

COMPANION TO THE COMPLETE INTERVIEW PACK

The Work, From Zero

A day in the life of the Millennium Corporate Access Services desk, hour by hour and season by season; the basic knowledge and skills an interviewer can test; fifty knowledge questions with answers; and the mindset the job needs.

Prepared: 21 September 2026, for Round 2 (two one-hour interviews: Joe, a member of the team, and Chris, the Head of the Desk).

What this is: Part 1 reconstructs the day from Millennium's own postings, the only first-hand practitioner accounts that exist, the 2026 EMEA conference calendar and the results-season rules, and says what is confirmed and what is inferred. Part 2 builds the basics from nothing: who is who, the company's year, the meeting formats, why a PM wants a meeting, how a bank allocates, the money, the compliance wall, the tools, the Excel, the emails. Part 3 is fifty knowledge questions with answers. Part 4 is the mindset: seven habits, an escalation ladder, a thirty-sixty-ninety plan.

Honesty note: No published hour-by-hour account of a buy-side corporate access day exists; Part 1 is a model built line by line from sources, and every line is tagged. The desk's own rules, systems and numbers are not public and are never claimed.

Sources: markers [Sxx] resolve in Part 5, shared with the Complete Interview Pack.

Contents

■ Part 1. A day in the life, hour by hour and season by season	3
What a day is made of; a normal day; conference season and the 2026 calendar; results season; a company in the office; 3 the quiet weeks; the life of one request; the intern's slice	
■ Part 2. The basics, from zero: the knowledge and skills they can test	10
Who is who; the company's year; the nine formats; why a PM wants a meeting; how a bank allocates; the money; the compliance wall; the tools; Excel; emails and invites; vocabulary; markets	
■ Part 3. The basics question bank: fifty things they can ask	19
■ Part 4. The mindset: how people who are good at this think	24
■ Part 5. Sources	29

Figures

1. A normal day on the London desk, hour by hour	4
2. Conference season: the six-week arc from booking window to log	5
3. The EMEA conference calendar for 2026, as published	6
4. Results season: closed periods, quiet periods and the post-results wave	6
5. The life of one request, with timestamps	8
6. The market map: three sides and the desk in the middle	10
7. A listed company's year, as the desk experiences it	11
8. Nine meeting formats: who arranges, scarcity, compliance	12
9. What a PM gets from a meeting, and what they must not get	13
10. A conference from the bank's side, and where the desk plugs in	14
11. The compliance wall: five concepts, five rules	15
12. The request tracker: the columns that make it work	16
13. From the attendance log to the consumption report: four Excel moves	16
14. Four emails and one invite	17
15. The seven habits of mind	24
16. The escalation ladder	26
17. Thirty, sixty, ninety	27

Callout boxes: ■ Key term ■ Say this in the interview ■ Don't say this ■ Your opinion goes here ■ Source uncertain ■ Worked example

PART 1

A day in the life, hour by hour and season by season

Nobody has published an hour-by-hour account of a buy-side corporate access day. What exists is Millennium's own description of the job in three postings, one long interview with the person who ran corporate access at AllianceBernstein, a sell-side counterpart's account, a multi-manager head's roundtable remarks, the published 2026 conference calendar, and the rules that shape when companies will talk. This part assembles them into a day, then into the three seasons that change it, and tags every line.

1.1 What a day is made of

Strip the job to its physics and there are two streams and one record. The **inbound stream** is what brokers and companies offer: conference invitations, roadshow dates, IR calls, fireside chats. The **outbound stream** is what PMs and analysts ask for: a specific company, in a specific format, in a window. The desk's job is to match the two, and the **record** is what proves it did. Millennium's posting describes both streams in one line, "sell-side broker sourced, and Millennium originated", and names the outputs: databases, email, communication channels, meetings, reports [S430] **Confirmed**.

The front door is a shared mailbox. The AllianceBernstein head: "My team, we have a centralized mailbox, and that's all we see. And we're sectorized, so the team is actually focused on specific sectors." Her team was three people in New York serving 31 investment teams [S433][S434] **Confirmed**. Fidelity runs "centralized internal inboxes in each region" [S5]. The desk you are joining serves several hundred teams across EMEA from London, with sister desks in New York and Tokyo [S431][S432], so the mailbox is the first thing you open and the last thing you clear.

The unit of work is the request. A vendor describes the buy-side cycle as four stages: "Discover: which conferences, NDRs, and one-off opportunities are upcoming. Request: submit ranked meeting requests through sell-side hosts. Attend: execute meetings. Capture: structured notes flowing to PMs, analysts, and IC" [S437] **Reported**. The AllianceBernstein head's own image for the seat is simpler: "I view us as a conduit. The traffic cop that sits in the middle and directs people to where they need to be" [S434].

1.2 A normal day, hour by hour

A mid-quarter day with no conference in town. Times are London. The tasks are Millennium's own words where tagged Confirmed; the sequence and clock times are the author's model.

A normal day on the London desk (model; mid-quarter, no conference in town)

WHAT THE DAY IS MADE OF, BY SHARE (author's estimate for a normal day; the desk's own split is not public)

Requests, confirmations, invites: about a third Brokers and companies: a quarter Portal and marketing: a fifth Reports and data: the rest

In conference season the first bar doubles and the last shrinks; in results season the second bar grows; in the quiet weeks the last bar is most of the day.

The intern's posting names all four: "handling various databases and email correspondence, implementing internal and external communication channels and processes, coordinating internal meetings, preparing reports, and working to increase efficiencies" [S430].

Figure 1. A normal day. Tasks from Millennium's London, New York and Tokyo postings [S430][S431][S432]; the mailbox and response discipline from the AllianceBernstein interview [S433][S434]; the sequence and times are the author's model. Not a description of any actual Millennium day.

KEY TERMS: THE FOUR THINGS YOU TOUCH EVERY DAY

The **portal** is Millennium's own system for "forward-looking event marketing and requests" [S430]: the calendar of what is coming, and the requests against it. The **tracker** is the working list of requests and their status (it may live inside the portal or beside it in Excel). The **consumption report** is the record of meetings actually attended, by team, broker, format and sector [S430]. The **marketing calendar** is the report of each company's results dates, closed and quiet periods and upcoming events, used to plan originated access [S431].

IF THEY ASK "WHAT DO YOU THINK A DAY LOOKS LIKE?"

"Two streams and a record. Inbound: what brokers and companies offer, which I would load into the portal and market to the pods that cover those names. Outbound: what PMs and analysts ask for, which I would check, submit, chase, confirm and invite. And the record underneath both: every request with a status, every meeting logged, so the consumption report and the broker vote are right. The clock is set by the sell side and by results: booking windows open four to six weeks before a conference, and demand spikes the day after a company reports."

1.3 Conference season: the six-week arc, and the calendar you are interviewing in

Your Round 1 interviewers said conference season is the peak. The published calendar says why: European banks cluster their conferences in the open windows after each results season, and in 2026 the September cluster alone had nine named events between 2 and 20 September [S446] **Confirmed as listed**. Booking for one-on-ones "typically opens four to six weeks before the event" and hosts are advised to "hold remaining slots for the last 48 to 72 hours of booking" [S439] **Reported**. So the desk's crunch is the month before the conference, not the conference itself, and several booking windows overlap.

Conference season: the six-week arc from booking window to log**WHY THIS IS THE PEAK**

Several banks run overlapping EMEA conferences within a fortnight (2 to 20 September 2026 per the published calendar [S446]), so the desk is inside three or four booking windows at once, each with its own company list, deadline, allocation round and hold-back. Every contested name means an internal allocation and a set of noes with alternatives. Round 1 intelligence: broker events are often one seat per firm, so the hard problem is inside the firm, not with the bank. (The one-seat rule is not written anywhere public; IR sources report companies asking to consolidate duplicate meetings from one firm's several PMs [S462][S456].)

WHAT AN INTERN OWNS IN SEASON

The collection and pooling of requests; the tracker's status states; the invites and rooms for in-office meetings; the live attendance record; the same-day log. Not the allocation rule, not the escalation decision, not the broker negotiation. Knowing that boundary, and saying it, is what a head of desk wants to hear.

Figure 2. The six-week arc. Booking windows, tiering and hold-backs from the WeConvene sell-side guides [S438][S439]; ranked, tagged requests from the buy-side workflow guide [S437]; the vote from the Tokyo posting [S432]; the September cluster from Wall Street Horizon [S446]. The desk's internal steps are inferred.

The EMEA conference calendar for 2026, as published by Wall Street Horizon

Source: Wall Street Horizon's quarterly investor-conference calendars for 2026 [S444][S445][S446]. Cities are mostly not given by the source. Individual events move year to year; the clusters do not.

Figure 3. The 2026 EMEA calendar. Named events and dates as listed by Wall Street Horizon [S444][S445][S446]; the Q4 column is the pattern, not a list. Useful in the interview as evidence that you know the desk's clock.

SAY THIS, IN EITHER HOUR

"You have just come through the September cluster: the TMT, medtech, utilities and pan-European conferences all landed inside three weeks. I'd expect the desk's crunch to have been late July and August, when the booking windows opened, rather than the conference days themselves. What I'd want to learn is how the desk keeps four allocation rounds straight at once, because that is where the record either holds or doesn't."

1.4 Results season: closed periods, quiet periods and the post-results wave

Twice a year for most European companies, and four times for those that report quarterly, the calendar flips. In the weeks before results, companies go dark; on the morning of results, demand spikes. A desk that knows the rules is never surprised by either.

Results season for one company (December year-end, full-year results on a Thursday in late February)

Figure 4. Results season. Closed period from the exchange's MAR explainer [S447]; ESMA and FCA guidance on pre-close calls and closed-period communications [S448][S449]; quiet periods from IR advisers [S450][S451]; demand window and NDR timing from the vendor calendar guides [S441][S440]; desk actions from the postings [S430][S431].

IF THEY ASK "A PM WANTS THE CFO OF A COMPANY THAT REPORTS IN TEN DAYS; WHAT DO YOU DO?"

"The company is inside its closed period and almost certainly its own quiet period, so IR will not book management and I would not press them. I would tell the PM that today, not after trying, and ask what they need to cover. Then I would request the first post-results slot: the IR call the day after, or a place on the post-results roadshow, and get the ask in before the spike, because that window is the most contested of the quarter. And I would log the company's dates so the next request on that name is timed right."

1.5 A company in the office: the originated meeting and the NDR visit

Some days the meeting comes to you. A company on a roadshow visits Millennium's office, or the origination team has secured a call directly with IR. These are the days the intern's duties are most visible: "booking and confirming rooms and attendees" and "sending calendar invites" [S430].

Moment	What happens	What the desk does, and why
The week before	The broker or IR confirms the date, the executives attending and the format (a 45-minute one-on-one, or a group of several pods). AllianceBernstein's team keeps brokers out of the room "by design" [S433]; whether Millennium does is not public.	Confirm attendees pod by pod, on separate invites, so no pod sees another's interest. Book the room. Check the name against the restricted list and the company's closed period. Note any chaperone requirement.
The day before	Reconfirm with the host; collect any last changes to the company's line-up.	Update the invites; brief the associate on who is coming; print or share the attendee list for reception and for the record.
On the day	Executives arrive; pods rotate through the room; a broker or IR contact hosts. Meetings under 30 minutes are "increasingly viewed as insufficient" for new relationships [S456]; one broker reports three-quarters of its meetings are three-on-one or smaller [S459].	Be at the room. Manage the hand-over between pods to the minute. Record who attended. Be the person the host remembers as easy to deal with.
After	The host may ask for feedback for the company; the FCA suggests documenting discussions [S449]. The multi-manager head wants his firm's analysts to face "tough questions head-on" and to keep "cameras on" when virtual [S455].	Log every attendance the same day. Route any feedback through the associate. Flag anything that sounded like inside information to Compliance immediately.

WHAT IS NOT KNOWN

Whether Millennium's desk runs a no-broker rule in meetings, how many pods it seats in one room, and what its chaperone policy is are not public. The AllianceBernstein and multi-manager sources describe their own practice; use them to ask, not to assert.

1.6 The quiet weeks: what the desk builds when the phones are quiet

July is "a quiet month on the industry conference circuit" [S446]; mid-quarter is the window IR teams use for strategic roadshows [S440]; and IR teams plan the following year's calendar in the fourth quarter [S441]. No first-hand account says what a buy-side desk does in those weeks, but the postings do: the New York coordinator "prepares reports around company marketing calendars, earnings and quiet periods to help strategize Millennium Originated Access" [S431]; the Tokyo associate "manages the semi-annual Corporate Access

Broker Vote process, including collecting feedback on broker access quality, meeting quality, and overall effectiveness, and compiling the results" [S432]; the London intern "prepares reports" and works "to increase efficiencies" [S430]. The quiet weeks are when the record becomes the product: the consumption report is built, the vote is compiled, the forward calendar is mapped, and the tracker is cleaned. It is also when an intern's process improvement gets built and measured, which is why the summer window (roughly June to August, by third-party accounts [S265]) is well placed for it: it straddles the June cluster, the July lull and the August build-up.

1.7 The life of one request, with timestamps

The life of one request: three pods want Company A at Bank X's November conference

Figure 5. One request, end to end. The mechanics rest on the posting [S430], the booking-window and tiering descriptions [S438][S439] and the response discipline [S433]; the pod numbers, initials and timestamps are placeholders. The desk's allocation rule is not public and is not stated.

1.8 The intern's slice of the day

The posting's own sentence is the job description of the summer: "Day-to-day, interns will be handling various databases and email correspondence, implementing internal and external communication channels and processes, coordinating internal meetings, preparing reports, and working to increase efficiencies" [S430] **Confirmed**. Read against the day above, that is: the tracker and the portal (databases); the shared mailbox and the four emails (correspondence); the templates and the request form (channels and processes); the rooms and invites (internal meetings); the consumption and calendar reports (reports); and one improvement, measured (efficiencies).

Posting phrase	What it is in the day	What you would own by August (a reasonable target, not a promise)
"handling various databases"	The portal's events and requests; the tracker's status states; the attendance log	The daily tidy: every request with an ID, owner and current status; duplicates pooled; closed-period flags set
"email correspondence"	The shared mailbox; confirmations; the no-with-alternative; broker requests; IR asks	Confirmations and invites for EMEA meetings without supervision; drafts of the harder emails for the associate
"internal and external communication channels and"	How requests come in and how events go out; templates; the request form	One template or form that captures a request completely the first time

processes"		
"coordinating internal meetings"	Rooms, attendees, invites, hand-overs on the day	The in-office meeting days, end to end
"preparing reports"	Consumption by broker, format, sector, PM; the marketing calendar; vote inputs	One strategy-session report built from the log, with the pivot and one slide
"working to increase efficiencies"	The one thing that costs the most time and adds nothing to the record or the service	One improvement, undoable, measured in minutes saved or errors removed

1.9 What the day teaches you about the interview

- **The clock is external.** Booking windows and results dates set the pace; the desk's skill is being early. Say so.
- **The hard part is internal.** The bank's one seat becomes the desk's allocation problem; the record and the alternative are what make it survivable.
- **Every inbound gets an answer; every outbound gets a status.** That is the whole discipline, and it is what "organisation is half the job" means.
- **The intern's boundary is clear.** You own capture, checks, pooling, emails, invites, the log and one improvement. You do not own the rule, the escalation or the broker negotiation. Saying that is judgement.
- **You are interviewing at the end of the peak.** The desk has just run the September cluster. Ask about it; they will have opinions.

PART 2

The basics, from zero: the knowledge and skills they can test

Everything in Part 1 assumes a set of small facts and small skills. This part builds them from nothing: who the people are, what a listed company's year looks like, what each meeting format is for, why a PM wants forty-five minutes with a CFO, how a bank runs a conference, the money, the compliance wall, the tools, the Excel, the emails. Each section ends with the interview question it answers.

2.1 The market map: who is who

Corporate access sits between three groups. A listed company wants investors to understand it. Investors want to understand the company before they buy or sell its shares. Banks sit between them and arrange the contact, because they have relationships with both [S1]. Inside each group there are specific jobs you must be able to name.

The market map: the three sides of corporate access, and the desk in the middle

WORDS PEOPLE USE WITHOUT EXPLAINING

"Corporates" = listed companies. "IROs" = investor relations officers. "The Street" = the sell side. "Coverage" = the companies an analyst follows.
 "Names" = stocks. "The book" = a PM's portfolio. "Consumption" = the meetings a team actually attended. "The vote" = the buy side's scoring of brokers [S39].

Figure 6. The market map. Roles from the WeConvene guide, the Fidelity and AllianceBernstein interviews, the UK corporate broking sources and Millennium's postings [S1][S5][S7][S29][S36][S40][S42]. The desk's position is confirmed by the New York associate posting [S42].

KEY TERMS: BUY SIDE AND SELL SIDE

The **buy side** is anyone who manages money and buys securities: hedge funds, pension funds, asset managers. The **sell side** is the banks and brokers that sell them research, trading and access. A **PM** (portfolio manager) is the person who decides what the fund buys and sells; an **analyst** works for a PM studying companies; at a bank, a **research analyst** publishes views on companies for investor clients and a **salesperson** talks to investors daily. When someone on the desk says "the Street", they mean the sell side collectively.

THE QUESTION IT ANSWERS: "WHO ARE THE PARTIES IN CORPORATE ACCESS, AND WHERE DOES THE DESK SIT?"

"Three parties. The company, whose IR team manages investor contact. The bank, whose corporate access desk arranges conferences, roadshows and one-on-ones and allocates the slots among its investor clients. And the investor, which here is 350-plus independent teams. The desk sits between all three: it takes demand from the pods, works the broker channel and the direct channel, and allocates and records what comes back."

2.2 A listed company's year, and when management is available

Management availability is not random. It follows the company's reporting calendar, and a desk that knows the calendar knows when to ask.

A European company's year (December year-end), as the desk experiences it

Timing of results: European large caps report full-year in Feb to Mar, Q1 in Apr to May, half-year in Jul to Aug, Q3 in Oct to Nov; many mid-caps report half-yearly only. Companies set their own quiet periods before results (typically two to four weeks). Conference months are the recurring pattern reported by IR advisers; individual events move year to year.

Figure 7. The company's year. Closed periods from MAR Article 19 as summarised by the FCA's bulletins and TR15/1 [S22][S20]; results rhythm and post-results demand from IR and vendor guidance [S30][S12]; the semi-annual vote from the Tokyo posting [S43]. Conference months are the pattern, not a schedule.

Term	What it means, from zero	What it means for the desk
Results (full-year, half-year, quarterly)	The company publishes its numbers on a fixed date, with a presentation and a call open to analysts and investors. Everything management says is public.	"The period immediately following earnings results is the highest-demand window for investor access in the quarter" [S441]. The NDR wave follows, often launched the day after.
Closed period	Under the UK and EU Market Abuse Regulation, the 30 calendar days before an interim or year-end report, when the company's directors and senior managers may not deal in its shares; it is a dealing restriction, not a legal gag on the company [S447][S22].	It restricts dealing, not meetings, but the FCA recommends companies avoid private investor calls in it and praised a fund that avoided investee meetings then [S22][S20]. Expect IR to decline requests in the closed period, and do not push.
Quiet period	A company's own policy of limiting investor contact for roughly the last two to four weeks of a quarter until results are out; no standard length exists, and most restrict one-on-ones and forward-looking talk rather than factual answers on public data [S450][S451][S441].	Same practical effect. The company's IR page usually states it. Check before asking.

AGM	The annual general meeting where shareholders vote. Management is busy and cautious around it.	Not a meeting venue for the desk. Note it in the calendar.
Capital markets day (CMD), investor day	A company-hosted event, often a half day, where management presents strategy in depth to any analyst or investor who registers.	Public, so low compliance risk; often the best "access" a mid-cap gives all year. The desk should know the dates and market them to pods.
Pre-close	A trading update or an analyst call some companies give just before the closed period. ESMA warned in 2024 that pre-close calls "carry inherent risks of inadvertent unlawful disclosure" and set out good practice for them [S448].	A signal that access is about to close for a few weeks, and a date to push to the covering pods.

THE QUESTION IT ANSWERS: "WHY MIGHT A COMPANY SAY NO TO A MEETING IN LATE FEBRUARY?"

"Because it is inside its closed period before full-year results. The rule itself stops directors dealing in shares, but the regulator has told companies to avoid private investor calls during it, and most IR teams will not book management until results are out. The right move is to ask for the first slot after results, when demand will be highest, and to have the request in early."

2.3 The meeting formats, and what each is for

Every request the desk handles names a format. Knowing them is basic literacy on the desk.

Nine formats: who arranges them, how scarce they are, what the compliance risk is

Format	What it is	Usually arranged by	Scarcity	Compliance attention
1x1 (one-on-one) 30 to 60 min, private	Management with one investor team. The most requested and most contested format [S39]	Bank (at conferences, NDRs) or IR directly; or the desk	High: one seat	High. Private forum; analysts are "not the public" [S21][S22]
Group meeting breakfast, lunch, "fireside"	Several investors with management; a moderator asks the questions at a fireside chat	Bank or IR	Medium	Medium; the alternative the desk offers when the 1x1 is lost
Broker conference 1 to 3 days, dozens of companies	Presentations plus 1x1 and group slots booked 4 to 6 weeks out [S30]; up to 80% of access [S12]	Bank's conference team	High in season	Medium; presentations public, 1x1s private
NDR (non-deal roadshow) 2 to 5 days, several cities	Management tours investors' offices with no transaction attached; ~65% broker-sponsored [S38]	Bank (sponsoring analyst) or company IR	Medium	High: in-office, private, often just after results
Site visit / field trip "reverse roadshow"	Investors travel to a plant, store or HQ; itinerary set by broker or IR [S180 para 2.11]	Bank or IR; the desk for originated trips [S27]	Low to medium	Medium; any research briefing on the trip is separated from the access [S180]
Capital markets day company-hosted	Half-day strategy deep dive open to all registered analysts and investors	Company IR (UK: with the corporate broker) [S36]	Low	Low; broadly disseminated
IR call 30 min, video or phone	A team talks to the IR officer, not the CFO. The everyday alternative to a 1x1	IR directly; the desk	Low	Medium; same MAR rules apply to what IR says [S22]
Expert call via an expert network	A call with a former employee or industry expert. Not corporate access, but adjacent	Expert network firm	Paid per call	Highest: chaperoned, pre-cleared, current employees banned [S24]
Virtual 1x1 or group video	Any of the above by video. 93% of meetings in late 2021; about 13% by 2023 [S460][S458]	Any	Low	Same rules as in person; a multi-manager head wants "cameras on" [S10]

Scarcity and compliance ratings are the author's summary of the sources cited in each row.

Figure 8. The nine formats. Definitions from the WeConvene guide, the NDR study and IR advisers [S1][S12][S38]; who arranges them from the Fidelity, AllianceBernstein and Point72 sources [S5][S8][S27]; compliance notes from the FCA bulletins [S21][S22].

THE QUESTION IT ANSWERS: "WHAT IS THE DIFFERENCE BETWEEN AN NDR AND A CONFERENCE?"

"A conference is the bank's event: many companies in one venue for a day or three, with presentations and a grid of one-on-one and group slots that the bank allocates among its clients. An NDR is one company on tour: management spends a few days visiting investors' offices, usually just after results, with a broker or the company's own IR organising the diary. For the desk, a conference is an allocation problem across many teams at once; an NDR is a question of getting Millennium onto one company's list, which is where origination matters."

2.4 Why a PM wants forty-five minutes with a CFO

You will be asked some version of "why does a PM want a meeting?" It is a test of whether you understand the client. The answer is not "to get information the market doesn't have"; that is the wrong answer and a dangerous one. It is about judgement.

What a PM gets from a management meeting, and what they must not get

WHAT THEY ARE LISTENING FOR

1. Whether the thesis holds: does management describe the business the way the PM's model assumes?
2. Tone and confidence about things already public: guidance, the order book, pricing, competitors
3. Capital allocation: buybacks, deals, capex priorities
4. Quality of the people: do they know their numbers, do they answer the question asked?
5. Multi-level views: divisional heads and IR as well as the CEO [S10]

The "mosaic": many small public pieces that together change a view. Legal and normal [S18]

WHY IT MATTERS TO A POD

A pod runs a hedged book under tight loss limits (reported: lose 5%, capital halved) [S104][S113]

So it needs "shorter feedback loops focused on price discovery and risk management" [S11]

An analyst covering dozens of names needs to be selective about which meetings to take [S10]

Meetings around results and NDRs are when views get updated; local investors trade heavily and profitably around NDRs [S38]

Hence: timing, the right format, and the right person in the room are what the desk delivers

WHAT THEY MUST NOT GET

Inside information: precise, non-public, price-sensitive (MAR Art. 7) [S21]

Examples: the number before it is published; a deal or a capital raise in progress; guidance that differs from what was said publicly

Einhorn, 2009: told on a broker-arranged call that Punch was near an equity raise; sold; fined £7.3m with his fund. Declining the NDA was no defence [S19]

If a PM hears something like this, the meeting stops being an opportunity and becomes a compliance event. The desk's log is the record.

Never say: "edge", "colour the market doesn't have", "what they really think about the quarter". **Say:** "judgement on things that are public, from the people who run the business".

Figure 9. What a meeting is for. The listening list is the author's synthesis of practitioner sources [S10][S11][S18]; the pod economics are press-reported [S104][S113]; the NDR trading evidence is from the academic study [S38]; the boundary is UK MAR as explained by the FCA and the Einhorn case [S21][S19].

KEY TERMS: LONG, SHORT, THESIS, CATALYST

A **long** is a position that profits if the share price rises; a **short** profits if it falls (the fund borrows shares, sells them, and buys them back later). A **thesis** is the reasoning behind a position: "this company's margins will expand because of X". A **catalyst** is the event expected to make the market agree: results, a capital markets day, a contract award. A **hedged book** holds longs and shorts so that the overall market moving up or down matters less than the PM being right about the specific companies. A meeting is a way to test a thesis before the catalyst.

THE QUESTION IT ANSWERS: "WHY DOES A PM WANT TO MEET MANAGEMENT IF EVERYTHING MATERIAL IS ALREADY PUBLIC?"

"Because judgement is not information. The numbers are public; what a meeting adds is how management talks about them: whether they describe the business the way the PM's model assumes, how confident they sound about guidance they have already given, what they say about capital allocation, and whether they know their numbers. For a pod under tight loss limits, that updates a view faster than waiting for the next results. What the meeting must never add is anything precise, non-public and price-sensitive, and the desk's log is the record that it did not."

2.5 How a bank runs a conference, from the bank's side

To allocate well you need to know how the other side allocates. The sell-side desk is doing the same job as you, one level up, for hundreds of investor clients at once.

A conference from the bank's side, and where the desk plugs in

1. Eight weeks out

Bank confirms which companies attend and how many 1x1 and group slots each will give. Company gives a "must see" list [S30]

2. Four to six weeks out

Booking opens. Investor clients submit ranked requests through the bank's portal or by email; slots "fill quickly" [S30][S28]

3. The bank allocates

Investors tiered by size, commission and relationship; fit with the company's interest; its priority list [S438][S436]

4. The last 48 to 72 hours

Held-back slots released; waitlists move; cancellations create openings. The desk that is watching wins these [S30]

5. The event and after

Bank tracks who attended what and reports outcomes to both companies and investors [S29]. Feeds its own broker-vote case

WHERE THE DESK PLUGS IN

Step 1 to 2: load the conference into the portal and market it to the pods whose names attend ("internal sales and target marketing" [S40]). Collect requests with PM, priority and format; de-duplicate across pods; submit one ranked Millennium list, tagged with team and prior coverage so the bank's allocator has context [S28].

Step 3 to 4: receive the allocation; where the bank gave one seat and three pods asked, allocate by the desk's rule, attach the alternative (group slot, IR call), and keep asking for more as slots free up. Step 5: log attendance by PM, broker, company and format; that log is the consumption report and the broker vote [S39][S43].

Round 1 intelligence: broker events are often one seat per firm, so the internal allocation is the hard part, not the request.

Figure 10. The bank's process and the desk's touchpoints. Booking windows, hold-backs, tiering and allocation logic from the WeConvene planning, strategy and role guides [S30][S438][S436]; ranked requests from the buy-side workflow guide [S28]; the desk's duties from the posting [S40].

THE QUESTION IT ANSWERS: "WALK ME THROUGH WHAT HAPPENS WHEN A BANK ANNOUNCES A CONFERENCE."

"The bank confirms the companies and their slot counts about two months out, and booking opens four to six weeks before the event. I would load it into the portal, tell the pods whose names are attending, collect their requests with a priority, remove duplicates across teams, and send the bank one ranked list with context. When the allocation comes back, I would allocate internally by the desk's rule, attach an alternative for anyone who lost a seat, and keep watching the last two or three days, when banks release held-back slots. After the event I would log who attended what, because that is the consumption report and the vote."

2.6 The money: how access is paid for, in one paragraph

Part 6 of the Complete Interview Pack covers this in full; here is the version you need on the desk. Before June 2014, UK fund managers paid banks for corporate access through dealing commission, a cost carried by their end investors; the FCA found no firm could justify this and banned it from 2 June 2014 [S180]. MiFID II, from 3 January 2018, extended the logic across the EU: arranging meetings is not research, it is "a discrete service" that must be paid for separately or accepted only where it is a minor non-monetary benefit [S185]. When the FCA re-allowed bundled payments for research from 1 August 2024, it ruled corporate access "out of scope" [S181]. Two practical consequences: access to companies below £200m market cap can be accepted free under the FCA's rules [S15][S190]; and everything else is either paid from the firm's own money or reached directly through IR, which is why an origination channel and a consumption record exist [S42][S39].

THE QUESTION IT ANSWERS: "WHY CAN'T WE JUST PAY THE BANK FOR THE MEETING THROUGH OUR TRADING?"

"Because since 2014 in the UK, and 2018 across the EU, corporate access is not research and cannot be bought with dealing commission. It is a separate service, so it is either paid for from the firm's own resources, accepted as a minor benefit where the rules allow, such as companies under £200m, or arranged directly with the company. That is why the desk records what it consumes and why it has an origination channel."

2.7 Compliance from zero: the wall you work next to

The desk is not the compliance department, but it is the first place a problem is visible. You need five concepts and five rules.

The compliance wall: five concepts, five rules for an intern**Inside information**

Precise, not public, and likely to move the price if it were (MAR Art. 7). Trading on it or passing it on is a crime (Arts 8, 10, 14) [S21]

US name: MNPI

Selective disclosure

A company telling some investors what it has not told all. Private calls with shareholders count as "dissemination" [S22]. US: Regulation FD forces public release within 24h [S17]

Wall-crossing

Being formally given inside information (e.g. about a placing) after agreeing not to trade. Handled by a gatekeeper independent of the PM [S23][S20].
Never by the desk

Restricted list

Names the firm may not trade or discuss because someone inside holds inside information. A meeting request on a restricted name goes to Compliance, not to the broker [S20]

Chaperone and record

A compliance person on a call, pre-cleared topics, a log of who met whom and when. Standard since the expert-network cases [S24]. The FCA suggests documenting discussions [S22]

FIVE RULES FOR AN INTERN ON THE DESK

1. If a PM or analyst comes back from a meeting with a number, a deal or guidance that is not in public releases, tell Compliance and your associate now. Do not forward it, summarise it or "check" it with the broker.
2. Never ask a company or a broker for anything that would be inside information. The desk asks for time, not content.
3. Never tell one pod what another pod requested, holds or asked. Pods compete; the desk's confidentiality is what makes the pooled request possible.
4. Log every meeting: who, with whom, when, which broker, which format. If it is not logged, it did not happen, and the firm cannot prove what a PM did or did not hear.
5. Do not arrange meetings on restricted names, in closed periods, or with anyone Compliance has not cleared. When in doubt, ask before booking, not after.

Basis: the FCA's bulletins and thematic review, Market Watch 75, Regulation FD and the expert-network history [S20][S21][S22][S23][S17][S24]. The rules are the author's synthesis; the desk's own procedures are not public.

Figure 11. The compliance wall. Concepts from the FCA's Primary Market Bulletins 42 and 52, TR15/1 and Market Watch 75, the SEC's Regulation FD release and the expert-network history [S21][S22][S20][S23][S17][S24].

THE QUESTION IT ANSWERS: "WHAT WOULD YOU DO IF AN ANALYST TOLD YOU AFTER A MEETING THAT THE CFO SAID THE QUARTER WAS 'WELL AHEAD'?"

"I would treat it as a possible unlawful disclosure and tell my associate and Compliance immediately, with the meeting details from the log: which company, which broker, who was in the room, when. I would not pass the comment to anyone else, and I would not go back to the broker. The FCA has said analysts are not the public and private calls are dissemination, so this is exactly the situation the record exists for. What happens next is Compliance's decision, not mine."

2.8 The tools, and what each is for

Tool	What the desk uses it for	What you should be able to say
Outlook (email and calendar)	The shared desk inbox where brokers and IR write in; calendar invites for every meeting, with room, dial-in, attendees, time zone and the log reference [S5][S40].	You run a clean inbox with folders or categories, use tentative and confirmed states, and always send invites in the recipient's time zone.
Excel	The request tracker, the conference grid, the attendance log, the consumption report and the broker-vote scorecard. See 2.9.	XLOOKUP, COUNTIFS and SUMIFS, pivot tables, filters, conditional formatting, data validation, remove duplicates. Say which you have used.
PowerPoint	The strategy-session pack: meetings used by sector, broker and format; what is coming; what the desk recommends [S40].	A clean chart from a pivot, one message per slide.
The proprietary portal	Millennium's own system for "forward-looking event marketing and requests": the calendar of events, request capture by pod and priority, the allocation record and the attendance log [S40].	You would learn it first, keep it accurate, and look for where a field or a report could save the team time.
Corporate access platforms (WeConvene, Bloomberg's corporate access functions, Dealogic/A2, ingage)	Where banks publish event calendars, tagged by sector, region and market cap, and take ranked requests [S31][S32][S33][S28].	You know they exist and what they do; you do not claim to have used one unless you have.

CRM / research management (FactSet, Tamale and similar)	Where analysts' meeting notes live at some firms [S28]. At Millennium the pods keep their own; the desk keeps the attendance record.	Awareness only.
Chat (the firm's internal messaging)	Where PMs actually send requests, at speed.	Requests that arrive by chat get copied into the tracker the same hour. The record is the tracker, not the chat.

2.9 Excel, exactly what they may ask

The posting asks for "proficiency in Microsoft Excel, Word and PowerPoint, including the ability to work with and manipulate data" [S40]. Nobody will hand you a laptop in a video interview, but they may ask how you would build something, or which function you would use. Here is the desk's spreadsheet world, from the tracker to the report.

The request tracker: one row per request, the columns that make it work (illustrative)

ID	Received	Pod / PM	Requester	Company (ticker)	Sector	Format	Event / channel	Priority	Status	Slot / date	Compliance	Owner
R-0412	21 Sep 09:12	Pod 118 / ML	analyst	Company A (AAA LN)	Industrials	1x1	Bank X conf, Nov	1 of 3	Submitted to bank	tbc	clear	JC
R-0413	21 Sep 09:40	Pod 042 / RK	PM	Company A (AAA LN)	Industrials	1x1	Bank X conf, Nov	2 of 5	Duplicate: pooled	tbc	clear	JC
R-0414	21 Sep 10:05	Pod 205 / TS	analyst	Company B (BBB FP)	Consumer	IR call	Originated	1 of 1	Confirmed	29 Sep 14:00 BST	clear	JC
R-0415	21 Sep 10:30	Pod 118 / ML	analyst	Company C (CCC GY)	Healthcare	NDR 1x1	Bank Y NDR, Oct	3 of 3	Waitlisted	tbc	closed to 8 Oct	JC

WHY EACH COLUMN EXISTS

ID and Received: the audit trail; who asked first matters when slots are scarce.
Pod / PM and Requester: the client, and who to tell. Priority: the requester's own ranking ("1 of 3") so the desk can pool fairly. Company and Sector: to de-duplicate across pods (rows R-0412 and R-0413 become one request to the bank).
Status: the state machine. Compliance: restricted-list check and closed periods.
Owner: one name per row. Nothing on the desk is owned by "the team".

THE STATUS STATES, IN ORDER

Received → Checked (restricted list, closed period, duplicate) → Pooled (merged with other pods' requests) → Submitted (to bank or to IR) → Allocated / Waitlisted / Declined → Confirmed (invite sent, room booked) → Attended / No-show → Logged.

Every state change gets a timestamp. The consumption report is built from the Attended rows; the broker vote from Attended rows grouped by bank; the PM's "what did I get" answer from Attended plus Declined-with-alternative rows.

Figure 12. An illustrative request tracker. Fields are inferred from the posting's duties, the buy-side workflow guide and the broker-vote whitepaper [S40][S28][S39]; the pod numbers, initials and companies are placeholders, not Millennium data.

From the attendance log to the consumption report: the four Excel moves

1. Clean the log

Remove Duplicates on ID.
Text to Columns on "Company (ticker)".
TRIM and PROPER on names typed by many hands. Dates as real dates, not text.
Data Validation drop-downs on Format, Status and Sector so the next person cannot type "1-on-1" and "1x1" both.

2. Enrich with lookups

XLOOKUP(pod, PodTable, Sector) brings the pod's sector and PM name in.
XLOOKUP(ticker, CompanyTable, MarketCap) flags the sub-E200m names the rules treat differently [S15].
IFERROR(...,"check") so a missing key is visible, not silent.

3. Count and sum

COUNTIFS(Status,"Attended", Broker,"Bank X", Quarter,"Q3")
= meetings consumed from Bank X in Q3.
COUNTIFS by PM = what each team got.
COUNTIFS(Status,"Declined") / total = the fill rate the head of desk watches.
AVERAGEIFS on response time, by owner.

4. Pivot and present

Pivot: rows = Broker, columns = Format, values = count of Attended.
Second pivot: rows = PM, columns = Month.
Slicer on Sector for the strategy session.
Conditional formatting: red for a broker whose no-show rate is above the desk's.
Chart once, paste into PowerPoint.

The one-line answer: "Clean the log, look up the context, count with COUNTIFS, pivot by broker and by PM, then chart the two questions the session asks: what did we use, and what did each team get."

Figure 13. The four Excel moves from log to report. The functions are standard Excel; what the report must show follows from the posting and the broker-vote literature [S40][S39][S29].

They ask	You say
"How comfortable are you in Excel?"	Name three things you have actually done: a lookup between two tables, a pivot summarising a list, a formula with conditions. Then: "I would want to learn the desk's tracker first before changing anything in it."
"How would you find out which broker gave us the most meetings last quarter?"	"From the attendance log: filter Status to Attended and the quarter, then a pivot with brokers as rows and a count of meetings, or a COUNTIFS per broker. Then I would check the same by format, because ten group meetings are not ten one-on-ones."

"Two pods requested the same company. How would your spreadsheet handle it?"	"Both rows stay, because each pod's request is a fact. A status of Pooled links them, and one request goes to the bank. When one seat comes back, the allocation is recorded on one row and the alternative on the other, so the report can show both teams what happened."
"What is the difference between VLOOKUP and XLOOKUP?"	"XLOOKUP looks in any direction, returns a chosen value if nothing matches, and does not break when columns are inserted. VLOOKUP needs the key in the first column and a fixed column number. On a shared tracker that people edit, XLOOKUP is safer."
"How would you make sure the tracker stays clean when five people use it?"	"Drop-downs for every categorical column, one owner per row, dates as dates, an ID that never changes, and a weekly duplicate check. And a rule that a request is not real until it is in the tracker, however it arrived."

2.10 Email and calendar craft: the desk's actual output

Most of what the desk produces is short emails and calendar invites. Interviewers who run the desk notice whether you can write one. The four that matter, with the fields that must be in each.

Four emails and one invite: what must be in each

1. Confirmation to the PM or analyst Subj: CONFIRMED Company A 1x1 12 Nov 10:30 GMT Company, format, host, date and time with zone, venue or dial-in, who from the company attends, who from your side, the request ID. One line on preparation if relevant. Invite attached. No adjectives. Test: could a stranger run the meeting from this email alone?	2. The no, with the alternative Subj: Company A at Bank X: allocation and alternatives What was requested; what the bank gave the firm; the rule in one line; what you have secured instead (group slot, IR call, next conference); how to escalate. Never who got the seat, never why they ranked higher. Test: does the reader have something to do next, not just a no?	3. The broker request Subj: Millennium ranked requests Bank X conf One list, ranked, with format and any flexibility ("1x1 preferred; group acceptable"). Context that helps the allocator without revealing positions. Deadline you need an answer by. Thank them; you will need them next month. Test: is there anything here you would not want the bank to hold?
4. The originated ask to IR Subj: Millennium: request for a call after results Who you are and the firm; what you are asking for (format, window, virtual or in person); why it fits their calendar; a line on the firm's engagement standards (cameras on, prepared analysts). Short. IR teams get hundreds of these. Test: would an IRO know in ten seconds what to do with it?	THE CALENDAR INVITE: THE RECORD'S PUBLIC FACE Title: "Company A (AAA LN) 1x1 Bank X conference R-0412". Time in the attendee's zone, and the other zone in the body when a US PM joins a London meeting. Location: room and floor, or the dial-in, never both left blank. Body: company attendees and titles, host contact, the desk's contact, and any compliance note (chaperoned; closed period ends X). Attendees: the requester only, plus the desk mailbox, so one pod never sees another pod on an invite. Tentative until the bank confirms; a confirmed invite is a promise. Round 1 intelligence: colour-code the calendar and the inbox; it is how the desk keeps a hundred moving items visible at once.	

Figure 14. The desk's written output. Field lists inferred from the posting's duties and the centralised-inbox practice described at Fidelity and AllianceBernstein [S40][S5][S8]; the confidentiality rule follows from the information barriers between pods [S348].

DON'T

Do not copy a PM on a broker email, or a broker on a PM email. Do not put two pods on one invite. Do not write "urgent" in a subject line the desk sends fifty of; write the date instead. Do not reply to an IR team from a personal tone ("hope you're well!!!"); the firm's name is on it.

2.11 The vocabulary and numbers sheet

Term	Meaning	Term	Meaning
Ticker	The short code for a listed share. On Bloomberg the exchange follows: LN London, FP Paris, GY Germany, SM Spain, IM Italy, SW Switzerland, NA Amsterdam, SS Stockholm, US New York.	Broker vote	The buy side's periodic scoring of each bank's services, run quarterly, semi-annually or annually, which decides how the firm rewards them; one-on-one meetings are the most cited item (82%) [S39][S453]. Millennium's is semi-annual for corporate access, on "access quality, meeting quality, and overall effectiveness" [S432].
Market cap	Share price times shares in issue. Rough bands: mega (over £50bn), large (£5bn to £50bn), mid (£500m to £5bn), small (under £500m). The FCA's £200m line matters for access rules [S15].	Consumption	The meetings a team actually attended, by broker, format and company. The desk's

Sector	Companies grouped by business: industrials, consumer, healthcare, financials, TMT (technology, media, telecoms), energy, materials, real estate, utilities. Banks run conferences by sector; pods are organised by sector.	core dataset [S40].
Coverage	The set of companies an analyst follows. A sell-side analyst may cover 15 to 30; a pod analyst "dozens" [S10].	Origination
Guidance	What a company says publicly it expects its numbers to be. Meetings can discuss it; they cannot change it privately.	Meetings the firm secures directly from a company rather than through a bank [S42]. Slow to build; luxury companies reluctant (Round 1).
Consensus	The average of sell-side analysts' forecasts. "Beat" or "miss" is measured against it.	Allocation
EMEA	Europe, the Middle East and Africa. The London desk's scope: time zones from UTC to UTC+4, so Dubai is three hours ahead in autumn and New York five behind.	Two meanings: the centre giving capital to pods; the desk giving won slots to pods.
Long-only	A fund that only buys. Needs "one or two substantive annual one-on-one meetings" per company; hedge funds want more frequent contact [S11].	House broker, Nomad
		UK-specific: the bank retained by a listed company; AIM companies must have a nominated adviser [S36].
		Pass-through
		Millennium's investors pay the firm's costs, including services like this desk, on top of performance fees [S104].
		Chaperone
		A compliance person present on a call to make sure nothing improper is said or received [S24].
		Minor non-monetary benefit
		A small perk a fund may accept free without breaching inducement rules; access to companies under £200m market cap qualifies [S15].

2.12 Markets awareness: the one view to have ready

Operations interviewees at Millennium report a question on "global market conditions" [S263]. You need one view, with a date on it, not a forecast. As of the 17 September sweep: Millennium was flat in August and up 8.2% for the year after a July fall driven by an AI-stock sell-off; Citadel was up 12.1% for the year; the S&P 500 was up about 12% by Hedgeweek's count [S402]. The firm is closing \$22bn of new commitments on 1 October under a five-year withdrawal restriction [S400]. In regulation, nothing has moved on corporate access since 2024, while conduct enforcement is live: the Upper Tribunal upheld the FCA's ban on Crispin Odey on 10 September [S413]. Check Hedgeweek on the morning of the interview for the September numbers and any Millennium item, and check the Bank of England and Federal Reserve decisions of mid-September, which post-date this document's sources.

THE QUESTION IT ANSWERS: "WHAT IS GOING ON IN MARKETS THAT MATTERS FOR THIS DESK?"

"Two things. The multi-managers are having a steady, not spectacular, year: Millennium up about eight per cent to August against a market up more, which is the low-volatility product doing its job, and which makes the fee conversation louder. And the firm is adding capital and teams, with \$22bn closing on 1 October, so the desk's client base is growing. For the desk specifically, the rules on paying for access have not changed since 2024; what has changed is enforcement on conduct, which is the perimeter the desk works inside."

PART 3

The basics question bank: fifty things they can ask that you should simply know

Not the behavioural bank (that is in the Complete Interview Pack) and not the scenarios (Part 11 there). These are knowledge questions: the small facts and mechanics a desk practitioner may check in passing, especially in the team member's hour. Each has a two-sentence answer and the trap. Read the answer, close the page, say it aloud.

3.1 What things are

Question	Answer	Trap
1. What is corporate access?	Arranging contact between the people who run listed companies and the investors who own or might own their shares: one-on-ones, group meetings, conferences, roadshows, site visits [S1]. The regulator's narrower version is the arranging itself, which since 2014 is a service that cannot be bought with trading commission [S180].	Describing it as "networking" or "getting information the market doesn't have".
2. What is the buy side and the sell side?	The buy side manages money and buys securities: hedge funds, pension funds, asset managers. The sell side is the banks and brokers that sell them research, trading and access.	Mixing them up. Millennium is buy side; the brokers you email are sell side.
3. What is a PM, and what is an analyst?	A portfolio manager decides what a book buys and sells and is judged on its profit and loss; an analyst works for a PM studying companies and building models, and attends most of the meetings the desk arranges. At a bank, a research analyst publishes views on companies for investor clients.	Assuming "analyst" means the same thing on both sides.
4. What is a pod?	One PM and a small team running their own slice of the firm's capital under the centre's limits, paid on their own results; Millennium says over 350 [S71]. Pods are independent and compete, which is why a central desk pools their requests.	Quoting the reported loss thresholds as official.
5. What is IR?	Investor relations: the team inside a listed company that manages contact with investors and analysts, runs results, and decides who management meets. The desk's direct counterparty for originated meetings [S5][S7].	Thinking IR reports to the bank. It does not; it hires the bank.
6. What is a one-on-one?	A private meeting, usually 30 to 60 minutes, between management and one investor team. The most requested and most contested format; 82% of buy-siders cite it as the top item in the broker vote [S39].	Saying "1x1" without being able to say why it is scarce (one management team, many investors).
7. What is an NDR?	A non-deal roadshow: management touring investors' offices over a few days with no transaction attached, usually after results; about two-thirds are broker-sponsored in the US evidence [S38].	Confusing it with a deal roadshow (an IPO or placing).

8. What is a broker conference?	A bank-hosted event where dozens of companies present and give one-on-one and group slots that the bank allocates among its investor clients; booking opens four to six weeks out [S30]. For many companies it is most of their investor access [S12].	Thinking the company allocates the slots. The bank does, with the company's priority list.
9. What is a capital markets day?	A company-hosted deep dive on strategy, open to any registered analyst or investor. Public, so low compliance risk, and often the best access a mid-cap gives all year.	Treating it as a private meeting to be allocated.
10. What is the broker vote?	The buy side's periodic scoring of each bank's services, which decides how the firm rewards them; the desk's consumption data feeds it, and at Millennium it is semi-annual for corporate access, scoring "access quality, meeting quality, and overall effectiveness" [S39][S432].	Saying it is how the firm pays for access. It is how it evaluates brokers.
11. What is a consumption report?	A record of which PMs and analysts attended which meetings, from which broker, in which format and sector, over a period. Used in strategy sessions with PMs and in the broker vote [S40] [S29].	Calling it admin. It is compliance evidence, budget attribution and client service in one table.
12. What is "originated" access?	Meetings the firm secures directly from a company's IR team rather than through a bank; at Millennium a sectorised origination team does this [S42]. It takes years to build and some sectors resist (Round 1).	Implying origination replaces brokers. Practitioners say the opposite [S10].
13. What is inside information?	Information that is precise, not public and likely to move the price if it were, under UK MAR Article 7 [S21]. Trading on it or passing it on is a crime, and analysts in a private meeting are "not the public".	Using "MNPI" and "colour" interchangeably. Colour is public information interpreted; inside information is not public.
14. What is a closed period?	The 30 calendar days before a company's interim or year-end report, when its directors may not deal in its shares; a dealing ban, not a gag, though the FCA tells companies to avoid private investor calls then [S447][S449].	Saying meetings are illegal in it. They are not; they are usually declined.
15. What is the difference between research and corporate access?	Research recommends or gives a substantiated view on value; arranging meetings does neither, so it is "a discrete service" under MiFID II [S185]. Research can now be paid for jointly with execution again in the UK; corporate access cannot [S181].	"MiFID II banned corporate access." It changed how it is paid for.

3.2 How things work

Question	Answer	Trap
16. How does a request reach the desk?	By chat, email, the portal, or in person; from a PM or analyst; naming a company, a format and usually a window. The desk's first job is to get it into the tracker with an ID, a priority and an owner, whatever channel it came by.	Treating the chat as the record.
17. What happens between the request and the meeting?	Check (restricted list, closed period, duplicates), pool with other pods' requests, submit to the bank or to IR, receive an allocation or a decline, confirm with an invite and a room, attend, log. Every step gets a timestamp.	Skipping the check step in the answer. It is the step that protects the firm.
18. How does a bank decide who gets a one-on-one?	By the investor's commission relationship, the fit with what the company wants, and the company's own must-see list; banks	Assuming the biggest fund always wins. The

	hold some slots back until the last 48 to 72 hours [S30]. Often one seat per firm (Round 1).	company's list matters too.
19. How does the desk decide who gets the seat internally?	By a rule the losing team could accept as fair: relevance of coverage, a live position or live work, when the team last met the company, the requester's own ranking. The desk's actual criteria are not public; as an intern you would learn them, not set them.	Inventing a rule and defending it.
20. What is a "no with an alternative"?	The desk's standard answer when a seat is lost: the rule in one line, an alternative already secured (group slot, IR call, the next conference), and an escalation path that is not you. It keeps the relationship and the record.	Apologising for the rule, or explaining who got the seat.
21. Why does the desk market events to PMs who have not asked?	Because the desk knows the forward calendar and the pods do not; "internal sales and target marketing" means telling the teams whose names are attending before booking closes [S40]. Requests that arrive after the window are the ones that fail.	Sounding like a spammer. Targeting means the right pods, not all pods.
22. Why do PMs and analysts not book meetings themselves?	Three reasons: they cannot see each other's demand, because pods compete and do not share; a bank will not run 350 separate relationships with one firm; and the firm needs one record of who met whom for compliance and the vote [S348] [S39].	Saying "because they are busy". True but not the mechanism.
23. What does a conference week look like on the desk?	Allocations landing and being re-allocated, invites and rooms for in-office meetings, waitlists moving, PMs arriving at the desk, and the log being kept live so the report at the end is right. Conference season is the peak (Round 1).	Describing it as calm. It is not; the calm is the desk's job, not its state.
24. How does an originated meeting come about?	The desk or the origination team asks a company's IR directly for a call or a meeting in a window that fits the company's calendar, with a clear ask and a clean reputation; the buy side is far more likely to take a meeting arranged directly [S4], and companies increasingly expect it [S35].	Thinking any company will say yes. Relationships take years; luxury companies are reluctant (Round 1).
25. What happens after a meeting?	The attendance is logged; any feedback from the team is noted; the bank may ask for feedback for the company; anything that sounds like inside information goes to Compliance. The row moves to Attended and feeds the report and the vote.	Forgetting the log. The meeting is not finished until it is recorded.
26. How is the consumption report used in a strategy session?	To show a PM what the team used by broker, format and sector; to spot names the team wanted and never got; to plan the next quarter's requests; and to feed the broker vote with evidence rather than memory [S40][S39].	Presenting counts without the second question: was it worth its cost?
27. What is the difference between a 1x1 at a conference and an NDR 1x1?	Same format, different scarcity and logistics: at a conference the bank owns a grid of slots for many companies; on an NDR one company visits a few investors, often in the investor's office, so the desk books the room and the attendees.	Treating them as the same allocation problem.
28. What does "one seat per firm" mean for you?	The broker gives Millennium one place in a slot regardless of how many pods asked, so the hard allocation is internal. It is why the desk needs a rule, a record and an alternative.	Blaming the broker for the internal problem.
29. When are companies hardest to get?	In closed and quiet periods before results, around AGMs, and in the July lull; easiest just after results, "the highest-demand window for investor access in the quarter", and around conferences and capital markets days [S441][S446][S450].	Asking for a CFO in the last week of a quarter.

30. Why does the desk care about time zones?	EMEA runs from London to Dubai; some pods that cover European names sit in New York; company management may be in Zurich. Every invite carries the right zone, and a wrong one is a missed meeting the desk's name is on.	Not knowing that New York is five hours behind London in autumn.
--	---	--

3.3 Rules and money

Question	Answer	Trap
31. Why can't access be paid for with commission?	Because the FCA found in 2012 that no firm could justify it as research and banned it from 2 June 2014; MiFID II applied the same logic across the EU from 2018 [S180][S185]. The end investor was paying for something the fund manager consumed.	Getting the year wrong. 2014 UK, 2018 EU.
32. What changed in 2024?	The FCA allowed research to be paid for jointly with execution again from 1 August 2024, and for funds from 9 May 2025, but ruled corporate access out of scope [S181][S188]. The EU followed from June 2026 [S199].	Saying the 2024 change freed up access. It did not touch it.
33. So how does Millennium pay for access now?	From its own resources, as a firm that passes its costs through to investors [S104]; by accepting it free where the rules allow, such as companies under £200m [S15]; and by going direct. The New York role "advises on broker votes, commission allocation, and research budgets" [S25].	Claiming to know the desk's budget. It is not public.
34. What is a minor non-monetary benefit?	A small perk a firm may accept without breaching inducement rules; the FCA lists corporate access for companies under £200m market cap [S15][S190].	Thinking the exemption is about the meeting, not the company's size.
35. What is MAR?	The Market Abuse Regulation, UK and EU: it defines inside information, bans insider dealing and unlawful disclosure, and sets the closed period [S21][S22]. It binds the PM who receives information as much as the executive who gives it.	Assuming the rules only bind the company.
36. What is Regulation FD?	The US rule from 2000: if a company tells investors something material and non-public, it must tell everyone, at once if intentional and within a day if not [S17]. It binds US issuers; the fund's risk is insider-trading law.	Applying it to UK companies.
37. What was the Einhorn case?	In 2009 a broker-arranged call told David Einhorn that Punch Taverns was close to an equity raise; he had declined to be wall-crossed, sold, and the FSA fined him and Greenlight £7.3m in 2012 [S19]. Declining the NDA was no defence.	Telling it as a story about a villain. Tell it as a story about a process.
38. What is wall-crossing?	Being formally given inside information, for example about a placing, after agreeing not to trade; handled by a gatekeeper independent of the PMs [S23]. Not something the desk does or decides.	Offering to "handle" a wall-crossing request yourself.
39. What is a restricted list?	Names the firm may not trade or discuss because someone inside holds inside information. A meeting request on a restricted name goes to Compliance, not to a broker [S20].	Not knowing it exists.
40. Why does the desk log meetings?	Four reasons: to evidence what a PM did or did not hear; to prove access was not paid for with commission or subsidised by research; to attribute consumption for the vote; and because the FCA suggests documenting discussions [S20][S181][S39][S22].	Giving one reason.

3.4 Tools, data and the role

Question	Answer	Trap
41. What does the proprietary portal do?	Holds the forward calendar of broker and originated events, captures requests by pod and priority, records allocations and attendance, and produces the reports [S40]. The intern "updates and maintains" it.	Claiming to know its screens. Say what it must do.
42. What platforms do banks use to publish events?	Corporate access platforms such as WeConvene, Bloomberg's functions built with it, and aggregators that grew from A2 and ingage, tagged by sector, region and market cap [S31][S33][S28].	Pretending to have used one.
43. What would you put in a request tracker?	ID, received time, pod and PM, requester, company and ticker, sector, format, event or channel, priority, status, slot and date, compliance flag, owner. One row per request; duplicates linked, not deleted.	Forgetting the owner column.
44. Which Excel functions would you use most?	XLOOKUP to bring pod and company context onto the log; COUNTIFS and SUMIFS to count meetings by broker, PM and quarter; pivot tables for the report; data validation and remove duplicates to keep it clean.	Listing functions you cannot explain.
45. How would you present consumption to a PM?	One slide: what the team used by broker and format this quarter, what it asked for and did not get, and what is coming next quarter. Numbers from the pivot, one message per slide.	A twenty-row table on a slide.
46. What does "increase efficiencies" mean on this desk?	Removing steps that do not add to the record or the service: a template that captures a request completely the first time, a drop-down that stops mistyped formats, a report that builds itself from the log [S40]. Small, measured, after learning why the current way exists.	Proposing to rebuild the portal in week one.
47. What does the desk sit inside?	Execution Services, within Platform Solutions and Execution Management, the group that resources investment teams across access, data, research and technology [S42]. Not inside any pod.	Saying "the front office" or "the investment team".
48. Who are the desk's clients, and what do they owe it?	Portfolio managers and analysts across EMEA [S40]. Nothing: they have no obligation to use the desk, which is why service quality and marketing matter.	Assuming captive clients.
49. What does the intern actually do, per the posting?	"Handling various databases and email correspondence, implementing internal and external communication channels and processes, coordinating internal meetings, preparing reports, and working to increase efficiencies" [S40].	Not being able to quote the posting's own sentence.
50. What would a good week ten look like?	You own a slice of the tracker and the invites without supervision; brokers reply to you by name; the consumption report for one strategy session was yours; and one process on the desk is measurably faster because of something you built after asking why it worked the old way.	Describing outcomes the desk does not control.

HOW TO USE THIS PART

Cover the answer column and say each answer aloud in your own words. If you can do fifty in under thirty minutes without looking, the team member's hour holds no knowledge trap for you, and you can spend it showing judgement instead.

PART 4

The mindset: how people who are good at this think

Knowledge gets you through the questions. Mindset gets you the offer and then gets you through the summer. This part sets out the seven habits of mind the sources and the Round 1 interviewers describe, with the sentence each turns into, the way each shows up in an interview answer, and a thirty-sixty-ninety plan for the internship itself.

4.1 Where the mindset comes from

Three kinds of evidence point the same way. The posting asks for "a strong sense of prioritization and urgency", "strong attention to detail, with the ability to prioritize and execute in a fast-paced, changing environment", a "collaborative approach", and the ability to "communicate confidently with stakeholders at all levels" [S40]. Practitioners who run such desks describe the team as "a conduit" that "sits in the middle and directs people to where they need to be", say their job "isn't to replace brokers", and turn requests down with "no, not right now. And here's why" [S7][S8][S10]. Millennium's New York coordinator posting asks for "superior organizational skills, while understanding the necessity for confidentiality and professionalism at all times" and "remaining calm under pressure" [S431]; an IR adviser's 2026 survey of the Street concluded that "volume does not equal clarity" and that good access is "defined less by calendar density and more by intentional structure" [S456]. And the two people who interviewed you named the hardest part of the job as saying no to PMs and said organisation is half of it. Put together, the mindset has seven parts.

The seven habits of mind, and the sentence each turns into

Figure 15. The seven habits. Synthesised from the posting's requirements, the AllianceBernstein and multi-manager practitioner interviews, the FCA's good-practice findings and the Round 1 debrief [S40][S7][S8][S10][S20]. The sentences are the author's.

4.2 Service: the client owes you nothing

The desk's clients are inside the firm, and they have no obligation to use it. Fidelity's corporate access head described the team as "a complementary resource" giving IR teams "an entry point"; the AllianceBernstein head called hers "a conduit" [S5][S7]. What that means in practice is that the desk is judged on responsiveness and reliability, not on outcomes it does not control. You cannot make a CFO available. You can reply within the hour, say what you will do and by when, and do it.

HOW IT SOUNDS

"I'd reply within the hour so they know it's in hand, and I'd ask the two things that decide what I do next: what they need to cover, and whether a group call would do if a one-on-one isn't available. Then I'd say when I'll come back to them, and come back then, even if the answer is 'not yet'."

DON'T

Do not promise the meeting. Promise the process. A promise you cannot keep is worse than a clear "here's what I'll do".

4.3 The record: the admin is the substance

You said in Round 1 that you understood the "admin" was the substance. Here is why that is true and not a platitude. The log is the only evidence that a PM did not receive inside information on a given date [S20][S22]. It is the only evidence that access was not paid for with commission [S181]. It is the dataset the broker vote runs on [S39]. And it is the thing that makes a no credible, because the PM can see what the desk did deliver. A desk with a bad record is a desk that cannot defend a single decision. Ollie's "organisation is half the job" and the desk's colour-coding are this habit made visible.

HOW IT SOUNDS

"Every request gets an ID and an owner the hour it arrives, whatever channel it came by. The chat is not the record; the tracker is. At the end of the week I can tell any PM what they asked for, what they got, and what I got them instead, from the log, not from memory."

4.4 Fairness and discretion: pods compete, and the desk is the only place that sees all of them

Millennium's teams are deliberately independent; they do not share ideas or positions, and the firm keeps information barriers between them [S343][S348]. The desk sees every team's requests at once. That is the whole reason it exists and also its biggest responsibility. Two rules follow. Allocate by a rule that the losing team could accept as fair, which means a rule you can state in one line and apply the same way next week. And never let one team learn what another asked for, holds or attends. A careless "another team already has that slot" tells a PM which company a rival is working on.

HOW IT SOUNDS

"One seat came back and three teams asked. It goes on the desk's rule, which I'd apply the same way every time so nobody has to wonder. The two teams that missed get an alternative I've already secured and a route to escalate that isn't me. And none of the three hears who else asked."

4.5 Calm: the order in which things win

The composure set in the Complete Interview Pack gives the protocol: steady, sort, act, close. The mindset underneath it is an order of priorities that does not move when someone shouts. Rules and the firm's name come first: inside information, restricted names, how access is paid for, confidentiality. Fair service to every team comes second. The process and the record come third. Speed comes fourth, and it is real, but only inside the first three. A PM's urgency is a fact about the PM; the priority order is a fact about the desk.

The escalation ladder: what you decide, what you flag, what you hand over

DECIDE YOURSELF, THEN TELL Reversible, inside the rule, no money, no compliance question. Examples: which alternative to offer; the order to work the inbox; a room change; chasing a broker; fixing a wrong date you spotted. Do it, log it, mention it at the next check-in. "I've moved it to the 9th floor and told both sides."	FLAG NOW, THEN ACT ON THE ANSWER Anything that changes an allocation, commits the firm to a broker or a company, or a PM asking you to bend a rule. Examples: a senior PM wants the seat re-opened; a broker offers something unusual; a request in a closed period the PM insists on. Tell the associate with your recommendation, not just the problem. "I'd hold the allocation; your call."	HAND OVER IMMEDIATELY Anything that could be inside information, a restricted name, a wall-crossing, a market sounding, a PM asking you to skip Compliance, a company executive who said too much. Also: a mistake that has already reached a PM or a broker. To Compliance and your associate, in that order, with the log entry. Then stop and wait.
---	---	--

The three columns are the author's synthesis of the FCA's gatekeeper guidance, the good-practice findings in TR15/1 and the posting's "prioritization and urgency" [S23][S20][S40].

Figure 16. The escalation ladder. Knowing which column a problem sits in is most of what "judgement" means for an intern.

HOW IT SOUNDS WHEN TWO PMS ARE AT THE DESK AT ONCE

"I'd take a breath and say what I'm going to do before doing it. Neither of these is a compliance question, so the thing that decides it is fairness: I don't rank two teams by who is standing closer. I'd take both requests down with their priorities, tell each what I'll do and when, and if there's only one seat I'd apply the rule and attach the alternative. If either wants it looked at again I'll take it to the associate now. Then I'd log both."

4.6 Learn the rule before changing it

The posting wants you to "work to increase efficiencies" [S40], and the Millennium executive interview on hiring praises self-initiated fixes to things "nobody would ever touch because they were all afraid of breaking it" [S277]. But the desk's processes exist for reasons that are often invisible from outside: a field that looks redundant is a compliance record; a step that looks slow is where duplicates are caught. The FCA's thematic review praised firms whose controls were designed around how information actually flows, and criticised those that assumed someone else was checking [S20]. The habit is to ask why, then improve one thing, then measure it. Your Round 1 story about categorising hundreds of emails and introducing an AI workflow is this habit; tell it with the number.

HOW IT SOUNDS

"In the first fortnight I'd change nothing and write down every step and why it exists, by asking. Then I'd pick the one thing that costs the most time and does not add to the record or the service, fix it in a way the team can undo, and measure it. Last summer that was a categorisation system that turned hundreds of emails a day into a list nothing fell out of."

4.7 Relationships are the asset

The desk has three sets of counterparties and needs all of them next quarter. Brokers allocate scarce slots and remember who was easy to deal with; IR teams decide who meets management and remember which funds' analysts were prepared and polite; PMs decide whether to use the desk at all. Hedge funds historically

had "a negative perception among corporate leadership" to overcome [s9], and a multi-manager corporate access head sets standards for how the firm's analysts behave in meetings, down to "cameras on" [s10]. The culture of the desk you met is polite (Round 1). Politeness here is not softness; it is the interest rate on a relationship you will draw on.

HOW IT SOUNDS

"With brokers, I'd be the person whose requests are clean and ranked and whose thank-you arrives the same day, because in November I'll be asking them for a seat they don't have to give. With IR teams, I'd be specific and brief. With PMs, I'd be the same person on the day I say no as on the day I say yes."

4.8 Ownership: close every loop

Nothing on the desk is owned by "the team". Every request has one owner, every promise has a time, and every day ends with a list of what is done, what is pending and what is blocked. A head of desk can only run a desk of people who report state honestly; a hidden mistake costs more than a visible one. The habit shows in small things: a status column that is always current, a reply that says "not yet, and here is when", a handover note before you leave at six that someone in New York can act on.

Thirty, sixty, ninety: what "good" looks like across a ten-week internship

DAYS 1 TO 30: LEARN THE MACHINE

Read every field in the portal and the tracker and know why it exists. Shadow the inbox. Learn the desk's allocation rule and the compliance flags.

Own: calendar invites and room bookings for EMEA meetings; the daily tidy of the tracker.

Measure: zero invite errors; every request in the tracker within the hour.

Ask one question a day you could not have answered from the pack.

DAYS 31 TO 60: RUN A SLICE

Own one conference end to end under supervision: marketing to pods, request collection, the ranked list to the bank, internal allocation, the alternatives, the log. Draft the no-with-alternative emails.

Build one consumption report for a strategy session from the log, with the pivot and one slide.

Measure: fill rate, response time, and one PM who says the desk got them something they would not have got alone.

DAYS 61 TO 90: LEAVE SOMETHING BEHIND

Fix the one process you identified in month one, in a way the team can undo, and measure it: minutes saved per request, errors removed, a report that now builds itself.

Write the handover: how the slice you ran works, what is pending, what you would do next.

Measure: a broker who replies to you by name; a head of desk who can say what you changed in one sentence. That is the return offer.

The firm's stated aim is to hire its analyst class from the internship; programme length is about ten weeks by third-party accounts [S261][S265]. The plan is the author's; the desk's own onboarding is not public.

Figure 17. A thirty-sixty-ninety plan for the seat, built from the posting's duties and the firm's stated conversion aim [S40][S261]. Useful in the interview as the answer to "what would you want to have done by the end of the summer?"

4.9 Good intern, great intern

Situation	A good intern	A great intern
A request arrives by chat at 16:50	Replies, forwards to the broker, tells the analyst it is done.	Replies within minutes, puts it in the tracker with an ID, checks the closed period and the restricted list, asks the two questions that shape the request, and tells the analyst when the answer will come.
One seat, three teams	Gives it to the first requester and apologises to the others.	Applies the desk's rule, records the allocation, sends each losing team an alternative already secured and an escalation route, and tells nobody who else asked.
A wrong date in the portal	Fixes it.	Fixes it, checks who requested against the wrong date, tells them, and looks for the pattern: did this broker's other entries come in wrong too?

An analyst mentions the CFO "hinted" at the quarter	Thinks it is interesting.	Tells the associate and Compliance now with the log entry, forwards nothing, and does not go back to the broker.
A slow process	Rebuilds it in week two.	Asks why it exists, finds the compliance reason for half of it, fixes the other half in a way the team can undo, and measures the saving.
Six o'clock in conference season	Goes home with things in their head.	Leaves a done-pending-blocked note in the shared folder that a colleague in New York could act on, and a colour-coded calendar for the morning.
A senior PM says the rule is stupid	Changes the allocation.	Says he may have a point, will raise it with the head of desk, and does not change today's allocation.

4.10 Ten sentences to carry into both hours

1. "The desk is the only place where the demand of hundreds of independent, competing teams becomes visible; it turns that into one voice to the market and one fair allocation back."
2. "A no from the desk is an allocation with an alternative attached."
3. "The admin is the substance: the log is the compliance evidence, the budget attribution and the reason the no is credible."
4. "I promise the process, not the meeting."
5. "Rules first, fairness second, the record third, speed fourth. Speed is real, but only inside the first three."
6. "Never tell one team what another asked for."
7. "I'd learn the desk's rule before I'd change anything, and then I'd change one thing and measure it."
8. "Brokers and IR teams are people I will need next quarter."
9. "One owner per row. Done, pending, blocked."
10. "Judgement is not information. A meeting adds how management talks about what is public; it must never add what is not."

A SELF-TEST BEFORE ROUND 2

For each of the seven habits, find one thing you have actually done that shows it, with a number or a name in it. If you cannot find one for a habit, say so in the interview if asked, and say how you would build it. A desk that hires for judgement can tell the difference between a habit and a slogan.

PART 5

Sources

Every [Sxx] marker above resolves here. IDs are shared with the Complete Interview Pack and the earlier guides. Sources accessed between 4 and 21 September 2026 as recorded in each row.

"Fetched" means the full text was read; "Snippet" means only a search excerpt was seen;

"Paywalled" means the headline was recorded and nothing was inferred from unread text.
