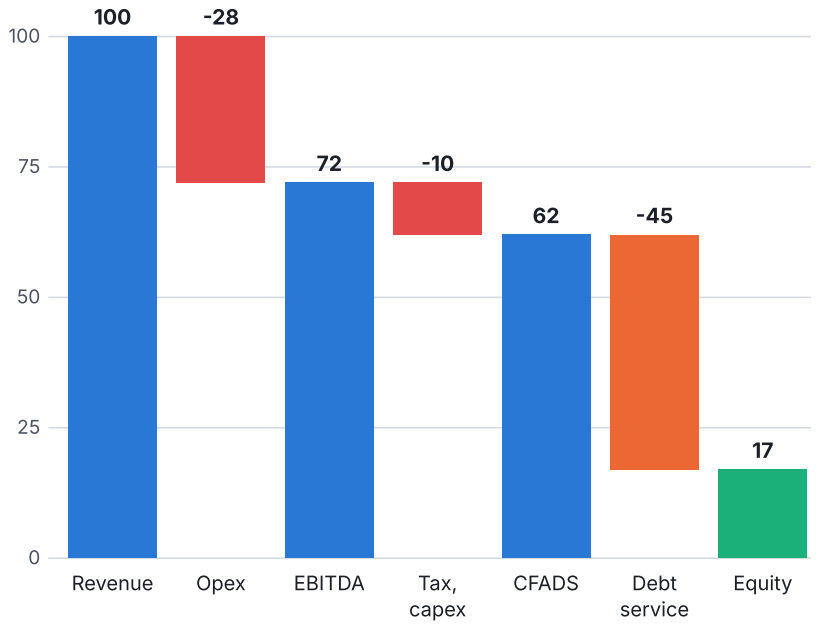

Every infrastructure asset is valued from one ladder of deductions. Start with revenue. Take off operating costs to reach **EBITDA** (earnings before interest, tax, depreciation and amortisation: the cash the asset makes from running). Take off tax and maintenance capex to reach **CFADS** (cash flow available for debt

service). Pay the lenders interest and scheduled principal. What remains belongs to equity. Lenders watch the **DSCR** (debt service cover ratio):

DSCR = CFADS ÷ (interest + scheduled principal)

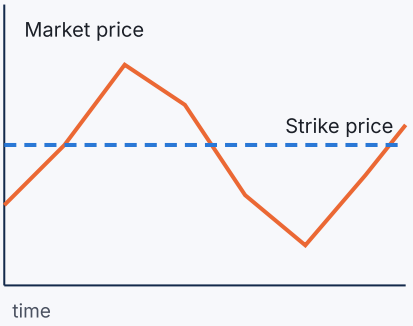

A DSCR of 1.38x means the asset earns 38% more cash than it needs to pay its lenders that year. If DSCR falls below a level set in the loan, cash is "locked up" and equity gets nothing until it recovers. This is general project finance practice INFERRED.

Offshore wind farm: where each 100 of revenue goes (illustrative numbers)

Opex: maintenance, seabed lease, grid fees, insurance. DSCR = 62 / 45 = 1.38x.

How a CfD fixes the price

Market above strike: the generator pays the excess back.

Market below strike: the generator is topped up.

Price per MWh is fixed. Wind is not.

Figure 47. The equity is what is left at the bottom. Left: a waterfall with illustrative numbers per 100 of revenue; not Norfolk Vanguard data. Right: the CfD mechanism in general INFERRED. Norfolk Vanguard won CfDs [S357], so its price risk is mostly removed, but the owner still carries volume (wind) and construction risk INFERRED.

Step 2: worked example, cash yield versus total return (illustrative numbers)

WORKED EXAMPLE: A CONTRACTED ASSET HELD FOR TEN YEARS (ILLUSTRATIVE NUMBERS)

Buy. Enterprise value £1,200m. Debt £720m (60%) at 5.5%, repaid £20m a year. Equity cheque £480m.

Year 1. EBITDA £90m. Tax and maintenance capex £15m. Interest 5.5% × £720m = £39.6m. Principal £20m. Cash to equity = 90 - 15 - 39.6 - 20 = **£15.4m**.

Cash yield = cash to equity ÷ equity invested = 15.4 ÷ 480 = **3.2%**.

Years 2 to 10. The contract is indexed, so EBITDA and costs grow 2.5% a year. Debt falls, so interest falls. By year 10 cash to equity is £44.0m, a 9.2% yield on the original cheque. Average over ten years: 6.1%.

Exit. Year 11 EBITDA £115.2m × 12 (the same multiple as entry, rounded down slightly) = £1,382m. Less remaining debt £520m = **£862m** to equity.

Total return. The internal rate of return (IRR: the single annual rate that makes all cash in equal all cash out in today's money) on -480 then the yearly cash then +862 is **10.5%**. If the exit only returned the £480m cheque, the IRR would be **5.8%**. So about 5.8 points come from cash and about 4.7 from growth plus debt paydown.

Cash yield climbs; the exit adds the rest (illustrative numbers)

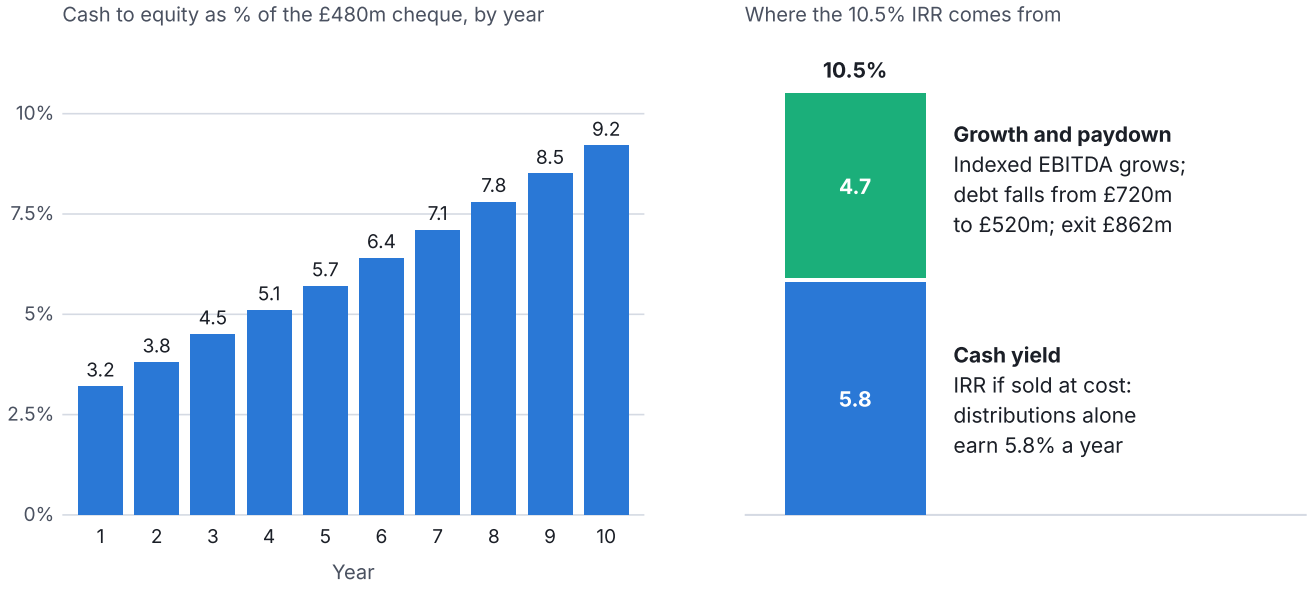

Figure 48. Two returns in one asset. A core investor (DCIF type) is buying the blue: steady cash. A core-plus or value-add investor (GII V type) also needs the green, which depends on inflation, debt paydown and the exit price. All numbers illustrative; computed by the author INFERRED.

This split explains real KKR documents. K-INFRA's 10-K warns that distributions "may and are expected to exceed our earnings and cash flow from operating activities" [S421] CONFIRMED. In the example, early-year cash yield is low (3.2%) while value is building, so a vehicle promising a steady payout must sometimes pay out more than the assets yield that year INFERRED. And DCIF's carry on "asset level cash yield" above 4% [S432] pays the manager only for the blue part of the bar INFERRED.

Step 3: the data centre version of the same story

A data centre's life: the J-curve of cumulative equity cash (illustrative shape)

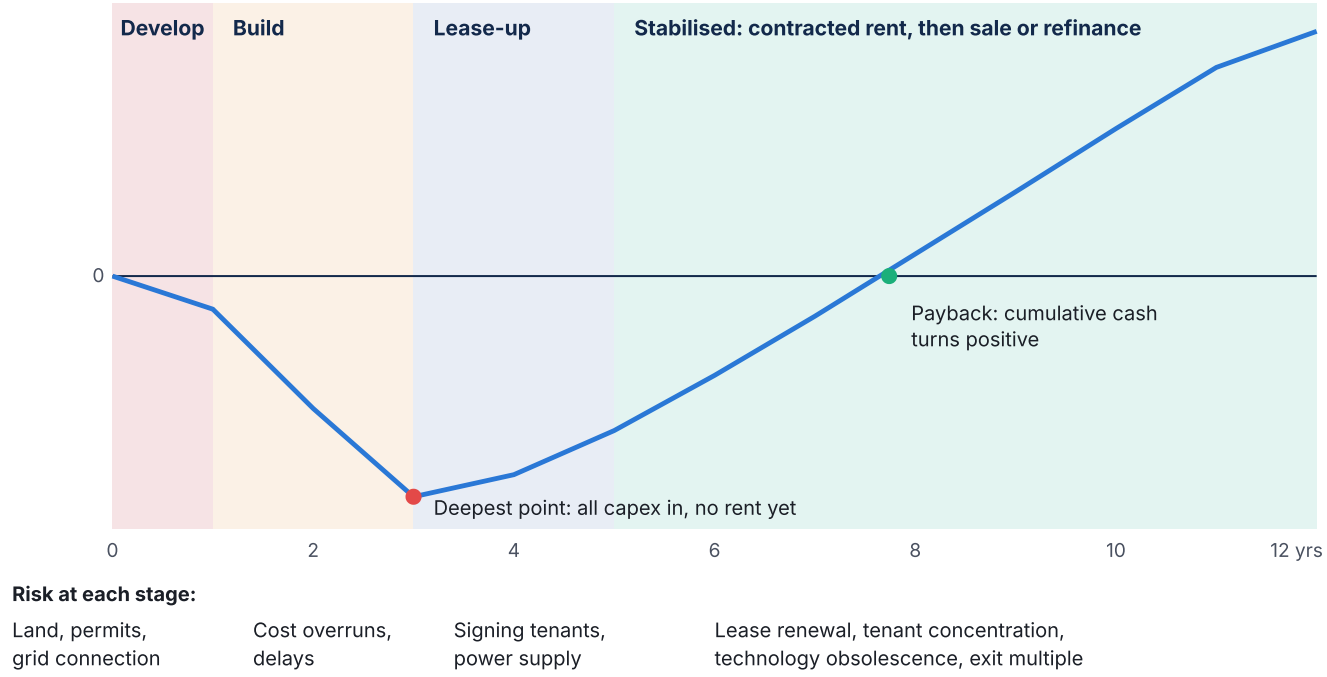

Figure 49. Data centres are value-add on the way up and core once leased. The curve is an illustrative shape, not Global Technical Realty data. Stage risks are a general framework INFERRED. One live example of renewal risk: Meta's lease on the Hyperion campus financed with Blue Owl "renews every four years", which S&P called unusually short [S289] REPORTED.

That curve is why a fund like GII V and a platform like Helix can own the same kind of asset and still be different products. The investor who funds the trough earns the climb; the investor who buys at the stabilised stage earns the yield INFERRED. KKR's earlier $50bn partnership with Energy Capital Partners for data centres and power generation [S35] REPORTED and Helix's focus on "power and connectivity" [S3] CONFIRMED show that power supply, not buildings, is now the binding constraint KKR talks about INFERRED.

WHERE YOU MEET IT AT KKR

GII V had already committed over $9bn at close, including Global Technical Realty and Gulf Data Hub [S430] CONFIRMED. An LP update on GTR's extra $1.5bn equity [S182] uses exactly this vocabulary INFERRED.

ONLY AT KKR

KKR's insurance balance sheet bought the TotalEnergies stake [S180] while DCIF pays carry on cash yield [S432]. Seeing which buyer prices the blue bar and which prices the green bar, inside one firm, is the lesson INFERRED.

SAY IT IN ONE LINE

"I want to learn to split an infrastructure return into cash yield and growth, because that split decides whether an asset belongs in a core fund, in GII V or in K-INFRA."

A5. What an LP asks about infrastructure

WHAT YOU WILL LEARN

The questions a due diligence questionnaire (DDQ) will ask about an infrastructure fund, and how to pre-empt them with an asset-by-asset risk map.

Most institutional LPs start from the ILPA DDQ 2.0: 58 pages, 20 numbered sections from "Firm: General Information" to "ESG" and "Diversity, Equity and Inclusion", plus eight appendices [S444] CONFIRMED. ILPA's DDQ is generic. For infrastructure, the sharp questions cluster in sections 4 (Investment Strategy), 7 (Credit Facilities), 11 (Market Environment), 15 (Accounting / Valuation) and 19 (ESG) [S444] CONFIRMED. The clustering is the author's reading INFERRED. Here is how they translate into infrastructure language:

LP question	What they are really testing	Where the answer comes from
What share of revenue is exposed to power prices, and how is it hedged?	How far each asset sits towards "merchant" on Figure 1	Deal team models; CfD and offtake contracts
Which assets are regulated, and when are the next resets?	Regulatory and political risk; FiberCop shows the EU Commission can intervene [S2]	Legal, deal team
How much debt matures in the next three years, and at what rates?	Refinancing risk: higher rates cut cash to equity (Step 2 of A4)	Portfolio finance, KCM
How are the assets valued each quarter?	Discount rates and exit multiples; ODD focus on "controls, policy, oversight, and governance" [S458]	Valuation committee, finance
What is the fund's climate and ESG approach?	ILPA section 19 follows PRI's responsible investment DDQ [S444]	ESG team, Climate Transition strategy
What is the inflation linkage, asset by asset?	Whether the "nominal GDP" story [S360] holds in each contract	Deal team contract summaries

An analyst's risk map: four KKR assets against six LP questions (author's judgement)

	Power price	Regulation and policy	Construction	Refinancing	Counterparty or tenant	Technology
Norfolk Vanguard CfD wind, pre-build	Low	Med	High	Med	Low	Low
TotalEnergies portfolio operating renewables	Med	Med	Low	Med	Med	Low
Global Technical Realty data centres, building	Med	Low	High	Med	High	Med
FiberCop fibre network	Low	High	Med	Med	Med	Med

Why these grades: CfDs fix Norfolk Vanguard's price [S357] but it must still be built (over $15bn capex). TotalEnergies assets are "developed" [S180] but their contract mix is not public. Data centres depend on a few large tenants [S289]. FiberCop's regulator and an EU Commission probe [S2].

Every grade is the author's judgement for teaching [Inferred], not KKR's view. A real map uses the deal team's contract data.

Figure 50. Pre-empting the DDQ. A grid like this tells a KCS team which questions each asset will attract before the LP asks. Facts behind each row from KKR and partner releases [S180, S181, S182, S357, S2, S289]; grades are teaching judgements INFERRED.

WHERE YOU MEET IT AT KKR

KKR's Dublin KCS posting describes completing "tenders/Due Diligence Questionnaires for potential new clients ... while leading investor diligence processes" [S106] CONFIRMED. A GII V or K-INFRA DDQ is where the table above becomes real work INFERRED.

ONLY AT KKR

Because K-INFRA co-owns assets with GII V and DCIF [S421], one asset's answer must be consistent across an institutional DDQ, a wealth platform's questionnaire and a US 10-K. Keeping one story straight across three disclosure regimes is unusual training INFERRED.

SAY IT IN ONE LINE

"I want to learn to answer an infrastructure DDQ asset by asset, power price, regulation, refinancing and ESG, so the answer is the same whether the reader is a Gulf sovereign or a private bank."

A6. The infrastructure pitch a KCS analyst helps build

WHAT YOU WILL LEARN

The standard storyboard of a fund presentation, which part of KKR supplies each panel, and where a junior adds value: consistency and the numbers.

KCS product teams "own marketing materials, developing thought leadership and leading investor diligence processes" [S106] CONFIRMED. Infrastructure product strategy teams "work closely with KKR's Infrastructure portfolio management and Global Client Solutions teams to match KKR's infrastructure capabilities with clients' portfolio requirements" (Donnenfeld's bio) [S138] CONFIRMED. The storyboard below is a generic fund pitch structure filled with public GII V facts INFERRED.

Panel 2 needs one honest comparison. GII V closed at $19.2bn on 3 August 2026 [S430] CONFIRMED. GII IV closed at $17bn on 14 March 2022, more than double GII III's $7.2bn [S431] REPORTED (from a search snippet of KKR's release); KKR's 10-Q shows GII IV commitments of $16,606m [S175] CONFIRMED. So GII V is about 13% bigger than GII IV, a smaller step than IV over III, in a harder market INFERRED. The stronger number for the pitch is that GII V contributes to "approximately $45 billion raised across KKR's latest infrastructure vehicle vintages globally", including perpetual vehicles such as K-INFRA [S430] CONFIRMED.

The GII V pitch as an eight-panel storyboard

1 Why infra, why now

"Security of Everything", grids, energy systems, power for AI; inflation "resting heart rate" [S360]

Supplies: macro team

2 The platform

About $120bn infra equity, from $13bn in 2019; about 160 people; 100+ investments; since 2008 [S430, S192]

Supplies: product team

3 The strategy

"Core+", critical infrastructure, mainly North America and Western Europe [S430]

Supplies: deal team

4 Portfolio so far

Over $9bn committed at close across nine named assets, e.g. FiberCop, GTR, Sempra Infra [S430]

Supplies: deal team

5 Case study

Global Technical Realty: data centres, extra $1.5bn equity with Oak Hill [S182]

Supplies: deal team

6 Track record

GII I to IV: gross and net IRR, TVPI, DPI, PME. Not public; lives in the data room [Gap]

Supplies: finance, KCS

7 Terms

Fees, carry, hurdle, key persons, term, GP commitment. In the PPM and LPA, not public

Supplies: legal, KCS

8 Risks and answers

Power price, regulation, refinancing, ESG: the A5 risk map

Supplies: KCS, ESG

The junior's job across all eight: every number must match the DDQ, the data room and the last quarterly report [Inferred].

Figure 51. Who writes which page. Panel contents are public GII V facts with sources; the eight-panel structure and the "supplies" labels are a generic fund-pitch template INFERRED. GII V's track record and terms are not public, so panels 6 and 7 are left as slots.

WHERE YOU MEET IT AT KKR

Daniel Valladares moved from KKR's Infrastructure Product team to Head of EMEA Consultant Relations [S132] CONFIRMED, and Rory Smith moved from KKR Real Estate investing to London KCS infrastructure product [S137] CONFIRMED.

ONLY AT KKR

A placement agent builds a deck from outside. At KKR the deck is assembled inside one firm with "one P&L" [S107], so the analyst can ask the deal team directly and has to reconcile its numbers with a 10-K for K-INFRA as well INFERRED.

SAY IT IN ONE LINE

"I want to learn to build the eight panels of an infrastructure pitch, from 'why now' to 'risks and answers', and keep every number consistent with the DDQ and the data room."

B1. Asset-based finance: lending against pools, not companies

WHAT YOU WILL LEARN

What a pool of loans or receivables is, how it is cut into tranches, why amortising cash flows differ from a direct loan, and how to compute who loses what when defaults rise.

KKR defines asset-based finance (ABF) as "private credit investments backed by large, diversified pools of hard or financial assets", and adds that "private ABF is considered non-corporate credit" [S434] CONFIRMED. Translation: you do not lend to one company and hope it survives. You lend against thousands

of small loans or leases (car loans, aircraft leases, royalties, development loans) whose combined repayments pay you back INFERRED. K-FIT's 10-K gives KKR's own examples: "auto loans, royalties, aircraft leasing, real estate development lending" [S422] CONFIRMED.

	Direct lending	Asset-based finance
Borrower	One company, usually owned by a PE fund	A pool of many loans or assets, held in a special purpose vehicle (SPV)
Paid back from	The company's profits	Repayments on the pool, plus the value of the collateral
Cash flow shape	"interest-only coupons" with principal at the end [S434]	"front-loaded principal payments plus interest, similar to the way homeowners make their mortgage payments" [S434]
Main risk	One company fails	Many small borrowers default together; servicer fails
KKR scale	$48bn corporate private credit, of which $39bn direct lending (30 Jun 2026) [S332]	$91bn ABF AUM (30 Jun 2026) [S332]

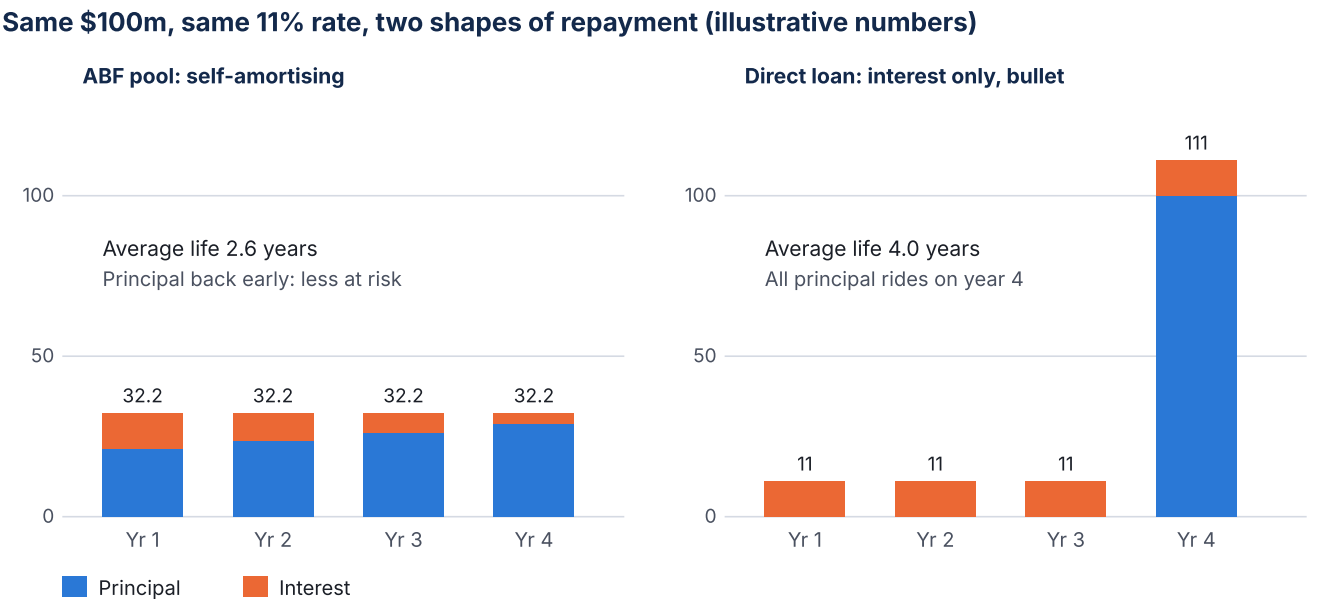

Figure 52. Why insurers like the left shape. The amortising pool returns 21% of principal in year one; the direct loan returns none until year four. Payment = 100 × 0.11 ÷ (1 - 1.11^{-4}) = 32.2 a year. Weighted average life = Σ(year × principal repaid) ÷ 100. Illustrative numbers; the two shapes are as KKR describes them [S434].

Worked example: a $100m auto-loan pool, tranched (illustrative numbers)

WORKED EXAMPLE: WHO GETS PAID, WHO LOSES (ILLUSTRATIVE NUMBERS)

The pool. $100m of car loans yielding 11% a year. Expected annual losses 2.5%. Servicing (collecting payments, chasing arrears) costs 1.5%. Net pool yield = 11 - 2.5 - 1.5 = **7.0%**, or $7.0m in year one.

The tranches. Senior $80m paid 5.5% ($4.40m). Mezzanine $10m paid 8.5% ($0.85m). Equity (first loss) $10m gets whatever is left: 7.0 - 4.40 - 0.85 = $1.75m, a **17.5%** return on $10m.

Stress. If losses rise to 5%, net yield is 4.5% ($4.5m). Senior still gets $4.40m. Mezzanine gets only $0.10m of its $0.85m. Equity gets nothing and starts absorbing principal losses: roughly -7.5% that year. The senior investor is untouched until losses eat through the $20m below it.

The formula in words. Credit enhancement for a tranche = the share of the pool below it. Senior here has 20% enhancement: pool losses must exceed 20% of principal before it loses a dollar.

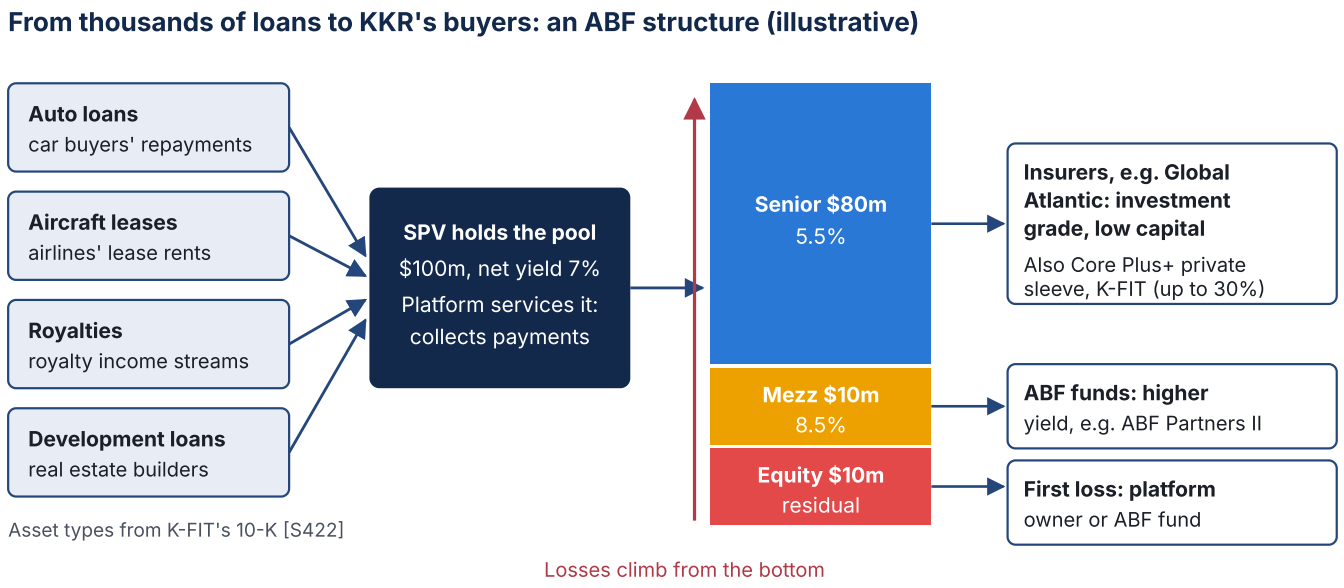

Figure 53. One pool, three risk appetites. Tranching turns a pool of consumer loans into an investment-grade senior piece for an insurer and a high-yield first-loss piece for a fund. Numbers illustrative; asset types [S422]; platform count [S3]; vehicle mapping INFERRED.

KKR's market case: "We estimate the private ABF market today is larger than the syndicated loan, high yield bond, and direct lending markets combined, and it could reach approximately $9.2 trillion by 2029" (KKR and Integer Advisors data as of 31 March 2024) [S434] CONFIRMED. The reason it is private: "Post-crisis regulation and resulting higher capital requirements have reduced banks' risk appetites" [S434] CONFIRMED. KKR began ABF in 2016 [S433] REPORTED and closed Asset-Based Finance Partners II in July 2025 at $5.6bn plus nearly $1bn of separately managed accounts, $6.5bn in total, more than twice Fund I [S433] REPORTED. KKR's 2026 mid-year outlook says "collateral-based cash flows (asset-based finance, real estate credit, structured solutions) matter more" [S360] CONFIRMED.

WHERE YOU MEET IT AT KKR

Credit KCS work is run largely from Dublin, a legacy of the 2014 Avoca purchase [S152] CONFIRMED. KKR also runs a registered interval fund called KKR Asset-Based Income Fund [S114] CONFIRMED.

ONLY AT KKR

KKR owns many of the platforms that originate the loans (around 20, with 7,000+ staff [S3]), and owns an insurer that buys the senior paper [S425]. Seeing origination, structuring and the end buyer inside one firm is rare; most managers see one or two of the three INFERRED.

SAY IT IN ONE LINE

"I want to learn how KKR turns thousands of car loans or aircraft leases into a senior tranche an insurer can hold and a first-loss piece a fund wants, and who loses what when defaults rise."

B2. Why insurers want ABF, and how it reaches Core Plus+

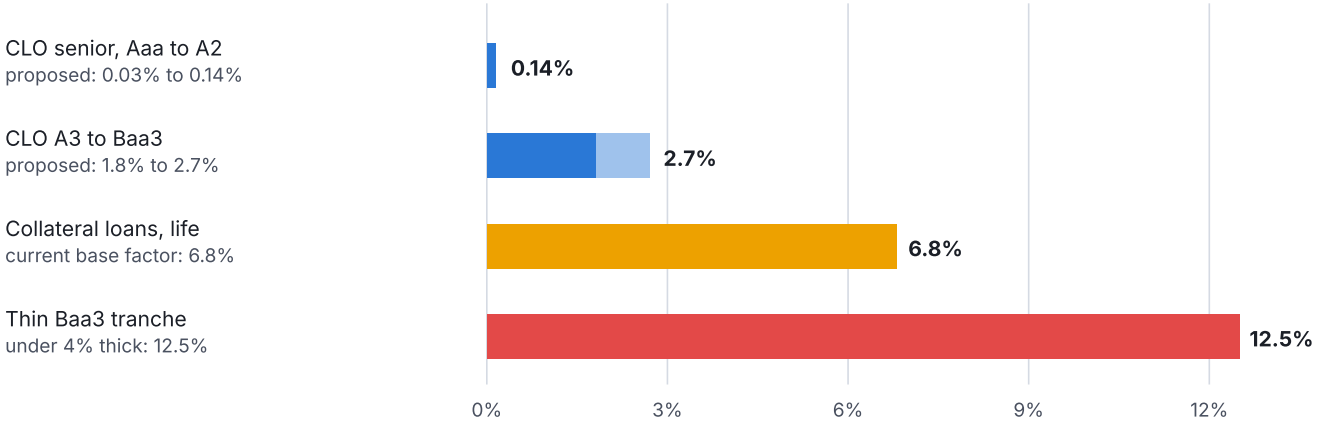

WHAT YOU WILL LEARN

The two reasons an insurer buys private credit (capital and matching), the regulatory factors that decide it, and the plumbing that puts KKR's private credit inside a Capital Group fund with a $1,000 minimum.

Reason 1: capital

A US life insurer must hold capital (risk-based capital, RBC) against each asset. KKR's 10-K says "the determination of RBC is based on the NAIC designation of the assets in which Global Atlantic invests", and the designation "depends on the applicable NRSRO rating" (a recognised credit rating agency) [S425] CONFIRMED. So an insurer wants assets that are rated investment grade, so the capital charge is low, but pay more than a public bond of the same rating INFERRED. A senior ABF tranche is built to be exactly that. KKR's own NAIC digest shows how much structure changes the charge:

Capital an insurer must hold per $100 of asset: NAIC factors in KKR's April 2026 digest

Pale segment: range. Proposals; NAIC targets year-end 2026 for CLO factors and likely year-end 2027 for a look-through on collateral loans [S439].

Figure 54. Structure changes capital by a factor of nearly 100. The same kind of loan collateral can cost an insurer 0.14% or 12.5% in capital depending on where in the structure it sits. Source: KKR, "Highlights from the NAIC's 2026 Spring National Meeting", 7 Apr 2026 [S439] CONFIRMED.

Reason 2: matching

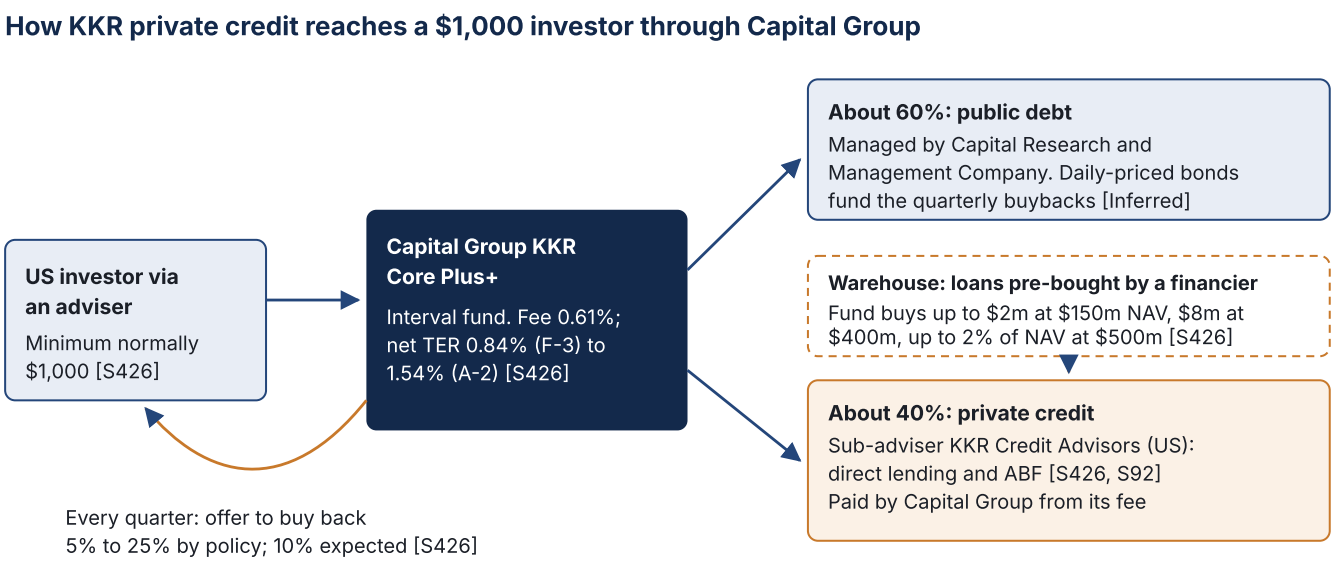

An annuity book pays policyholders a little every month for years. Assets that also pay back principal every month (the left shape in the ABF figure) match those outflows better than a bullet loan INFERRED. KKR's 2026 Insurance CIO Survey (about 50 US insurers, nearly $2.6tn of assets) lists insurers' concerns as "Asset-liability matching, illiquidity limits, regulatory capital, reinvestment risk", and says "Every major Private Credit category is a net add in the survey, led by Asset-Based Finance" [S438] CONFIRMED. Global Atlantic itself had $220bn of AUM at 30 June 2026, of which $164bn is credit and $62bn sits in Ivy and other sponsored reinsurance vehicles [S1] CONFIRMED.

WORKED EXAMPLE: SAME RATING, MORE SPREAD, SAME CAPITAL (ILLUSTRATIVE NUMBERS)

An insurer holds $100m of A-rated assets. A public A-rated corporate bond pays 1.0% over government bonds. A senior ABF tranche, also rated A, pays 1.8% over (illustrative; the extra is payment for complexity and illiquidity). If the capital factor is the same for both ratings, the insurer earns an extra 0.8% × $100m = **$0.8m a year** for no extra capital. Across Global Atlantic's $164bn of credit [S1], every 0.1% of extra spread is about $164m a year INFERRED. That is why spreads, ratings and NAIC rules are KCS conversation topics with insurers.

The plumbing into Capital Group KKR Core Plus+

Core Plus+ is an interval fund (a fund that must offer to buy back a set share of its units every quarter) that allocates "approximately 60% of its net assets to public debt assets (to be managed by the investment adviser) and approximately 40% to private credit assets (to be managed by the sub-adviser)" [S426] CONFIRMED. The private credit is direct lending and asset-based finance [S92] CONFIRMED. KKR Credit Advisors (US) is the sub-adviser and is "paid solely by the investment adviser out of the investment adviser's fees" [S426] CONFIRMED.

Terms from the pre-effective N-2/A of 16 Apr 2025; final terms may differ slightly [S426].

Figure 55. A 60/40 split is a liquidity design, not only an asset mix. The public 60% is what lets the fund promise quarterly buybacks; the warehouse is how a new fund starts with a seasoned private portfolio [S426] INFERRED. Sources on the figure.

Compare the promise with KKR's own evergreen funds. An interval fund must make the repurchase offer every quarter under a "fundamental policy" changeable only by shareholder vote; a K-Series board may repurchase less or nothing [S426, S420] CONFIRMED; the contrast is the author's INFERRED. Firmer liquidity requires more liquid assets, which is why the private sleeve is only about 40% INFERRED.

WHERE YOU MEET IT AT KKR

Darryl Herrick heads Global Insurance Client Solutions and is President of Global Atlantic Re, "helping manage the third-party reinsurance sidecar platform" [S127] CONFIRMED. KKR's NAIC digest tells insurer clients to "reach out to your relationship manager" [S439] CONFIRMED. Daniel Celeghin leads New Markets and Sales Partnerships, including Capital Group [S136] CONFIRMED.

ONLY AT KKR

KKR is both an insurer's asset manager and, through Global Atlantic, an insurer itself, with $58bn of third-party sidecar capital at end-2025 [S425]. You would learn insurance capital maths from people who live under the same NAIC rules as the client INFERRED.

SAY IT IN ONE LINE

"I want to learn why an insurer will pay for a senior ABF tranche, capital charge and cash-flow matching, and how the same KKR loans end up in a Capital Group fund with a $1,000 minimum."

C. Private equity briefly: one deal, a flagship and an evergreen owner

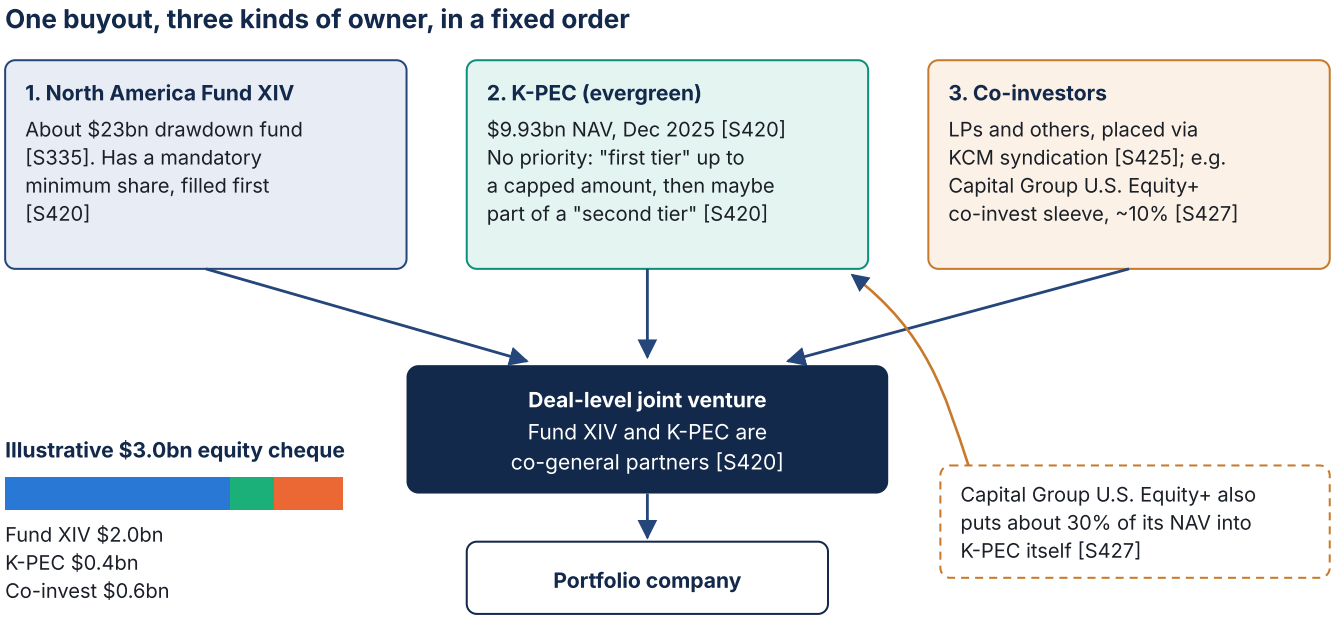

WHAT YOU WILL LEARN

How KKR splits one buyout between North America Fund XIV, the evergreen K-PEC and co-investors, and why the order of the split is the conflict KCS must explain to both sets of clients.

North America Fund XIV closed at about $23bn in April 2026, which KKR calls the largest private equity fund focused only on North America [S335] CONFIRMED; KKR's Q2 table shows $21.9bn committed, investing April 2025 to April 2031 [S1] CONFIRMED. The release reported a 23% gross IRR (19% net) across the three predecessor funds as of 31 December 2025 [S335] REPORTED.

K-PEC is built differently from a fund. It "seeks to acquire, own and control portfolio companies ... through Joint Ventures", and K-PEC and the flagship fund are "co-general partners" of each deal-level joint venture, with economic shares that "vary from acquisition to acquisition" [S420] CONFIRMED. Because its main asset is a general partner interest, which is not an "investment security", K-PEC keeps investment securities below the 40% test of the US Investment Company Act of 1940 and operates as a company, not a registered fund [S420] CONFIRMED.

Why the co-investment slice matters to the firm: since 2014 KKR's fund agreements share 100% of transaction and monitoring fees allocable to a fund with fund investors, while "transaction fees earned in our capital markets business are not shared with fund investors" [S425] CONFIRMED. KCM earned $930m of transaction fees in 2025 [S425] CONFIRMED. Co-investment that KCS places is therefore tied to a fee line that flagship LPs do not offset INFERRED. LPs know this: ILPA DDQ section 5 asks whether co-investments were "of a syndicated nature" and how "broken-deal expenses associated with co-investments are handled" [S444] CONFIRMED.

The split of the $3.0bn is illustrative, not a KKR deal. The order (flagship minimum, then capped first tier, then second tier, then syndication) follows K-PEC's 10-K [S420] and KKR's 10-K on co-investment [S425]. K-PEC also bought $165.5m of stakes from earlier KKR vehicles "as part of a sale and purchase between successive fund vintages" in 2025 [S420].

Figure 56. Same company, three wrappers. Institutional flagship LPs get first call; the wealth vehicle fills in behind them; co-investors take what is left. That order is what KCS must explain honestly to both a pension fund and a wealth platform [S420] INFERRED.

WHERE YOU MEET IT AT KKR

Matt Yates in London is Head of EMEA Product Development and runs product management for K-PRIME and K-PEC [S150] CONFIRMED. K-PRIME is K-PEC's non-US twin with "similar objectives and strategies" [S111] CONFIRMED.

ONLY AT KKR

K-PEC's co-GP joint venture is KKR's own legal answer to the 1940 Act [S420]; competitors use other routes INFERRED. Learning the allocation order from the 10-K that discloses it, and then explaining it to clients, is specific to this platform INFERRED.

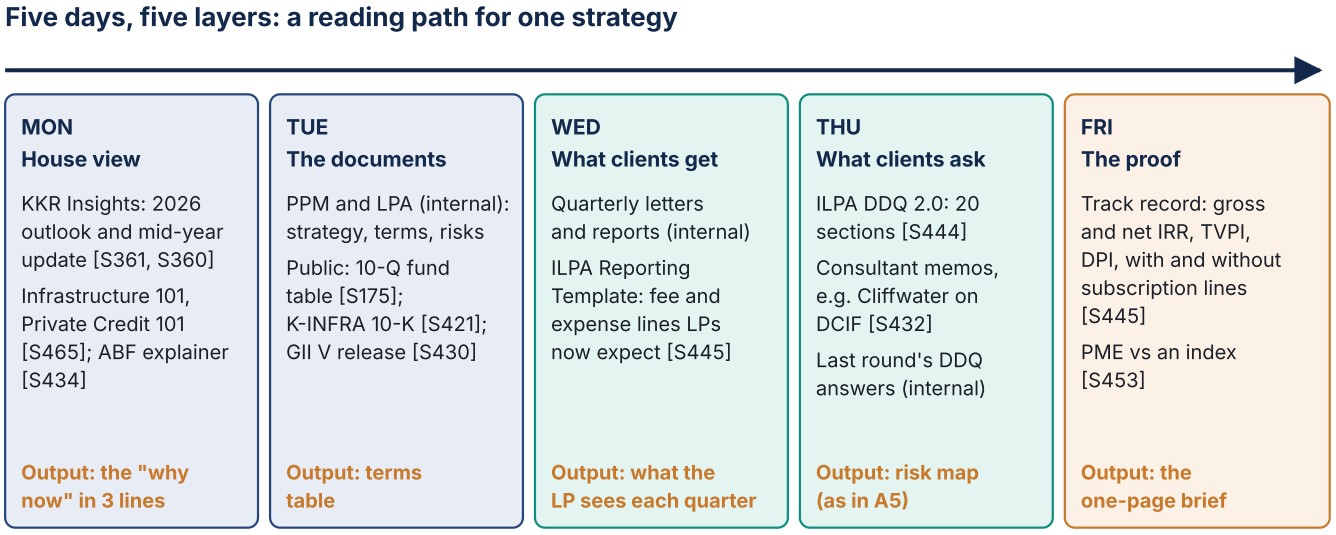

SAY IT IN ONE LINE

"I want to learn how one KKR buyout is shared between North America Fund XIV, K-PEC and co-investors, and how to explain that order to a pension fund and a private bank without changing the story."

D1. How a KCS junior learns a strategy in a week

WHAT YOU WILL LEARN

A repeatable reading path from house view to fund documents to client questions to track record, ending in a one-page brief you can defend.

Internal documents are what a KCS team would normally hold; their contents are not in the research [Inferred]. Public items carry source IDs.

Figure 57. Read in the order a client thinks. A client asks why, then what, then how they will be told, then what could go wrong, then whether it has worked before. The path follows that order INFERRED; public documents sourced on the figure.

Two technical tools from Friday's reading need defining. **TVPI** (total value to paid-in) is distributions plus remaining value divided by money paid in; **DPI** (distributions to paid-in) counts only cash actually returned. These are standard definitions INFERRED. The **PME** (public market equivalent) of Kaplan and Schoar "measures the discounted value of the cash outflows of the fund relative to the discounted value of the cash inflows (all net of fees), where discounting is undertaken using the total return to the S&P 500" [S453] CONFIRMED; above 1.0 means the fund beat the index INFERRED. The ILPA Performance Template, for funds starting on or after 1 January 2026, standardises IRR and TVPI "with and without the impact of fund-level subscription facilities" [S445] CONFIRMED. A subscription facility is a short-term loan a fund uses before calling LP money, which can flatter IRR INFERRED.

WHERE YOU MEET IT AT KKR

KKR's TPA paper says that across private market strategies "annual distributions have historically averaged approximately 10-30% of NAV" [S436] CONFIRMED, and KKR's wealth model portfolios put 5% to 7.5% in infrastructure [S437] CONFIRMED.

ONLY AT KKR

Few firms publish a 10-K for an evergreen infrastructure vehicle (K-INFRA), a consultant-reviewed core fund (DCIF) and a flagship close (GII V) on the same platform. A junior can cross-check the same assets in three public documents before opening the data room INFERRED.

SAY IT IN ONE LINE

"I want to learn KKR's way of mastering a strategy in a week, house view, documents, reports, DDQ and track record, and to finish with a one-page brief a relationship manager can use."

D2. The one-page strategy brief, filled in for GII V

WHAT YOU WILL LEARN

To compress a strategy into eleven lines a relationship manager can use in a meeting, using only facts you can source, and to mark the gaps honestly.

The template is the author's INFERRED; every cell uses public facts only, and gaps are left visible on purpose.

Field	Global Infrastructure Investors V
1. One-line description	"$19.2 billion Core+ fund focused on investing in critical infrastructure assets and businesses primarily in North America and Western Europe" [S430] CONFIRMED
2. Vehicle and timing	Drawdown fund; investment period July 2024 to July 2030 [S1]; final close 3 August 2026 [S430]. Infrastructure drawdown terms typically 10 to 13 years [S2] CONFIRMED
3. Size and momentum	$19.2bn vs GII IV $17bn announced in 2022 [S431] REPORTED (the 10-Q shows $16,606m of GII IV commitments [S175]): about +13% INFERRED. Part of about $45bn raised across the latest infrastructure vintages, including perpetual vehicles [S430] CONFIRMED
4. Risk rung and themes	"Core+" by KKR's label [S430], above DCIF (core, 7-9% net [S432]) INFERRED. Themes: energy transition, digital, transport [S192]; "Security of Everything" [S360] CONFIRMED
5. Portfolio so far	Over $9bn committed: Altitude III, EDF power solutions North America, Enilive, FiberCop, Global Technical Realty, Gulf Data Hub, Metronet, Sempra Infrastructure, The Parking Spot [S430] CONFIRMED
6. Platform	About $120bn infrastructure equity (from $13bn in 2019), about 160 dedicated executives, 100+ investments; platform since 2008 [S430, S192] CONFIRMED
7. Investors	"pension plans, sovereign wealth funds, insurance companies, asset managers, private wealth platforms, and family offices" [S430] CONFIRMED
8. Terms and track record	Not public: do not quote GII V fees, carry or prior-fund returns [Gap]. KKR's 10-K range for drawdown infrastructure management fees: 0.75% to 1.50% [S2] CONFIRMED
9. Top three LP questions	Power price exposure and data-centre power supply; regulatory risk (e.g. FiberCop and the EU Commission [S2]); refinancing at higher rates (see A5) INFERRED
10. Related products for other clients	DCIF for core-seeking institutions [S432]; K-INFRA for individuals, co-owning GII V assets [S421]; Global Climate Transition Fund [S175]; Helix [S3]
11. People	Raj Agrawal, Global Head of Real Assets; Brandon Donnenfeld, Chief Development Officer [S430]; Tara Davies and Vincent Policard, Co-Heads of European Infrastructure [S158, S159]; London KCS infrastructure product team [S150] CONFIRMED

WHERE YOU MEET IT AT KKR

The London analyst posting describes working "closely with Relationship Managers across EMEA, providing support for client investments with KKR" [S140] CONFIRMED. This brief is that support in written form INFERRED.

ONLY AT KKR

Row 10 is the KKR-specific row: one team, four doors (GII V, DCIF, K-INFRA, Helix) [S175, S421, S3]. Writing it well is the "solutions" in Global Client Solutions INFERRED.

SAY IT IN ONE LINE

"By the end of the summer I want to be able to write a one-page brief on a KKR strategy like GII V, every number sourced and every gap marked, that a relationship manager would actually take into a client meeting."

PART 5

Module 4: The machine room: co-investment, diligence, distribution rules and the tools

Behind every fund close sits a machine: deals syndicated through walls, questionnaires answered line by line, a rulebook applied to every email, and a record kept of all of it. This module takes the machine apart and shows each moving piece.

Parts 1 to 4 explained what KCS sells and why clients buy. This part explains how the work is actually done. It covers five mechanisms: co-investment syndication with KKR Capital Markets (KCM), the diligence process (DDQs, RFPs, operational due diligence, side letters), the distribution rules a junior applies every day, the tools and records, and a worked week-three task. Every KKR fact carries a source. Every number that is invented for teaching is labelled "illustrative".

Co-investment and syndication: how a deal is shared

The idea in one paragraph

A **co-investment** is money a client puts directly into one specific deal, alongside a KKR fund, rather than into the fund itself. **Syndication** is the process of selling that slice of the deal to several clients. KKR describes the mechanism in its 10-K: its capital markets business "provides syndication services for co-investments in transactions participated in by KKR, our investment vehicles, Global Atlantic, and third-party clients, which may entitle the firm to receive transaction fees, management fees, and a carried interest" [S425] CONFIRMED. KCS's official team description gives it a role in exactly this: "Work in partnership with Capital Markets in the syndication/distribution of product" (KKR KCS team description) [Advert].

KEY TERMS

Underwrite: to promise to provide the money first, then sell part of it later. KKR says: "We have used our balance sheet in our capital markets business to underwrite loans, securities or other financial instruments, which we generally expect to syndicate to third parties" [S425] CONFIRMED.
Sell-down: the amount the underwriter plans to sell on to others.
Co-underwriting: a client commits before the deal is signed and shares the underwriting risk with KKR. ILPA's due diligence questionnaire asks about it by name [S444] CONFIRMED.
Balance sheet: KKR's own money, as opposed to clients' money in funds.

The lifecycle, stage by stage

Figure 1 shows the six stages and who does what in each. Read it as four parallel lanes: the deal team with KCM, the KCS client team, Compliance, and the co-investor. Only the underwrite-then-syndicate logic, the risk of an unsold remainder, and the fee rules are KKR's own disclosures. The exact order of steps is a standard industry sequence that I have reconstructed INFERRED.

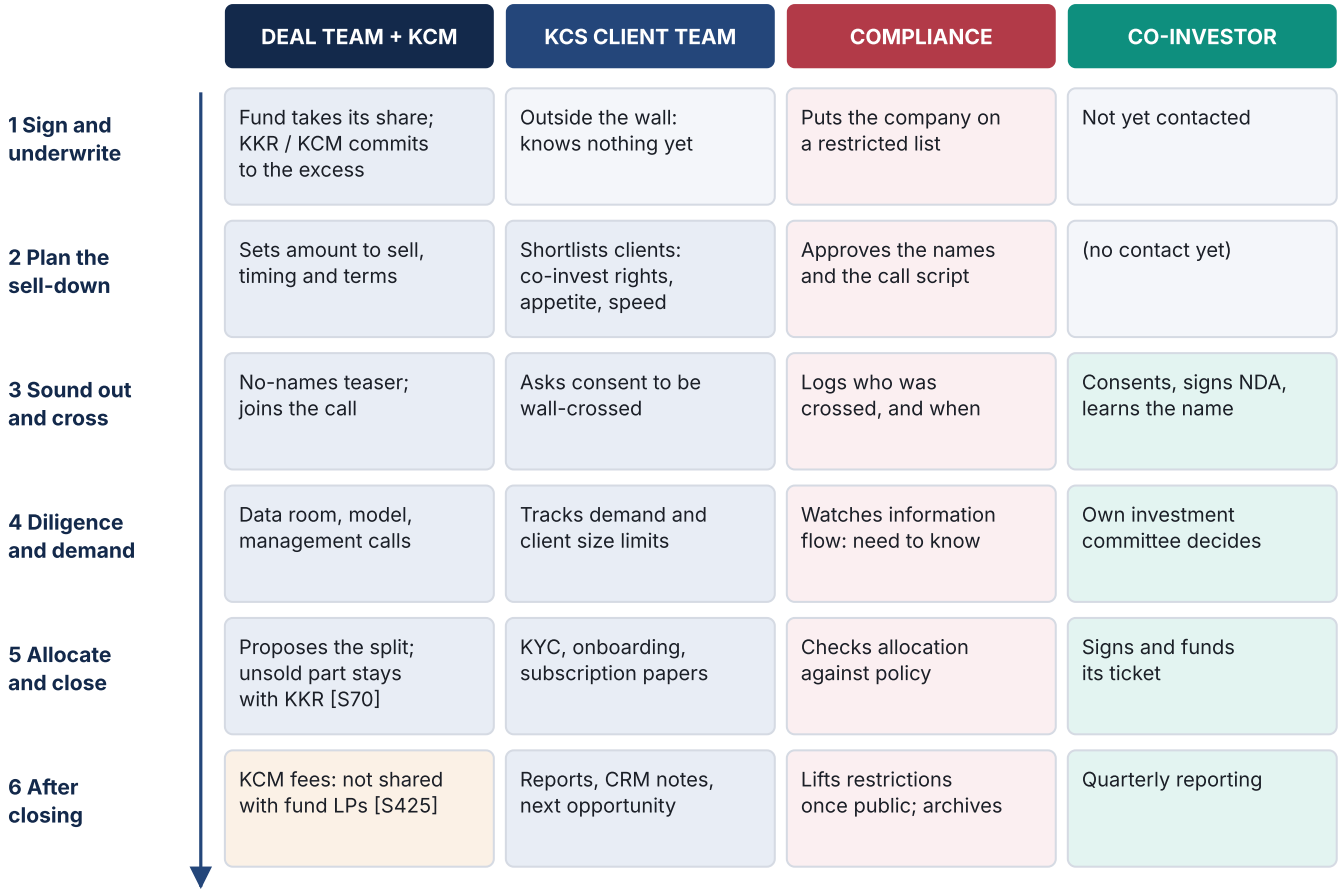

Figure 58. The co-investment lifecycle in four lanes. Notice that KCS appears in every stage after the first: it chooses who is asked, carries the consent call, tracks demand and onboards the winner. Underwrite-then-syndicate and the unsold remainder from KKR's 10-K [S425, S70] CONFIRMED; step order INFERRED.

Three details in the lifecycle deserve attention, because they are where things go wrong.

- **The unsold remainder.** KKR warns that "if we are unable to syndicate all or part of such commitment, or if such co-investors fail to fund their commitments, we may be required to fund the remaining commitment" [S70] CONFIRMED. KKR also uses "arrangements with third parties that reduce our risk associated with holding unsold securities ... which enables our capital markets business to underwrite a larger amount" [S425] CONFIRMED. So the speed and reliability of KCS's client list directly limits how big KKR can underwrite INFERRED.
- **Who gets asked first.** Some clients hold co-investment rights in their side letters; others are simply fast. KKR names "increased co-investment rights" among the concessions it may grant in fundraising [S425] CONFIRMED. Allocation policy decides the order, and Compliance checks it INFERRED.
- **The new buyers.** Evergreen vehicles now buy co-investments too. K-PEC, KKR's private equity vehicle for individuals, is offered a "first tier" alongside nearly all KKR vehicles "up to a capped amount", but "will not benefit from any priority acquisition allocation" [S420] CONFIRMED. Capital Group KKR U.S. Equity+ "expects to invest approximately 30% of its net assets in K-PEC and approximately 10% of its net assets in co-investments" [S427] CONFIRMED. A retail fund built by a third party is now one of the co-investors.

The economics: why KKR wants co-investment

This is the single most important technical fact in the module, and it comes straight from KKR's 10-K. There are two kinds of deal fee, and they are treated in opposite ways (Figure 2).

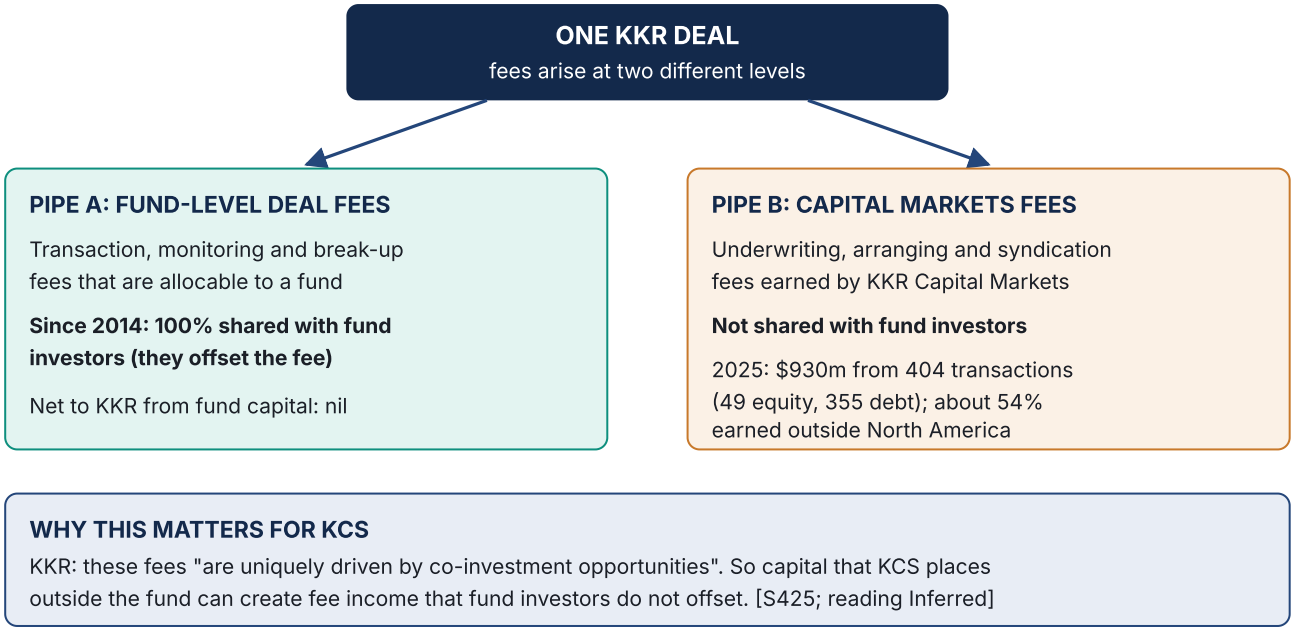

Figure 59. Two fee pipes, opposite treatment. Pipe A is fully rebated to fund investors; Pipe B is kept. Co-investment and capital markets work feed Pipe B. Source: KKR & Co. 10-K for FY2025 [S425] CONFIRMED, figures for calendar 2025; the link to KCS is INFERRED.

The exact words matter, so here they are. "Since 2014, our fund agreements typically require us to share 100% of any monitoring, transaction, and break-up fees that are allocable to a fund ... with fund investors, therefore these types of fees, when generated, are uniquely driven by co-investment opportunities." And: "transaction fees earned in our capital markets business are not shared with fund investors" [S425] CONFIRMED. KCM earned $930m of capital markets transaction fees in 2025 across 404 transactions (49 equity, 355 debt), up from 397 in 2024; fee rates are "generally higher" for equity than debt; about 15% of fees came from unaffiliated third parties [S425] CONFIRMED. In London, the KCM partnership (KKR Capital Markets Partners LLP) had an average of 10 employees and 10 members in 2025 and £244.2m of profit before members' remuneration [S172] CONFIRMED. A small team, a large number.

THE FORMULA, IN WORDS AND SYMBOLS

KKR fee income from a deal = (fund-level fees × 0%) + (fees on co-investment capital) + (KCM capital markets fees).

In symbols: $F_{KKR} = 0 \times F_{fund} + F_{co} + F_{KCM}$. The first term is zero because of the 100% offset [S425] CONFIRMED. The second and third terms grow with the amount of capital placed outside the fund INFERRED. One accounting detail: capital syndicated by KCM to third parties is excluded from KKR's "capital invested" metric [S425] CONFIRMED, so a large syndication can be invisible in that headline number.

What the client gains: the blended fee

For the client, co-investment is about cost. Fund investors pay a management fee and carried interest; co-investments often carry no fee or a low fee (Part 1 showed a blended fee *rate*; here we add carried interest and compute the effect on the client's net multiple). KKR's own 10-K gives the range for private equity drawdown funds: 1.0% to 2.0% of committed capital in the investment period [S2] CONFIRMED. The example below sits inside that range. Everything else is illustrative.

Illustrative numbers ($m)	Fund only	Co-invest, no fee	Both together	Co-invest, low fee*
Capital invested	100	50	150	50

Illustrative numbers ($m)	Fund only	Co-invest, no fee	Both together	Co-invest, low fee*
Gross profit at 2.0x	100	50	150	50
Management fee: 1.5% × 5 years	7.5	0	7.5	1.25 (0.5%)
Carried interest: 20% × (profit minus fees)	18.5	0	18.5	4.9 (10%)
Total fees	**26.0**	**0**	**26.0**	**6.1**
Net profit	74.0	50.0	124.0	43.9
Net multiple (capital + net profit) ÷ capital	**1.74x**	**2.00x**	**1.83x**	**1.88x**
Fees as % of gross profit	26.0%	0%	17.3%	12.3%

*Low-fee variant: 0.5% a year and 10% carry, both illustrative. Simplifications: the fee is charged on the full $100m for five years; the hurdle is assumed cleared with full catch-up, so carry equals 20% of profit after fees. Standard 2-and-20 structure as described in [S2] (range) and WS4 (textbook terms) INFERRED.

The two formulas behind the chart: **blended management fee = fund fee × F ÷ (F + C)**, and **fees as a share of gross profit = 26% × F ÷ (F + C)**, where F is fund capital and C is co-investment capital. Both fall in a straight line as the co-invest share rises (Figure 3).

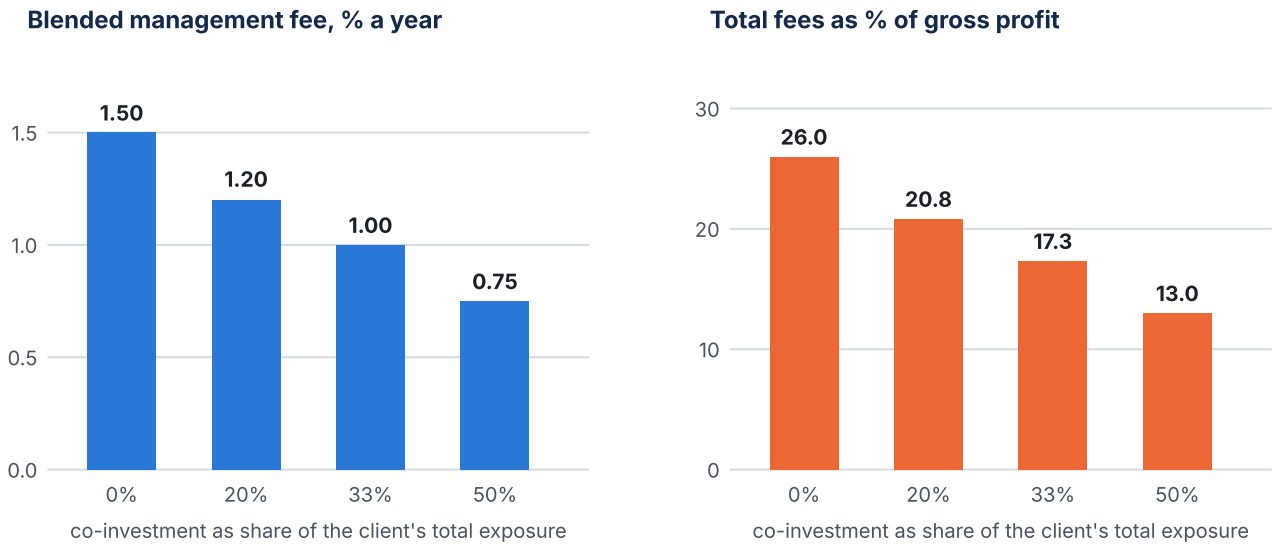

Figure 60. How co-investment averages fees down. At a one-third co-invest share the client's blended management fee falls from 1.5% to 1.0%, and total fees fall from 26% to about 17% of gross profit. All values illustrative; the 1.5% fee sits inside KKR's disclosed 1.0% to 2.0% range for PE drawdown funds [S2] CONFIRMED.

The risks a client must weigh

Risk	What it means	How it shows up at KKR
Adverse selection	The fear that the manager offers co-investment on the deals it least wants to hold. The client gets the leftovers INFERRED.	KKR's structure cuts both ways: flagship funds have a "mandatory minimum" filled first, and other vehicles take the rest [S420] CONFIRMED. Co-investment is the excess on deals the fund already backs at its maximum, not a deal the fund rejected INFERRED.
Speed	A co-investment decision may be needed in days or weeks. Many pensions need months and a board meeting INFERRED.	Clients who can decide fast get asked first; clients who cannot need pre-approved programmes or co-invest funds INFERRED.

Risk	What it means	How it shows up at KKR
Concentration	One company, not a portfolio of 15 to 20 INFERRED.	The client's own risk team sets a cap per deal; KCS logs it in the CRM INFERRED.
Broken-deal costs	Who pays the costs of a deal that never happens.	In 2015 the SEC found KKR misallocated more than $17m of broken-deal expenses to flagship funds rather than co-investors; KKR paid nearly $30m [S20] CONFIRMED. LPs still ask about it (next section).
Warehousing price	An asset bought first by KKR and sold on later at cost may be worth more or less by then.	K-INFRA's 10-K: transfers "at cost, or cost plus an interest rate or carrying cost", with conflicts that "may not be resolved in favor of the Company" [S421] CONFIRMED.

How LPs test it: ILPA DDQ section 5

The industry's standard questionnaire (next section) has a whole section on co-investment. Section 5 of ILPA DDQ 2.0 asks whether predecessor funds charged LP co-investors a transaction fee, management fee or carry; whether co-investments were "of a syndicated nature"; whether any "involved co-underwriting pre-signing"; and how "broken-deal expenses associated with co-investments are handled" [S444] CONFIRMED. Each of those questions maps onto a box in Figure 1. A junior who can explain why each one is asked has understood the whole lifecycle INFERRED.

Family Capital and "two-way sourcing"

KKR's Family Capital page lists "Co-Investment Opportunities", "Customized Portfolio Solutions", "Bespoke Separately Managed Accounts", "Two-Way Sourcing Dialogues" and "Comprehensive Debt Solutions" [S84] CONFIRMED. "Two-way" means the flow runs in both directions INFERRED:

- **KKR to family:** co-investment in KKR deals, routed through the same syndication lifecycle.
- **Family to KKR:** many wealthy families own operating businesses. They may bring KKR a deal, need financing for their own company, or want a partner. Scott Kaldenberg in Family Capital is "responsible for originating financing and capital markets opportunities across KKR's global platform, partnering closely with leading family offices and their operating companies" [S138] CONFIRMED. The France hire release says Family Capital "sources investment and capital markets opportunities" for families [S178] CONFIRMED.

The career paths show how close these teams are. Doug Brody, now Head of Family Capital for the Americas and EMEA, previously led "the Credit & Markets Co-investments and Partnerships team, which facilitates private capital investments and transactions across all of KKR's asset classes" [S125] CONFIRMED. Monica Mandelli sits on KKR's "Capital Markets Coordination Committee" [S134] CONFIRMED.

Information walls: inside information and wall-crossing, step by step

Material non-public information (MNPI), often called inside information, is information that is not public and that a reasonable investor would use to decide whether to buy or sell a security. If a co-investment involves a listed company (a take-private, for example), the name of the target is MNPI until the deal is announced INFERRED. An **information wall** (or barrier) is the set of rules that keeps such information inside a small group. **Wall-crossing** is the controlled act of bringing an outsider, such as a client, inside that group, with their consent, so they can evaluate the deal INFERRED.

Why this lands on KCS: KCS works "in partnership with Capital Markets", and KCM handles financings and securities. KKR's UK capital markets entity is FCA-authorised for dealing and arranging [S70] CONFIRMED. Amy Lesch, KCS's Head of Global Product Strategy, is a member of KKR's "Global Conflicts and Compliance Committee" [S121] CONFIRMED. KKR's actual wall procedure is not public. Figure 4 shows the standard shape of a wall-crossing; treat it as a method to learn, not as KKR's manual.

	STEP	CLIENT STATUS
1	**Approval inside KKR** Deal team or KCM wants to test appetite before the deal is public. Compliance approves the investor names, the script and who may call.	PUBLIC
2	**No-names approach** KCS calls the client's nominated contact: sector and size only, no name. The question: "Are you willing to receive inside information?"	PUBLIC
3	**Consent and record** The client checks with its own compliance and agrees. KCS records who agreed, when, and exactly what was said, in the approved system.	ABOUT TO CROSS
4	**The crossing** NDA signed. The client learns the name and sees non-public data. Each person crossed is logged by Compliance, by name and time.	CROSSED
5	**Restricted period** The client may not trade the company's listed securities or pass it on. KCS shares only on a need-to-know basis, on approved channels.	CROSSED
6	**Cleansing** The deal is announced or dropped. Once the information is public or no longer material, the client is told it is cleansed. Restrictions lift.	CLEANSED
7	**The record** Logs, NDAs and call notes are archived. Messages on unapproved apps are a breach: KKR paid $11m in the SEC's January 2025 off-channel sweep.	CLEANSED

Standard industry sequence, reconstructed by the author. KKR's internal wall procedure is not public. Off-channel fine: [S29].

Figure 61. A wall-crossing in seven steps. Watch the status column: the client is "inside" only between steps 4 and 6, and every transition leaves a written record. Sequence INFERRED; off-channel communications settlement (January 2025, $11m within a $63.1m sweep of 12 firms) [S29] REPORTED.

THE CLASSIC JUNIOR MISTAKES

Mentioning a live deal name to a client "to build excitement" before step 4. Forwarding a teaser from a personal phone. Adding a colleague to an email thread who is not on the wall. Each one breaks the wall even if nobody trades INFERRED. The off-channel settlement shows regulators enforce the record-keeping side too [S29] REPORTED.

WHAT YOU WILL LEARN

The full syndication lifecycle from underwriting to reporting; the two-pipe fee rule and why it makes co-investment strategic for KKR; how to compute a client's blended fee and net multiple with and without co-investment; the five risks a co-investor weighs; and the seven-step wall-crossing that lets a client see a live deal lawfully.

WHERE YOU MEET IT AT KKR

In Europe, Mark Danzey is both European Head of KKR Capital Markets and European Head of Institutional Client Solutions [S156] CONFIRMED. Co-investment demand is large across the market: PitchBook tracked $37.5bn of co-investment fundraising in the 12 months to June 2026 [S260] CONFIRMED. KKR's own macro team writes that portfolio exposures "inform future deployment decisions, including where to lean in and where to syndicate through co-investment" [S436] CONFIRMED.

ONLY AT KKR

Other large managers run co-investment programmes, so the concept is not unique. What is unusual is the disclosure: KKR states in its 10-K that fund-level fees are 100% offset and that KCM fees are not [S425] CONFIRMED, so a junior can trace the economics of a syndication from a public document. Add one leader spanning KCM and institutional clients in Europe [S156], and the lifecycle is visible from both sides INFERRED.

SAY IT IN ONE LINE

"I want to learn how KCS and KKR Capital Markets syndicate a co-investment, because it is where a client's blended fee falls and KKR's non-shared capital markets fees rise, so getting allocation right serves both."

The diligence machine: DDQs, RFPs and operational due diligence

Before a pension fund commits $200m, it asks hundreds of written questions. The answers become representations to the client: if one is wrong, it is a legal and regulatory risk INFERRED. Three document types carry most of this load.

Document	What it is	Who sends it, who answers
DDQ (due diligence questionnaire)	A long, standardised list of questions about the firm, fund, team, terms and operations.	Sent by LPs and consultants, often in ILPA format [S320] REPORTED. Answered by product specialists with a central team (below).
RFP (request for proposal), called a **tender** in the UK and EU	A formal competition: the client describes a mandate and invites several managers to bid.	Typical of public pensions and DC schemes. Answered by the same machine, with more pricing and process detail INFERRED.
ODD (operational due diligence)	A separate review of the back office: valuation, cash controls, compliance, cyber, service providers.	Run by a specialist ODD team at the LP or consultant [S458] CONFIRMED. Answered by Finance, Operations, Compliance, Technology INFERRED.

Who answers at KKR: the CAPS team

KKR has a dedicated support function. Client and Product Services (CAPS) answers RFPs, RFIs (requests for information) and DDQs from Dublin and New York [S146] CONFIRMED. A Dublin product posting asks the analyst to "Work with the internal CAPS team to complete tenders/Due Diligence Questionnaires for potential new clients across credit while leading investor diligence processes" [S106] CONFIRMED. The 2027 Frankfurt KCS intern will "Coordinate responses to client due diligence requests/RFPs, including underlying portfolio statistics, marketing materials and presentation decks" and work with "strategies teams, client services, the RFP team" [S141] CONFIRMED. So an intern in London is likely to sit between three groups: the relationship manager who owns the client, the product team who owns the content, and CAPS who owns the process INFERRED.

The industry template: ILPA DDQ 2.0

The Institutional Limited Partners Association (ILPA), the LP trade body, publishes a standard DDQ. Version 2.0 was updated in November 2021, runs to 58 pages, and has 20 numbered sections and 8 appendices [S444] CONFIRMED. By my count it holds roughly 320 numbered question lines (estimate, as of the November 2021 text) [S444] INFERRED. The 2021 update added sections on succession planning, co-investment, GP-led secondaries, credit facilities and cybersecurity; the ESG section follows the PRI's LP questionnaire [S320] REPORTED. Figure 5 lays out all twenty sections and who inside a firm would typically own each answer.

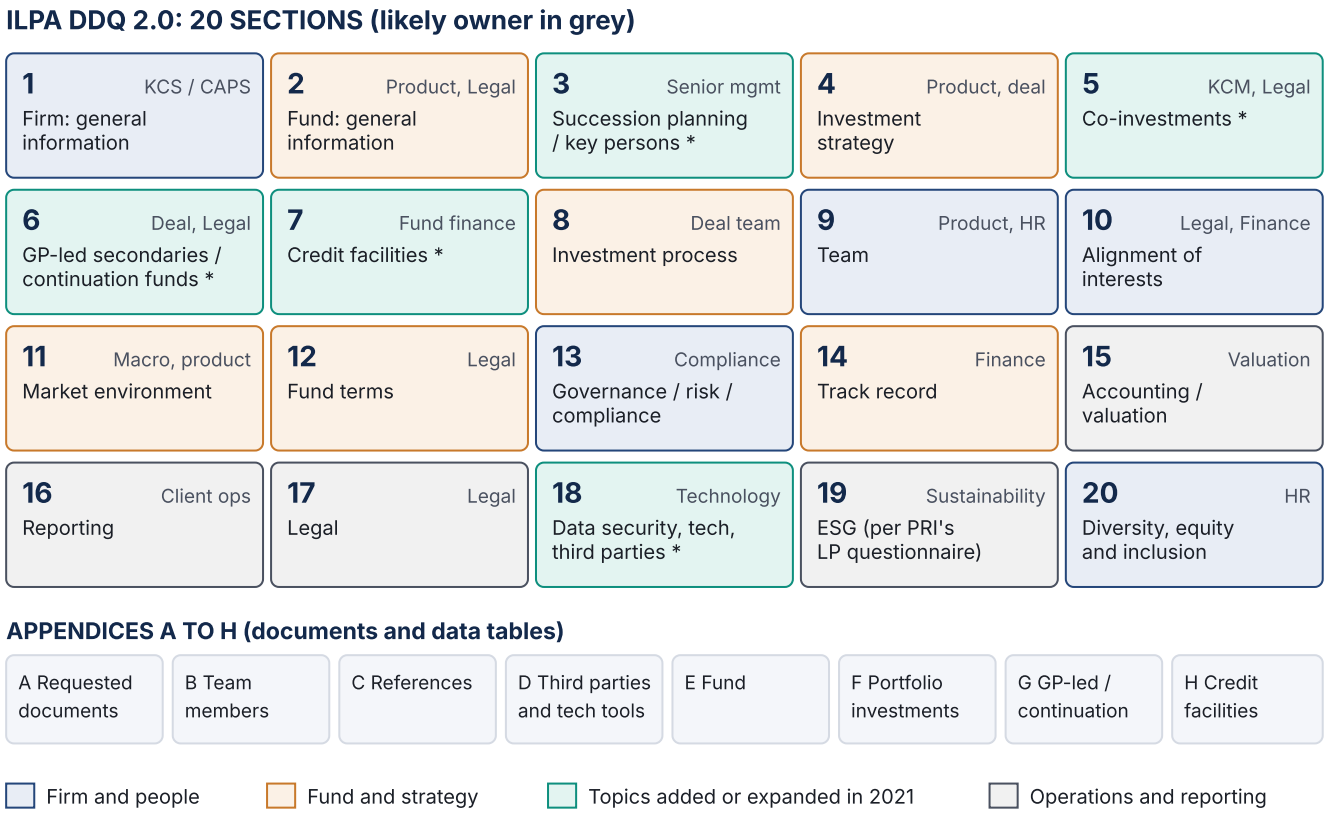

Figure 62. Anatomy of the ILPA DDQ 2.0. Twenty sections, eight appendices, and at least ten internal owners. The colours show why one DDQ touches the whole firm. Section list and appendices from ILPA DDQ 2.0, November 2021 [S444] CONFIRMED; new topics [S320] REPORTED; owner mapping INFERRED.

Read the owner labels again. A single DDQ needs Legal, Finance, Compliance, Technology, HR, the deal team and KCM. That matches the London analyst posting almost word for word: "Collaborating with various internal divisions globally to answer client requests (Product teams, Investment teams, Operations, Finance, Legal, Compliance, Risk)" [S101] CONFIRMED.

Operational due diligence: what it covers

Cambridge Associates, a large investment consultant, describes the ODD view of valuation precisely: it is "not to audit or underwrite specific asset valuations, but rather to assess a manager's controls, policy, oversight, and governance" [S458] CONFIRMED. It stresses open-end and evergreen funds, "where transactions are based on the fund's NAV", because "Fee calculations rely on accurate valuations"; oversight should come from "a valuation committee, fund auditors, and the board" [S458] CONFIRMED.

ODD area	The question behind it	KKR evidence a junior might point to
Valuation governance	Who sets the marks, who checks them, how often?	K-PEC: the Manager "determines the NAV of our Shares monthly"; an Administrator computes per-share NAV; all portfolio companies are Level III [S420] CONFIRMED.
Fund administration and cash controls	Can money move without two people approving?	Not public; answered by Finance and Operations [Gap].
Compliance and conflicts	How are allocation and conflicts handled?	K-PEC's allocation tiers [S420]; a Global Conflicts and Compliance Committee [S121] CONFIRMED.
Business continuity and cyber	What happens if systems fail or are attacked?	ILPA section 18 and Appendix D [S444]; KKR's answers are not public [Gap].
Regulatory history	Any enforcement, and what changed after?	SEC broken-deal case 2015 [S20]; off-channel sweep 2025 [S29]. Use only approved wording INFERRED.

Regulators look at the same thing. The FCA's March 2025 review of private market valuation practices covered 36 firms and found weaknesses in valuation governance records, conflicts identification, independence and ad hoc revaluations [S310] REPORTED.

Side letters, MFN elections and the 2025 ILPA reporting templates

Side letters

All investors in a fund sign the same Limited Partnership Agreement (LPA). Individual LPs often negotiate extra terms in a private side agreement called a **side letter**: fee breaks, reporting rights, ESG commitments, co-investment rights, or "excuse rights" that let an LP skip deals it cannot legally hold [Inferred, from WS4 standard terms].

The most-favoured-nation (MFN) clause

The law firm CMS defines it: an MFN "typically entitles an investor to elect the benefit of rights contained in other investors' side letters and potentially also the right to view the other investors' side letters" [S456] CONFIRMED. Three mechanics make MFNs technical:

- **Tiering.** An LP can usually only elect terms given to LPs with equal or smaller commitments [S457] REPORTED.
- **Carve-outs.** Standard exclusions cover legal, regulatory and tax-status terms, LPAC (advisory committee) seats, co-investment rights and size-based fee breaks [S457] REPORTED. Sponsors use carve-outs to "afford larger, first close or repeat investors more favourable rights" [S456] CONFIRMED.

- **The election window.** Sponsors "require MFN elections to be submitted within a certain period following closing" and "Late MFN election submissions are at risk of being rejected" [S456] CONFIRMED.

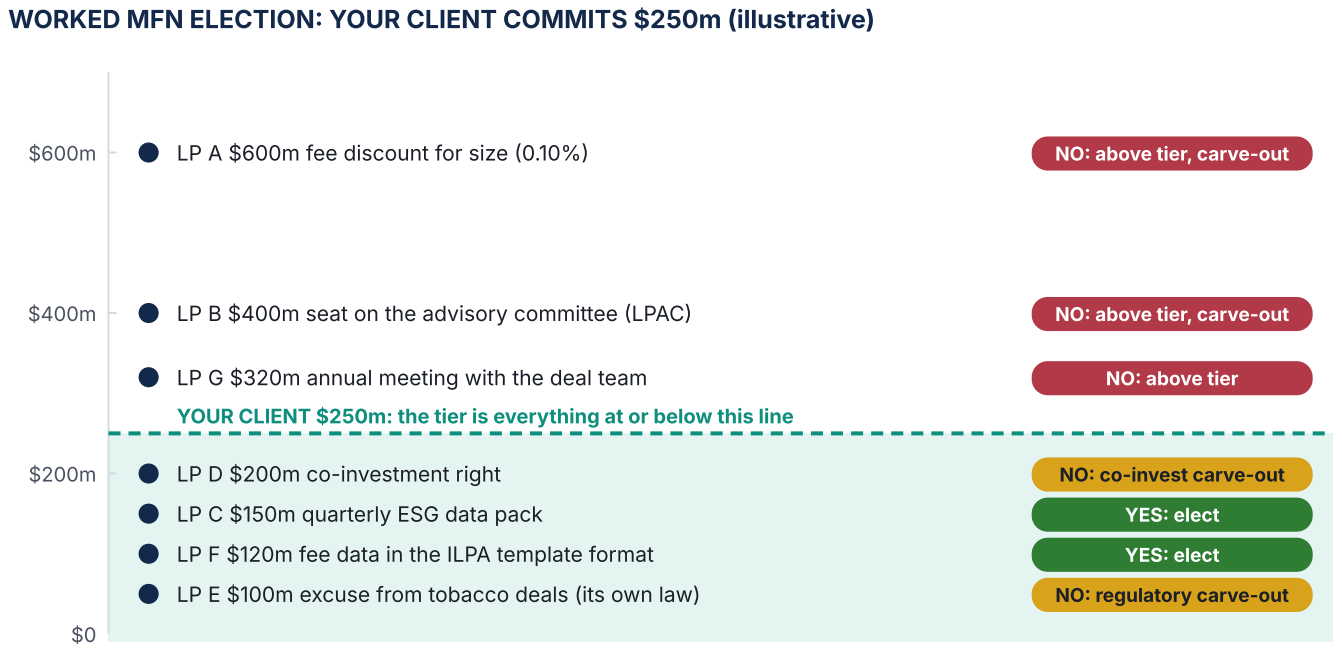

Figure 63. An MFN election, worked. Two filters run in order: size (is the granting LP in your tier?) and type (is the right carved out?). Only rights that pass both can be elected. All LPs, sizes and rights are illustrative; mechanics from CMS [S456] CONFIRMED and secondary sources on tiering and carve-outs [S457] REPORTED.

The procedure in words. (1) After the final close, the sponsor sends each MFN holder a compendium of side-letter terms it is entitled to see. (2) The client's counsel filters by tier: keep only terms granted to LPs at or below $250m. (3) Strike carve-outs: size-based fee breaks, LPAC seats, co-investment rights, legal, regulatory and tax-status terms. (4) Choose what to elect and return the election form before the deadline. (5) The sponsor updates its obligations register so that, for example, the ESG pack actually goes out every quarter [S456, S457; steps 1 and 5 Inferred]. CMS notes the process adds "financial, administrative and disclosure burdens on sponsors, particularly in open-ended products" [S456] CONFIRMED: an evergreen fund closes every month, so the compendium never stops growing INFERRED.

The 2025 ILPA templates: what clients will expect in reports

Template	What it adds	When it applies
Reporting Template (released Jan 2025)	A gross-to-net management fee reconciliation (rebates, waivers, offsets); granular partnership expenses, including chargebacks to the GP; capitalised transaction fees; "granular accounting of incentive allocation amounts" [S445] CONFIRMED.	Funds "still in their investment period during Q1 2026" or starting on or after 1 January 2026 [S445]; first delivery covers Q1 2026 [S318] CONFIRMED.
Performance Template (released Jan 2025)	Two methods, "granular" (itemised cash flows) and "gross-up". Standardises IRR and TVPI/MOIC, gross and net, "with and without the impact of fund-level subscription facilities" [S445] CONFIRMED.	Funds starting on or after 1 January 2026; first delivery four full fiscal quarters later [S445] CONFIRMED.
Capital Call and Distribution Template	Refreshed later in 2025 [S446] CONFIRMED.	Portfolio Company Template refresh slated for January 2027 [S446].

Notice the link back to the two fee pipes. The Reporting Template's "gross-to-net management fee reconciliation (rebates, waivers, offsets)" is exactly where the 100% fee offset from Figure 2 becomes visible to each LP, line by line [S445, S425] INFERRED.

How a junior drafts a DDQ answer

A DDQ answer is not written from memory. It is assembled from approved sources, checked by the person who owns the fact, reviewed by Compliance, and stored so that the next answer starts from it. Figure 7 is the life cycle of one answer. The method is standard practice, reconstructed INFERRED; the fact that juniors do this work with CAPS and the product teams is sourced [S106, S141].

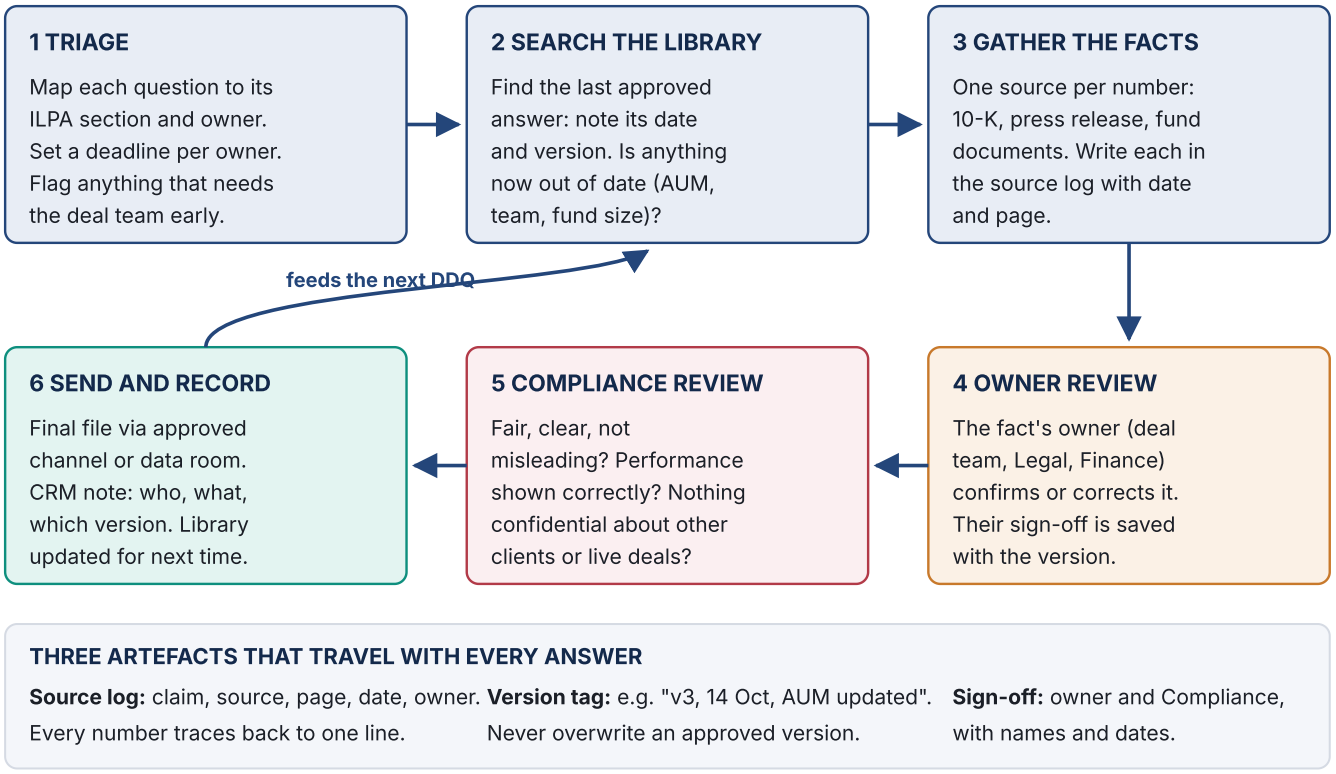

Figure 64. The life of a DDQ answer. Six stages, and the loop back from 6 to 2 is the point: a good answer becomes the starting point of the next one. Method reconstructed by the author INFERRED; the junior's role alongside CAPS and product teams from KKR postings [S106, S141, S146] CONFIRMED.

A source log, in practice

Claim in the draft	Source	Date	Owner to confirm	Status
KKR AUM $796bn	Q2 2026 earnings release [S74]	30 Jun 2026	KCS (public figure)	Use; check if Q3 released
GII V size $19.2bn	KKR press release [S430]	3 Aug 2026	Infra product team	Use
Predecessor fund net IRR	Not public	n/a	Finance, performance team	Request; do not estimate
Co-investor fees in GII IV	Not public	n/a	Legal and KCM	Request

Table layout is a teaching example; the public figures and their sources are real.

DON'T DO THIS

Copy a number from last year's DDQ without checking its date. Round a performance figure "to look cleaner". Answer a question about another client's terms. Each turns a DDQ into a misstatement INFERRED.

WHAT YOU WILL LEARN

The structure of the industry-standard DDQ section by section; the difference between investment diligence, an RFP and ODD; how to route a question to the right internal owner; how to run a tiered MFN election; what the 2025 ILPA templates require; and how to draft an answer from a source log through sign-off.

WHERE YOU MEET IT AT KKR

CAPS in Dublin and New York [S146]; the Frankfurt intern's "due diligence requests/RFPs" duty [S141]; product specialists who are "leading investor diligence processes" [S106] CONFIRMED. Evergreen products such as K-PEC face the toughest ODD questions on monthly NAV [S420, S458].

ONLY AT KKR

Any large manager answers DDQs. At KKR the same machine must cover drawdown flagships, evergreen K-Series vehicles, insurance sidecars and co-investment, each with different legal forms (an LLC "conglomerate", a BDC, a registered fund) [S420, S422, S424] CONFIRMED. So one intern sees several versions of section 12 (fund terms) and section 15 (valuation) side by side INFERRED.

SAY IT IN ONE LINE

"I want to learn how a 20-section DDQ is answered across Legal, Finance, Compliance and the deal team, because accurate diligence answers are what turn a first meeting into a commitment."

Distribution rules a KCS junior applies every day

Every deck, email and DDQ is a **marketing communication** in the eyes of some regulator. Whether it may be sent depends on three things: **who** the person is, **where** they are, and **what** the product is. KKR's own 10-K says that outside the US it relies on "private placement exemptions and marketing registrations, for example under the AIFMD in Europe, the Financial Services and Markets Act 2000 ... and the Alternative Investment Fund Managers Regulations 2013 ... in the United Kingdom" [S70] CONFIRMED. This section turns that sentence into the checks a junior runs.

The rulebook in one table

Rule	What it does, in plain English	Key facts and dates
Professional vs retail	Regulators split clients into professional (institutions, large firms) and retail (individuals, unless they qualify otherwise). Rules for retail are far stricter. The exact tests are Compliance's call INFERRED.	KKR's wealth site states its materials are "only intended and directed to Institutional, Professional or Accredited Investors" [S83] CONFIRMED.
AIFMD and the passport	The EU law for managers of alternative funds. An EU manager can market EU funds to professional investors across the EU with a passport. Non-EU managers use each country's national private placement regime (NPPR), under Article 42.	Directive 2011/61/EU; passport live 22 Jul 2013 [S300] CONFIRMED. KKR's EU AIFM is authorised by the Central Bank of Ireland [S70] CONFIRMED.

Rule	What it does, in plain English	Key facts and dates
AIFMD II	Update covering loan origination, liquidity tools, delegation and tighter NPPR conditions.	Directive (EU) 2024/927, applies 16 Apr 2026 [S294, S296]; NPPR funds must not be in EU AML high-risk or tax non-cooperative jurisdictions [S294] REPORTED; open-ended AIFs must pick at least two liquidity tools [S449] CONFIRMED.
Pre-marketing	Testing interest before a fund is set up or notified, without an offer.	An EU AIFM must notify its home regulator within two weeks of starting; any subscription by professional investors within 18 months counts as marketing [S299] CONFIRMED.
Reverse solicitation	The investor approaches the manager entirely on its own initiative, so no marketing occurred.	The 18-month rule effectively blocks relying on it after pre-marketing [S299] CONFIRMED. A junior should never assume it applies INFERRED.
ELTIF 2.0	EU long-term fund label open to retail investors.	Regulation (EU) 2023/606 applies from 10 Jan 2024 [S301, S302]; RTS 2024/2759 on redemptions [S447] CONFIRMED; 189 new ELTIFs since 2024, about €34bn at end-2025 [S302] REPORTED. No KKR ELTIF found [Gap].
UK LTAF	UK open-ended long-term fund.	Rules in force 15 Nov 2021 [S306]; units recategorised as Restricted Mass Market Investments from 3 Jul 2023 [S305] CONFIRMED; dealing no more than monthly, 90+ days' notice [S451] REPORTED; £7.5bn AUM (May 2026) [S452] REPORTED. No KKR LTAF found [Gap].
UK financial promotions	Promotions to individuals must be approved or fall within an exemption.	Certified high-net-worth thresholds: £100,000 income or £250,000 net assets, restored 27 Mar 2024 [S307] CONFIRMED.
Consumer Duty	Firms must deliver good outcomes for retail customers, including fair value.	Open products from 31 Jul 2023, closed products from 31 Jul 2024 [S308] CONFIRMED. Managers "may still fall in scope where they sit in a distribution chain to retail customers" [S452] REPORTED.
MiFID II product governance	Manufacturers and distributors define a target market for each product and check the client fits it.	MiFID II applied from 3 Jan 2018 [Inferred, date not re-verified]. KKR's 10-K: these rules cover "marketing, investor suitability assessments, and conflicts of interest management" [S70] CONFIRMED.
US: Reg D and accredited investors	Private offerings in the US are limited to qualifying investors.	Rule 506(b): no general solicitation; 506(c): solicitation allowed if all buyers are verified accredited [S314]. Accredited: income over $200,000 ($300,000 joint) or net worth over $1m excluding home [S314] CONFIRMED. K-PEC sells under Reg D and Reg S [S420] CONFIRMED.

Rule	What it does, in plain English	Key facts and dates
US Marketing Rule	SEC rule 206(4)-1 for adviser advertisements, including performance.	Adopted 22 Dec 2020; compliance date 4 Nov 2022 [S313] CONFIRMED.

SOURCE UNCERTAIN

The detailed performance rules inside the Marketing Rule (for example, how gross returns must be accompanied by net returns) were not read in our research files. Treat any specific rule here as something to confirm with Compliance INFERRED. What is sourced is the industry direction: the ILPA Performance Template standardises IRR and TVPI "gross and net" and "with and without the impact of fund-level subscription facilities" [S445] CONFIRMED. Why it matters, using the illustrative fund from the co-investment section: gross 2.0x, net 1.74x. Showing 2.0x alone to an investor who will receive 1.74x overstates the outcome by 26 cents per dollar invested [Inferred; numbers illustrative].

The daily decision: "can I send this deck to this person?"

Figure 8 puts the rulebook into a single tree. It is a learning aid, not legal advice: the real answer always comes from KKR's Compliance team. It shows the order of questions, which is the skill.

Where the tree bites at KKR

- **K-PRIME to a European private bank.** K-PRIME is the Luxembourg twin of K-PEC with "similar objectives and strategies" [S111] CONFIRMED; its product development is run from London by Matt Yates [S133] CONFIRMED. Its own documents describe a Part II UCI under Luxembourg's 2010 law, supervised by the CSSF [S429] REPORTED. A deck for a Swiss or German private bank runs down the EU column of Figure 8; the bank's own clients bring in MiFID II target market questions INFERRED.
- **A UK wealth manager.** KKR announced that Quilter Cheviot would offer KKR's evergreen private equity strategy from January 2026 [S177] CONFIRMED. Quilter is the distributor; Consumer Duty means KKR must give it what it needs to show fair value [S452] [Reported; application Inferred].
- **A US adviser.** Nuttall: "K Series is built to be able to go to the accredited investor in the U.S., which is $1 million and up in net worth" [S76] REPORTED. The SEC's late-September 2026 proposals would add routes such as a FINRA accredited-investor exam and the CFA charter [S275] REPORTED, which would change US-1 in the tree.
- **The UK regime itself is moving.** FCA CP26/28 (July 2026) proposes three tiers of UK AIFM by NAV and keeps NPPR with limited changes; comments close 14 October 2026 and new rules are expected in force in 2028 [S303] CONFIRMED.

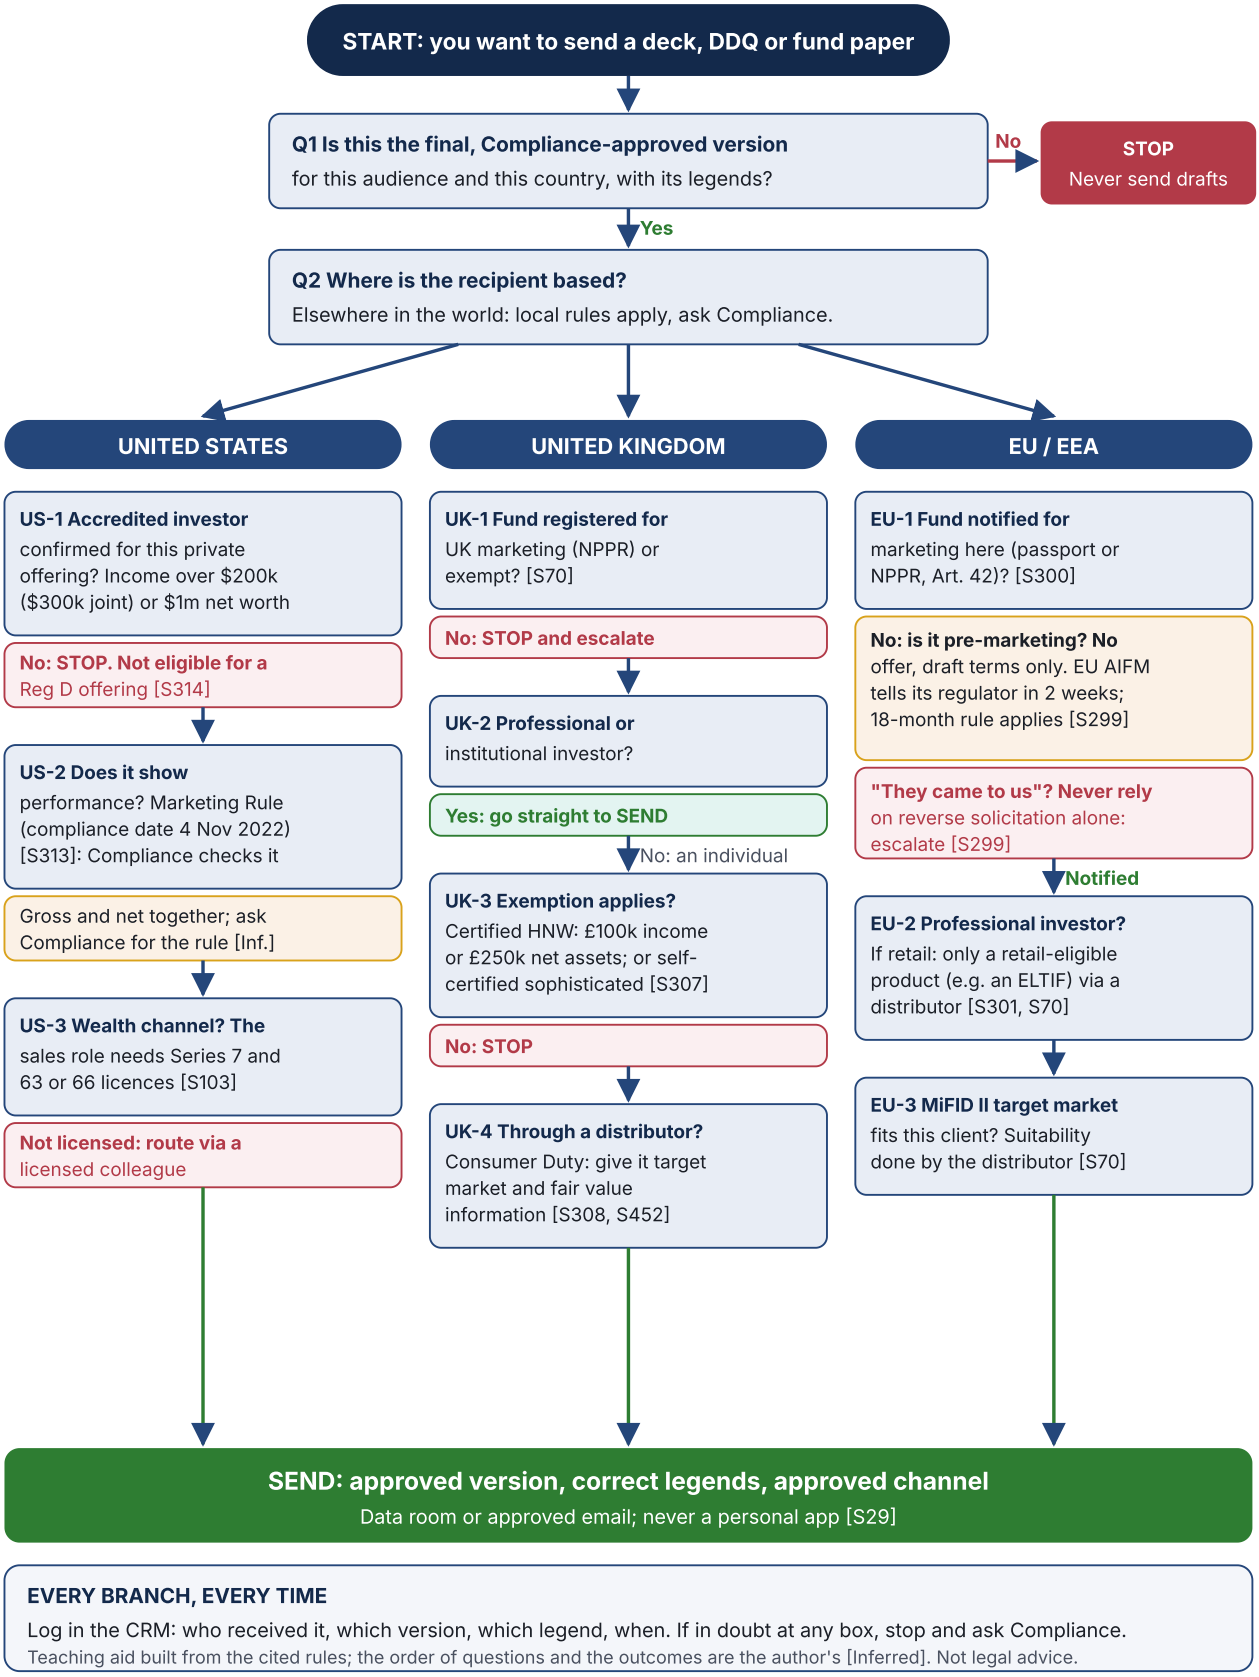

Figure 65. "Can I send this deck to this person?" Two universal gates (approval, location), then one column per jurisdiction. Red boxes stop the send; amber boxes need Compliance; the green bar is the only way out. Rules and dates from **[S70, S83, S103, S299, S300, S301, S307, S308, S313, S314, S452]**; the tree structure is **INFERRED**.

WHAT YOU WILL LEARN

To classify a recipient (professional or retail, US or UK or EEA), to know which permission a product has in each place, and to run the send decision in the right order: approval, location, eligibility, performance, channel, record.

WHERE YOU MEET IT AT KKR

KKR's UK entities are FCA-authorised; its EU AIFM is Central Bank of Ireland-authorised [S70] CONFIRMED. KCS is in London, Dublin, Zurich, Paris, Stockholm, Frankfurt and the Gulf [S80] CONFIRMED, so one EMEA team sends into many regimes at once.

ONLY AT KKR

KKR sells the same strategy through drawdown funds for institutions, evergreen vehicles under US Reg D and Reg S [S420], a Luxembourg vehicle for Europe [S429], and a third party's US interval funds [S427]. A London junior therefore sees one investment idea pass through several legal wrappers and several rulebooks. That breadth is the learning, inferred from the product range INFERRED.

SAY IT IN ONE LINE

"I want to learn how KCS decides who can receive which material in which country, because in private markets distribution the rulebook is part of the product."

The tools and the record

KCS work leaves a trail: every meeting, every document sent, every onboarding step. The tools exist to make that trail complete and searchable. What is confirmed about KKR's toolset is short, so this section separates sourced facts from method.

What is confirmed: Salesforce is named in a KKR wealth posting, which asks for "Proficiency in CRM systems (Salesforce)" and "meeting/call notes in CRM" [S103] CONFIRMED; the Singapore intern maintains "CRM data" [S107] CONFIRMED; the London analyst is "Partnering with clients to help with KYC & investment onboarding" and "Managing a variety of reporting requirements for investors" [S101] CONFIRMED. KKR notes that "Financial crime laws may limit our investment and capital raising activities" [S70] CONFIRMED, which is why KYC sits on the critical path to a closing. What is not public: the data room vendor, any use of DealCloud, and the internal answer library's form [Gap].

AI: what is public, and what is not

- **The internship text.** KKR's internship wording says interns are "encouraged to leverage KKR's approved AI tools" (quoted in the candidate brief).
- **The London analyst posting.** It asks for "Strong working knowledge of AI-enabled productivity tools, with the ability to use generative AI effectively and responsibly" [S101] CONFIRMED.
- **The firm's platform.** KKR's Technology team advertised an "AI Platform Lead" in New York to "Define, build, and scale a centralized AI platform to enable a new generation of intelligent, business-facing applications" and to "Drive the adoption of Generative AI, NLP, and ML across the firm" (listing removed 23 Feb 2026) [S443] CONFIRMED. A job advert shows intent, not deployment.
- **What is not public.** I found no public KKR statement on how KCS itself uses AI. DDQ drafting, RFP search, meeting notes and CRM summaries are plausible uses but unconfirmed [S443] [Gap].

FROM THE INTERNSHIP ADVERT

KKR's 2027 London internship text says: "Interns are encouraged to leverage KKR's approved AI tools to accelerate their work, deepen their learning, and contribute fresh perspectives on how emerging technology can enhance the way we operate" [Advert]. The London analyst posting also asks for generative AI skills [S140]. How KCS uses those tools day to day is not public.

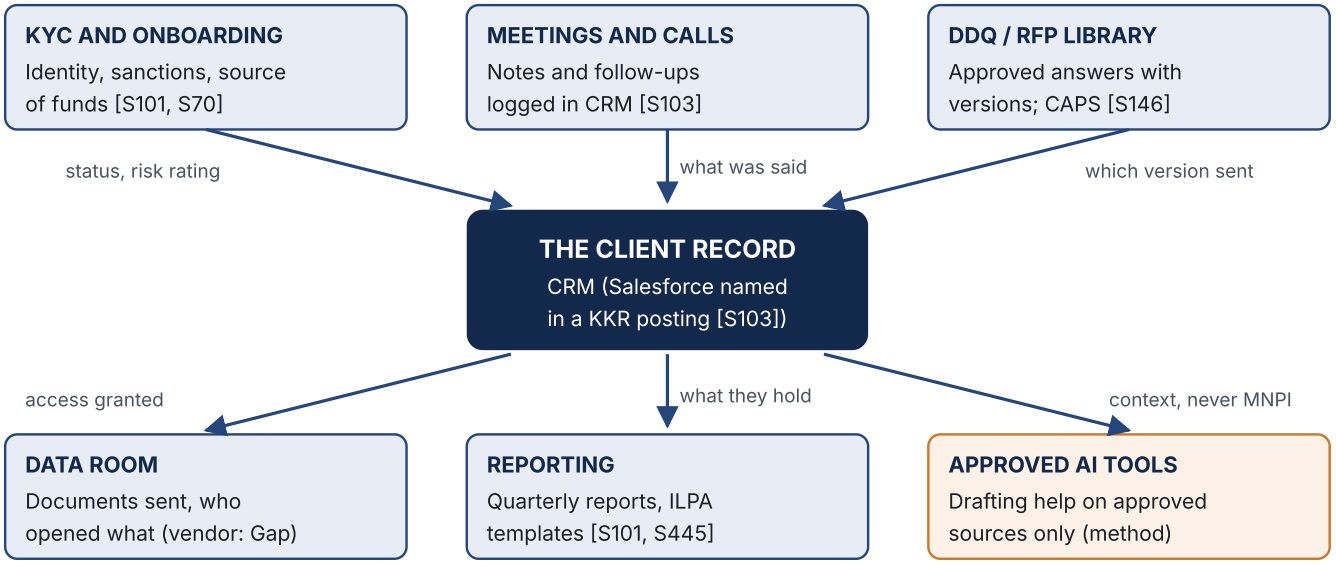

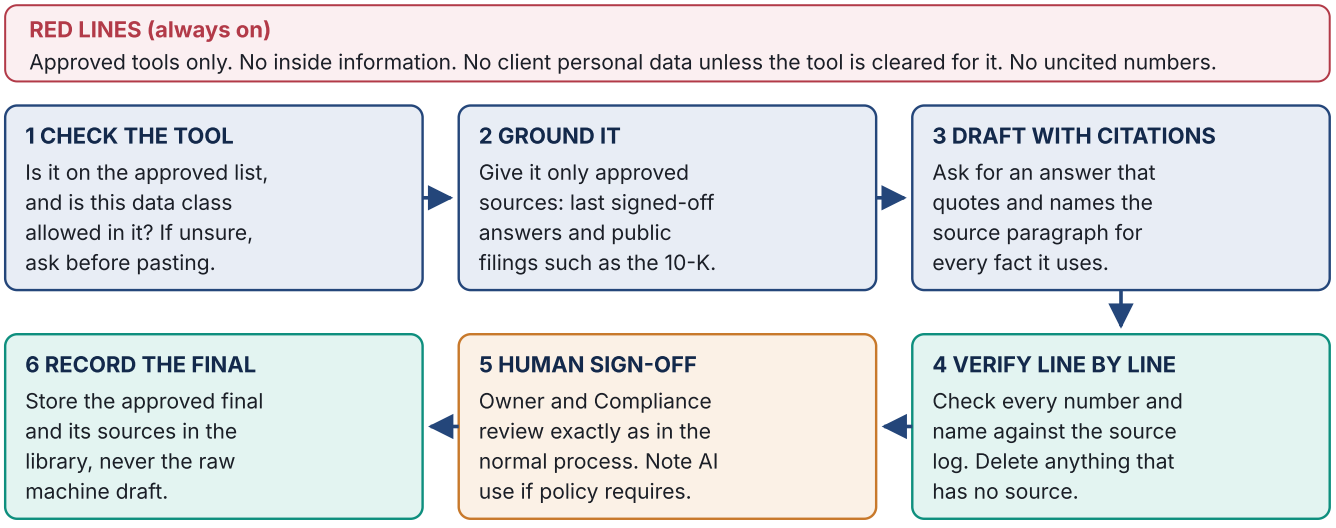

Figure 66. Six systems, one record. Every arrow is a fact that must end up against the client's name. The test of a good junior: could a colleague reconstruct the relationship from the CRM alone? Salesforce [S103], KYC and reporting duties [S101], CAPS [S146] CONFIRMED; data room vendor and AI tool use not public [Gap]; the map is INFERRED.

A responsible-AI workflow for DDQ drafting (method, labelled)

The workflow below is my proposed method, not KKR's procedure INFERRED. It applies the same discipline as Figure 7, with extra guardrails because a language model can produce fluent text that is wrong.

Author's proposed method [Inferred]. KKR's actual AI policy and tools are not public [S443, Gap]. Steps 4 to 6 mirror Figure 7.

Figure 67. Responsible AI in DDQ drafting. The machine speeds up steps 2 and 3; steps 4 and 5 stay human, and they are where accountability sits. Method INFERRED; the requirement to use generative AI "effectively and responsibly" is KKR's wording [S101] CONFIRMED.

WHAT YOU WILL LEARN

How the client record is built across CRM, KYC, data room, reporting and the answer library; why approved channels matter legally; and a disciplined way to use generative AI on client documents without losing accuracy or confidentiality.

WHERE YOU MEET IT AT KKR

Salesforce and CRM notes [S103]; KYC and reporting duties in the London analyst role [S101]; the AI requirement in the same posting [S101]; KKR's central AI platform hiring [S443] CONFIRMED .

ONLY AT KKR

Honestly, the tools themselves (Salesforce, data rooms) are industry standard. What is specific is the combination: a firm building a "centralized AI platform" across the business [S443] while its client team handles DDQs whose facts can be checked against public SEC filings [S420, S425]. That is a good setting in which to learn AI drafting with verification, inferred from the sources INFERRED .

SAY IT IN ONE LINE

"I want to learn how KCS keeps a complete client record and uses KKR's approved AI tools on documents like DDQs, with every fact still traced to a source."

A worked week-three task: five DDQ answers on GII V

The brief from your relationship manager (illustrative) — **WEEK 3**

SETUP A Nordic public pension (hypothetical) has sent five questions on Global Infrastructure Investors V (GII V). Answers are due Friday. KKR covers the Nordics from Stockholm and Copenhagen (Carl Lithander, Victor Kihlgren, Adam Bjorndal, Fanny Jorwall) [S155] CONFIRMED .

THE FIRST CATCH GII V held its final close on 3 August 2026 [S430] CONFIRMED , so a new commitment to the main fund is no longer possible. The realistic versions of this task are an existing investor's annual monitoring DDQ, or a client weighing co-investment alongside GII V. Spotting this before drafting is the first test INFERRED .

THE RULE Use only sourced public facts. Mark every point that needs the deal team, Finance or Legal. Never estimate a performance number.

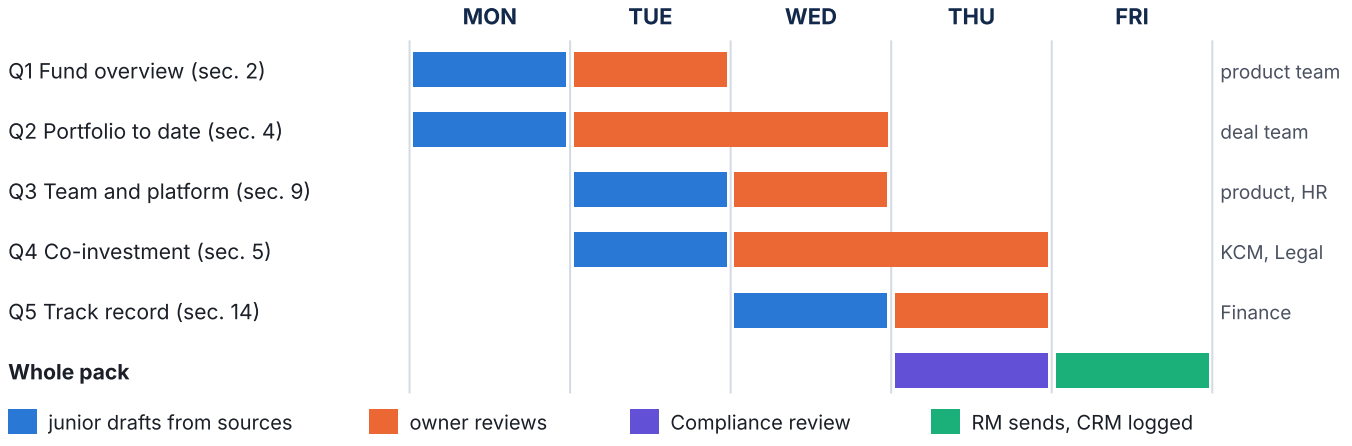

Figure 68. The week plan. Questions that depend on others (deal team, Finance) are drafted first so their owners have the most time; Compliance sees the whole pack once. Schedule and owners illustrative INFERRED ; ILPA section numbers from [S444].

Q1. Describe the fund: size, strategy, geography. (ILPA section 2) — PUBLIC FACTS

DRAFT "GII V is a $19.2 billion Core+ fund focused on investing in critical infrastructure assets and businesses primarily in North America and Western Europe. It is the fifth vintage of the strategy and KKR's largest infrastructure fund raised to date."

SOURCE LOG KKR press release, 3 Aug 2026 [S430] CONFIRMED. Quote the release wording; do not paraphrase "Core+" into a risk claim.

NEEDS AN OWNER Investment period dates and fee terms come from the fund documents: Legal and the infrastructure product team.

Q2. Which investments has the fund made to date? (ILPA section 4 and Appendix F) — PARTLY PUBLIC

DRAFT "At final close GII V had committed over $9 billion, including investments in Altitude III, EDF power solutions North America, Enilive, FiberCop, Global Technical Realty, Gulf Data Hub, Metronet, Sempra Infrastructure and The Parking Spot."

SOURCE LOG [S430] CONFIRMED. Date the statement "as of 3 August 2026".

NEEDS THE DEAL TEAM Commitment per asset, current valuation, and anything signed since August. Appendix F asks for portfolio data in a table; valuation marks are confidential and come from Finance INFERRED.

Q3. Describe the team and platform. (ILPA section 9) — PUBLIC FACTS

DRAFT "KKR's infrastructure platform manages approximately $120 billion of infrastructure equity, up from $13 billion in 2019, across more than 100 investments, with approximately 160 dedicated infrastructure executives. KKR has committed over $70 billion of equity across the Global Infrastructure strategy in North America and Europe."

SOURCE LOG [S430] CONFIRMED. In EMEA, the infrastructure strategy is co-led from London by Tara Davies, Co-Head of KKR EMEA and Co-Head of European Infrastructure [S158] CONFIRMED.

NEEDS AN OWNER Named key persons, departures and hires (section 3 and Appendix B): product team with HR and Legal, because key-person terms are contractual INFERRED.

Q4. Do you offer co-investment, and on what terms? (ILPA section 5) — NEEDS KCM AND LEGAL

DRAFT (FIRM-LEVEL ONLY) "KKR Capital Markets provides syndication services for co-investments in transactions in which KKR and its vehicles participate. Since 2014, KKR's fund agreements typically require 100% of monitoring, transaction and break-up fees allocable to a fund to be shared with fund investors."

SOURCE LOG KKR 10-K FY2025 [S425] CONFIRMED. GII IV comparison: closed at $17bn in March 2022 [S431] [Reported: search snippet, verify before use].

NEEDS KCM AND LEGAL ILPA's actual questions: fees, management fee or carry charged to co-investors in predecessor funds; whether co-investments were syndicated; any co-underwriting before signing; treatment of broken-deal expenses [S444] CONFIRMED. None of these GII-specific answers is public.

THE TRAP Do not mention any live co-investment by name: the client is not wall-crossed (Figure 4). If the pension wants co-investment, the RM logs the interest in the CRM and KCM decides on approach INFERRED.

Q5. Provide the track record of predecessor funds. (ILPA section 14) **FINANCE ONLY**

DRAFT "Track record for Global Infrastructure Investors I to IV is provided in the attached performance schedule, prepared by KKR's finance team as of [date], showing gross and net IRR and multiple." The schedule itself is left blank for Finance.

SOURCE LOG Public: fund sizes only (GII IV $17bn; GII III $7.2bn [S431] REPORTED). No predecessor performance is in our public sources [Gap].

NEEDS FINANCE AND COMPLIANCE Gross and net figures, and for newer funds the effect of subscription lines, which the 2025 ILPA Performance Template standardises [S445] CONFIRMED. Compliance checks presentation (see the rules section).

WHY IT WORKS The junior adds value by building the shell, the source log and the owner list, not by guessing numbers INFERRED.

WHAT A NORDIC PENSION WILL PROBABLY ALSO ASK

Nordic pensions are often strong on responsible investment, so section 19 (ESG, per the PRI questionnaire) is likely in a real version INFERRED. No GII V-specific ESG data is in our sources [Gap]: route it to the sustainability team rather than drafting from general KKR statements.

WHAT YOU WILL LEARN

How to turn a client's questions into an ILPA-mapped plan, draft only what public sources support, build the source log as you go, and hand the right people the right gaps early in the week.

WHERE YOU MEET IT AT KKR

GII V's investor list spans "pension plans, sovereign wealth funds, insurance companies, asset managers, private wealth platforms, and family offices" [S430] CONFIRMED. The biggest dedicated KCS product cluster in London is infrastructure (Rory Smith, James Hewitt, Larisa Svintsitski, Pablo Arribas) [S150] CONFIRMED.

ONLY AT KKR

The same infrastructure team's ideas reach clients through GII V, the open-ended Diversified Core Infrastructure Fund, K-INFRA for individuals, and co-investment [S421, S430, S432] CONFIRMED. So the five answers above would read differently for each wrapper, and a junior learns to keep one fact base consistent across all of them INFERRED.

SAY IT IN ONE LINE

"I want to learn to answer a pension's DDQ on a fund like GII V from primary sources, knowing exactly which answers I can write and which only the deal team or Finance can give."

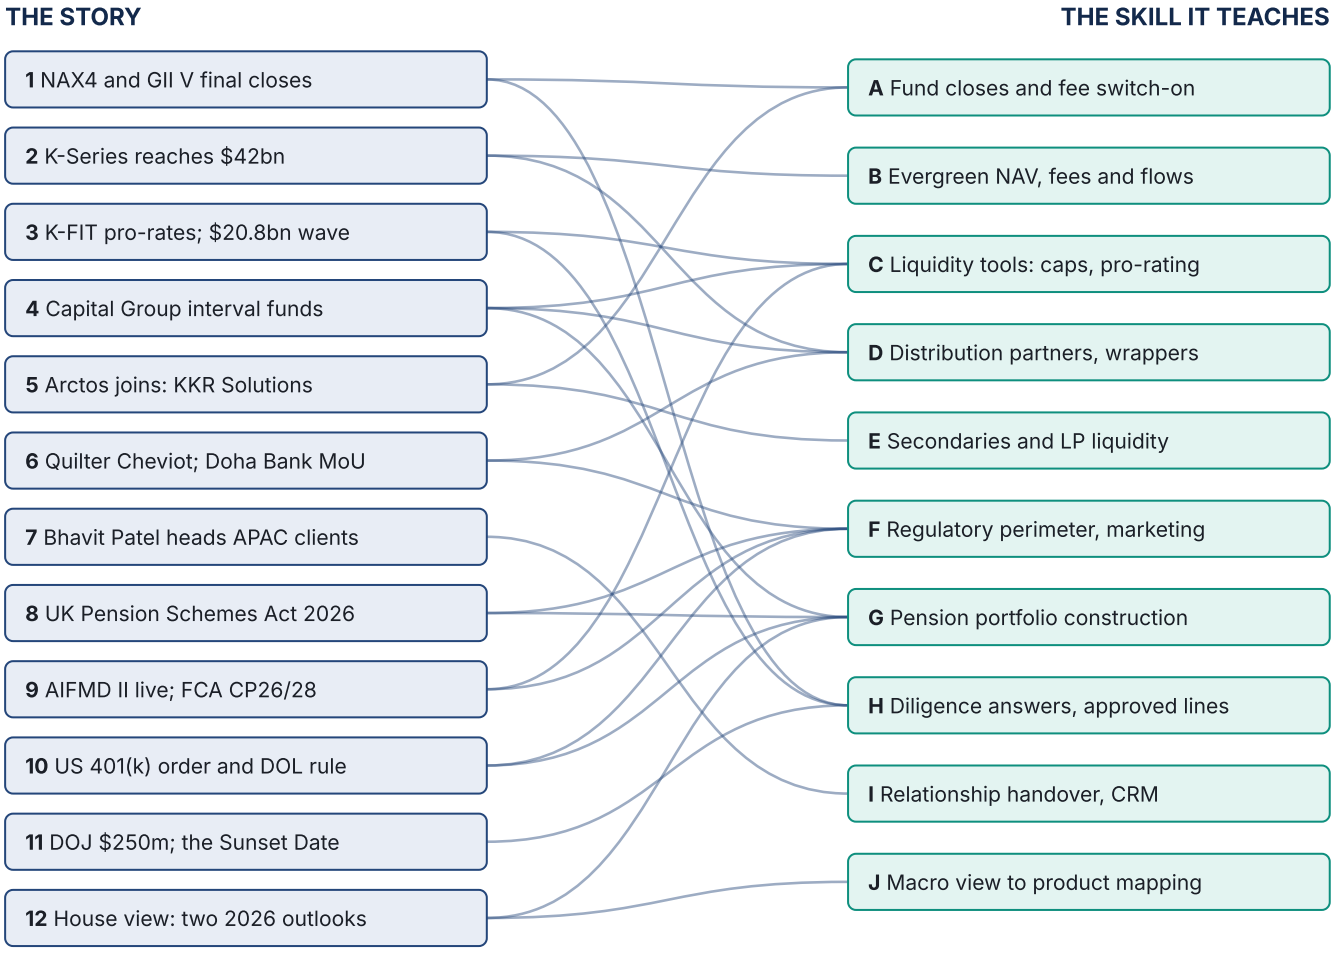

PART 6

The news, turned into lessons

Twelve stories from April to October 2026 that KKR drove or that hit its client business. For each: what happened, the technical concept it teaches, where a KCS intern would meet it, and one line you can use.

How to read this part

Commercial awareness usually means knowing the headline. This part goes one step further: every story is a worked example of a mechanism you would handle in the KCS seat. Figure 1 maps stories to skills. Figure 2 puts them on one timeline. Then each story gets the same block: **what happened** (dated and sourced), **what you will learn** (the concept, with numbers), **where you meet it at KKR**, and **one line to use**. Each section ends with an "Only at KKR" box.

Each line = one story teaches one skill. Story 7 links to I; the mapping is the author's.

Figure 69. News to skill map. Twelve stories feed ten skills. Notice that liquidity (C), the regulatory perimeter (F) and pension portfolio construction (G) each collect three or more stories: they are the most "newsworthy" technical skills of 2026. Mapping INFERRED; stories sourced below.

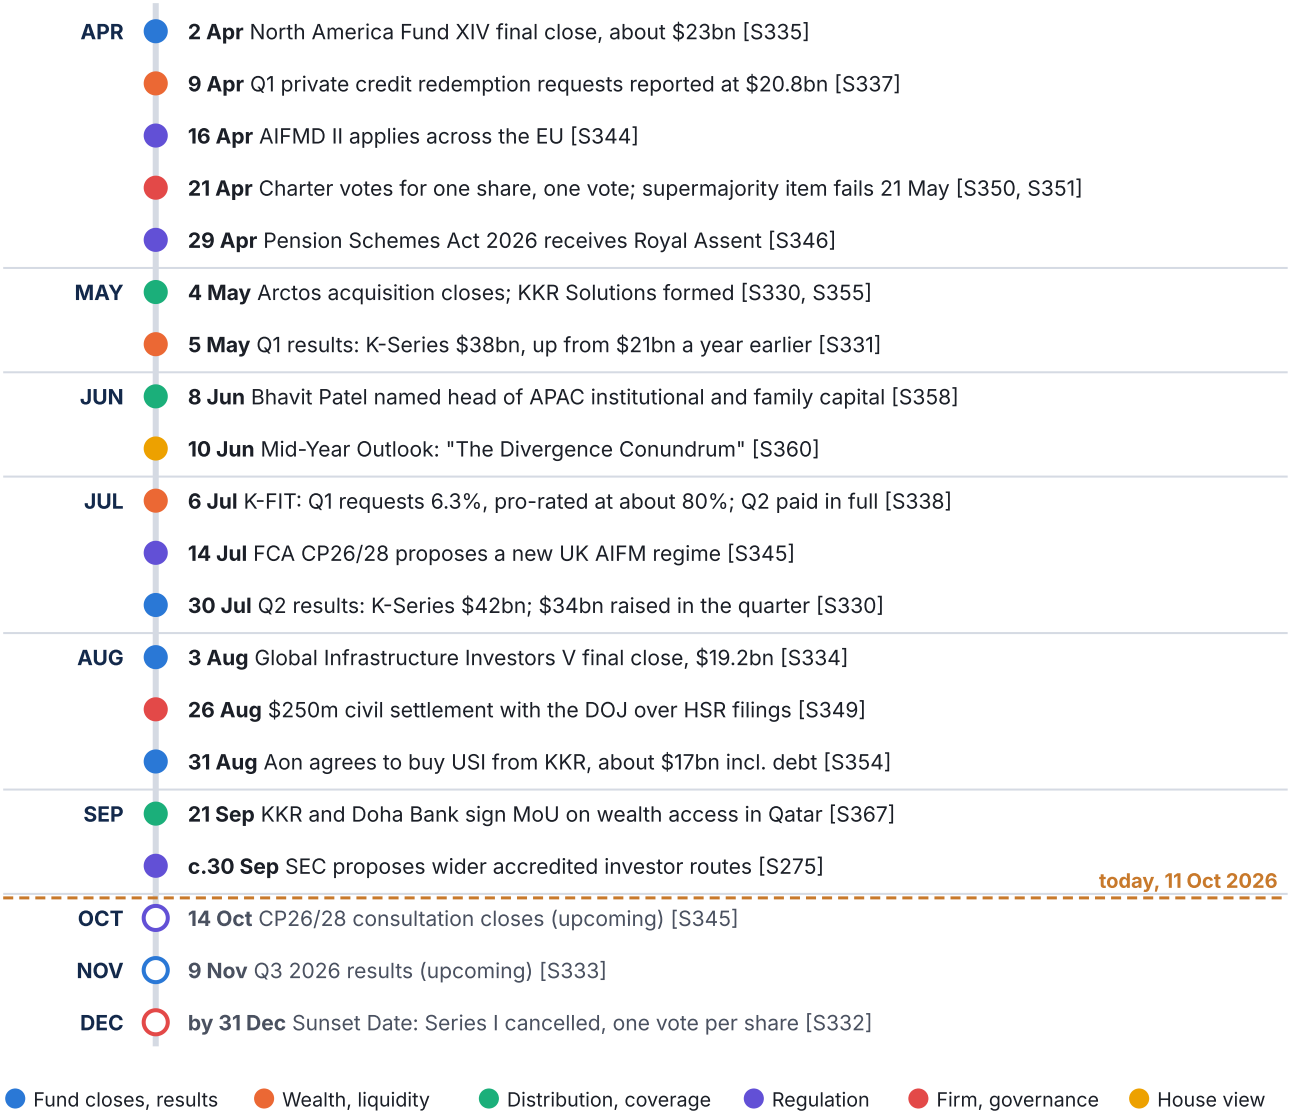

Figure 70. KKR client-facing news, April to December 2026. Read the colours down the line: regulation (purple) and wealth liquidity (orange) are spread across the whole period, while the two flagship closes bracket it. Hollow dots are scheduled, not yet happened. Spacing is by event, not to scale in time. Sources as marked; dates as reported.

Fundraising: two flagship closes

Story 1. North America Fund XIV (about $23bn) and Global Infrastructure Investors V ($19.2bn)

What happened. On 2 April 2026 KKR closed North America Fund XIV ("NAX4") at about $23bn, which it calls the largest private equity fund focused only on North America [S335] CONFIRMED. The release reported a 23% gross IRR (19% net) across the three predecessor funds as of 31 December 2025 [S335] REPORTED. KKR's Q2 vehicle table shows $21.9bn committed and an investment period from April 2025 to April 2031 [S1] CONFIRMED. On 3 August 2026 KKR closed Global Infrastructure Investors V at $19.2bn, its largest infrastructure fund, a Core+ fund focused on North America and Western Europe, with over $9bn already committed to deals and investors including "pension plans, sovereign wealth funds, insurance companies, asset managers, private wealth platforms, and family offices" [S334] CONFIRMED. Brandon Donnenfeld credited "longstanding clients who have partnered with us across multiple fund vintages and new investors from around the world" [S334] CONFIRMED.

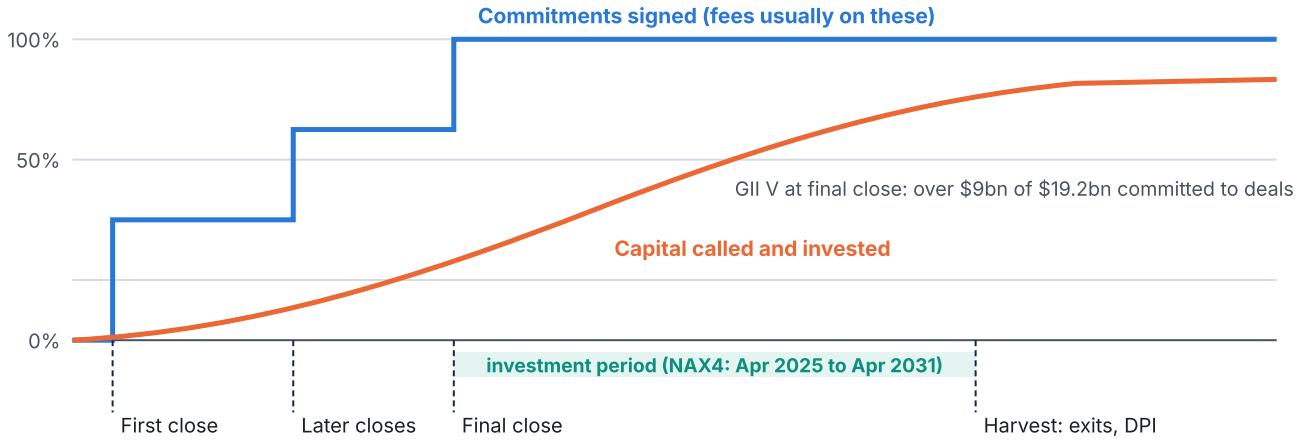

Figure 71. Commitments versus called capital. The blue step is money promised at each close; the orange curve is money actually invested. The gap between them is dry powder. Shape illustrative; GII V deployment from KKR's release [S334], NAX4 dates from the Q2 vehicle table [S1] CONFIRMED.

WHAT YOU WILL LEARN

Close mechanics and fee switch-on. A fund holds a first close, later closes and a final close; investors who join late typically pay their share of earlier calls (equalisation) INFERRED. In private equity, fees usually run on committed capital in the investment period (1.0% to 2.0%) [S2] CONFIRMED. At 30 June 2026 KKR had $72bn of committed capital not yet paying fees, at an average of about 90 basis points [S1] CONFIRMED. Worked: $72bn × 0.9% ≈ **$650m a year** of management fees that switch on as money is invested INFERRED. GII V had over $9bn of $19.2bn committed at close: 9 ÷ 19.2 ≈ 47% INFERRED.

WHERE YOU MEET IT AT KKR

"Partnering with clients to help with KYC & investment onboarding" and "Supporting Relationship Managers in fundraising activities" [S101] CONFIRMED. A re-up decision at a pension like CalPERS, which committed $600m to North America Fund XIII [S117] CONFIRMED, is exactly the decision a NAX4 close depends on INFERRED.

SAY IT IN ONE LINE

"I want to learn what happens between a first and a final close, how commitments become called capital and how fees switch on, using a live fund like GII V."

ONLY AT KKR

GII V's investor list puts private wealth platforms beside sovereigns [S334], and in the same quarter KKR's real assets money also came from K-Series Infrastructure and Helix [S74] CONFIRMED. One team raises the same asset class through drawdown, evergreen and platform routes, so a junior sees how one strategy is explained to three audiences INFERRED.

Wealth and liquidity

Story 2. K-Series grows to $42bn, and its fees change shape

What happened. K-Series AUM grew from $6bn (2023) to $16bn (2024) and $34bn (2025) [S72] CONFIRMED, then $38bn at 31 March 2026 [S331] and $42bn at 30 June 2026 [S73] CONFIRMED. About 85% sits in private equity and infrastructure [S76] REPORTED. Scott Nuttall: "we're up 20% net year-to-date" [S76] REPORTED. From Q2 2026, about $160m of K-Series private equity performance revenue is reported as fee-related performance revenue [S73] CONFIRMED, carrying a 15% to 20% compensation rate rather than the 70% to 80% used for carried interest [S1] CONFIRMED.

WHAT YOU WILL LEARN

Evergreen arithmetic. Change in NAV = subscriptions − redemptions + investment return. Fees run on NAV (1.25% for K-PEC main classes [S111] CONFIRMED). Performance fees on evergreen vehicles are paid above a preferred return and a high-water mark [S1] CONFIRMED. Worked high-water mark (illustrative): NAV per share 100 → 110 (fee earned on the gain above the hurdle), falls to 95, recovers to 105: **no new performance fee**, because 105 is still below the 110 peak.

WHERE YOU MEET IT AT KKR

Monthly and quarterly materials for private banks; the EMEA Wealth Communications team in London [S102] CONFIRMED; adviser education at "KKR Academies, having 100 advisers at a time come in" [S207] CONFIRMED.

SAY IT IN ONE LINE

"I want to understand evergreen funds like K-PRIME from the inside: how NAV, fees and flows interact, and why KKR now reports their performance fees as recurring earnings."

Story 3. K-FIT pro-rates redemptions, inside a $20.8bn industry wave

What happened. In Q1 2026 investors in KKR FS Income Trust (K-FIT, a non-traded private credit BDC) "tried to redeem 6.3% of shares", so the fund paid about 80% of each request; in Q2 requests fell to 1.65% and were paid in full (Bloomberg, 6 July 2026) [S338] REPORTED. Industry-wide, Q1 requests to withdraw from private credit funds reached $20.8bn; managers with about $300bn of assets paid "just over half"; Blackstone and Oaktree paid above the 5% cap while Apollo, Ares, Blue Owl, HPS and Morgan Stanley kept their limits; the trigger was worry about loans to software companies, while "underlying loan performance remains largely stable" [S337] REPORTED. Apollo Debt Solutions received requests of 11.2% and honoured 5%; Blackstone's BCRED paid 100% of 7.9% [S278] REPORTED. Nuttall said software is "about 6% of our AUM" [S362] REPORTED.

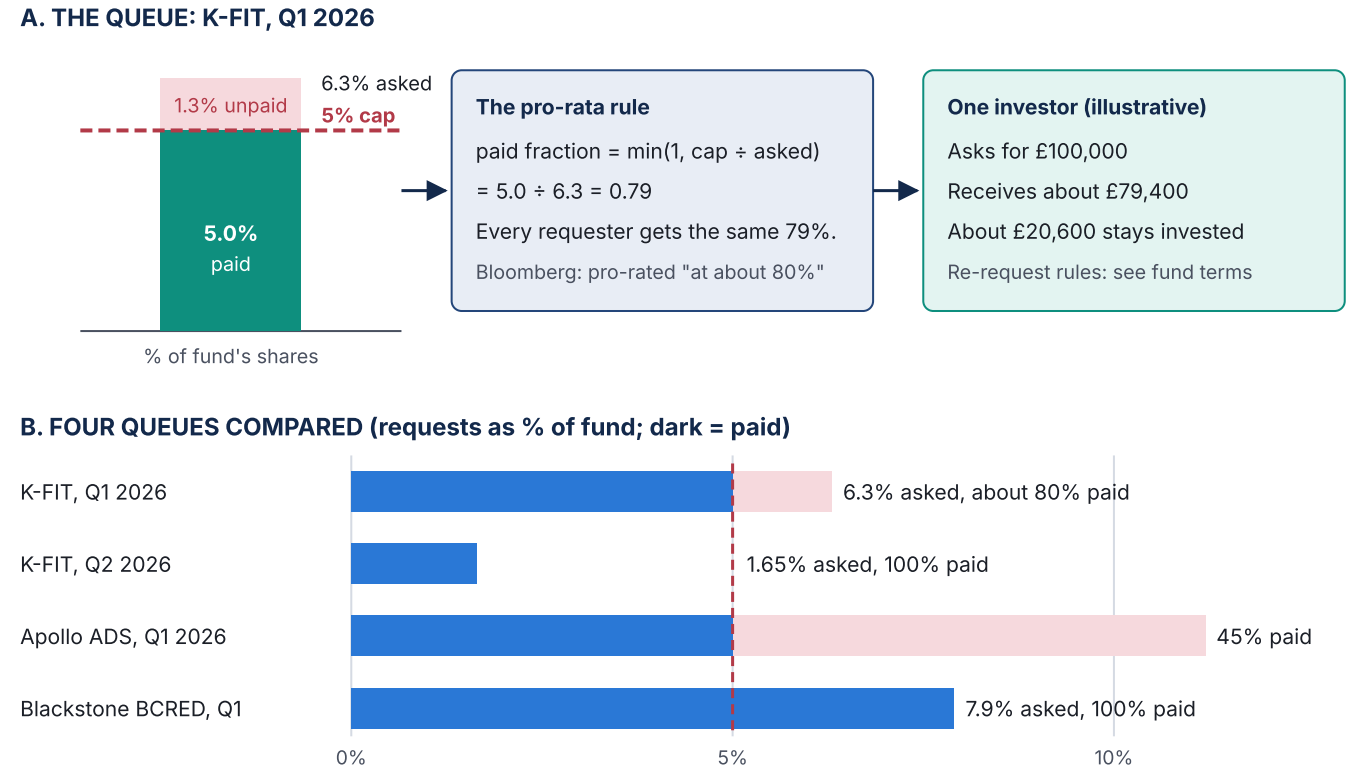

Figure 72. Redemption queue mechanics. Panel A: requests above the cap are scaled back pro rata, so 6.3% asked becomes 5% paid and each investor gets about 79 pence in the pound. Panel B: the same rule produces very different outcomes, and one manager (BCRED) chose to pay above its cap. Sources: K-FIT [S338]; Apollo ADS and BCRED [S278], all REPORTED; investor example illustrative.

WHAT YOU WILL LEARN

Why caps exist and how pro-rating works. A semi-liquid fund holds illiquid loans or companies but promises periodic exits. The cap stops early leavers draining the cash that remaining investors rely on, which also removes the incentive to rush for the door INFERRED. Under AIFMD II, open-ended EU funds must choose at least two liquidity management tools from a list that includes gates, notice periods, redemption fees, swing pricing, redemption in kind and side pockets [S295] CONFIRMED. Contrast: closed-end private debt funds returned cash at a 24.1% distribution rate and behaved "differently from evergreen vehicles" [S260] REPORTED.

WHERE YOU MEET IT AT KKR

Drafting investor letters and adviser FAQs, answering private bank questions consistently, and updating the liquidity section of DDQs INFERRED from the duties in [S101, S141]. The London wealth product team runs the evergreen PE vehicles that carry the same kind of terms [S133] CONFIRMED.

SAY IT IN ONE LINE

"When K-FIT received 6.3% redemption requests against a 5% cap, it paid about 80% of each; I want to learn to explain that mechanism to a private bank before the queue forms, not after."

ONLY AT KKR

Blackstone also runs several evergreen funds (BREIT, BCRED, BXPE, BXINFRA) [S213] CONFIRMED, so breadth alone is not unique. What a KKR junior sees in 2026 is a liquidity event in one product (K-FIT) handled while the wider K-Series kept net inflows, "up 20% net year-to-date" [S76, S338] REPORTED, with the evergreen private equity product team sitting in London [S133] CONFIRMED. That is a live lesson in containing one product's problem INFERRED. Partners Group shows the downside elsewhere: requests at one evergreen fund reached an estimated 9.8% and its shares fell up to 18.2% in a day [S339] REPORTED.

Distribution and coverage

Story 4. Capital Group and KKR: public-private interval funds

What happened. The two firms launched Capital Group KKR Core Plus+ and Multi-Sector+ on 29 April 2025: about 60% public fixed income and 40% private credit, quarterly repurchase offers of up to 10% of shares at NAV, 84 basis points total expense ratio for Core Plus+ (F3), with KKR Credit Advisors sub-advising the private sleeve [S92] CONFIRMED. A public-private equity fund followed; KKR's 10-K says its private side "invests in a K-Series private equity vehicle" [S70] CONFIRMED. In December 2025 the partners announced a target-date fund for 401(k) plans and public-private model portfolios [S363] REPORTED. One independent analysis puts the three funds at about $703m combined on 30 June 2026 [S364] REPORTED, a low-authority source. Nuttall: Capital Group has "relationships with 220,000 of the 300,000 advisers in the United States" [S362] REPORTED.

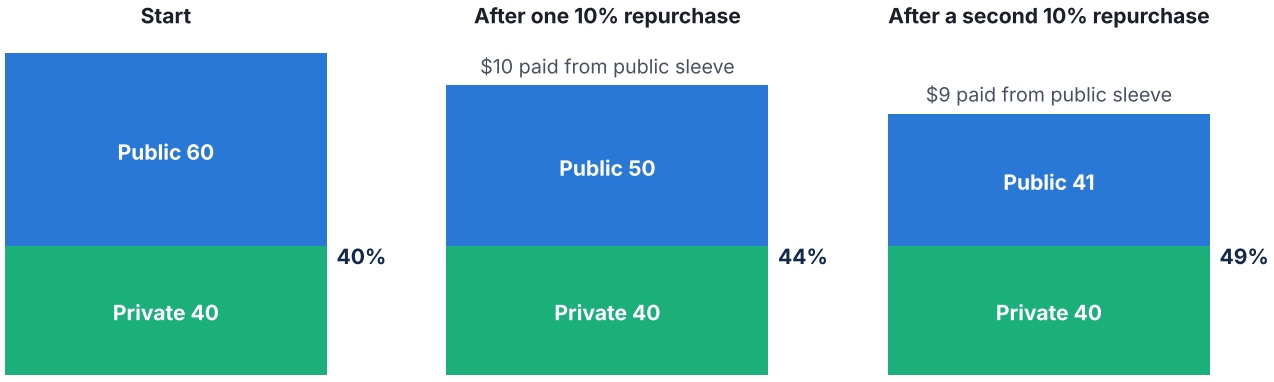

Figure 73. The liquidity buffer. A $100 fund pays redemptions from its liquid public sleeve, so each repurchase raises the private share (bold numbers, right of each bar): 40% to 44% to 49%. That drift is why such funds need rebalancing rules. Illustrative numbers INFERRED; 60/40 split and 10% quarterly offers from Capital Group [S92] CONFIRMED.

WHAT YOU WILL LEARN

How a liquidity buffer works. Private share after a repurchase = private ÷ (total − redemption). Worked: 40 ÷ (100 − 10) = 44.4%; then 40 ÷ (90 − 9) = 49.4%. Two full redemption quarters push a "40% private" fund near 50% unless new money or sales rebalance it INFERRED. You also learn the sub-adviser role: KKR runs a sleeve inside another manager's product [S92].

WHERE YOU MEET IT AT KKR

Daniel Celeghin heads "New Markets and Sales Partnerships", covering defined contribution and the Capital Group and Itau distribution partnerships [S136] CONFIRMED. A London junior meets the same logic when a European partner asks how K-Series could sit inside a model portfolio INFERRED.

SAY IT IN ONE LINE

"I want to learn how a 60/40 public-private fund like Capital Group KKR Core Plus+ keeps its promise of 10% quarterly liquidity, and what that does to the private share over time."

Story 5. Arctos closes and KKR Solutions is formed

What happened. KKR agreed on 4 February 2026 to buy Arctos Partners (minority stakes in sports franchises and solutions for other private equity firms) for $1.4bn initial consideration plus up to $550m earn-out [S8] CONFIRMED. It closed on 4 May 2026, adding $16.0bn of AUM, about $20bn by 30 June [S1] CONFIRMED. Arctos forms "KKR Solutions", reported as home to "a scaled multi-asset class secondaries business" [S355] REPORTED. Arctos Keystone Partners Fund I was one of three named drivers of Q2 private equity fundraising [S74] CONFIRMED. CFO Lewin said the chance to "create flow for Global Atlantic" was critical to the case [S207] CONFIRMED.

WHAT YOU WILL LEARN

Secondaries as an LP liquidity tool. An LP-led secondary sells a fund stake early; a GP-led deal moves assets into a continuation vehicle. Evercore counted $121bn of secondary volume in H1 2026 ($65bn GP-led, $56bn LP-led), with good buyout stakes clearing near 90% of NAV [S267] CONFIRMED. Worked: an LP sells a stake with NAV $50m at 90% = $45m cash now, a $5m discount, to fix a denominator problem or fund new commitments INFERRED.

WHERE YOU MEET IT AT KKR

Conversations with LPs who are short of distributions: Bain reports distributions below 15% of NAV for four years [S262] CONFIRMED. KKR Solutions' Customized Portfolio Solutions team works on "strategic partnerships and other bespoke private market solutions" [S85] CONFIRMED.

SAY IT IN ONE LINE

"With Arctos now in KKR Solutions, I want to learn how secondaries work as a liquidity tool KCS can offer clients who are waiting for distributions."

Story 6. Quilter Cheviot in the UK and Doha Bank in Qatar

What happened. On 10 December 2025 KKR and Quilter Cheviot announced that the UK wealth manager would offer KKR's evergreen private equity strategy to its clients from January 2026; Markus Egloff called it "an important milestone in our efforts to deliver greater access to KKR's strategies" [S177] CONFIRMED. On 21 September 2026 KKR and Doha Bank signed a memorandum of understanding to "explore a strategic partnership" widening access to KKR's private markets strategies for eligible investors in Qatar, signed by David Petraeus, chairman of KKR Middle East [S367] REPORTED.

WHAT YOU WILL LEARN

The anatomy of a distribution partnership. The manufacturer (KKR) designs the product and its target market; the distributor (the wealth manager or bank) owns client suitability and advice. MiFID II, AIFMD and ELTIF rules put suitability and conflict duties on distributors too [S70] CONFIRMED. UK firms must also meet the Consumer Duty, in force for open products since 31 July 2023 [S308] CONFIRMED. An MoU is a step before a binding distribution agreement INFERRED.

WHERE YOU MEET IT AT KKR

Global Wealth Solutions International, led from London, with a Head of Northern Europe and the Middle East (Odumade Odutola) [S124, S137] CONFIRMED; Middle East private bank coverage from Dubai [S151] CONFIRMED. The junior builds the onboarding pack, the partner's training material and the due diligence answers INFERRED.

SAY IT IN ONE LINE

"I want to learn what a private bank partnership like Quilter Cheviot actually requires: who checks suitability, who owns the client, and what KKR must give the distributor."

Story 7. Bhavit Patel takes over Asia-Pacific client coverage

What happened. On 8 June 2026 Bloomberg reported that KKR appointed New York-based Bhavit Patel to head its Asia-Pacific institutional and family capital franchise, succeeding the retiring Kate Richdale, in a memo from Eric Mogelof [S358] REPORTED. KKR also hired Katrina Wong as a KCS Principal in Hong Kong in April 2026 [S359] REPORTED. KKR says it has "nearly 1,000 people" in Asia [S3] CONFIRMED and its outlook says "We want to own more Asia at this point in the cycle" [S361] CONFIRMED.

WHAT YOU WILL LEARN

The coverage model. KCS splits coverage three ways: by region, by channel (institutional, family capital, wealth) and by product specialist [S141, S150] CONFIRMED. A leadership change tests whether relationships live in the firm's records or in one person's head INFERRED. CRM discipline is a stated junior skill: "meeting/call notes in CRM" [S103] CONFIRMED.

WHERE YOU MEET IT AT KKR

Maintaining CRM data and "assisting with sales territory management" [S107] CONFIRMED; briefing notes that let a new senior pick up a client history in an hour INFERRED.

SAY IT IN ONE LINE

"I want to learn how KCS keeps a client relationship continuous across a leadership change, because the record a junior keeps is what makes that possible."

ONLY AT KKR

The Capital Group pairing is KKR's alone: an exclusive partnership in which KKR sub-advises Capital Group-branded funds and a Capital Group equity fund holds a K-Series vehicle [S70, S92] CONFIRMED ; other alternatives firms have tie-ups with traditional managers, so the concept is not unique, only the pairing INFERRED . Add Arctos's sports and GP-solutions shelf [S330] and a London desk that sees UK, European and Gulf wealth partners in one year [S177, S367], and the distribution lessons are unusually varied INFERRED .

The rules changing the market

Story 8. The UK Pension Schemes Act 2026 and the Mansion House Accord

What happened. Royal Assent on 29 April 2026 [S346] CONFIRMED . Multi-employer DC schemes need a £25bn default fund by 2030; a reserve power from 1 January 2028 can require up to 10% in qualifying private assets, no more than 5% UK-specific, with a best-interests opt-out [S346] CONFIRMED . The Local Government Pension Scheme (over £400bn, 86 funds in England and Wales) is consolidating from eight pools to six after a missed 31 March 2026 deadline [S347] REPORTED . An Isio study of 13 master trusts found illiquid allocations "rapidly increasing" [S348] REPORTED .

WHAT YOU WILL LEARN

Constraint arithmetic for a pension portfolio. For a £25bn default fund: 10% cap = £2.5bn private; 5% UK limit = at most £1.25bn of that tied to UK-specific assets (the Accord separately pledges at least 5% UK) [S346, S315] CONFIRMED . You also learn why buyer concentration changes product design: six LGPS pools and a few megafunds negotiate like sovereigns, so SMAs and fee breaks follow INFERRED .

WHERE YOU MEET IT AT KKR

Alice Bush covers "Family Capital clients across EMEA and UK institutions" [S120] CONFIRMED ; Daniel Valladares leads EMEA consultant relations, the gatekeepers to UK schemes [S132] CONFIRMED . UK assets KKR already owns, such as the Norfolk Vanguard wind partnership [S181], become part of the story INFERRED .

SAY IT IN ONE LINE

"I want to learn how KCS would build a 10% private markets sleeve for a £25bn UK DC megafund, including what counts toward the 5% UK share."

Story 9. AIFMD II goes live; the FCA proposes a new UK regime

What happened. AIFMD II applied from 16 April 2026: loan-originating funds face leverage caps of 175% (open-ended) and 300% (closed-ended), must keep 5% of loans they sell, and may not originate only to distribute; open-ended funds must pick at least two liquidity tools; delegation needs at least two EU-resident full-time people; new reporting starts 16 April 2027 [S344] CONFIRMED . On 14 July 2026 the FCA published CP26/28: UK managers tiered by net assets (under £750m, £750m to £5bn, over £5bn), lighter

disclosures, consultation closing 14 October 2026, rules expected 2027 and in force 2028 [S345] CONFIRMED. UK managers marketing UK funds would move from 20-day pre-approval to notification [S303] CONFIRMED.

WHAT YOU WILL LEARN

The regulatory perimeter. Who is the regulated manager, and which route reaches which investor. KKR's EU manager is authorised in Ireland, and outside the US it uses private placement and marketing registrations [S70] CONFIRMED. Worked (illustrative): an open-ended EU loan fund with €500m NAV may run exposure up to 1.75 × 500 = €875m under a 175% cap INFERRED; selling a €100m loan means keeping €5m [S344].

WHERE YOU MEET IT AT KKR

Why K-PRIME is a Luxembourg vehicle for one client and why another is reached by private placement [S111, S70]; the Dublin credit strategy team that structures European credit products [S152] CONFIRMED; compliance sign-off on every pitch INFERRED.

SAY IT IN ONE LINE

"I want to learn the plumbing of distribution: why a fund is Luxembourg for one client and private placement for another, and how AIFMD II changed what a credit fund may do."

Story 10. US 401(k): the executive order, the DOL rule and the SEC

What happened. Executive Order 14330, "Democratizing Access to Alternative Assets for 401(k) Investors", was signed on 7 August 2025 [S273] CONFIRMED. On 30 March 2026 the Department of Labor proposed a process-based safe harbour: plan fiduciaries who weigh six factors (performance, fees, liquidity, valuation, benchmarks, complexity) get legal protection [S342] CONFIRMED. Comments closed on 1 June 2026, and no final rule was found by 11 October [S342, S343] REPORTED. Around 30 September 2026 the SEC proposed new accredited investor routes, including an exam and CFA, CPA and CFP credentials [S275] REPORTED.

WHAT YOU WILL LEARN

Fiduciary process as a product requirement. The six DOL factors are a checklist a manager must help a plan sponsor complete, much like a due diligence questionnaire INFERRED. A product that cannot document valuation and liquidity cannot enter the channel. The same six questions are what UK DC trustees ask INFERRED.

WHERE YOU MEET IT AT KKR

The Capital Group target-date fund plan [S363] REPORTED; Daniel Celeghin's defined contribution remit [S136] CONFIRMED. From London, the transferable lesson is the evidence pack that any DC buyer needs INFERRED.

SAY IT IN ONE LINE

"I want to learn how a fund proves itself on fees, liquidity and valuation to a pension fiduciary, because the US 401(k) rule and the UK Pension Schemes Act are asking the same question."

ONLY AT KKR

A London KCS team meets three rulebooks at once: UK pension reform, EU fund law through an Irish manager, and Gulf distribution through KKR MENA and KKR Saudi entities [S70, S151] CONFIRMED. Add US retail rules via the Capital Group partnership [S92], and a junior sees four regulatory regimes shaping one product shelf INFERRED.

The firm itself, and the house view

Story 11. The $250m DOJ settlement and the Sunset Date

What happened. On 26 August 2026 a KKR subsidiary agreed to pay $250m to settle a DOJ civil case over pre-merger (HSR) filings for 2021 and 2022 deals; KKR said the penalty "will have no financial impact on the firm, our funds, or any of our investors and will be fully reimbursed by outside law firms", and that it strongly disagrees with the Antitrust Division's characterisation; the judgment needs court approval [S349] CONFIRMED. Separately, by 31 December 2026 KKR will "cancel the Series I preferred stock, establish voting rights for all common stock on a one vote per share basis, and acquire control of the carry pool" [S332] CONFIRMED. A charter proposal won 86.60% of outstanding shares but needed 90% and was not adopted [S351] CONFIRMED.

WHAT YOU WILL LEARN

How governance and litigation enter fund diligence. The ILPA DDQ 2.0 added sections such as succession planning [S320] REPORTED. A client's question on the DOJ matter is answered with the approved public statement, word for word, never paraphrased INFERRED. The quorum arithmetic: 86.60% < 90%, so a proposal with 97.83% of votes cast still failed [S203] CONFIRMED.

WHERE YOU MEET IT AT KKR

Coordinating "responses to client due diligence requests/RFPs" [S141] CONFIRMED with Legal and Compliance, two of the eight internal teams the London analyst works with [S101] CONFIRMED.

SAY IT IN ONE LINE

"I want to learn how KCS answers the hard diligence questions, on governance and litigation, accurately and consistently across hundreds of clients."

Story 12. The house view: "High Grading" and "The Divergence Conundrum"

What happened. KKR's "Outlook for 2026: High Grading" (17 December 2025) argued for upgrading quality while it is cheap: "we think a B is an A in this environment, but a C could be an F", and "We want to own more Asia at this point in the cycle" [S361] CONFIRMED. The Mid-Year Outlook "The Divergence Conundrum" (June 2026, Henry McVey and Lauren Goodwin) said "the cycle continues, but the rules of the game are changing", called "Security of Everything" a capital allocation decision, favoured collateral-based cash flows and warned that stocks and bonds diversify each other less [S360] CONFIRMED.

House view call	KKR product it points to
"Security of Everything": energy, data, defence, grids [S360]	GII V; Helix Digital Infrastructure [S334, S3] CONFIRMED
Collateral-based cash flows [S360, S361]	Asset-based finance, $91bn of KKR AUM [S332] CONFIRMED

House view call	KKR product it points to
"Own more Asia" [S361]	Asian Fund V, raising in Q2 2026 [S332] CONFIRMED
Stocks and bonds diversify less; add "differentiated return streams" [S360]	Total Portfolio Approach conversations [S90] CONFIRMED

WHAT YOU WILL LEARN

Macro to portfolio to product. How a view on inflation's "resting heart rate" or stock-bond correlation becomes an allocation argument, then a specific fund [S360] CONFIRMED ; the mapping to products is INFERRED . This is the skill behind the Total Portfolio Approach, which treats the whole portfolio rather than "static asset class silos" [S90] CONFIRMED .

WHERE YOU MEET IT AT KKR

Client meetings and quarterly updates that open with the macro slides; the Chief Investment Strategist for Global Wealth (Lauren Goodwin) co-wrote the mid-year note [S360, S138] CONFIRMED .

SAY IT IN ONE LINE

"I want to learn how KKR turns a house view like 'Security of Everything' into a portfolio a client can act on, and which fund on the shelf carries it."

ONLY AT KKR

KCS works through a governance change most listed peers made earlier or never needed: founder control ends at the Sunset Date, while employees own about 30% of the stock [S201] CONFIRMED . And the macro team that writes the house view also co-writes for wealth clients [S360], so a London junior can trace a single idea from outlook to product to adviser slide INFERRED .

Using the news in a 1,000-character answer

The application question allows about 1,000 characters, so pick one story per skill, not a list. Three pairings work well because each is sourced, recent and technical INFERRED :

- **Liquidity:** K-FIT's 6.3% requests against a 5% cap, about 80% paid [S338].
- **Packaging:** GII V at $19.2bn beside K-Series Infrastructure and Helix in one quarter [S334, S74].
- **Rules:** the Pension Schemes Act's 10% and 5% levels for UK DC megafunds [S346].

SAY IT IN ONE LINE

"I hope to learn how KCS matches clients to products when liquidity, rules and capacity all bind at once: why K-FIT pro-rated at 80%, how GII V and K-Series Infrastructure package one strategy twice, and how a UK DC megafund reaches 10% private markets."

PART 7

What only KKR teaches, and how to say it

The uniqueness test, an eight-week learning map, and the follow-up questions your answer will trigger.

The uniqueness test

A claim about learning is only strong if the reader cannot say "you could learn that anywhere". The table applies that test to eleven technical things. The last column is the honest caveat: where a rival offers something close, it says so, so you never overclaim.

You would learn	Where it lives at KKR	Why it is distinctive here	Honest caveat
How one deal is shared between an institutional flagship and a wealth vehicle	K-PEC and K-INFRA invest through joint ventures alongside KKR flagship funds, with flagship minimums filled first and K-PEC getting no priority [S420, S421].	The allocation rule is written into the filings, so you learn the conflict and how it is disclosed, not just the sales story INFERRED.	Blackstone and Apollo run wealth vehicles too, with different legal routes [S420] REPORTED.
Why an evergreen PE fund is legally "not a fund"	K-PEC's co-GP joint-venture structure keeps it under the Investment Company Act 40% test [S420].	A structural trick few people outside product teams can explain in a sentence INFERRED.	The rule is US law; Europe uses K-PRIME, a Luxembourg SICAV [S111].
Evergreen fee and liquidity maths in exact numbers	1.25% fee; 15% (PE) or 12.5% (infra) over a 5% hurdle with high-water mark and full catch-up; 5% quarterly repurchase cap; 5% early repurchase fee within 24 months [S420, S421].	You compute a real year's performance allocation and model a real queue, rather than textbook "2 and 20" INFERRED.	Similar structures exist across the industry; the numbers are KKR's.
One strategy, three price lists	Infrastructure as GII V (drawdown), the Diversified Core Infrastructure Fund (0.6% to 0.8% fee, six-year lock, 2021 terms) and K-INFRA [S430, S432, S421].	The same team's assets sold to three client types on three sets of terms: product design in plain view INFERRED.	DCIF terms come from a 2021 consultant memo and may have changed [S432].
Co-investment economics	Fund-level deal fees are fully offset to LPs, but KCM's capital markets fees (about $930m in 2025) are not [S425].	KCS, KCM and deal teams meet on one transaction; you see why co-invest matters to both the client and the firm INFERRED.	Blackstone and Apollo have capital markets arms; KKR writes the link into KCS's mandate [Advert] [S214, S220].
A retail product built from KKR parts	Capital Group KKR U.S. Equity+ holds about 30% in K-PEC and 10% in KKR co-investments; Core Plus+ is 60/40 public/private credit [S427, S426].	An exclusive pairing with a large traditional manager [S210] CONFIRMED; you see distribution partnerships from the inside INFERRED.	Rivals' tie-ups with traditional managers were not verified in this research.
Insurance capital maths	Global Atlantic and the Ivy vehicles ($58bn at end-2025) [S440]; NAIC capital factors on CLOs and collateral loans [S439].	An owned insurer is both a client and a source of capital, so KCS insurance work is about capital efficiency, not just return INFERRED.	Apollo/Athene is larger in insurance [S220].

You would learn	Where it lives at KKR	Why it is distinctive here	Honest caveat
Selling a portfolio, not a fund	KKR's Total Portfolio Approach papers (Feb and Jul 2026) [S435, S436].	The house framework gives KCS a way to move from "buy Fund X" to "build your programme" INFERRED.	TPA is an industry concept; KKR's papers are its own version.
The LP's checklist from the manager's side	ILPA DDQ 2.0's 20 sections, including co-investment questions; the 2025 ILPA performance template; the CAPS team for tenders [S444, S445, S106].	A breadth of strategies means DDQs across PE, infra, credit and real estate in one seat INFERRED.	Every large GP answers DDQs.
European liquidity rules as product constraints	AIFMD II's liquidity management tools apply to open-ended funds such as K-PRIME [S449]; Consumer Duty for UK wealth [S308].	A London intern sees EU and UK rules shape a live product INFERRED.	Tool choices for K-PRIME are not public; ask, do not assert.
Trust as a professional discipline	"Like and trust" and Walter Industries [S384]; KKR's culture text: "presenting numbers accurately" [Advert].	KKR states it as the hiring test [S385] CONFIRMED.	Every firm values integrity; the evidence (17 years on one bankruptcy) is KKR's own.

DON'T SAY THIS

"I could only learn this at KKR." Say instead "KKR is where I would see this most clearly, because..." and name the mechanism. The difference is one clause and it removes the overclaim.

An eight-week learning map (illustrative)

Nobody publishes a KCS intern timetable, so this is a reasoned sketch built from KKR's London analyst posting [S101, S140], its Dublin posting on tenders and DDQs [S106] and the modules in this guide INFERRED. Its value is to show you know how learning compounds in a client seat: first the product, then the client, then the judgement.

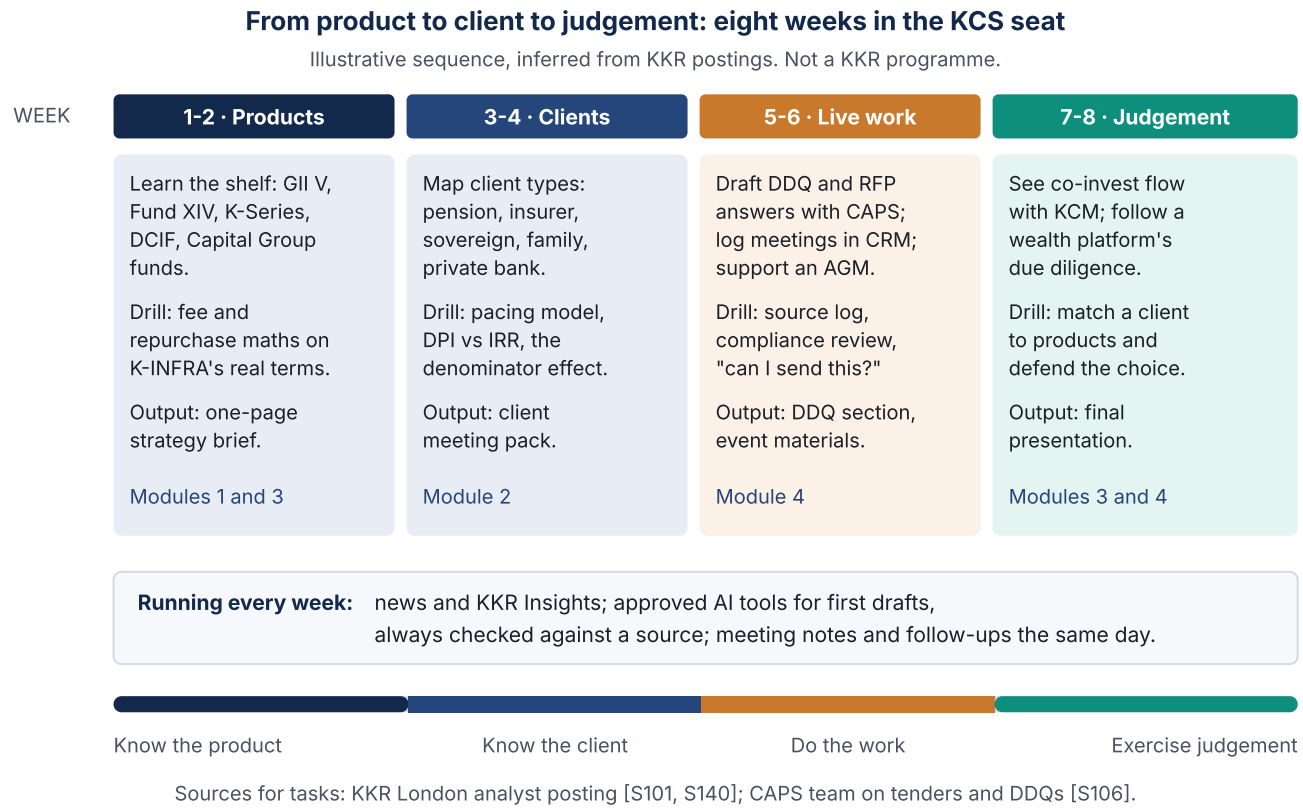

Figure 74. The eight-week map. Tasks are drawn from KKR's own KCS postings [S101, S140, S106]; their order and weeks are the author's inference.

The follow-up questions your answer will trigger

A specific answer invites specific questions. That is the point: it moves the interview onto ground you have prepared. For each phrase in Version A, here is the likely follow-up and a scaffold for the reply.

"You mentioned K-INFRA. What is it, in one breath?"
Tests: whether the name is decoration.
"KKR's evergreen infrastructure vehicle for individual investors. It owns stakes in KKR infrastructure assets through joint ventures with funds like GII V and the core infrastructure fund, strikes a NAV each month, charges 1.25% plus 12.5% of returns over a 5% hurdle, and lets investors redeem up to 5% of NAV a quarter." [S421]

"Why not just put private bank clients into GII V?"
Tests: whether you understand why wrappers exist.
Minimums, capital calls over years and no liquidity suit a pension, not an individual. The evergreen wrapper invests money at once, offers limited liquidity and accepts small cheques, in exchange for a liquidity sleeve, a gate and a different fee structure [S421] INFERRED. Then add the cost: the 5% gate means a client may not get out when they want, as K-FIT's Q1 2026 queue showed [S338].

"What is the Total Portfolio Approach?"
Tests: whether you read KKR's own research.
Instead of fixed buckets ("10% private equity"), the client sets one return and risk target for the whole portfolio and lets every asset compete for a place against a simple reference portfolio. KKR's 2026 papers describe ideas such as "zero-based budgeting" and a "minimum viable TPA" [S435, S436]. For KCS it turns a fund sale into a portfolio conversation INFERRED.

"Why does co-investment matter to KKR, not just to clients?"
Tests: commercial understanding.
Clients get extra exposure at low or no fee. KKR gets bigger deals done, and capital markets fees earned by KCM are not offset against fund fees, unlike fund-level transaction fees: about $930m of KCM fees in 2025 [S425]. Then add the safeguard: allocation has to be fair and disclosed, which is why ILPA's DDQ asks about it [S444].

"What do you mean by information walls?"
Tests: maturity about rules.
Capital markets work can involve material non-public information about listed companies. People who hold it are separated from people who do not, and anyone brought over the wall is logged and restricted. In a client seat that means never passing on deal information outside a controlled process [Inferred; rules in Part 5].

"Isn't 'trust is the product' a cliché?"
Tests: whether you can back a value with evidence.
"It would be without the evidence. Kravis describes spending almost 17 years on Walter Industries to get fund investors their money back [S384]. In a client team the same idea is mechanical: if one number in a DDQ is wrong, every other number becomes doubtful."

The one-paragraph version for an interview

SAY IT IN ONE LINE (OR FOUR)

"I want to learn the technical core of a client seat at a firm built as one P&L. That means three things: the plumbing of how one strategy is packaged for different clients, like infrastructure through GII V or K-INFRA; how clients build portfolios, from pacing to KKR's Total Portfolio Approach; and how co-investment flows from Capital Markets to clients behind proper walls. KKR is where I would see all three in one seat."

PART 8

Glossary

Every term in plain English.

How to use the glossary

Terms are grouped by theme so you can learn them in clusters, not alphabetically. Bold words inside a definition are themselves defined somewhere on these pages. KKR-specific names carry a source marker; general finance definitions are standard usage.

1. The basic cast

Term	Plain-English meaning
Alternative asset manager	A firm that invests other people's money in things outside listed shares and bonds: private companies, loans, buildings, infrastructure. KKR, Blackstone and Apollo are the largest.
Traditional asset manager	A firm that mainly buys listed shares and bonds, often cheaply in index funds (BlackRock, Vanguard). Lower fees, daily liquidity.
General partner (GP)	The manager that runs a private fund, picks the investments and earns fees and **carried interest**. KKR is the GP of its funds.
Limited partner (LP)	An investor in a private fund: a pension, insurer, sovereign wealth fund, endowment, family office or wealthy individual. "Limited" because they can lose only what they put in and do not run the fund.
Client / investor	KKR's own word for LPs and other buyers of its products. KCS calls them clients.
Portfolio company	A company a private equity fund owns.
Sponsor	A private equity firm in its role as owner and backer of a deal. "Sponsor-backed" means owned by a PE firm.
Buy side / sell side	Buy side invests money (KKR, pensions). Sell side sells services to investors (investment banks, brokers).
Family office	A private company that manages one wealthy family's money. KKR calls this channel **Family Capital** [S84].
Sovereign wealth fund (SWF)	A state-owned investment fund, for example in Norway, Abu Dhabi, Saudi Arabia or Singapore.
Endowment	The investment pot of a university or charity, spent slowly over very long horizons.
Defined benefit (DB) pension	A pension that promises a set income in retirement. The scheme carries the investment risk, so it invests to meet future payments (**liabilities**).
Defined contribution (DC) pension	A pension where each saver has a pot and carries the investment risk themselves. Workplace DC pots are the target of the UK Mansion House reforms.
Private wealth	Wealthy individuals investing through private banks, wealth managers and financial advisers. Smaller cheques, many more investors, stricter consumer rules.
Wirehouse	A large US brokerage with thousands of financial advisers (for example Morgan Stanley, Merrill). A key gateway to private wealth.
Insurer / annuity	An insurer collects premiums and invests them to pay future claims. An annuity pays a retiree a fixed income for life. Long-dated promises suit long-dated private assets.

2. How a private fund works

Term	Plain-English meaning
Closed-end / drawdown fund	A fund with a fixed size and life (often 10-12 years). Investors promise money up front and hand it over only when the GP asks.
Commitment	The amount an LP promises to a drawdown fund. Not paid on day one.
Capital call (drawdown)	The GP's request for part of the commitment, usually with 10 business days' notice, when it needs cash for a deal.
Dry powder	Money committed to funds but not yet invested.
First close / final close	The first date the fund can start investing with commitments so far, and the last date new investors can join.
Hard cap	The maximum size the GP has promised the fund will reach.
Investment period	Usually the first 4-6 years, when the fund buys new assets.
Harvest period	The later years, when the fund sells assets and returns cash.
Distribution	Cash paid back to LPs after a sale or from income.
Exit	Selling an investment: to another company (trade sale), to another PE firm (secondary buyout), or by listing it (IPO).
Flagship fund	A firm's main, numbered fund in a strategy, e.g. KKR North America Fund XIV, European Fund VI, Global Infrastructure Investors V [S2].
Vintage year	The year a fund starts investing. Used to compare funds fairly.
J-curve	The shape of an LP's returns over time: negative early (fees, no sales yet), positive later as investments are sold.
Re-up	An existing LP committing again to the next fund in the series. A core KCS success measure.
Evergreen / semi-liquid fund	A fund with no end date that takes new money continuously and lets investors redeem, usually monthly or quarterly, up to a limit. The main product for private wealth. KKR's are the **K-Series**.
NAV (net asset value)	The value of a fund's assets minus its debts. Evergreen funds issue and redeem units at NAV.
Redemption gate	A cap on how much investors can withdraw in a period (often 5% of NAV a quarter). Protects remaining investors from fire sales.
Interval fund	A US registered fund that offers to buy back a set percentage of shares at set intervals. The Capital Group KKR funds use this structure [S92].
BDC (business development company)	A US vehicle that lends to mid-sized companies and can be sold to retail investors. K-FIT is one [S113].
Non-traded REIT	A real estate investment trust that is not listed on an exchange. Sold to wealth clients; KREST is KKR's [S114].
Feeder fund	A vehicle that pools many small investors and invests as one LP into the main fund. Platforms like iCapital run them.
Separately managed account (SMA)	A portfolio run for one large client under its own rules, instead of a pooled fund. One meaning of "customised products".
Co-investment	An LP investing directly in a specific deal alongside the fund, usually with low or no fees. Highly valued by LPs; at KKR, syndicated with KCM [S70].
Syndication	Selling pieces of a deal or a loan the firm has committed to, to other investors.
Secondaries	Buying or selling existing fund stakes or assets from other investors, often at a discount, to give early liquidity.
Continuation vehicle (CV)	A new fund a GP sets up to buy one or more assets from its own older fund, so existing LPs can cash out or roll over.
Strategic partnership	A large multi-strategy mandate with one client across several KKR products, often with fee terms and co-investment rights.

3. Fees and returns

Term	Plain-English meaning
Management fee	An annual fee on committed or invested capital (traditionally about 1.5-2% for buyout funds). Pays for the team whatever happens.
Carried interest (carry)	The GP's share of profits (traditionally 20%) once LPs have their money back plus the hurdle.
Hurdle / preferred return	The minimum annual return LPs get before carry starts, often 8%.
Catch-up	After the hurdle, the GP takes a larger share for a while until it has "caught up" to its full 20%.
Waterfall	The order in which cash is split between LPs and GP: capital back, hurdle, catch-up, then 80/20.
Clawback	The GP returns carry it was paid early if the fund later underperforms. KKR repaid $344m on Asian Fund II in Q4 2025 [S2].
GP commitment	The GP's own money invested in its fund. "Skin in the game".
Side letter	A private agreement giving one LP special terms (fees, reporting, co-invest rights).
MFN (most favoured nation)	A clause letting an LP claim terms given to other similar-sized LPs.
Basis point (bp)	One hundredth of a percent. 84bp = 0.84%.
IRR (internal rate of return)	The annualised return that accounts for the timing of cash in and out. Sensitive to timing; can flatter quick wins.
MOIC / TVPI	Multiple on invested capital / total value to paid-in: total value (cash returned plus value still held) divided by money put in. 2.0x = doubled.
DPI (distributions to paid-in)	Cash actually returned divided by money paid in. The "real money" metric; the word of 2025-26 because exits have been slow.
RVPI	Residual value to paid-in: the unsold part. TVPI = DPI + RVPI.
PME (public market equivalent)	Compares a fund's return with what the same cash flows would have earned in a stock index.
Sharpe ratio	Return per unit of volatility. Higher means a smoother ride for the return earned.
Denominator effect	When public markets fall, private holdings become a bigger share of an LP's portfolio, pushing it over its target and making it pause new commitments.

4. KKR's own vocabulary

Term	Plain-English meaning
KCS (Global Client Solutions)	KKR's fundraising and client team, formed in 2009, about 300+ people, split into sales/relationship management and product/strategy management [S103].
KCM (KKR Capital Markets)	KKR's in-house capital markets business: arranges debt and equity financing for KKR deals and portfolio companies and syndicates co-investment.
Capstone	KKR's in-house team of operating specialists, mostly ex-consultants, who work inside portfolio companies on operational improvements.
Global Atlantic	KKR's insurance subsidiary (retirement, life and reinsurance). Its policyholder money is a large, long-term source of capital for KKR's credit strategies.
Strategic Holdings	KKR's segment of long-term stakes in businesses held on its own balance sheet.
AUM / FPAUM	Assets under management / fee-paying AUM, the part that earns management fees. KKR: $796.5bn AUM and $638.4bn FPAUM at 30 Jun 2026 [S1].
FRE (fee related earnings)	Profit from recurring fees after paying the people and costs that earn them. Investors prize it for stability.
ANI (adjusted net income)	KKR's headline profit measure including carry, insurance and balance sheet income.
K-Series	KKR's evergreen funds for private wealth: K-PEC/K-PRIME (private equity), K-INFRA (infrastructure), K-FIT/K-FITS (private credit), KREST (real estate) [S111-S114].

Term	Plain-English meaning
Family Capital	KKR's client segment for family offices, offering co-investment, customised portfolios, SMAs, two-way sourcing and debt solutions [S84].
CAPS team	The internal KKR team that completes tenders and due diligence questionnaires with KCS [S106].
Sunset Date	The date, no later than 31 Dec 2026, when the founders' special control ends and every KKR share gets one vote.
Investment Committee (IC) memo	The document a deal team writes to ask senior partners to approve an investment.

5. Fundraising and client work

Term	Plain-English meaning
Investor relations (IR)	Keeping existing investors informed and happy. At KKR, part of KCS's "servicing" job.
Capital formation	Industry word for raising money: new clients, new products, new channels.
Relationship manager (coverage)	The person who "owns" a set of clients, usually by region or investor type.
Product specialist	The expert on one strategy (say infrastructure) who explains it in depth to clients.
Pitch book	The presentation used to market a fund.
PPM (private placement memorandum)	The formal offering document for a private fund.
LPA (limited partnership agreement)	The legal contract governing the fund.
Data room	A secure online folder of fund documents for investors doing diligence.
DDQ (due diligence questionnaire)	A long standard questionnaire investors send a manager. ILPA publishes a template.
RFP / tender	Request for proposal: a formal competition where an investor invites managers to bid for a mandate.
ODD (operational due diligence)	Checking the manager's operations, controls, valuation and compliance, separate from the investment case.
Investment consultant / gatekeeper	Advisers such as Cambridge Associates, Mercer or Hamilton Lane who recommend managers to pensions and others.
Placement agent	An outside firm paid to help a GP raise a fund (for example Evercore, Campbell Lutyens, PJT Park Hill).
ILPA	Institutional Limited Partners Association, the LP trade body that publishes best-practice principles and reporting templates.
AGM / annual meeting	The yearly meeting where a GP updates its LPs on a fund.
CRM	Client relationship management software. KKR postings name Salesforce [S103].
Cross-sell	Getting a client who invests in one strategy to invest in another.

6. Asset classes and deal words

Term	Plain-English meaning
Private equity (PE)	Buying stakes in private companies, usually control, improving them and selling within years.
Leveraged buyout (LBO)	Buying a company using a lot of borrowed money secured on the company itself. KKR's founding idea.
Growth equity	Minority stakes in fast-growing companies that need capital to expand.
Impact investing	Investing for a financial return and a measurable social or environmental result. KKR Global Impact focuses on climate, learning, sustainable living and inclusive growth.

Term	Plain-English meaning
Private credit	Loans made by non-bank funds directly to companies or backed by assets. The fastest-growing private asset class.
Direct lending	Private credit lent straight to mid-sized companies, mostly floating rate.
Asset-based finance (ABF)	Lending secured on pools of assets (loans, equipment, receivables) rather than a company's cash flow.
Infrastructure	Long-life physical assets providing essential services: power, data centres, fibre, transport, utilities.
Core / core-plus / value-add / opportunistic	The risk ladder for real assets, from stable income (core) to heavy repositioning (opportunistic).
Real estate	Buildings and land: logistics, housing, offices, data centres. Earns rent and value growth.
ECM / DCM	Equity capital markets (share issues, IPOs) and debt capital markets (bonds, loans).
Due diligence	The deep investigation before an investment: financial, commercial, legal, operational.
Value creation	How an owner makes a company worth more: growth, margins, better capital structure, bolt-on acquisitions.
Investment theme / thesis	A view about a long trend (say, power demand from data centres) used to find deals.

7. Rules and regulators

Term	Plain-English meaning
FCA	Financial Conduct Authority, the UK conduct regulator. KKR's UK LLP is FCA-authorised (FRN 593180) [S23].
SEC	US Securities and Exchange Commission, the US securities regulator.
AIF / AIFM	Alternative investment fund / its manager. Almost every private fund is an AIF.
AIFMD / AIFMD II	The EU law on alternative fund managers (2011) and its revision, which member states had to transpose by 16 April 2026.
Marketing passport	The EU right for an authorised EU manager to market a fund to professional investors across the EU.
NPPR	National private placement regime: country-by-country rules for marketing a fund without a passport (the UK route for non-UK funds).
Reverse solicitation	An investor approaching a manager on its own initiative, which can fall outside marketing rules. Narrowly interpreted; never rely on it casually.
Pre-marketing	Testing investor appetite before a fund is formally launched, under strict EU conditions.
ELTIF 2.0	The revamped EU long-term investment fund regime (applies from 10 Jan 2024) that lets retail investors buy private-market funds.
LTAF	The UK long-term asset fund (2021), an open-ended fund structure for private assets aimed at DC pensions and, later, wider investors.
Financial promotion	Any UK communication inviting someone to invest. Must be fair, clear and not misleading, and approved by an authorised person.
Consumer Duty	The FCA's rule (from July 2023) that firms must deliver good outcomes for retail customers.
Professional / retail client	The regulatory split: professionals (institutions, some wealthy individuals) can be offered more complex products than retail clients.
Accredited investor	The US test (income or wealth) for who may buy most private funds.
Marketing Rule	The SEC's rule on adviser advertising, including how performance can be shown.
MNPI / inside information	Material non-public information about a listed company. Trading on it or passing it on is illegal.
Information barrier ("Chinese wall")	Policies separating people who hold MNPI (often capital markets) from others.

Term	Plain-English meaning
SMCR	The UK Senior Managers and Certification Regime, which makes named individuals accountable for conduct.
Mansion House Accord	A May 2025 voluntary pledge by UK pension providers to put more of their default DC funds into private markets.
Pension Schemes Act 2026	UK law (Royal Assent 29 Apr 2026) consolidating DC schemes into large funds and allowing government to set private asset allocations.
