

What Happens After You Submit

Three applications, one candidate record — how the HireVue actually works across them, who reviews it, and how selection is made

Your position: **2 submitted** (AM Client Solutions 171037, AM Change Management 171031), **1 planned** (Private Wealth Management 170879), **1 slot in reserve** · Labels: **OFFICIAL** Goldman's own words · **LIKELY** credible/standard practice · **UNKNOWN** genuinely not public · **MY MODEL** labelled inference

The short version. Your three applications travel as **three separate races on three separate clocks**, each run by a different recruiting team against a different requisition. What they share is *you*: one candidate record, one CV, one email address, one set of answers behind them.

On your actual question — one HireVue or three? Goldman does not publish this, so nobody outside can promise you an answer. What is certain is the architecture below. What is most likely, and why, is in section 3 — along with the one signal that will tell you definitively within days of the first invite landing.

1. The architecture: what is shared and what is separate

The single most important line Goldman publishes on this **OFFICIAL** is: “you may hear back regarding different roles at different times.” That one sentence confirms the whole picture — separate queues, separate clocks, separate decisions. There is no central committee weighing your three applications against each other.

2. Does one HireVue cover all three?

What is certain

- The invite is **pushed by email** when an application is selected — you cannot request it, and there is no portal to unlock. **OFFICIAL**
- Format: **asynchronous, recorded, roughly 30 minutes**, a handful of questions with ~30 seconds to prepare and up to ~2 minutes to answer each. **OFFICIAL**
- Completion windows are **short** — commonly 24–48 hours, sometimes up to a week. **LIKELY**

What is genuinely unknown — and my honest model

UNKNOWN Goldman has never published whether one recording can satisfy several applications. Anyone who tells you definitively is guessing.

My model, and the reasoning **MY MODEL**: for EMEA campus at Goldman's volume — 300,000+ applications firmwide — running genuinely bespoke video interviews per requisition would be operationally impossible. The overwhelmingly likely design is a **common campus HireVue**: largely behavioural and motivational questions, with some division-flavoured

variation (front-office roles get lighter commercial questions; Engineering gets HackerRank instead). Under that design, the two realistic possibilities are:

Possibility	What you would observe
A. One recording, reused — you complete it once and each team reviews the same video against its own role	A single invite email, then all three applications progress or stall without further video requests
B. Separate invites, similar questions — each requisition triggers its own invite, but the question set is near-identical	Two or three invite emails arriving days or weeks apart, each naming a different role

The signal that resolves it for you. Read the first invite email carefully. It will either reference one specific requisition, or refer generically to "your application to Goldman Sachs." And if a second invite arrives for a different role, you have your answer immediately. Either way, the preparation is identical — which is why this uncertainty should not cost you a minute of worry.

3. Who actually reviews it

Campus Recruiting (HCM)
Runs the process, sends invites, manages the pipeline, and does the first-pass review at volume. Your first reader is almost certainly here, not on the desk.

The division's own people
Analysts, associates and VPs from the actual team. They review shortlists and own the final-round decision — and their judgement is what ultimately hires you.

Automated scoring?
Coaching sites assert an AI scoring model ranks HireVue answers.
Goldman has never confirmed it.
Treat as unproven.

The AI question, answered honestly **DISPUTED**: several prep companies claim Goldman runs an AI model over HireVue transcripts weighting "structured, specific answers." Goldman does not confirm this, and those firms sell interview coaching. What Goldman *has* said publicly is the opposite-facing point: in 2025 it warned EMEA students **not** to use ChatGPT to prepare or answer, prohibits external tools during the process, and a spokesperson stated the firm wants applicants "*in their own voice.*" **OFFICIAL**

Why this doesn't change your preparation: a model and a tired human reward exactly the same things — structure, specificity, and a real person talking. Write for both and the question becomes irrelevant.

4. How selection actually plays out across three applications

Scenario 1 — staggered invites. CSG invites you in October, Change Management in November, PWM in December. Entirely normal: separate teams, separate rolling queues. Silence from one is *not* a rejection from it.

Scenario 2 — one progresses, others don't. Very common, and it carries no penalty elsewhere. **Your friend is the proof:** rejected by the Middle East desk, then recalled to interview for UK & Ireland. A no from one team does not travel.

Scenario 3 — two teams want you at final round. A good problem. Recruiting typically coordinates so you are not competing against yourself, and you may be asked to state a preference. Answer honestly — a manufactured preference collapses under one follow-up question.

Scenario 4 — the routing move. A team that likes you but has no seat may pass you to a sister team. This is exactly what happened to your friend, and it is an argument for keeping your motivation statements *compatible* rather than mutually contradictory.

The one real risk in running three applications

It is not the number — four is explicitly permitted. It is **inconsistency**. Your CV, three motivation statements and HireVue answers all hang off one candidate record, and evaluators cross-check downstream. If your CSG statement says relationships are what you want to build, your Change Management statement says systems are, and your PWM

statement says families are, a reader who opens all three sees someone reverse-engineering whatever each desk wants to hear.

The fix is a shared spine. You have one genuinely: *you understand how an asset manager delivers for its clients — you have covered them, operated for them, and built the systems behind them.* Each statement emphasises a different face of that one thing. That survives cross-checking; three unrelated pitches do not.

5. What to do, practically

1. **Prepare once, thoroughly.** Whether it is one recording or three, the content is the same. Build answers for: why Goldman, why this division, a teamwork example, a failure or setback, working under pressure, and a light commercial question. Your BAE and One Goldman Sachs material covers the firm questions completely.
2. **Have a distinct "why this role" answer for each of the three** — the only part that genuinely differs. CSG: owning the whole client lifecycle. Change Management: the DDQ portal and how firms actually change. PWM: why individuals and families, honestly argued.
3. **Check that inbox daily, spam included.** The window can be 24–48 hours and there is no rescheduling culture. A missed invite is the most avoidable rejection there is.
4. **Be ready before the first invite lands.** It can arrive within days of submitting — do not treat submission as the moment to start preparing.
5. **Record in your own voice.** Goldman is explicitly screening for canned, AI-shaped answers. Your friend answered like a human and works there now.
6. **Treat silence as silence.** Rolling queues move at different speeds; no news from one team says nothing about the others.

Sources. "You may hear back regarding different roles at different times", the video-interview description, the 2–5 campus interviews, and the ChatGPT warning with the "own voice" quote: Goldman's own careers materials and 2025 reporting (Fortune, eFinancialCareers) **OFFICIAL**. Application architecture (separate requisitions, shared candidate record, per-requisition selection processes): Oracle Recruiting Cloud product documentation plus the live requisition data pulled for this project **LIKELY**. Whether one HireVue recording serves multiple applications, and whether automated scoring is in use, are **not public** — those sections are labelled as my reasoning. The routing evidence is your friend's first-hand account. Verify anything decision-critical against the invite email you receive.
