

The Millennium × Criteria Corp Behavioural Assessment

A sourced preparation guide for the behavioural section of the Criteria Corp On-Demand Assessment, sat as part of Millennium Management's UK campus / early-career process. The cognitive (CCAT) section is assumed already complete; this guide covers only what remains.

HEADLINE FINDING — read this first

Your working assumption was a situational judgement test (SJT). The evidence says that is **probably wrong**. The behavioural section is almost certainly a **self-report personality inventory** — a run of short first-person statements about how you behave at work, each rated on a 1–5 “**Always True** → **Always False**” agreement scale — not a scenario-and-options SJT and not an emotional-intelligence game. The single most detailed candidate account of this exact platform (KKR London, same Criteria On-Demand system, 2025/26 cycle) reads verbatim: “*Behavioral: typical statements about how you act/behave in a work environment. 10 minutes for 88 statements.*”^[17] A Wall Street Oasis description of Millennium's own first online assessment matches: “*a personality test where they rank how much they relate*.”^[21] The most likely specific instrument is Criteria's **Employee Personality Profile (EPP)**. Everything downstream — the validity scales, the consistency mechanic, the trait targets — follows from that.

This document is ~20 pages. If you have 10 minutes, read Section 1 (executive summary) and Section 6 (answering protocol). If you have 30, add Sections 2, 4 and 5. The practice bank is Section 7; the confidence ledger (what is proven vs reasoned vs guessed) is Section 10.

1 Executive summary

What the test is. A ~30-minute, single-sitting Criteria On-Demand Assessment with no pausing, back-tracking, skipping or calculator. It has two parts. Part one is the **CCAT** cognitive test: 50 questions in 15 minutes^[13,17] — you have completed this. Part two, the behavioural section, is a **personality inventory** of roughly 10 minutes.^[17,19]

The time budget is the master clue. 30 minutes minus a 15-minute CCAT leaves ~15 minutes. A personality inventory (EPP ~10 min; Illustrait 5–10 min) fits. **Emotify does not** — it is a 20-minute test on its own^[11], so it cannot be the behavioural block inside this window. This single fact removes the one Criteria behavioural product that has objectively right answers, and tells you not to prepare for an ability test.

Most-likely formats, in order. (1) **EPP** — 140 rate-a-statement items, 12 traits, ~10 min; Criteria's most-used personality test.^[2,19] (2) **Illustrait** — adaptive, ~60–90 items, 5–10 min.^[5] (3) a **bespoke SJT** built by Millennium in Criteria's TestMaker (possible, no evidence). CPI is unlikely — Criteria itself says it is “*not recommended as a pre-employment tool*.”^[9] Emotify is ruled out on time.

The non-obvious edge is the validity machinery. The EPP score report shown to the recruiter contains response-style scales: **Inconsistent Responding (INC)**, **Self-Enhancing (ENH)** and **Self-Critical (CRT)**.^[1,2] The naive strategy — pick the most flattering answer to every item — is **detected**: it spikes ENH and, because flattering answers to reworded opposites contradict each other, it spikes INC. An **INC score of 3 or higher auto-flags the whole profile as invalid**, printed in red on page one of the recruiter's report.^[2] That is the outcome to avoid at all costs.

The winning strategy is therefore not ‘lie upward’ but ‘present your true best professional self, consistently, at speed.’ Answer as one coherent character — a driven, disciplined, resilient front-office analyst — use the scale's extremes where the statement genuinely fits that character, and move fast enough that you answer each reworded item the same way you answered its twin. Speed *helps* consistency because it keeps you anchored to the character rather than re-computing each item.

#	Do this	Because
1	Assume a personality inventory, not an SJT. Confirm in the first 30s (Section 2).	Format evidence + time budget both point to rate-a-statement items.
2	Answer as one consistent character across all ~140 items.	Reworded duplicate items feed the INC scale; contradictions flag you invalid at INC≥3.
3	Do NOT max every flattering answer.	Spikes Self-Enhancing (ENH); a 99th-pct ENH reads as an applicant ‘trying to impress’.

#	Do this	Because
4	Use extremes decisively where true; avoid parking everything on '3'.	Mid-point clustering suppresses trait scores and reads as evasive.
5	Aim high on Achievement, Conscientiousness, Stress Tolerance, Motivation.	The load-bearing survival traits for a P&L-accountable pod seat.
6	Aim MODERATE (not maximal) on Cooperativeness, Patience, Extroversion.	Criteria's own benchmark: over-accommodation 'hinders objective decision-making'.
7	Move at a steady pace; don't agonise.	It is untimed-but-observed; speed preserves character consistency and lowers INC.
8	If a compliance/control scenario appears (SJT case), flag/escalate — never work around.	In finance, the compliance-override answer is keyed correct regardless of other merits.

2 The 30-second format-identification decision tree

You cannot go back, so decide what you are in **before** you answer item three. Read the first screen and the on-screen instruction, and match it to one of these five signatures.

What the first screen looks like	You are almost certainly in...	Switch to this mode
First-person statements about you ('I stay calm when plans change', 'I set myself demanding goals') with a 1–5 agreement scale , often labelled Always True → Always False . Many items, one per line or a small grid.	EPP (personality inventory). Most likely .	Consistent-character mode. Sections 4–6.
Statements/preferences presented one at a time , the next depending on your last answer (adaptive); may ask which of two activities you prefer or how well a trait describes you; ~60–90 items, finishes in 5–10 min.	Illustrait (adaptive personality). Second most likely.	Same consistent-character mode; answer decisively (adaptive tests punish fence-sitting).
A workplace scenario paragraph followed by 4–6 possible actions you must rank , or mark most/least effective , or rate each for effectiveness.	A bespoke SJT (Millennium-authored in TestMaker). Possible.	Judgement mode. Section 5 + practice bank B.
Faces / emotion words on a timer (a 3-second countdown), or 'how does this person feel?' / 'what best manages this feeling?' mini-games.	Emotify (ability EI). Unlikely — won't fit the time budget .	Ability mode. Section 3.6 — but you probably won't see this.
A single agreement scale but only ~20 short work- preference items ('I prefer structured tasks').	WAA (work-alignment) — rare add-on.	Consistent-character mode; low stakes.

The one distinction that changes your whole strategy

If you are rating **statements about yourself** → there are no right answers, and the game is **consistency + true-best-self calibration** (avoid the validity flags). If you are ranking **actions in a scenario** → there are keyed-better answers, and the game is **judgement** (pick the proportionate, compliance-safe action). Ninety seconds of reading the instruction decides which. Everything else in this guide hangs off that fork.

3 What each candidate format measures, and how it is scored

3.1 Employee Personality Profile (EPP) — the most likely

Criteria's most commonly used personality test.^[19] **140 prompts, ~10 minutes, untimed but the platform records pace.**^[2] It measures **12 traits**, scored as **percentiles against a global norming group** — Criteria states flatly there are "no 'high' or 'low' scores on the EPP."^[2] The underlying model is the Big Five. Items are short self-statements rated 1–5 from Always True to Always False.^[19,20]

The 12 traits: **Achievement, Assertiveness, Competitiveness, Conscientiousness, Cooperativeness, Extroversion, Managerial, Motivation, Openness, Patience, Self-Confidence, Stress Tolerance.**^[1] The recruiter's report shows a bar per trait, a paragraph interpreting each, a match score against 12 job families, tailored interview questions, and — critically — a **Validity & Response Style** page (Section 4).^[1,2]

3.2 Illustrait — the plausible alternative

An **adaptive** competency-based personality assessment: “*Illustrait’s adaptive engine adjusts the assessment questions based on the candidate’s previous answers.*”^[5] It averages **60–70 questions (~90 with the optional Work Styles block), 5–10 minutes.**^[5,6] It draws from a library of **38 competencies in 5 groups** (Leading Others, Thinking & Deciding, Working with Others, Completing Tasks, Managing Self) mapped to 900+ O*NET jobs^[5,8]; the employer chooses which competencies to score. Output is a percentile per competency (IRT-scored, average reliability .84)^[5] plus a validity indicator called the **Scatter Score** (Section 4). Note: the KKR observation of ~88 items is close to Illustrait-plus-Work-Styles (~90), so do not assume EPP with certainty — the answering approach is identical either way.

3.3 Criteria Personality Inventory (CPI) — unlikely

Pure Big Five (Extraversion, Conscientiousness, Agreeableness, Openness, Stress Tolerance), ~10 minutes. Criteria’s current guide states it “*is best used for team building and is not recommended as a pre-employment tool.*”^[9] That single line makes it an unlikely choice for a selection assessment. (Note a source discrepancy: your brief said 100 items; Criteria’s current guide says 140. Immaterial to strategy.)

3.4 A bespoke SJT via TestMaker — possible, no evidence

A true SJT exists on Criteria only when an employer authors one in **TestMaker**, their custom test-builder. It is therefore possible Millennium wrote scenario items. But **no candidate anywhere describes SJT scenarios for Millennium**, and every first-hand account of this platform in finance describes rate-a-statement personality items.^[17,21] Treat SJT as the low-probability fallback — prepared for in Sections 5 and 7B, not assumed.

3.5 Why Emotify is effectively ruled out here

Emotify is an **ability** EI test with objectively correct answers — and it takes a dedicated **20 minutes**: Matching Faces (30 rounds, 3 s each), Emotional Ties (20 rounds, up to 1 min each), Emotions in Action (14 rounds, up to 1 min each).^[11] Twenty minutes cannot coexist with a 15-minute CCAT inside a 30-minute window. So although Emotify is the one behavioural product worth ‘studying’ for, it is the one you are least likely to face. Section 3.6 covers it briefly in case Millennium runs a longer or separate window than reported.

3.6 If it is Emotify (contingency)

Emotify is built on the Mayer–Salovey (1997) **ability model** of EI and validated against the academic STEU and STEM situational EI tests ($r = .54$ and $.38$).^[11] Its ‘correct’ answers come from that tradition: theory-based keys for understanding, expert/consensus keys for management, accuracy for perception — not crowd voting. (For context, in the parent MSCEIT, consensus and expert keys correlate ~.98.^[38]) What is genuinely practisable: (a) **timing familiarity** — 3 seconds per face is the biggest avoidable score-killer; drill fast facial-emotion recognition so you don’t freeze; (b) **emotion granularity** — know how feelings blend and transition (relief follows a removed threat; disappointment can curdle into resentment); (c) answer ‘**what best manages the emotion here**’, choosing the response that most reduces negative and builds constructive emotion — not the most assertive nor the most conflict-avoidant option. You cannot fake ability EI, but familiarity reclaims the ~10–15 percentile lost to shock and misreading the instruction.^[11,38]

3.7 The six candidate formats at a glance

Format	Items	Time	Right answers?	Validity check	Likelihood here
EPP (personality)	140	~10 min	No	INC/ENH/CR T	Most likely
Illustrait (adaptive personality)	~60–90	5–10 min	No	Scatter Score	Plausible
Bespoke SJT (TestMaker)	varies	varies	Yes (keyed)	—	Possible, no evidence
CPI (Big Five)	140	~10 min	No	consistency	Unlikely (not for hiring)
Emotify (ability EI)	64 rounds	20 min	Yes (ability)	—	Ruled out on time
WAA (work preferences)	~20	<5 min	No	—	Rare add-on

Sources for this table: EPP^[2,19], Illustrait^[5,6], CPI^[9], Emotify^[11], Assessment Types Guide^[16]. ‘Ruled out on time’ = cannot fit the ~15 min left after a 15-min CCAT in a 30-min window.

4 The validity scales — and why the obvious strategy fails

This is the part almost no candidate knows about, and it is where the assessment is won or lost. A personality inventory is not a naive form that believes whatever you type. The EPP report carries **response-style scales** whose entire job is to catch people gaming it, and they are printed on the report the recruiter reads.^[1,2]

4.1 The three EPP response-style scales (verbatim from Criteria)

Scale	What it detects (Criteria's own words)	What triggers it
INC Inconsistent Responding	<i>"the individual's level of attention to the meaning of EPP statements"; a high level "may suggest that the candidate wasn't reading the prompts correctly, or was just racing through the test"— i.e. careless or random answering.</i> ^[1,2]	Answering reworded/opposite versions of the same item differently. INC≥3 = whole profile marked INVALID , in red, on page one. ^[2]
ENH Self-Enhancing	<i>"whether or not a candidate tends to exaggerate 'positive' qualities and deemphasize 'negative' qualities" — over-positive self-presentation.</i> ^[2]	Picking the maximally flattering answer to (almost) every item. High ENH reads as impression management.
CRT Self-Critical	The inverse: <i>"inaccurately downplaying 'positive' qualities while exaggerating more 'negative' qualities."</i> ^[2]	Excessive modesty / self-criticism. Rare in applicants; not your risk.

Illustrait uses a differently-named equivalent, the **Scatter Score**: a **TYPICAL** result means *"adequate attention... open and honest"*; an **ATTENTION** result means the candidate *"may have responded in an inattentive or careless manner, or... may not have been open and honest... This calls into question the validity of the assessment data."*^[6] Same idea, same consequence.

4.2 Why 'pick the most flattering answer every time' is a trap

The naive strategy fails on two independent mechanisms at once:

- **It spikes ENH.** A profile that claims every virtue at maximum is statistically abnormal. Criteria's own 2013 sample report shows a candidate at the **99th percentile on ENH** with the printed commentary: *"This can be a characteristic of job applicants and others trying to make a good impression... characteristic of people who tend to sell themselves."*^[4] The recruiter is told, in plain English, that you were probably managing your image.
- **It spikes INC.** Many items are the same trait reworded, sometimes reversed. 'I stay calm under pressure' and 'stressful situations rattle me' are the same question inverted. If you reflexively 'agree that you're great' on both, you contradict yourself — and enough contradictions cross **INC≥3**, which prints INVALID on the report.^[2]

4.3 What a flag actually does to you

- **An INC-invalid profile is the real disaster.** The report literally states the results are invalid; in-platform the test carries a red error symbol.^[2] No serious employer credits an invalid personality result. Whether it is a hard auto-reject or a 'retest/park' depends on the employer's configured rules — Criteria's guidance to recruiters is to *"consider retesting"*^[9] — but at a fund that hires ~1–2% of applicants, 'your result was unusable' is functionally fatal in a bulk-screen round. **[INFERRED — the auto-reject wiring is not published; the invalid-print is verified.]**
- **A high ENH is damaging but softer.** ENH and CRT are interpretive percentile scales, *not* pass/fail flags — only INC≥3 auto-invalidates.^[2] But a very high ENH hands the recruiter a ready-made reason to discount your whole profile as 'faked-good', and Criteria may *"adjust"* your trait scores downward to compensate.^[2] You lose the benefit of the doubt exactly where you wanted the halo.

Tactical conclusion

The optimisation target is not 'maximise every trait'. It is **'present a genuinely strong, coherent professional profile that clears INC and keeps ENH out of the danger zone.'** You want to read as an excellent-but-real analyst, not a cartoon of one. That means telling the truth about a driven, disciplined version of yourself — and being *consistent* about it — rather than agreeing you are superhuman.

4.4 The consistency mechanic — why answering as a character beats answering item-by-item

With ~140 items measuring only 12 traits, each trait is probed ~10–12 times in reworded and reversed forms. The INC scale exists precisely to compare your answers across those near-duplicates.^[2] There are two ways to answer such a test, and they fail differently:

- **Item-by-item (the trap).** You read each statement fresh and locally optimise — ‘what’s the best answer to *this* one?’ Because you are re-deciding every time, your implied self-model drifts, and two reworded versions of the same question get answered inconsistently. This is exactly what pushes INC toward the ≥ 3 invalid threshold.
- **As a consistent character (the fix).** You fix one coherent persona in advance — the analyst profile in Section 5 — and for every item ask only ‘how does *this person* answer?’ A single character is internally coherent by construction, so its answers to a statement and to that statement’s reworded twin automatically agree. Consistency stops being something you police and becomes a by-product of who you’re being.

Why speed helps rather than hurts. This is counter-intuitive, because Criteria also warns that ‘racing through’ can raise INC.^[2] The resolution: the danger is *careless* speed (not reading the item), not *brisk* speed. Deliberating for fifteen seconds per item is its own risk — the longer you argue a statement on its individual merits, the more your self-model wanders from the twin you answered two minutes ago. A steady ~3–4 seconds keeps you in the character’s voice and answering from the same stable self each time. Read every item; just don’t litigate it.

A worked example of a reverse-keyed cluster — all four must point the same way for a high-Stress-Tolerance character, or INC rises:

Reworded item (same trait: Stress Tolerance)	Character’s answer	Direction
‘I stay composed when everything goes wrong at once.’	Always True	high ST → agree
‘Pressure tends to get to me.’	Always False	reversed → disagree
‘I keep a clear head in a crisis.’	Always True	high ST → agree
‘I often feel overwhelmed by deadlines.’	Always False	reversed → disagree

4.5 Scale-use strategy — extremes vs the safe middle

On a 5-point Always True→Always False scale, *how* you use the scale is itself scored information, independent of *which* traits you endorse. Two failure modes bracket the right answer:

- **Mid-point clustering** (answering ‘3’/‘neutral’ to most items) pulls every trait score toward the population mean, so you surface no strengths at all — and a wall of neutrals reads as evasive, disengaged, or unwilling to commit. You throw away the entire point of the exercise, which is to look distinctively strong on the traits that matter.
- **All-extremes** (answering 1 or 5 to everything, always in the flattering direction) is the ENH failure from Section 4.2: statistically abnormal, low-information, and read as impression management. It also raises INC risk because forced extremes on nuanced items contradict each other.

Recommended distribution over ~140 items

Roughly **35–45% at the extremes (1 or 5)** — used decisively where a statement squarely fits or squarely contradicts your character; **40–50% at 2 or 4** — ‘mostly true / mostly false’, your default register; **10–20% at the midpoint** — reserved for genuinely mixed items. This gives a profile that is clearly differentiated (strong where it should be) without looking gamed. Internalise the *feel* now; do not try to count on-screen. If the platform shows a different anchor set (e.g. a 5-point Agree–Disagree), the same logic applies unchanged. **[INFERRED calibration — the percentages are reasoned, not from Criteria’s manual.]**

4.6 Does ‘faking good’ work — and what the recruiter actually receives

Two facts change how you should think about the whole exercise:

- **The ENH scale is itself proof that inflation is expected and modelled.** Criteria did not build a 99th-percentile ‘trying to make a good impression’ flag by accident — applicant self-enhancement is common enough that they measure it and, per their own guide, may “*adjust ... different scores*” to correct for it.^[2,4] So the arms race is already lost for the naive faker: the instrument assumes you might inflate and prices it in. The only response style that reliably beats it is the one that isn’t a style at all — a true, consistent self, aimed at your genuine professional best. That is not a moral point; it is the mechanically optimal play.
- **Your answers generate the report the recruiter reads — including your interview.** The EPP output is not a pass/fail number. It is a multi-page document: a percentile bar and interpretive paragraph per trait, a **match score against job families**, the validity page, and a set of **tailored interview questions generated from your specific answers**.^[1,2] Illustrait does the same.^[7] Practically, this means the personality section is not a throwaway screen — it seeds the questions a human will later ask you. If you answer that you thrive under pressure and hold independent views, expect to be asked to evidence exactly that. **Answer as someone whose interview stories will corroborate**

the profile — another reason the true-best-self strategy dominates: it is the only one you can defend live, weeks later, without notes.

5 The Millennium target profile — with reasoning and sources

Generic ‘be conscientious’ advice is useless because several traits are **non-monotonic**: scoring maximally high is worse than moderately high. The task is to work out, from Criteria’s own job-family benchmarks and Millennium’s published culture, what a front-office analyst at a multi-PM fund should look like on the 12 EPP traits.

5.1 What Millennium actually says it wants

- Millennium’s careers page names its DNA as *“integrity, work ethic, entrepreneurial energy and emotional intelligence”* and prizes people who contribute *“independent views and ideas.”*^[22] Note the emphasis on **independent** — not accommodating.
- The students page seeks *“determined self-starters”* who pair *“quantitative skills with creative problem solving.”*^[23]
- Live analyst JDs stress *“attention to detail and judgment”* and rigorous modelling/data work.^[24] Mission language: *“integrity, discipline and excellence.”*^[48,25]
- The multi-PM pod model is a meritocratic, individually-P&L-accountable, ‘eat-what-you-kill’ structure with tight drawdown discipline and real job insecurity tied to near-term results.^[26,27,28] The survival trait everyone cites is **resilience under pressure.**^[26]

Why the pod model skews the profile. Millennium allocates capital to many semi-autonomous PM ‘pods’ under tight, automated risk limits: a drawdown of roughly 5% from a pod’s peak capital is widely reported to trigger a large capital cut and ~7.5% to close the pod, with turnover treated as a structural feature rather than a failure.^[28,26] (These exact thresholds are well-corroborated secondary reporting, not a primary Millennium disclosure — treat as directional.) The behavioural consequence is what matters for your answers: the seat rewards someone who is **decisive and accountable under real loss, disciplined about controls and risk limits**, and willing to **hold an independent line** rather than defer — and who does *not* fall apart when the environment is unforgiving. That is the character the trait targets below encode.

5.2 Target profile across the 12 EPP traits

Levels: **High** / **Mod-High** / **Moderate** / **Low**. ▲ marks a **non-monotonic** trait where moderate beats maximal. ‘V’=evidence-backed, ‘I’=reasoned inference.

EPP trait	Target	Why	Basis
Achievement	High	Uncapped, P&L-linked comp rewards strong achievement drive.	V ^[22,26]
Conscientiousness	High	‘Attention to detail and judgment’; a data error can breach a risk limit. Near-maximal is genuinely good here.	V ^[24]
Stress Tolerance	High	‘Sink-or-swim’, tight drawdown rules, insecurity on near-term results. The #1 survival trait.	V ^[26,25]
Motivation	High	‘Determined self-starters’, minimal supervision, decentralised model.	V ^[23]
Self-Confidence	Mod-High	Back your convictions and own P&L — but paired with humility to cut losers fast. Overconfidence is the classic drawdown killer.	I
Assertiveness	Mod-High	Defend a thesis and voice ‘independent views’ — but you sit under a PM. Assertive, not domineering.	V/I ^[22]
Competitiveness	Mod-High	Relative-performance, perform-or-exit pod economics — but pod work is internally cooperative, so not maximal.	V/I ^[26]
▲ Openness	Mod-High	‘Creative problem solving’, alternative data, AI tools — but a rules-bound risk framework caps pure novelty-seeking. (Criteria: Openness is the least predictive Big Five trait for selection.)	V/I ^[23,10]
▲ Cooperativeness	Moderate	The sharpest one. Collaborate within the pod, but a risk seat needs objective, independent judgement; over-accommodation lets errors stand and corrupts calls.	V ^[1,22]
▲ Extroversion	Moderate	‘Outstanding communication’ is required, but the work is deep solitary analysis in a siloed pod, not a room-working sales role.	V/I ^[24,25]
▲ Patience	Moderate	Markets reward fast, decisive action and tolerance of ambiguity; yet impulsive over-trading breaches limits. A calibrated middle.	I ^[26]

EPP trait	Target	Why	Basis
Managerial	Low–Mod	An early-career analyst is an individual contributor to a PM; leading others is not the seat (slight upside for a future PM track).	I

5.3 The Cooperativeness point — the highest-value, most counter-intuitive finding

Most candidates instinctively max out ‘I’m a great team player’. In a risk-taking seat that is a mistake, and Criteria says so in its **own EPP benchmark text**. For the Management & Leadership job family the report reads, verbatim:

“Low to medium scores in Cooperativeness are also appropriate, because being too accommodating can be a hindrance to effective and objective decision-making.” — Criteria EPP sample report, Management & Leadership benchmark^[1]. The 2013 edition is blunter: *“being too accommodating and empathetic can be a hindrance to effective and objective decision-making.”*^[4]

The same non-monotonic logic recurs across Criteria’s docs: the CPI notes conscientiousness is *“more predictive of success for lower-level positions... than... higher-level managerial positions that place a premium on seeing the ‘big picture’”*; mid-range Agreeableness lets you *“strike a balance between being accommodative... and making objective decisions”*; and finance/analytic roles benchmark **below-average** Extroversion and Openness.^[10] So: on team/harmony items, agree that you collaborate and share information — but do **not** claim you avoid conflict, always defer, or put group harmony above the right answer. The keyed-good analyst holds an independent line.

6 Answering protocol — the rules to run during the test

An ordered, concrete ruleset. Rules 1–9 apply to the likely personality inventory; Rule 10 routes you if it turns out to be an SJT.

#	Rule	Detail
1	Build your character in advance.	Before you start, fix the profile from Section 5 in your head: driven, disciplined, resilient, decisive, honest, independent, collaborative-but-not-a-pushover. Answer every item as <i>that person</i> .
2	Answer the character, not the item.	Don’t re-decide each statement from scratch. Ask ‘how does this analyst answer?’ This is what keeps reworded twins consistent and INC low.
3	Go fast — ~3–4 seconds per item.	140 items in ~10 min is ~4 s each. Speed is your friend: it anchors you to the character and stops you over-thinking contradictions into existence. ^[2]
4	Tell the truth, upgraded — never invent.	Answer as your genuine best professional self on a good day. Truth is automatically self-consistent; fabrication is what INC catches.
5	Use the extremes where they’re true.	On a core trait that genuinely fits (you DO stay calm under pressure; you DO set demanding goals), pick Always/Almost-Always. Decisiveness reads as conviction and lifts the traits you want high.
6	Don’t park everything on the middle.	Mid-point (‘3’) clustering flattens every trait toward the mean, reads as evasive/disengaged, and wastes your chance to show strength. Reserve the middle for genuinely mixed items.
7	Keep a few honest non-maxima.	Not every flattering statement is you. Where a virtue genuinely isn’t your peak (e.g. ‘I never feel nervous before something important’), don’t claim the extreme. A handful of honest 3s/4s is what keeps ENH out of the 99th percentile.
8	Moderate the three ▲ traits deliberately.	On Cooperativeness / Patience / Extroversion items, aim for genuine-but-moderate. Agree you collaborate; disagree that you avoid conflict or defer to keep the peace. Agree you’re sociable enough; don’t claim you need constant social buzz.
9	Watch for reverse-keyed pairs.	‘I keep calm in a crisis’ and ‘pressure gets to me’ must get opposite answers. If you agreed strongly with the first, disagree strongly with the second. This is the single biggest INC-saver.
10	If it’s an SJT, switch protocols.	Read whether it asks ‘MOST EFFECTIVE’ (answer the ideal best practice) or ‘MOST LIKELY YOU’ (answer your true tendency, consistently). Then apply the finance hierarchy in Section 7B: proportionate response; compliance/control issues → flag & escalate, never work around.

Scale-use, in one line (full version in Section 4.5)

Aim for roughly **35–45% extremes / 40–50% at 2 or 4 / 10–20% midpoint**. Decisive where true, honest where mixed.

All-middle suppresses your strengths and reads evasive; all-extremes inflates ENH. Internalise the feel now — don't count live.

7 Practice bank

Two banks. **7A** is the most-likely format — personality statements — and trains *calibration and consistency*, not 'right answers'. **7B** is the SJT fallback in a hedge-fund context, with keyed model answers. All items are written here, modelled on real published examples^[1,4,33,34]; they are for rehearsal, not to consult during the test.

7A Personality-statement calibration (22 items)

For each statement, the 'lean' column shows how the target analyst-character answers on the 1–5 Always True→Always False scale (**AT**=Always True, **MT**=Mostly True, **N**=Neutral/Mixed, **MF**=Mostly False, **AF**=Always False), and why. Watch the reverse-keyed pairs (marked ↔) — they must stay opposite.

#	Statement	Lean	Rationale (and trait)
1	I set myself goals that others would find demanding.	AT	Achievement is a top target trait; claim it decisively where true.
2	I stay composed when everything is going wrong at once. ↔	AT	Stress Tolerance — the #1 survival trait. Pair-partner is #3.
3	When the pressure is really on, it gets to me. ↔	AF	Reverse of #2. If you said AT to #2, you MUST say AF here or INC rises.
4	I double-check my work before I call it finished.	AT	Conscientiousness / 'attention to detail'; near-maximal is genuinely good in a risk seat.
5	I'd rather keep everyone happy than push an unpopular but correct view.	MF	▲ Cooperativeness moderation: the keyed-good analyst holds an independent line over harmony.
6	I speak up when I think a decision is wrong, even to someone senior.	MT	Assertiveness + integrity. MT not AT — you raise it, but with judgement, not recklessly.
7	I need a lively social buzz around me to do my best work. ↔	MF	▲ Extroversion moderation: deep analytical work is solitary; don't over-claim sociability.
8	I'm comfortable working alone on hard problems for long stretches. ↔	AT	Complement to #7; consistent picture of a focused, self-directed analyst.
9	I keep going when a task is frustrating and progress is slow.	MT	Resilience/Motivation — but note Patience is only moderate; you persist without being placid.
10	I get impatient when things move too slowly.	MT	▲ Patience is moderate, not low: some impatience suits a fast seat, but AT would read as impulsive.
11	I'm confident backing my own judgement with real money at stake.	MT	Self-Confidence Mod-High — conviction, but MT leaves room for the humility in #12.
12	I change my mind quickly when the evidence turns against me.	AT	Intellectual honesty / cutting losers fast — the counterweight that stops #11 reading as arrogance.
13	I enjoy competing and comparing my performance against others.	MT	Competitiveness Mod-High — fits meritocratic pods; MT keeps it from looking abrasive.
14	I like trying new approaches rather than sticking to the proven one.	MT	▲ Openness Mod-High — creative problem-solving, but capped by a rules-bound risk framework.

#	Statement	Lean	Rationale (and trait)
15	I follow rules and controls even when a shortcut would be faster.	AT	Integrity/compliance disposition — a hard target at a regulated firm; claim it fully.
16	I'm happy to let a mistake slide if flagging it would be awkward. ↔	AF	Reverse of #15/#12. Flagging errors is non-negotiable in finance; AF, decisively.
17	I take ownership of outcomes rather than blaming circumstances.	AT	Accountability — central to an 'eat-what-you-kill', individually-P&L culture.
18	I feel every task deserves the same careful attention, however trivial.	N	A trap item: AT can inflate ENH and read as rigid. Genuine mixed answer keeps ENH honest.
19	I'm satisfied doing just enough to meet expectations. ↔	AF	Achievement floor; reverse of #1. If you claimed demanding goals, you must reject 'just enough'.
20	I prefer familiar methods and dislike changing how I work. ↔	MF	▲ Openness moderation, reverse of #14. Disagree — but MF not AF, since discipline values proven methods too.
21	I'm comfortable making decisions with incomplete information.	MT	Decisiveness under uncertainty — markets never give full information; over-claiming (AT) can read as reckless.
22	I naturally take charge and direct others in group settings.	N	Managerial is only low–moderate for an IC analyst under a PM; a genuine mixed answer avoids over-claiming leadership the seat doesn't need.

How to actually practise 7A

Don't memorise the leans — that's useless live, where wording differs. Instead, do this once: read all 22, notice how a single coherent character produces every answer, and spot how the ↔ pairs mirror. In the real test you reproduce the *character*, not the table. If you can explain why #5 is MF and #15 is AT in one sentence each, you're calibrated.

7B Hedge-fund SJT items (8 items, keyed)

If — against the evidence — you meet scenarios, use these. First, two things that decide how you should answer *before* you read the options.

Instruction type. Read whether the item asks what is **MOST EFFECTIVE** (a knowledge question — there is a best-practice ideal; answer it even if it isn't your instinct) or what you would **MOST LIKELY DO** (a behavioural-tendency question — answer your genuine tendency, and stay consistent, because these carry their own consistency checks).^[29,30,42] The two correlate with different things — 'most effective' with reasoning ability, 'most likely' with personality — so the same scenario can have different keyed answers depending on which is asked.^[30]

Response format and its scoring maths. No mainstream SJT format is all-or-nothing; all give proximity/partial credit against an expert-consensus key, so a 'second-best' pick still scores.^[41,31]

Format	What you do	How it's scored
Most / least effective	Pick the single best and single worst of ~4–6 options.	Full marks for hitting the keyed most and least; partial credit if you pick an option <i>adjacent</i> in the effectiveness key. ^[31]
Rank-order	Order all options from best to worst.	Scored on distance from the expert ranking — adjacent swaps cost little, distant misplacements cost more (rank-correlation to the key). ^[41]
Rate each	Rate every option independently (e.g. 1–5, very ineffective→very effective).	Each option scored on its own against the panel's mean rating, so you earn partial marks even if you'd have mis-ranked them. ^[41,31]

The practical upshot: **don't chase a single 'perfect' answer — get the ordering roughly right and, above all, get the extremes right** (clearly-best and clearly-worst), because those carry the most marks and the clearly-worst option is

usually the one that ignores, minimises, or works around the issue.^[32] The finance-specific rule threaded through the items below: **ordinary frictions** → **resolve directly first, escalate if it persists; anything touching a control, compliance, regulation, client fairness or a material error** → **flag/escalate through proper channels, never work around or minimise.**^[32]

1. A PM wants a portfolio exposure number 'right now' for a trade. Your model isn't fully reconciled and you suspect one input is stale.

Most effective: Give the number immediately with an explicit caveat — '~X, but one input may be stale; I'll confirm in 5 minutes' — then reconcile and follow up.

Least effective: Silently send the unreconciled number as if it were final, so you look fast.

Why: Speed matters in a trading seat, but a number that drives a trade is a control-sensitive output. The keyed answer is decisive-and-caveated, never confidently-wrong. Accuracy dominates speed once real money keys off the figure.^[26,32]

2. You realise a report you sent a PM yesterday contained an error that overstated a position's P&L.

Most effective: Tell the PM immediately, state the corrected figure and the cause, and confirm nothing traded on the bad number.

Least effective: Quietly fix the model and hope no one noticed the original.

Why: Flagging your own error fast is the textbook finance-SJT answer; concealing or working around it is the compliance-override failure that 'scores poorly regardless of other merits'.^[32,33]

3. A colleague is about to book a trade without the second sign-off your desk's control process requires, saying 'it's fine, we're in a hurry'.

Most effective: Ask them to pause and get the required sign-off; if they won't, escalate to the supervisor/control function before it books.

Least effective: Say nothing — it's their trade and their call.

Why: A control being bypassed is not an interpersonal matter to smooth over. On the compliance/control axis you escalate regardless of seniority or awkwardness; letting it slide is the worst option.^[32,37]

4. Two senior analysts each ask you to drop everything for their task, both 'by end of day'.

Most effective: Quickly confirm each task's true deadline and impact, propose an order, and tell both what they'll get and when; ask them to arbitrate if they disagree.

Least effective: Pick the one who asked more forcefully and silently drop the other.

Why: Prioritisation SJTs reward transparent triage and managing expectations, not guessing or people-pleasing. You surface the conflict and let seniors resolve genuine clashes.^[31,33]

5. You spot what looks like a material error in a senior PM's own valuation that flatters the book.

Most effective: Raise it directly and privately with evidence — 'can I check this input with you, I may be wrong' — and if it's a genuine material mis-mark, ensure it's corrected/escalated.

Least effective: Say nothing because they're senior and it's their number.

Why: Seniority doesn't shield a material error. The proportionate route is private-and-evidenced first; but a material mis-valuation is a control/materiality issue you don't let stand.^[32]

6. A friendly counterparty offers you and a colleague expensive tickets right before a deal. Your colleague says 'everyone accepts these'.

Most effective: Decline (or check the gifts-and-entertainment policy / compliance) before accepting anything, and don't let the timing create an obligation.

Least effective: Accept because refusing would be rude and 'everyone does it'.

Why: Anything touching conflicts of interest routes to policy/compliance. 'Everyone does it' is the classic wrong rationalisation in an ethics item.^[32,35]

7. Mid-quarter you're asked to hit an aggressive research deadline; doing it properly means the numbers won't be fully checked in time.

Most effective: Deliver what is genuinely verified by the deadline, clearly flag what is still unchecked and the risk, and give a realistic time for the rest.

Least effective: Submit the whole thing on time and present unchecked numbers as final.

Why: The speed-vs-accuracy trade is resolved by transparency: partial-but-labelled beats complete-but-unreliable when decisions key off the output. ^[36,33]

8. You notice a recurring data-feed glitch that occasionally mis-states a risk metric. It hasn't caused a problem yet.

Most effective: Document it and raise it with the owner/risk team so it's fixed, and note a manual check meanwhile.

Least effective: Ignore it since it hasn't caused a loss so far.

Why: A latent control weakness on a risk metric is exactly what you flag early. 'No harm yet' is not a reason to sit on a known control gap. ^[32,37]

The finance SJT hierarchy in one paragraph

Never ignore or avoid an issue (almost always the worst option) and never over-escalate a trivial interpersonal spat straight to the top. ^[32] For **ordinary** problems: address directly and privately first, escalate only if unresolved or serious. For anything touching **compliance, controls, regulation, client fairness, or a material error**: identify it, don't minimise, don't work around — flag and escalate through proper channels, and seniority is no shield. On 'MOST EFFECTIVE' items answer the ideal; on 'MOST LIKELY YOU' items answer your true tendency and stay consistent. ^[29,30,42]

8 Logistics checklist

The behavioural section has no right answers to rush, but the platform constraints still cost people. Handle these before you click start.

Item	What to do
'One sitting, no pause'	The assessment runs start-to-finish. Do the whole thing (both sections) in a single uninterrupted block. Budget ~30 min plus 10 min buffer; use the bathroom first.
No back / no skip	You cannot revisit an answer. For personality items this is fine — first instinct as the character is the right instinct; don't stall wishing you could return.
No calculator	Only relevant to the CCAT (already done). Behavioural items need no arithmetic.
Environment	Quiet room, door shut, phone off and out of reach, notifications silenced, single screen. Nothing that makes you pause — pausing on personality items inflates INC via inconsistency.
Connection	Use wired/stable Wi-Fi; close other bandwidth-heavy apps. Candidates on this platform report occasional glitches/disconnects. ^[18]
Browser	Desktop, current Chrome/Edge/Firefox, ad-blockers and VPN off (they can break the test frame). Don't sit it on a phone.
The Event ID (MLL-XXXX-XXXX-XXXXXX)	Keep the invite email open. The Event ID from DO-NOT-REPLY@criteriacorp.com is how you re-enter. If you disconnect mid-test, re-open the same link/Event ID promptly — the platform typically lets you resume the in-progress attempt; the timer may have kept running. ^[18]
If it disconnects and won't resume	Screenshot any error, then email the campus recruiter/HR contact with your name, the Event ID and a timestamp. Do this same-day; a genuine technical failure is a legitimate reason for a reset, but only if you report it promptly and factually. [INFERRED — reset policy is employer-configured, not published.]
AI ban	The invite bans AI use <i>during</i> the assessment. This guide is preparation only. Do not have anything open to consult live — and you don't need to: the whole point of Sections 5–7 is to internalise the character beforehand.

9 Annotated resource list

Every source cited above, plus the practice resources, with what each is and whether it's worth your time. Bracketed numbers match the citations throughout.

#	Source	Free?	What it is / worth it?
1	Criteria — EPP sample score report (PDF, 2023) https://www.criteriacorp.com/files/Criteria-Sample-EPP.pdf	Free	Reference — shows exactly what the recruiter sees, incl. the validity page.
2	Criteria — EPP Score Report Guide (PDF) https://www.criteriacorp.com/files/Criteria-ScoreReportGuide-EPP.pdf	Free	Reference — the INC>=3 invalid rule and ENH/CRT definitions are here verbatim.
3	Criteria — EPP Overview (PDF) https://www.criteriacorp.com/files/Criteria-Overview-EPP.pdf	Free	Background.
4	Criteria — 2013 EPP sample 'Lisa' (hosted on hirewithease.com) https://hirewithease.com/wp-content/uploads/EPPScoreReport.pdf	Free	Only public copy of the 99th-pct ENH 'trying to impress' commentary.
5	Criteria — Illustrait Info Brief (PDF) https://www.criteriacorp.com/files/docs/files/Criteria-InfoBrief-Illustrait.pdf	Free	Item count / timing / adaptive engine for Illustrait.
6	Criteria — Illustrait Score Report Guide (PDF) https://www.criteriacorp.com/files/Criteria-ScoreReportGuide-Illustrait.pdf	Free	Scatter Score (Illustrait's validity check) defined here.
7	Criteria — Illustrait sample report (PDF) https://www.criteriacorp.com/files/Criteria-Sample-Illustrait.pdf	Free	Reference.
8	Criteria — Competency Framework (38 competencies, PDF) https://www.criteriacorp.com/files/Criteria-CompetencyFramework.pdf	Free	The 38-competency / 5-group map behind Illustrait.
9	Criteria — CPI Score Report Guide (PDF) https://www.criteriacorp.com/files/Criteria-ScoreReportGuide-CPI.pdf	Free	Says CPI is 'not recommended as a pre-employment tool' — lowers its likelihood.
10	Criteria — CPI sample report (PDF) https://www.criteriacorp.com/files/Criteria-Sample-CPI.pdf	Free	Non-monotonic trait language (Conscientiousness, Agreeableness, Openness).
11	Criteria — Emotify Info Brief incl. embedded sample (PDF) https://www.criteriacorp.com/files/Criteria-InfoBrief-Emotify.pdf	Free	Module structure, round counts, timings, STEU/STEM validation.
12	Criteria — Emotify Score Report Guide (PDF) https://www.criteriacorp.com/files/Criteria-ScoreReportGuide-Emotify.pdf	Free	Scoring / classification bands.
13	Criteria — CCAT Info Brief (PDF) https://www.criteriacorp.com/files/Criteria-InfoBrief-CCAT.pdf	Free	Confirms 50 questions / 15 minutes.
14	Criteria — free candidate practice tests https://www.criteriacorp.com/candidates/practice-tests	Free	WORTH IT. The only publisher-made free practice; includes an EPP-style personality practice. No Emotify practice exists.
15	Criteria — CCAT prep page https://www.criteriacorp.com/candidates/ccat-prep	Free	CCAT familiarisation.
16	Criteria — Assessment Types Guide (PDF) https://www.criteriacorp.com/files/Criteria-AssessmentGuide-AssessmentTypes.pdf	Free	The full behavioural catalogue in one place.
17	Reddit r/FinancialCareers — KKR London Criteria assessment breakdown (2025/26) https://old.reddit.com/r/FinancialCareers/comments/1qo8855/kkr_london_assessment_interview_via_criteria_what/	Free	MOST USEFUL candidate source. Identical platform; verbatim two-part breakdown incl. '10 minutes for 88 statements'.
18	Reddit r/FinancialCareers — KKR 2027 analyst Criteria issues https://old.reddit.com/r/FinancialCareers/comments/1qkc00u/kkr_2027_analyst_criteria_corp_issues/	Free	Platform-glitch / disconnect anecdotes.
19	GraduatesFirst — Criteria Corp assessments guide https://www.graduatesfirst.com/criteria-corp-assessments	Freemium	Decent free background; actual practice is a paid bundle (~\$67+). Marginal.
20	JobTestPrep — On-Demand Assessment overview https://www.jobtestprep.com/on-demand-assessment	Freemium	Describes the 1-5 Always True/Always False EPP scale. Free CCAT test is the useful bit.
21	Wall Street Oasis — Millennium internship / interview threads https://www.wallstreetoasis.com/company/millennium/interview	Free	Millennium-specific: 'personality test where they rank how much they relate'. Snippet-level only (site blocks scraping).
22	Millennium Management — Careers (values) https://www.mlp.com/careers/	Free	Primary: 'integrity, work ethic, entrepreneurial energy and emotional intelligence'; 'independent views and ideas'.
23	Millennium Management — Students / early-career https://www.mlp.com/careers/students/	Free	'determined self-starters'; 'quantitative skills with creative problem solving'.
24	Millennium — Equities Analyst Program JD (campusjobs) https://campusjobs.mlp.com/careers/	Free	'attention to detail and judgment'; modelling / data responsibilities; GPA 3.6+.
25	Built In — Millennium culture & values https://builtin.com/company/millennium/faq/culture-values	Free	Aggregates the 'integrity, discipline, excellence, respect' principles; notes siloing and drawdown pressure.

#	Source	Free?	What it is / worth it?
26	GetSmartResume — Millennium early-career programs https://www.getsmartresume.com/article/millennium-early-career-programs	Free	'Eat What You Kill'; resilience under P&L; pressure; 'correct answer quickly' culture.
27	TechInterview.org — Millennium interview guide https://www.techinterview.org/companies/millennium-management-interview-guide/	Free	Pod autonomy: 'a small business inside a larger platform'.
28	Confluence GP — Millennium pod system analysis https://www.confluencegp.com/articles-and-news/millennium-s-pod-system-how-platform-design-beats-star-portfolio-managers	Free	Drawdown/turnover mechanics (secondary but well-corroborated).
29	SHRM — Knowledge vs situational-judgment questions https://www.shrm.org/topics-tools/news/organizational-employee-development/knowledge-vs-situational-judgment-exam-questions	Free	'the correct choice... is the action that is the most effective'.
30	Wikipedia — Situational judgement test https://en.wikipedia.org/wiki/Situational_judgement_test	Free	Knowledge vs behavioural-tendency instructions and their different correlates.
31	Psychometric Success — SJTs https://psychometric-success.com/aptitude-tests/test-types/situational-judgement-tests	Free	Format and scoring overview; some free aptitude PDFs elsewhere on site.
32	CareerTestPrep — SJT guide https://www.careertestprep.com/blog/situational-judgement-test-guide	Free	The compliance-override rule verbatim; over-escalation penalty.
33	Practice Aptitude Tests — free full SJT (no sign-up) https://www.practiceaptitudetests.com/situational-judgement-tests/	Free	WORTH IT. Full worked SJT, no registration; client-facing scenarios good for modelling.
34	AssessmentDay — free 16-question SJT (no sign-up) https://www.assessmentday.com/situational-judgement-test.htm	Free	WORTH IT for the one free test + solutions PDF.
35	AssessmentDay — Deutsche Bank SJT profile https://www.assessmentday.co.uk/profiles/deutsche-sjt.html	Freemium	Finance SJT competency dimensions (Analysing & Risk Management; Adhering to Principles & Values).
36	AssessmentDay — J.P. Morgan SJT profile https://www.assessmentday.co.uk/profiles/jpmorgan-sjt.html	Freemium	Confirms finance firms grade speed + accuracy of judgement; lead page for paid pack.
37	AssessmentDay — FCA SJT profile https://www.assessmentday.co.uk/profiles/fca-sjt.html	Freemium	Regulator SJT competencies incl. 'personal accountability'.
38	Wikipedia — MSCEIT (ability EI model) https://en.wikipedia.org/wiki/Mayer%E2%80%93Salovey%E2%80%93Carr%E2%80%93Ross_Emotional_Intelligence_Test	Free	Consensus vs expert scoring (they correlate ~.98); the ability-EI lineage Emotify sits in.
39	123test — free Big Five (no sign-up) https://www.123test.com/personality-test/	Free	WORTH IT for Big Five familiarisation; also a free short SJT.
40	Truity — free Big Five (OCEAN) https://www.truity.com/test/big-five-personality-test	Free	Usable free tier to feel the Big Five basis of the EPP.
41	Test Partnership — SJT guide https://www.testpartnership.com/blog/situational-judgement-tests-guide.html	Free	Distance-from-key scoring explained.
42	PsychometricTest.org.uk — SJT https://www.psychometrictest.org.uk/sjt/	Free	'most effective' vs 'most likely' framing.
43	Christian, Edwards & Bradley (2010), Personnel Psychology — SJT meta-analysis (PDF) https://mikechristian.web.unc.edu/wp-content/uploads/sites/13307/2016/11/Christian-et-al-2010-PPPsych-SJT.pdf	Free	What SJTs actually measure; construct validity.
44	JobTestPrep — Emotify page https://www.jobtestprep.com/emotify-test	Paid	SKIP for now — no working Emotify practice; 'course being developed'.
45	JobTestPrep — free CCAT practice test https://www.jobtestprep.com/free-ccat-practice-test	Free	A genuinely free CCAT taster.
46	Criteria — Emotify product page https://www.criteriacorp.com/assess/emotional-intelligence/emotify	Free	Product overview.
47	Criteria — EPP product page https://www.criteriacorp.com/assess/personality/employee-personality-profile-epp	Free	Product overview.
48	Indeed — Millennium company profile (mission) https://www.indeed.com/cmp/Millennium-Management-1/about	Free	Mission language: 'integrity, discipline and excellence'.

If you only open three links

(1) **Criteria's own free practice**^[14] — the 'Workplace Behavior/Personality' option is an EPP-style taster from the publisher itself; also do the CCAT one. (2) **Practice Aptitude Tests' free SJT**^[33] — full worked scenarios, no sign-up, only if you want SJT insurance. (3) **123test or Truity free Big Five**^[39,40] — 10 minutes to feel the trait structure the EPP is built on. Everything else is background. There is **no genuinely free Emotify practice anywhere** — and you almost certainly don't need it.

10 Confidence appendix — verified / inferred / speculative

So you know exactly how much weight each claim bears. **VERIFIED** = sourced to a primary or corroborated document. **INFERRED** = reasoned from evidence but not directly stated. **SPECULATIVE** = plausible, thin or no evidence.

VERIFIED

- The cognitive test is the **CCAT, 50 questions / 15 minutes**.^[13,17]
- On the identical Criteria platform in finance, the behavioural block was **rate-a-statement personality items, ~10 minutes** (KKR: '10 minutes for 88 statements'); Millennium's own first OA is described as a personality test where you rank how much you relate.^[17,21]
- The **EPP** is 140 prompts, ~10 min, 12 traits, percentile-scored, 1–5 Always True/False; it is Criteria's most-used personality test.^[2,19]
- The EPP report carries **INC, ENH, CRT** validity scales; **INC≥3 auto-marks the profile INVALID**; a 99th-pct ENH is annotated as 'trying to make a good impression'. Illustrait has an equivalent **Scatter Score**.^[1,2,4,6]
- Criteria's benchmark text: **low-to-medium Cooperativeness** suits decision-making roles because over-accommodation 'hinders objective decision-making'; analytic roles benchmark below-average Extroversion/Openness.^[1,4,10]
- **Emotify is a standalone 20-minute test** (30/20/14 rounds), built on the Mayer–Salovey ability model, validated vs STEU/STEM.^[11]
- **CPI is 'not recommended as a pre-employment tool'** per Criteria.^[9]
- In finance SJTs, **compliance/control issues are an override**: ignoring/minimising/working around them 'scores poorly regardless of other merits'.^[32]
- Millennium's published values: integrity, work ethic, entrepreneurial energy, EI; 'independent views'; determined self-starters; attention to detail and judgment.^[22,23,24]

INFERRED

- The behavioural section here is specifically the **EPP** (vs Illustrait). Format and length fit both; no candidate names the exact product for Millennium. Your answering strategy is identical either way.
- **Emotify is ruled out** for this sitting purely on the time budget (20 min can't fit the ~15 min remaining after CCAT). Correct unless Millennium runs a longer/second window.
- The full **12-trait target profile** for a Millennium analyst — the directions are anchored to Criteria benchmarks + Millennium culture, but several (Self-Confidence, Patience, Managerial) are reasoned, not sourced trait-by-trait.
- The **scale-use distribution** (~35–45% extremes etc.) is a reasoned calibration, not from Criteria's manual.
- An **INC-invalid profile behaves as a de-facto reject** in a bulk campus screen. The invalid-print is verified; the downstream auto-reject wiring is employer-configured and unpublished.
- **Disconnect/resume behaviour** and reset eligibility — reasoned from platform norms + candidate glitch reports; the exact policy is employer-configured.^[18]

SPECULATIVE

- That Millennium authored a **bespoke TestMaker SJT**. Possible in principle; **no evidence** for it, and all first-hand accounts describe personality items. Covered as insurance only.
- The exact **item count and scale labels for Millennium specifically**. '88 statements' and 'Always True–Always False' come from the same platform / vendor docs, not a Millennium candidate verbatim; item counts are configured per employer.
- The precise **INC mechanism** ('paraphrased duplicate items'). Criteria says only 'based on consistency of responses'; the paraphrase-pairs detail is standard psychometric practice but not in Criteria's public docs.

- **Emotify's exact keying** (consensus vs expert). Inferred from its STEU/STEM lineage; Criteria doesn't state it publicly. ^[11,38]

Open questions worth resolving if you can. (1) Ask the campus recruiter, or a prior-cycle candidate, whether the behavioural part is 'personality statements' or 'scenarios' — one sentence settles EPP-vs-SJT with certainty. (2) Confirm the total window is 30 minutes including the CCAT (if the behavioural part has its own separate longer window, Emotify re-enters the picture). Everything in this guide is robust to answer (1) being 'personality', which the evidence strongly favours.

Prepared from primary Criteria Corp documentation, first-hand candidate accounts of the identical platform, Millennium's published materials, and the occupational-psychology / SJT literature. Citations map to Section 9. This is a preparation aid only; it contains nothing to be used during the assessment, consistent with the invitation's terms.
