

LSEG

Business Management Summer Internship 2027

The role decoded, the team mapped, the firm from the inside, the industry from zero, the rules, the news, the process, a scenario playbook and the case for "why LSEG", built from mechanism.

London Stock Exchange · LSEG FX · Tradeweb · Turquoise · LCH

Role: Business Management Summer Internship, requisition R0123386, 5 Canada Square, London. Division: Markets. Nine weeks from June 2027.

Application closes 30 October 2026 (reviewed on a rolling basis). Process: application, then an untimed Immersive Online Assessment, then a strengths-based video interview, then a half-day virtual assessment centre.

Built only from public sources, each marked [Sxx] and listed in Part 15. Confidence is tagged Confirmed, Reported or Inferred. Not affiliated with or endorsed by LSEG.

What could not be established	252
Where sources disagreed	254

How the research was done	256
Re-check before each stage	257
Final self-check	258

PART 0

Start here

How to use the pack at each stage of the process, and the ten minutes to read if you only have ten minutes.

What this pack is

This is a research pack for one application: the LSEG Business Management Summer Internship 2027, requisition R0123386, based at 5 Canada Square in London ^[S1]. It covers the role, the team, the firm, its rivals, the industry, the rules that shape it, the news, the recruitment process, and how to hold your ground in a scenario question. Everything comes from public sources read on or before 5 October 2026. Every non-obvious fact carries a marker such as ^[S72], which you can look up in the source table in Part 15.

The pack separates three kinds of claim. You should keep them separate when you speak, too.

CONFIRMED

A primary source (LSEG's own reports, a regulator) or two credible outlets. Say it as fact.

REPORTED

One credible source, such as trade press. Say "it was reported that".

INFERRED

The author's reasoning from the evidence. Say "my reading is", and be ready to be told you are wrong.

INPUTS THAT WERE NOT SUPPLIED

The brief left the candidate fields blank: no degree, year, CV, prior knowledge score, interview date or interviewer names. The pack therefore assumes a penultimate-year undergraduate with little finance background (about 3 out of 10). It treats the next step as the application (closing 30 October 2026, reviewed on a rolling basis ^[S1]), and it builds the CV grill in Part 11 as a method with placeholder examples. Once you have an interview date or a name, add them and re-read Parts 9 to 11.

How to use it at each stage

Stage	What it tests	Read	Time
Now: the application (closes 30 Oct 2026, rolling)	Whether you meet the bar and can explain why LSEG, briefly and specifically.	Part 0, Part 1 (the role decoded), Part 12 (why LSEG, 30-second version). Apply early: LSEG reviews applications as they arrive and may close early ^[S1] .	2 hours
Immersive Online Assessment (untimed)	Judgement in realistic work situations. The prep hub LSEG links to is Cappfinity's ^[S264, S265] INFERRED	Part 11 (priority order, scenario cards), Part 1 (what the work looks like), Part 9 (the stage explained).	3 hours
Strengths video interview	What energises you, how you learn, and what draws you to LSEG ^[S264]	Part 9 (question bank), Part 12 (all three lengths), Part 7 (news), Part 8 (your opinions).	6 hours

Stage	What it tests	Read	Time
Half-day virtual assessment centre	Group work, analysis of a case pack, communication, values.	Parts 2 to 6 (the firm and the industry in depth), Part 11 (frame-holding), Part 13 (cheat sheet), Part 10 (who assesses).	8 to 10 hours
The morning of any stage	Calm and recall.	Part 13 (cheat sheet) and the ten-minute version below. Check Part 7's diary for anything new since 5 October.	20 minutes

The callout boxes

KEY TERM

A word you will hear, defined in plain English. Every key term is also in the glossary in Part 14.

SAY THIS IN THE INTERVIEW

A line you can adapt. These are scaffolds, so put them in your own words.

DON'T SAY THIS

A common answer that sounds weak, or is wrong, and why.

YOUR OPINION GOES HERE

A live question, both sides of it, and a position you could defend.

SOURCE UNCERTAIN

The evidence is thin or conflicting. Do not state these as fact.

WHY THIS MATTERS

The link from a fact to your seat.

FIGURE 1

The whole pack on one page: the industry, the firm, the division and your seat

1. THE INDUSTRY: THE LIFE OF A TRADE (PART 5)

2. THE FIRM: LSEG'S FOUR DIVISIONS (PARTS 2 TO 4)

Group income FY2025 £8,986m, +7.1% organic; 73% recurring; 28,516 people [S72, S74]

3. THE DIVISION: WHERE AN INTERN CAN LAND (PART 1)

Run by Daniel Maguire, Group Head of LSEG Markets and CEO of LCH Group [S306]. Markets was formed 1 Jan 2025 [S22].

Orange outline = part of the Markets division. Placement A leans on the LSE, B on LSEG FX, D on LCH; C draws on every unit.

4. YOUR SEAT: THE FOUR PLACEMENTS IN THE JOB DESCRIPTION

Placement-to-team mapping uses live LSEG job postings [S1 to S57]. The bullets are a template shared across postings; you are matched to a team during recruitment. **Inferred**

5. WHAT TIES IT TOGETHER: THE WHY-LSEG MECHANISM (PART 12)

6. THE TENSIONS YOU SHOULD BE ABLE TO DISCUSS (PARTS 7 AND 8)

Read it top to bottom. The industry has five steps. LSEG earns money at every one of them, through four divisions. Markets is the division that runs the venues and clearing houses, and the four placements in the job description sit inside it. The bottom two rows are what turn facts into an answer: the mechanism behind LSEG's structure, and the arguments you should hold a view on.

Sources: LSEG FY2025 preliminary results [S72], Annual Report 2025 [S74], H1 2026 interim report [S70] and results call [S71]; FTSE Russell ETF AUM at 30 Jun 2026 [S70]; LCH open-access articles [S305]; FXall client count [S340]; London IPO data for 2025 [S192]; share price data [S90]. The mapping of placements to teams is the author's inference from LSEG job postings.

The 10-minute emergency version

If you read nothing else, read this page and the cheat sheet in Part 13.

1. What the job is, in two sentences

You spend nine weeks in one team inside LSEG's Markets division: an FX customer team, a primary markets research team, a business intelligence and strategy team, or a risk team ^[S1]. LSEG uses the same four bullets in several postings, so treat them as a menu. Your strengths and interests decide where you land ^[S1, S5] **CONFIRMED**

2. Ten facts to have ready

Fact	Number	Source
LSEG total income, FY2025 (excluding pass-through recoveries)	£8,986m, up 7.1% organic	[S72]
H1 2026 total income	£4,799m, up 8.4% organic; 2026 guidance raised to 7.0 to 7.5%	[S70]
Markets division, H1 2026	£1,920m, up 11.9%: the fastest-growing division, about 40% of group revenue	[S24, S71]
Recurring share of revenue, 2025	73%	[S74]
SwapClear notional cleared, 2025	\$1,941 trillion, a record	[S72]
LSEG FX average daily volume, H1 2026	\$561bn a day	[S70]
FXall clients	2,400+ institutions, 200+ liquidity providers	[S340]
Ownership of the pieces	LCH about 94% (above 95% after the July 2026 deal); Tradeweb 50.9%; Turquoise 84.2%	[S23, S70, S74, S300]
People	28,516 at end 2025 (the job ad's "25,000" is out of date)	[S74]
Global FX market	\$9.6 trillion a day; UK share 37.8%, the largest centre	[S162, S163]

3. Why LSEG, in 30 seconds

SAY THIS IN THE INTERVIEW

"What draws me to LSEG is how it is built. It owns venues like the London Stock Exchange, Tradeweb and FXall. But its clearing house, LCH, has open access written into its rules: it must clear on fair terms even for trades from rival venues, and banks still sit on its risk committee. That is why the market trusts it with over 90% of cleared interest rate swaps. Business management works where those businesses join, and that is where I want to learn." ^[S303, S305]

4. The one regulatory point per placement

- **FX customers:** the FX Global Code, updated December 2024, sets the conduct standard. Never share one client's flow with another ^[S343].
- **Debt listings research:** the new prospectus regime (POATRs) has been in force since 19 January 2026. Issuer pipelines are confidential and can be inside information under UK MAR ^[S151, S348].
- **BI and strategy:** T+1 settlement in the UK and EU from 11 October 2027 changes post-trade workloads. LSE 24 launches in H1 2027 ^[S158, S24].

- **Risk:** LCH sets initial margin at 99.7% confidence. Every member default it has handled stayed within the defaulter's margin ^[S93, S351, S354].

5. The priority order when good things collide

Rules and market integrity first, then fair treatment of every customer, then the process and the record, then speed. The sentence that holds every frame: *"I'd keep it within the rules, treat every customer the same, follow and record the process, and then move as fast as I possibly can inside those lines."* Part 11 explains why this order fits LSEG in particular.

6. The honest weak spots, so nothing surprises you

The share price fell about 41% from February 2025 to February 2026. Much of that came on fears that AI tools would erode LSEG's data business, and the activist fund Elliott built a stake ^[S90, S88]. London's listings market is still small next to New York's ^[S192]. Open access let Euronext move its clearing away ^[S301]. You can be clear-eyed about all three and still want to join. Part 8 shows how.

7. One question to ask

SAY THIS IN THE INTERVIEW

"LSEG says much of FXall's functionality now sits inside Workspace, with Tradeweb next. From the Markets side, how do you measure whether clients have actually moved their workflow?" ^[S301, S302]

PART 1

The role, decoded, and the team mapped

What the posting really says, what a day in each of the four seats looks like, who sits around you in the Markets division, and the lines you must never cross.

This part does three jobs. First, it reads the job description (JD) line by line and translates each sentence into concrete work at a named LSEG unit. Second, it shows the seat in motion: a worked day for each of the four possible placements, how a request travels through the team, and what happens when two people want your time at once. Third, it maps the people and teams around the role, using only names and facts that appear in public sources, with every box tagged by how sure we are.

R0123386
Workday requisition; Division: Markets [S2]

30 Oct
Close date 2026; rolling, may close early [S1, S2]

9 weeks
From June 2027, 5 Canada Square, hybrid 3 days in office [S1, S2]

1 of 4
Placements; you are matched to one during recruitment [S2, S9]

The posting in one page

Fact	What the posting says	Source and note
Title	Business Management Summer Internship. The URL slug says "Business-Management-and-Sales-Summer-Internship".	[S1, S2] The "and Sales" slug hints at the client-facing FX seat. INFERRED
Requisition	R0123386, GBR-London-5 Canada Square, full time	[S1, S2] CONFIRMED
Posted	Workday's own record: 21 Sep 2026 ("Posted 14 Days Ago" on 5 Oct). The candidate's copy said "6 days ago", about 29 Sep.	[S1, S2] Trust the Workday date. The clock started on 21 Sep. CONFIRMED
Closes	30 Oct 2026, "rolling basis, may close early"	[S1, S2] Rolling means early applicants are read first. INFERRED
Division	Workday tag "Division: Markets". The careers website still says "Capital Markets and Post Trade".	[S2, S37] Old names; see the key term below. CONFIRMED
Career stage	Associate	[S1, S2] Workday's entry rung. CONFIRMED
Length and start	9 weeks, June 2027	[S1, S2, S37] CONFIRMED
Eligibility	Penultimate-year undergraduate finishing all course requirements in summer 2028. Right to work in the UK for the programme is "ideal".	[S1] The careers page still says "summer 2027": stale. The JD wins. [S37] CONFIRMED
Working pattern	Hybrid, 3 days in the office	[S1, S2] CONFIRMED
Selection	Application and CV; untimed Immersive Online Assessment; strengths-based video interview; half-day virtual assessment centre. Only your first application is reviewed.	[S1] The assessment is very likely Cappfinity. [S264, S265] INFERRED
Feeds into	The Business Graduate Programme, with "the opportunity to progress into a Graduate role"	[S2, S37] CONFIRMED

KEY TERM

Markets division: one of LSEG's four reporting segments since 1 January 2025, formed by merging the old Capital Markets and Post Trade segments. The other three are Data & Analytics, FTSE Russell and Risk Intelligence ^[S22, S23]. Inside Markets, LSEG runs separate **cash-generating units (CGUs)**, the smallest groups of assets that earn money on their own: Digital & Securities Markets, FX, Tradeweb, LCH Ltd, LCH SA, Post Trade Solutions and Regulatory Reporting ^[S22]. That list is the best public map of how Markets is run.

Figure 2 shows what every one of the four seats has in common: work arrives as a request from someone inside LSEG (or from a client through an account manager), it gets triaged, analysed and turned into a product, and the product is judged by an outcome.

FIGURE 2**The role's value chain: from internal demand to outcome**

Every placement runs the same five stages. As an intern you usually own the analysis and the product for one deliverable; the relationship and the triage stay with your manager. The dashed loop is why MI (management information) work never ends: each outcome becomes next month's data.

Source: stages Inferred from LSEG job postings that describe these teams [S11, S12, S17, S18, S19]; "individual contributor" from the JD [S1]; tools named in [S5, S21, S23]. October 2026.

The insight that changes how you prepare

The four "exposure" bullets in the JD are not a description of one London team. The New York Business Management internship (R0123464) uses the same four bullets word for word, the same five businesses and the same "dynamic nature of the division" line ^[S9]. The London graduate programme R0123406 reuses them as "exposure/rotations" ^[S6]. **CONFIRMED** The bullets describe a pool of Markets placements. The JD then says how you land in one: "To allow us to place you in the right area, during the recruitment process we will get to know your skills and interest and how they align with the needs of the business" ^[S1, S2].

So the recruitment process is also a matching process. Two things follow. First, you need a credible answer for all four seats, because you do not know which one you will get. Second, you can shape the match: an assessor who hears a specific, evidenced reason for preferring one seat has something to work with. **INFERRED**

SAY THIS IN THE INTERVIEW

"I understand the internship sits in the Markets division, which brought Capital Markets and Post Trade together from January 2025, and that interns are matched to a team during recruitment. I'd be happy in any of the four areas. If I had to choose, I'd lean towards [seat], because [one specific reason tied to a fact in this pack]."

Figure 3 shows how the four seats differ: which channel the work runs through, and who sits on the other side.

FIGURE 3

The four placements and the two channels the work runs through

	1 Placement 1 FX customers LSEG FX: FXall, FX Matching	2 Placement 2 Markets research LSE plc Fixed Income & Equity Primary Markets	3 Placement 3 BI and strategy Markets COO office, PMOs, change teams	4 Placement 4 Risk LCH Ltd, LCH SA, PTS first-line risk
Customer-facing channel Work done with or for an outside party	Client calls, business reviews, post-sale fixes, release notes	Feeds origination bankers who pitch issuers; no direct issuer contact likely	Little direct contact; client readiness comms on change	Member and regulator reports prepared, not sent by you
Internal / analytical channel Work for LSEG decision-makers and controls	Usage MI, CRM logging, tickets to Manila onboarding	Debt listings tables, valuation comps, shareholder and geographic analysis	MI packs, KPI dashboards, RAID logs, process maps, exec materials	Margin and risk MI, control tests, incident root cause, commentary
Who is on the other side	Banks (liquidity providers), asset managers, corporate treasurers	Issuers, DCM and ECM bankers, law firms, investors	Business heads, Finance, Tech, ops teams in Manila, Colombo	Clearing members, second-line Risk, Internal Audit, Bank of England

Main channel
 Secondary
 Light touch

Channel weights are Inferred from job postings

Only placement 1 is mainly customer-facing. Placements 2 to 4 are analytical seats whose customers are LSEG decision-makers, though placement 2 feeds bankers who face issuers, and placement 4 prepares material that reaches clearing members and regulators. Prepare a client story and an analysis story; you will need both.

Source: unit mapping from WS1 decode of the JD against LSEG postings [S2, S12, S13, S15, S17, S18, S19]; counterparties from [S15, S17, S23, S43]. Channel weights are Inferred. October 2026.

The JD decoded, line by line

Each block below quotes one sentence or bullet of the JD exactly (long dashes in LSEG's text are shown as " - " to keep this pack's house style), then decodes it. For the four exposure bullets the decode is a full table: the LSEG unit, counterparties, what good looks like, tools and the structural fact the line reveals. Boilerplate lines get a shorter treatment, but none is skipped.

Opening paragraph

"Please review all the graduate programme opportunities and make one application."

MEANS LSEG runs one early-careers pool. Several programmes are open at once in London: Business Management (Markets), Business Analyst (Markets), Engineering, and graduate schemes for FTSE Russell and Data & Analytics ^[S3, S4]. **STRUCTURAL FACT** Only your first application is reviewed if you send more than one ^[S1]. In the UK, business internships exist only in Markets; FTSE Russell and D&A have graduate schemes but no UK business internship open ^[S4, S37]. **CONFIRMED**

USE IT Choosing this programme is itself a statement that you want Markets. Have a reason.

"Our Summer Business Management Internship Programme has been crafted to simulate our Business Graduate Programme so that you can understand what a career with LSEG would really be like."

MEANS The internship is a nine-week trial of the 12-month Business Graduate Programme, and the main feeder into it ^[S2, S37, S38]. **CONFIRMED**

UNIT Early Careers sits in the People function; most graduate requisitions are tagged "Division: People" in Workday ^[S4].

WHAT GOOD LOOKS LIKE Behaving like a first-year graduate: owning a deliverable, managing your own stakeholders.

STRUCTURAL FACT Because the programme is a feeder, interviewers are asking "would I hire this person as a graduate in September 2028?", not "can they survive nine weeks?" **INFERRED**

"LSEG is at the forefront of trading services - a fundamental part of the financial and transactional services that support and enhance the development of businesses and economies across the world."

MEANS "Trading services" is the Markets division. It is now LSEG's largest division by EBITDA: £1,929m in 2025 against £1,617m for Data & Analytics ^[S22]. Total income was £3,467m in 2025 (+8.9% organic) and £1,920m in H1 2026 (+11.9%), at a 58.6% EBITDA margin ^[S22, S24]. The CEO told investors in July 2026: "Remember that Markets is 40% of LSEG revenue" ^[S71]. **CONFIRMED**

STRUCTURAL FACT The public debate about LSEG is about data and AI; the seat you are applying for is in the part of the group with the fastest growth.

USE IT One number, used once, beats five numbers recited.

KEY TERM

EBITDA and margin: EBITDA is earnings before interest, tax, depreciation and amortisation, a rough measure of operating profit. The margin is EBITDA divided by income. A 58.6% margin means about 59p of every £1 of Markets income is left after operating costs.

"As an intern, you will join one of our flagship trading services - London Stock Exchange, LSEG FX, Tradeweb, Turquoise - or LCH our global leading multi-asset clearing houses."

MEANS Five brands, which map onto the CGUs above. The Annual Report lists the venues: "the London Stock Exchange, AIM, Turquoise, FXall, FX Matching and Tradeweb", combined with "multi-asset class clearing infrastructure" [S23].

CONFIRMED

UNIT AND OWNERSHIP London Stock Exchange plc is a Recognised Investment Exchange (RIE), 100% owned. Turquoise is an equity MTF, 84.2% owned. LSEG FX runs FXall and FX Matching, 100% owned. Tradeweb is separately listed and majority-owned (about 50.9% economic interest) [S300, S303]. LCH Group, parent of LCH Ltd (UK) and LCH SA (France), is about 94% owned (94.4% per the Annual Report, 94.2% per the 2024 results), rising above 95% after a €70m minority buy-in agreed in July 2026 [S300, S121, S221]. **CONFIRMED**

STRUCTURAL FACT These are separate regulated legal entities with their own boards. That shapes everything you do: data, people and decisions do not move freely between them [S300, S304].

TRAP Do not call LCH "the LSEG clearing division". Name LCH Ltd and LCH SA as separate companies in different countries [S22, S28].

KEY TERM

RIE (Recognised Investment Exchange): a UK exchange recognised by the FCA under the Financial Services and Markets Act. It must run fair and orderly markets and police its own rules. London Stock Exchange plc operates its markets "in its capacity as a Recognised Investment Exchange" [S13, S95].

KEY TERM

MTF (multilateral trading facility): a regulated trading venue run by an investment firm rather than an exchange. It brings many buyers and sellers together under non-discretionary rules. Turquoise is an MTF; so are LSEG FX's venues, authorised by the FCA in the UK and the Central Bank of Ireland in the EU [S95, S341].

"We help customers across the trade life cycle, ensuring compliance and efficiency in clearing and reporting obligations, while granting access to diverse liquidity pools across various asset classes, fostering growth for customers, communities, and economies worldwide."

MEANS This is almost word for word the Annual Report's Markets introduction ("We help customers across the trade lifecycle optimise their financial resource consumption and risk, manage their regulatory reporting obligations ... We provide access to diverse liquidity pools") [S23]. **CONFIRMED** The JD was written from the divisional strategy text.

UNIT BY STAGE Raise capital: LSE plc primary markets. Trade: LSE, Turquoise, FXall, FX Matching, Tradeweb. Clear: LCH Ltd and LCH SA. After the trade: Post Trade Solutions (compression and optimisation) and Regulatory Reporting [S22, S300].

STRUCTURAL FACT "Clearing and reporting obligations" are legal duties on LSEG's customers. LSEG sells compliance as a product.

USE IT If you can walk an interviewer through the trade life cycle and name the LSEG unit at each stage, you have shown you understand "how it fits together", which the JD asks for later.

KEY TERM

Trade life cycle: the stages a trade goes through. Pre-trade (raising capital, getting prices), execution (agreeing the trade on a venue), clearing (a central counterparty steps in between buyer and seller), settlement (cash and asset actually swap) and post-trade (reporting, compression, record-keeping). **Liquidity pool:** a place where buyers and sellers meet, so you can trade size without moving the price much.

"The dynamic nature of the division means grads will join a fast-paced environment where instant reaction and long-term vision are equally important."

MEANS The same sentence appears in the FTSE Russell graduate JD, so it is programme-wide wording, not a team signal [S8]. **CONFIRMED**

WHAT IT POINTS AT "Instant reaction": an FX client ticket, a margin number that moved overnight, a platform incident. "Long-term vision": LSE 24, the 24-hour-a-day, five-day venue launching in H1 2027, or the move of FXall into Workspace [S24, S302].

USE IT Prepare one story where you reacted fast and one where you planned over months. The strengths interview tests both.

The four exposure bullets

The JD introduces these with "As an intern you can expect exposure across:". The word "Or" at the start of three bullets is the tell: each is a separate placement, not a rotation through all four [S1]. **INFERRED**

Bullet 1: "Solve problems for our FX customers! We understand their business goals, maintain relationships with existing customers, keep them informed and deal with post sale activity."

Account management and customer success inside LSEG FX. The "and Sales" in the URL slug fits this seat [S2].

LSEG unit	LSEG FX (the FX CGU). Platforms: FXall (dealer-to-client) and FX Matching (dealer-to-dealer), plus a US Streaming FX Spot business and links to LCH ForexClear [S22, S24, S45]. Likely team: FX Sales and Account Management or Customer Success [S17]. INFERRED
Day to day	Work the client queue: a user cannot see a bank's prices, a new trading entity needs setting up, allocations fail, confirmations do not reach the client's order system. Prepare client "business reviews": volume by currency pair, number of liquidity providers used, adoption of newer features such as Forward First Fixing (over \$330bn traded in Q2 2026) [S17, S302]. Send release notes and outage notices ("keep them informed") [S11]. Post-sale: onboarding, connectivity, entitlements, renewals. INFERRED
Counterparties	Banks acting as liquidity providers; asset managers; hedge funds; corporate treasurers; on FX Matching, interbank dealers. Contacts sit in "trading, treasury, eFX, sales, operations, and technology functions" [S17]. FXall has 2,400+ institutional clients and 200+ liquidity providers across 500+ currency pairs [S340].
Good looks like	Retention and renewals, revenue growth on assigned accounts, fast issue resolution, adoption of new functionality: "Achieve individual revenue, growth, retention and targets across assigned accounts" [S17]. For an intern: a review pack the account manager actually takes into the meeting, or a recurring problem fixed for good. INFERRED
Tools	LSEG Workspace (much of FXall's functionality now sits inside it), FXall Admin (the "reference data and permissioning tool"), Excel, a CRM, and Power BI or Tableau for usage MI [S302, S317, S21, S5]. Which exact tools this team uses is INFERRED .
Structural fact	FX is over-the-counter: there is no single exchange. LSEG earns venue, transaction and workflow fees, roughly 75% transactional and 25% recurring [S303]. Volume rises with volatility: "greater volumes driven by higher volatility in the market" [S23]. So the account manager's real job is to embed LSEG in client workflow so volume stays when volatility falls. INFERRED FX revenue was £272m in 2025 (+7.5%) and £145m in H1 2026 (+7.6%); average daily volume \$561bn in H1 2026 [S22, S24].
Control angle	Client information is confidential under the FX Global Code (Principles 19 and 20) [S343]. LSEG is hiring an FX Market Surveillance Product Director to detect "potential market abuse, misconduct, and anomalies" on its FX platforms [S14].

KEY TERM

FXall: LSEG's dealer-to-client FX platform. A buy-side firm or corporate asks several banks for prices at once (RFQ, request for quote), sees streamed prices, or uses an anonymous order book and algorithms (TWAP, Iceberg) [S342]. It also handles post-trade steps: confirmations, settlement instructions, reporting [S340].

KEY TERM

FX Matching: LSEG's dealer-to-dealer venue, an anonymous central limit order book where banks trade with each other [S22, S303].
Liquidity provider (LP): a bank or trading firm that quotes prices others can trade on.

KEY TERM

ADV (average daily volume): total value traded divided by trading days. LSEG's main FX volume KPI: \$525bn in 2025, \$561bn in H1 2026 [S301, S302]. **STP (straight-through processing):** a trade flows from execution to the client's booking and settlement systems with no manual re-keying. FXall offers STP via "Trade Notification" [S340].

KEY TERM

TCA (transaction cost analysis): measuring how much a trade really cost against a benchmark, to prove best execution. FXall's version is Trade Performance Reporting, to "evaluate the cost and effectiveness of your execution strategies" [S340]. **Post-sale activity:** everything after the contract is signed: onboarding, permissions, connectivity, renewals, billing queries.

Bullet 2: "Or research analysis into global markets which could have a focus on debt listings, valuations, and shareholder and geographic analysis."

Market research and intelligence for London Stock Exchange plc's primary markets, most likely in Fixed Income (debt) or Equity Primary Markets.

LSEG unit	London Stock Exchange plc, inside the Digital & Securities Markets CGU. Fixed Income Primary Markets runs debt listings on the Main Market, the International Securities Market (ISM) and the Sustainable Bond Market; Equity Primary Markets handles IPOs, secondary listings and the Private Securities Market [S15, S16]. A DCM job ad confirms a "market research and intelligence" team inside capital markets [S15]. REPORTED That this is the intern's home is INFERRED .
Day to day	<i>Debt listings:</i> tables of bond admissions by issuer type (sovereigns and agencies, banks, corporates, emerging-market issuers), currency, use of proceeds (green, social, sukuk) and region; target lists of issuers who borrow in Europe but have never listed in London. <i>Valuations:</i> how a sector trades in London against New York. <i>Shareholder analysis:</i> who owns London-listed peers and how much of it is international. <i>Geographic analysis:</i> sizing the Americas, Gulf or India pipeline [S15, S16]. INFERRED
Counterparties	Mostly internal: origination managers who pitch to "treasurers, heads of funding, origination and syndication professionals, capital markets lawyers and investors" [S15]. The team works with "FIG, SSA, EM issuers, bankers, law firms and advisors" [S15].
Good looks like	Accurate, sourced data with a clear "so what" for the origination banker. The business is judged on admissions, capital raised and listing revenue; Equities revenue was £412m in 2025 [S22]. INFERRED for the KPI list.
Tools	LSEG Workspace and LSEG's own data, Excel, PowerPoint; possibly Python or SQL, which the sibling Business Analyst internship names alongside Tableau and Power BI [S5]. INFERRED
Structural fact	London's debt market is an international venue. LSEG says Fixed Income Primary Markets serves "1,300 global borrowers in over 60 countries that raise \$500-600 billion annually" and calls ISM and the Sustainable Bond Market "key engines of growth" [S15]. REPORTED (a job ad, not audited). Equity listings are a competitive fight with New York; LSEG is widening the offer with the Private Securities Market, Digital Markets Infrastructure and LSE 24 [S23, S24].

Control angle

This is the seat where inside information lives. The team can see planned IPOs and bond admissions before they are public. See the compliance section below.

KEY TERM**ISM (International Securities Market):**

LSE's market for debt sold to professional investors. It is "a UK MTF and is operated by the Exchange as a Recognised Investment Exchange"; admission "is determined by the Exchange", and ISM securities "are not admitted to the Official List maintained by the FCA" ^[S346]. LSE markets it on speed: comments within three days of first submission and two days after that ("3+2") ^[S347].

KEY TERM**Listing (or admission) particulars:**

the disclosure document a bond issuer publishes so investors know what they are buying. On ISM they are called admission particulars; the Exchange's approval "is not an approval or verification" of them, and exempt issuers do not need them ^[S346]. Main Market debt involves the FCA and a prospectus or listing particulars; 2026 rules now refer to POATR ^[S346, S347].

Bullet 3: "Or Delivery of business intelligence, strategic initiatives, and operational improvements"

Business management in its purest form: COO offices, PMOs and transformation teams across Markets.

LSEG unit

No single team. Live postings show the CDSClear Transformation function at LCH SA, a Markets Operations and Controls COO office, a Post Trade Solutions PMO and a Markets Operations Transformation PMO ^[S12, S18, S4]. **CONFIRMED** that these teams exist. A cross-Markets strategy team is **INFERRED**: no public page names one, and a search for "chief of staff" roles found nothing relevant ^[S319].

Day to day

Refresh an MI dashboard (volumes, revenue per client, onboarding times); write one section of a steering committee pack; keep the RAID log; map a manual process and propose automation; benchmark a competitor's launch. **INFERRED** The Business Manager posting describes "high-quality executive materials" and "consistency in KPIs, MI, and performance reporting" ^[S18].

Counterparties

Internal: business heads and COOs, Finance, Technology, Risk and Compliance. The CDSClear programme manager coordinates "Risk, Operations, Product, Technology, Client Services, Legal, Compliance, Finance and Shared Services" ^[S12].

Good looks like

Numbers leadership trusts; decisions taken on time; projects delivered "on time, within budget and within agreed scope" ^[S12].

Tools

Excel, PowerPoint, Power BI or Tableau, project trackers, the GRC system for controls ^[S5, S19]. **INFERRED** for this team.

Structural fact

The operating engine of Markets sits largely offshore. 19 of 45 open Markets roles are in Taguig City, Manila, mostly operations, onboarding, PMO and control roles ^[S4]. LSEG cut engineering headcount from about 15,100 to 14,200 in 2025 while raising in-house engineers from 49% to 60% ^[S22, S300]. "Operational improvements" in London usually means working with a team in Manila, Colombo or Bengaluru. **INFERRED**

KEY TERM

COO office: the team around a Chief Operating Officer that runs the business's machinery: budgets, headcount plans, KPIs, governance packs, change programmes. LSEG's Markets version is described as "a critical enabler to the COO by driving business performance, governance, and execution discipline" ^[S18].

KEY TERM

PMO (programme management office): the team that tracks a large change programme: plans, budgets, risks and decisions. **RAID log:** its core tracker of Risks, Actions, Issues and Decisions. **MI (management information):** regular data packs that tell managers how the business is performing.

Bullet 4: "Or Risk teams, which involves monitoring and analysing risks, and interpreting data in readiness for the delivery of risk projects or reporting."

First-line risk work, most likely at LCH or Post Trade Solutions. Know which of three kinds of "risk" you mean.

LSEG unit	Three kinds of risk sit in Markets ^[S28, S19, S10] . (1) CCP financial risk at LCH Ltd and LCH SA: margin, default fund, collateral; (2) operational risk in the first line, e.g. the PTS Operational Risk Manager who keeps "the PTS control library within the GRC system" ^[S19] ; (3) market integrity : Market Supervision monitors trading on LSE and Turquoise for abuse under MAR ^[S10] . Which one hosts interns is INFERRED .
Day to day	Pull and clean margin or exposure data; reconcile risk reports; write commentary on why a metric moved; collect control evidence on a monthly cycle ("Monitor the timely submission of evidence (e.g., monthly/quarterly)") ^[S19] ; analyse incident logs; help draft a committee or regulatory report. INFERRED
Counterparties	Clearing members (large banks) and their clients; internal risk committees; second-line Group Risk under CRO Balbir Bakhshi; Internal Audit; regulators ^[S23, S19] . The PTS role must "Work with second-line risk, compliance, and internal audit during reviews" ^[S19] .
Good looks like	No surprises: accurate, on-time reporting; issues found and escalated early; remediation tracked to closure ^[S19] .
Tools	GRC (governance, risk and compliance) system, Excel, risk MI packs, incident logs ^[S19] . Python or SQL for data work is INFERRED .
Structural fact	At a clearing house, risk and revenue move together. SwapClear cleared a record \$1,941trn of interest rate swap notional in 2025 and holds over 90% of the cleared market ^[S22, S23] . Net Treasury Income (interest earned on margin cash) rose 12.6% in H1 2026, "driven by strong growth in cash collateral balances supported by elevated market volatility" ^[S24] . Volatility lifts revenue and default risk at the same time.

KEY TERM

CCP (central counterparty): a clearing house that "sits in the middle of trades as the buyer to every seller and the seller to every buyer" ^[S304]. If a member defaults, the CCP takes over its positions. LCH has managed nine member defaults, all within the initial margin it held ^[S351].

KEY TERM

Margin: collateral a member must post.

Initial margin covers the likely loss if the member defaults; LCH sets it at 99.7% confidence (99% for Listed Rates) ^[S351].

Default fund: a pool all members pay into, used only after the defaulter's own margin and LCH's own capital. **Notional**: the face value a derivative is based on, not money that changes hands.

How you will work

"Joining as an intern will allow you to be an individual contributor, and assist the product lifecycle, and work as a team to develop specialist skills."

MEANS You will own a deliverable (an analysis, a deck, a tracker, an MI pack), not shadow. "Product lifecycle" reflects LSEG's "product-led operating model" ^[S22]. **REPORTED**

WHAT GOOD LOOKS LIKE One finished piece of work with your name on it that someone uses after you leave. **INFERRED**

USE IT Interns on Higherin describe exactly this: a Post Trade intern "Working in Quantile with the marketing team. Testing our systems ... Working with Acadia with benchmarking" ^[S41].

"To allow us to place you in the right area, during the recruitment process we will get to know your skills and interest and how they align with the needs of the business."

MEANS The matching mechanism described above. Every stage is partly a placement interview [S2].

USE IT Give the assessors data: name the seat you lean towards and why, and show you would be useful in the others.

INFERRED

"To be eligible, you must be a penultimate year undergraduate student due to complete all the requirements of your course summer 2028."

MEANS Correct for a June 2027 start. The careers page's "summer 2027" is stale; trust the JD [S1, S37]. CONFIRMED

"These are real roles. Our 9 weeks summer interns play a part in the success of our organisation, just like they would do as a graduate."

MEANS Interns sit in live teams with real deadlines. Testimonials agree: Higherin reviewers rate LSEG internships 4.8/5 (five reviews), with a Capital Markets intern saying "I acquired financial knowledge across private, primary and secondary markets" [S41]. REPORTED Glassdoor snippets mention "real responsibilities" but also a programme that "could have been better organised by HR" [S42]. REPORTED

What we are looking for

"We are passionate about recruiting people who want to understand the full breadth of our organisation, how it fits together, how it functions - and are interested in playing a part of our development, as it grows and diversifies."

TESTING Whether you understand LSEG as a set of linked but separate businesses.

SHOW IT One sentence on how they fit: the 2025 merger of Capital Markets and Post Trade into Markets; RepoAgent, built by Post Trade Solutions and Tradeweb together, which LSEG cites as "the strength of collaboration within Markets" [S22]; FXall and LCH data now inside Workspace [S300]. Then one sentence on the limits: LCH must clear on open, non-discriminatory terms and cannot favour LSEG venues [S305].

"You should have a demonstrable interest in financial markets, which you've built through your studies, work experience or extracurricular activities."

TESTING Evidence, not enthusiasm.

SHOW IT A habit (for example, reading LSEG's quarterly KPIs: FX ADV, SwapClear notional, UK value traded [S301, S302]) plus one thing you did with it. Candidate CV details are not known to this pack: see the CV part for a method.

"A curiosity for data and an ability to analyse information to draw conclusions and propose solutions."

TESTING Can you go from a number to a recommendation?

SHOW IT Example from public data: FX revenue £272m on \$525bn average daily volume in 2025 gives a rough revenue capture rate, a metric LSEG does not publish [S301]. INFERRED Say clearly it is your own metric.

SEAT All four; heaviest in bullets 2 and 3.

"Individuals who are able to connect the dots and think strategically."

TESTING Second-order thinking.

SHOW IT "Volatility raises FX volumes and LCH's margin balances, but it also raises default risk, so the same event is good news for revenue and a test for risk" [S23, S24]. INFERRED for the linkage.

"The environment we work in is fast paced, you'll need to demonstrate focus, resilience and the flexibility to adapt to changing demands."

TESTING How you behave when priorities collide. Figure 8 shows a rule for that.

SHOW IT A story where the brief changed mid-way and you re-planned without dropping quality.

"People who can collaborate with others, using their strong communication skills in the process."

TESTING Partnership, one of LSEG's four values. Every seat is a coordinating seat: the CDSClear programme spans nine functions ^[S12], and London teams work daily with hubs in Manila, Colombo and Bengaluru ^[S4].

SHOW IT A story where you got something done through people who did not report to you.

"Ideal candidates will have the rights to work in the UK without restrictions for the duration of the programme."

MEANS "Ideal", not "must". If this affects you, check with Early Careers before the assessment centre. **INFERRED**

"You will stand out to us if you can demonstrate and recognise that what you achieve is equally important as how you achieve it."

MEANS A values test. Strengths interviews will probe how you got a result, not just the result ^[S2]. Map your stories to the four values in LSEG's own words ^[S307].

Value	LSEG's definition ^[S307]	What or how?	Story that proves it
Integrity	"We stand by our principles and deliver on our promises. We earn trust by acting responsibly."	Both	You hit a deadline without cutting a corner; or you flagged your own mistake early.
Partnership	"Our open model is integral to how we do business. We forge long-term relationships; we work together to solve evolving needs and deliver strategic outcomes."	How	You got a result through people you did not manage. Note "open model" echoes LCH's open-access rule ^[S305] .
Excellence	"Our breadth of capabilities sets us apart, globally. We achieve industry-leading outcomes by combining unique, diverse perspectives and knowledge across markets."	What	A measurable outcome that came from combining different views or skills.
Change	"We embrace change. We combine human ingenuity, technology, risk management, and insight to create the products and services that lead and shape the industry."	How	You changed a process, adopted a tool, or adapted when the plan broke, and managed the risk of doing so.

DON'T SAY THIS

"I always deliver results whatever it takes." In a firm that runs a clearing house and an exchange, "whatever it takes" is the wrong answer. The JD has told you that how matters as much as what.

The small print

JD line	What it tells you
"Application close: 30th October, rolling basis, may close early."	Apply well before the date. Posted 21 Sep on Workday ^[S2] .
"Stage 1: application and resume. Next: untimed Immersive Online Assessment ... Second stage: video interview, strength-based interview style. Final: half day assessment centre, several exercises (virtual)."	Four stages ^[S1] . The online assessment is very likely Cappfinity, which tests situational judgement in an LSEG setting ^[S264, S265] . INFERRED Strengths interviews ask what you enjoy and do well, so energy and specific examples count.
"Only first application reviewed if more than one made."	Choose once ^[S1] .
"Hybrid: 3 days in office. Career Stage: Associate."	Associate is the first rung; other postings show Senior Associate, then Manager ^[S2, S10, S20] . Ladder order is INFERRED .

JD line	What it tells you
"Benefits: wellness allowance, EAP, PMI, dental, gym, life insurance, income protection, pension, MyOffers."	Standard package ^[S1] . Not an interview topic.
"Values: Integrity, Partnership, Excellence and Change. 25,000 people across 65 countries. LSEG Foundation."	The headcount is boilerplate: the Annual Report gives 28,516 employees at 31 Dec 2025, 5,043 in the UK ^[S23, S300] . Do not quote 25,000 as current.
"Purpose: driving financial stability, empowering economies and enabling customers to create sustainable growth."	"Financial stability" is literal for LCH: the Bank of England supervises CCPs to "protect and enhance financial stability in the UK" ^[S357] .

A worked day in each of the four seats

No LSEG intern diary is public. The table below is an **Inferred composite**: each row is built from what LSEG's own job postings say these teams do ^[S11, S12, S15, S17, S18, S19], set against a hybrid week with three office days ^[S2]. Use it to picture the work and to answer "what do you think you'd be doing day to day?" without guessing wildly. **INFERRED**

Time	1. FX account management (LSEG FX)	2. Fixed Income Primary Markets research (LSE plc)	3. Markets COO office / BI / transformation	4. LCH or Post Trade risk
08:30	Read Asia-session notes; check the shared inbox for overnight client tickets.	Check the morning's bond admissions to the Main Market and ISM (published as RNS notices).	Check yesterday's volumes and incidents for the daily MI.	Review the daily risk MI pack. One margin figure moved more than usual: note it.
09:00	Team stand-up: client issues, platform incidents, renewals due this month.	Team check-in: which origination pitches need data this week.	COO office stand-up: actions due before Thursday's steering committee.	Ask the analyst who owns that margin model why it moved; write it down.
09:30	Build a usage review for a mid-sized asset manager: volume by currency pair, liquidity providers used, Forward First Fixing adoption.	Update the weekly debt listings tracker by issuer type, currency and region.	Refresh the KPI dashboard: ADV, client trades, onboarding times, by unit.	Control testing: chase control owners for this month's evidence in the GRC system.
11:00	Client call with your account manager. Two problems: allocation delays; one bank's prices missing.	Meeting with an origination manager: list Gulf bank issuers who issued in euros but never listed in London.	Workshop with the Manila operations team to map a manual onboarding step.	Join the weekly first-line risk meeting; take the action log.
12:00	Log both issues in CRM; raise the missing price stream with FX onboarding in Manila.	Pull issuance data from LSEG Workspace; clean it in Excel.	Update the RAID log from the workshop: two new risks, one decision needed.	Update the RAID log for a CDSClear transformation workstream.
13:00	Lunch			
14:00	Weekly market colour: what did volatility do to volumes? Three bullets for the team note.	Shareholder analysis for an equity pitch: international ownership of London-listed peers in one sector.	Draft the steering pack page on the onboarding process: current state, pain points, options.	Root-cause write-up of last week's incident: what failed, which control should have caught it.
15:00	Intern project: compare FX venue offerings; one-page summary.	Geographic analysis: size the Americas debt pipeline by issuer type.	Competitor benchmark: how a rival venue priced a comparable launch, from public sources.	Draft commentary for the monthly risk report: three movements, why each happened.
16:30	Follow up the morning tickets; update the client in writing.	Turn findings into two slides with a clear "so what".	Reconcile two versions of the same number from Finance and Operations.	Send the commentary to your manager for review before it goes to the committee.

Time	1. FX account management (LSEG FX)	2. Fixed Income Primary Markets research (LSE plc)	3. Markets COO office / BI / transformation	4. LCH or Post Trade risk
17:30	Send the draft client review pack to the account manager.	Confidentiality check: no pipeline names in the shared deck. Send to manager.	Send the dashboard refresh with a two-line summary of what changed.	Log open control evidence; flag one late item to the control owner.

Sources: column 1 from FX postings [S11, S17, S317]; column 2 from Primary Markets postings [S15, S16]; column 3 from business management and PMO postings [S12, S18]; column 4 from risk postings [S12, S19]. All rows Inferred.

FIGURE 4**A worked day in the seat: FX account management**

INFERRED COMPOSITE Built from LSEG FX job postings, not from a real intern's diary. 5 Canada Square.

Time split:

Client-facing 2h

Analysis 4h

Internal coordination 2h

Half the day is analysis, a quarter is talking to the client and a quarter is coordinating inside LSEG. The client never sees the coordination, but it is what makes "solve problems for our FX customers" true.

Source: Inferred composite built from LSEG FX postings [S11, S17, S317], FXall product facts [S302, S340] and hybrid pattern [S2]. October 2026. Not a record of a real intern's day.

The team mapped

LSEG publishes its executive team and LCH's leaders, but not the teams below them. Figure 5 (after the table of names) rebuilds the Markets division from the Annual Report, LSEG press releases, LCH's leadership page and live job postings. Each box is colour-coded by confidence. Only names that appear in our research are shown; where a team exists but its leader is not public, no name is given.

Who owns what: the names to know

Person	Role	Evidence and confidence
Daniel Maguire	Group Head, LSEG Markets and CEO, LCH Group; Executive Committee member. "26 years of experience in capital markets, risk and default management, product management and regulatory strategy, and over 20 years spent at LSEG across two tenures" ^[S23] . The senior owner of everything this internship touches.	^[S23, S26, S28, S306] CONFIRMED
John Horkan	COO, Markets and LCH Group; Head of Americas. Joined LCH in 2012; formerly SwapClear COO.	^[S28, S274] CONFIRMED
Patricia (Trish) Cuddy	Group Head of People, Markets and Americas. Quoted on graduate programme design.	^[S274, S270] CONFIRMED ; same person in both sources INFERRED
Julia Hoggett	CEO, London Stock Exchange plc and Head of Digital and Securities Markets, since 2021; previously at the FCA.	^[S278, S279] CONFIRMED
Charlie Walker	Deputy CEO, London Stock Exchange plc	^[S32] CONFIRMED
Tom Stenhouse	CEO, Turquoise and Head of Product, appointed March 2026, subject to regulatory approval	^[S32, S277] CONFIRMED
Susi de Verdelon	CEO, LCH Ltd since February 2025; previously Group Head of SwapClear and Listed Rates	^[S27, S28] CONFIRMED
Corentine Poilvet-Clédière	CEO, LCH SA	^[S28, S50] CONFIRMED
James Pearson	Head of FX, LSEG; took over from Neill Penney in May 2024; joined LCH as Head of ForexClear in 2021	^[S29, S281, S282] REPORTED for the current title
Gavin Wells; Adam Collins	COO, LSEG FX; Head of Sales, LSEG FX (both March 2025, trade press)	^[S30] REPORTED
Chris Coleman	Group Head of Sales and Account Management, joined January 2026. A central sales role, relevant to the FX seat.	^[S23, S306] CONFIRMED
Balbir Bakhshi	Group Chief Risk Officer: the second line your risk work reports into	^[S23, S306] CONFIRMED

SOURCE UNCERTAIN

Three gaps. (1) No public source names the heads of Equity or Fixed Income Primary Markets in London ^[S15]. (2) James Pearson's current FX title rests on trade press, the latest from May 2026 ^[S31, S282]. (3) No public page describes a Markets-wide strategy or chief-of-staff team; a Workday search found none ^[S319]. Treat seat 3's home as a reasoned guess.

FIGURE 5

The reconstructed Markets org chart

The four numbered markers show where each JD bullet most likely lands. Seats 3 and 4 are violet because no public page names the team an intern would join. Daniel Maguire appears twice on purpose: he runs both Markets and LCH Group.

Source: Annual Report 2025 and executive team page [S23, S26, S306]; CGUs [S22]; LCH leadership [S27, S28, S274]; LSE plc [S32, S278, S279]; LSEG FX [S29, S30, S281, S282]; Tradeweb [S33, S300]; teams from postings [S4, S10 to S19]. Read 5 October 2026. Names are public professional roles only.

Headcount: how big is the team around you?

LSEG does not publish headcount by division, or intern intake numbers ^[S23, S57]. The estimates below are ours. The method is shown so you can defend it or drop it.

Estimate	Range	Method
Markets division staff, worldwide	5,000 to 9,000 INFERRED , low confidence	Group headcount was 28,516 at 31 Dec 2025 ^[S23] . Markets carried £1,357m of £3,711m divisional operating costs, about 37% ^[S22] . 37% of 28,516 is about 10,400. That is a ceiling: Markets costs include Tradeweb's high US pay and non-staff costs, and the 14,200 engineers sit in a central function serving all divisions ^[S22] . Discounting for both gives 5,000 to 9,000.
London Business Management interns (R0123386)	8 to 20 INFERRED , low confidence	One requisition covers five businesses. If each hosts 1 to 4 interns the range is 5 to 20; we take 8 as the floor because four distinct placement types are advertised and each probably hosts at least two interns. No public number exists.
London Markets graduate intake (R0123406 + R0123408)	10 to 25 INFERRED , low confidence	Same method, plus conversion: internships feed graduate places ^[S37] .
Markets' share of open roles	45 of 661 (6.8%)	Against a 37% share of divisional costs, Markets hires externally far less per pound of cost than Engineering (312 open roles) ^[S4, S22] . INFERRED

How the work splits

Three splits matter for an intern.

- **London versus the hubs.** 19 of the 45 open Markets roles are in Taguig City, Manila: operations, onboarding, PMO and control roles ^[S4]. India holds 8,541 of LSEG's 28,516 staff, the UK 5,043 ^[S300]. London keeps product, client, regulatory and leadership roles. Your "operational improvement" project will probably involve a team you meet on video. **INFERRED**
- **Business versus the centre.** Risk ownership is assigned per principal risk to named executives: central counterparty risk to the Head of Markets; technology to the CIO; data to divisional heads and the COO ^[S302]. First-line teams inside Markets own their risks; Group Risk provides "Coverage (Data and Analytics, Markets, Post Trade and Operations)" ^[S314].
- **Client coverage.** A new Group Head of Sales and Account Management (Chris Coleman, January 2026) suggests account management is being pulled towards a central model ^[S306]. **INFERRED** for the implication. Ask about it.

Why have a business management function at all? Figure 6 shows the mechanism. Markets is a set of separate regulated companies plus central functions. Without someone who owns the numbers and the calendar, every party has to coordinate with every other party.

FIGURE 6**Why a central business-management function exists****Without it: everyone talks to everyone**

8 parties = 28 two-way links, each with its own format, timing and version of truth

With it: one hub, one set of numbers

8 spokes: KPIs defined once, packs on a fixed cycle, decisions logged (RAID)

With eight parties, direct coordination needs 28 links ($8 \times 7 \div 2$). A hub needs 8. The hub also gives one definition of each KPI, so the head of Markets sees the same number the LCH board sees. This is the job the Markets Operations and Controls COO office describes.

Source: link arithmetic and hub logic Inferred; function described in [S18] ("consistency in KPIs, MI, and performance reporting") and [S12] (coordination across nine functions). October 2026.

Figure 7 follows one request through the team. It is an FX client issue because that seat has the most moving parts, but the shape (log, triage, route, fix, confirm, learn) is the same for a strategy question.

FIGURE 7**The life of a request through the team**

Step 7 is where seats meet: a client problem in seat 1 becomes an operational improvement in seat 3 once the MI shows it recurring. Notice how many hand-offs cross a team or a country. The intern's value is keeping the ticket moving and the client informed.

Source: FXall Admin and Price Stream Entitlement requests [S317]; Manila onboarding team [S4]; outage handling under technology risk [S302]; client comms [S11]; FX Global Code P19, P20 [S343]. Steps are an Inferred composite. October 2026.

The scarce resource in any business management team is analyst time. Interns hit this in week two, when two people ask for something by the same day. Figure 8 gives you a rule to use and, in interview, a strengths answer about competing priorities.

FIGURE 8**The scarce-resource collision and how it is allocated****Why this rule, in LSEG terms**

Your manager owns the allocation, you own the early warning. Clients outrank internal packs because retention and renewals are how the FX team is judged; but a control or regulatory deadline outranks both because the first line "owns" risk. Writing it down is Integrity: "deliver on our promises".

The rule is not "do the most senior person's work first". It is: surface the clash early, rank by consequence, offer options, and write the decision down. That is what a manager wants from a first-year graduate.

Source: allocation rule Inferred. FX team judged on retention and renewals [S17]; first line owns risk [S300]; Integrity defined as "deliver on our promises" [S307]. October 2026.

What the function does, for whom, and how it is judged

A taxonomy of activities and formats

Almost everything a Markets business management intern produces falls into six types. Knowing the type tells you the audience, the cadence and what "done" means.

Activity type	Typical formats	Cadence	Audience	Seats and evidence
Recurring MI	KPI dashboard, weekly volume note, monthly risk MI pack	Daily to monthly	Business heads, COO, committees	3, 4. "Develop and maintain consistency in KPIs, MI, and performance reporting" [S18]
Client deliverables	Business review pack, release note, service announcement, onboarding checklist	Per client cycle	Clients via the account manager	1. "regular client engagement activities, including business reviews" [S17]; "service announcements, technical guidance, readiness materials" [S11]
Research and analysis	Listings tracker, target list, valuation comps, shareholder and geographic analysis, one-pager	Weekly plus ad hoc	Origination teams, management	2. "Execute market research and intelligence, competitive analysis and assist with internal reporting for LSEG management" [S316]

Activity type	Typical formats	Cadence	Audience	Seats and evidence
Programme and change	Steering committee pack, RAID log, process map, business case	Weekly to monthly	Steering committees, governance forums	3. "decision support and recommendations to senior management, governance forums and steering committees" ^[S315]
Control work	Control evidence, attestation, control library update, audit response	Monthly or quarterly	Second line, Internal Audit	4. "maintain the PTS control library within the GRC system" ^[S19]
Incidents and issues	Ticket, root-cause write-up, remediation tracker	As they happen	Client, Tech, Risk	1, 4. "perform root-cause analysis" ^[S19] ; outages as technology risk ^[S302]

Internal clients and external counterparties, concretely

Inside LSEG

- **Business heads** of each unit: LSE plc, LSEG FX, LCH Ltd, LCH SA, Post Trade Solutions ^[S28, S32].
- **The COO office** and PMOs: Markets Operations and Controls; CDS Clear Transformation; Markets Operations Transformation PMO in Bengaluru and Manila ^[S4, S12, S18].
- **Product, Customer Success, Account Management and Regional Sales**, which the FX sales role works "closely with" ^[S17].
- **Finance** (budgets, forecasts), **Technology** (delivery), **Legal and Compliance** (sign-off) ^[S12].
- **Group Risk** (second line) and **Internal Audit** (third line) ^[S19, S300].
- **Other divisions**: Data & Analytics and FTSE Russell, which use Markets data. The DCM team works with "Issuer Services, FTSE Russell, Admissions, Regulation, RNS, LSEG FX and Data & Analytics" ^[S316].

Outside LSEG

- **Banks** as FX liquidity providers, as clearing members of LCH, and as part-owners of Post Trade Solutions (11 banks hold 20%) ^[S17, S300].
- **Buy-side firms**: asset managers and hedge funds on FXall; clients clearing through members at LCH ^[S17, S304].
- **Corporate treasurers** hedging currency on FXall ^[S17].
- **Issuers**: sovereigns, banks, corporates and emerging-market borrowers listing debt; companies listing equity ^[S15, S16].
- **Advisers**: DCM and ECM bankers, capital markets lawyers, nominated advisers for AIM ^[S15].
- **Regulators**: the FCA (LSE plc as an RIE; UK MTFs), the Bank of England (LCH Ltd), the Central Bank of Ireland (EU FX MTF), the ACPR in France (LCH SA) ^[S13, S304, S341, S105].

What the team is judged on

Two layers. The division is judged on the KPIs LSEG publishes every quarter. Each team is judged on its own measures, which mostly roll up into those KPIs.

Published Markets KPI	2025	H1 2026	Seat that feeds it
FX average daily total volume	\$525bn (+9.6%)	\$561bn (+5.8%)	1
UK value traded, average daily	£4.8bn (+14.3%)	£6.67bn (+33.5%)	2, 3
Tradeweb ADV, all asset classes	\$2.62trn (+16.9%)	\$3.2trn (+24.8%)	3
SwapClear interest rate swap notional cleared	\$1,941trn (+21.2%)	\$1,165trn (+29.4%)	4
SwapClear client trades	5.31m (+33%)	3.28m (+23.8%)	4

Published Markets KPI	2025	H1 2026	Seat that feeds it
ForexClear notional; members	\$48.1trn (+31.4%); 40	\$33.3trn (+45.2%); 41	1, 4
Markets adjusted EBITDA margin	55.6%	58.6%	3

Source: 2025 Preliminary Results KPI table [S301]; H1 2026 Interim Report [S302]. Growth rates as LSEG reports them.

Team	Likely team KPIs	Evidence
LSEG FX sales and account management	Revenue, retention, renewals, new clients, feature adoption, ADV	[S17, S24] REPORTED
Equity and Fixed Income Primary Markets	Admissions, capital raised, issuers won, pipeline conversion, listing revenue; ISM turnaround against the 3+2 review promise	[S15, S16, S347] INFERRED for the list
LCH services	Notional cleared, client trades, members, collateral balances, Net Treasury Income; zero losses beyond the defaulter's margin	[S24, S351] CONFIRMED for published KPIs
Business management and PMO	On-time, on-budget delivery; MI quality; decisions enabled	[S12, S18] REPORTED
First-line risk	Control effectiveness, issue closure, audit findings, evidence on time	[S19] REPORTED
Market Supervision	Abuse detected and referred, STOR quality, alert efficiency	[S10] REPORTED

WHY THIS MATTERS

If you are asked "what would success look like for you in nine weeks?", answer in the team's currency. In seat 1: "a review pack the account manager used with a client, and one recurring issue closed for good". In seat 4: "evidence in on time, and commentary my manager did not have to rewrite". **INFERRED**

The compliance and control dimension

Markets is the most regulated corner of LSEG. LSE plc is an RIE supervised by the FCA; LCH Ltd is a Recognised Clearing House supervised by the Bank of England; the FX venues are MTFs licensed in the UK and Ireland [S13, S304, S341]. As an intern you will see information that could move markets or that a client has trusted LSEG with. The rules below are bright lines: there is no grey area for an intern, because the answer is always "stop and ask".

KEY TERM

MAR (UK Market Abuse Regulation): the law against insider dealing, unlawful disclosure of inside information and market manipulation. **Inside information** is "information of a precise nature, which has not been made public" that is "likely to have a significant effect on the prices" if it were (Article 7) [S349].

KEY TERM

Insider list: a record issuers and their advisers must keep of "all persons who have access to inside information", with the reason and "date and time" of access, kept for "at least five years" (MAR Article 18) [S348]. If you work on a live deal, your name may go on one.

KEY TERM

Three lines of defence: "Accountability for risk management ... sits within the first line of defence, independent oversight and challenge with the second line and objective, independent assurance with the third line" ^[S300]. First line is the business (you); second is Risk and Compliance; third is Internal Audit.

KEY TERM

STOR (suspicious transaction and order report): a report a venue files with the regulator when trading may be abusive. Market Supervision files them for LSE and Turquoise trading "as outlined in the UK Financial Conduct Authority's Code of Market Conduct and MAR" ^[S10].

Bright line	The rule	Where it bites	What you do
Inside information and insider lists	MAR Articles 7, 17 and 18 ^[S349, S350, S348] . LSEG's Code of Conduct bans trading on "confidential, proprietary, inside and/or material non-public information" and requires need-to-know ^[S307] .	Seat 2: planned IPOs and bond admissions; any seat that sees results before publication.	Do not trade, tip or hint. Ask whether you are on an insider list. Keep pipeline names out of shared decks.
Issuer pipeline confidentiality	The Exchange reviews ISM admissions itself; announcements go out via RNS as Dealing Notices ^[S346, S347] . RNS staff need "discretion, and ability to respect confidentiality at all times" ^[S20] .	Seat 2; also anyone near Issuer Services or RNS.	Never name a pipeline issuer outside the team, including to friends or on LinkedIn.
Client confidentiality	FX Global Code: "clearly and effectively identify and appropriately limit access to Confidential Information" (P19); "should not disclose Confidential Information to external parties" (P20) ^[S343] .	Seat 1: one client asks what a big bank or rival fund is doing.	Decline, politely, every time. Use only anonymised, aggregated data.
RIE obligations	LSE plc's PMAR team does "first line primary regulatory oversight of all of LSE plc's markets operated in its capacity as a Recognised Investment Exchange" ^[S13] .	Seat 2, and any work near AIM or ISM regulation.	Keep commercial work separate from the regulators' work. If unsure which side you are on, ask. INFERRED
CCP supervision and open access	LCH Ltd is supervised by the Bank of England; members sit on its Risk Committee "with no one constituent ... having a majority" ^[S304] . LCH must not favour LSEG venues, and information barriers let rival venues talk to LCH "assured of the confidentiality of those discussions from LSEG" ^[S305] .	Seat 4, and seat 3 if your project spans LCH and a venue.	Never pass member positions or rival venues' data to LSEG venue teams.
Three lines of defence	First line owns risk; second line challenges; third line assures ^[S300] .	Seat 4 most directly; every seat in practice.	Report incidents and control failures to your manager the same day. Do not fix them quietly.
Speak Up	"Confidential and if preferred, anonymous" channels, a 24-hour hotline, briefings to the Audit Committee; 192 reports in 2025 ^[S300] . "You must follow the Speak Up Policy and not look the other way"; no retaliation ^[S307] .	Anywhere.	Know the channel exists. Use it if your manager is the problem.

FIGURE 9**The walls around the function and what crosses each**

A business management team sits in the middle of four kinds of protected information. What may cross a wall is almost always published or aggregated data. Specific names, flows, positions and alerts stay inside, and you see them only if your task needs them.

Source: MAR Articles 7 and 18 [S349, S348]; Code of Conduct [S307]; FX Global Code P19, P20 [S343]; OFT decision on LCH information barriers [S305]; Market Supervision and PMAR postings [S10, S13]; RNS Dealing Notices [S347]. Walls between origination and PMAR inside LSE plc are Inferred: no public LSEG document describes them. October 2026.

SAY THIS IN THE INTERVIEW (UNPROMPTED)

"Because LSE plc is a Recognised Investment Exchange and LCH is a systemic clearing house, I'd expect to see information I can't share, whether that's a pipeline issuer, a client's flow or a member's positions. My default would be need-to-know: use published or aggregated data unless my task needs more, and ask before I share anything across teams."

DON'T SAY THIS

Naming a company you believe is about to list in London, or claiming to know anything about LSEG's pipeline. Do not cite a Bank of England fine on LCH or a named outage from memory: none was found in our research.

What Markets is hiring for, and how LSEG compares

A live job board is a cheap X-ray of a business. On 5 Oct 2026 LSEG had 661 live postings on its main Workday site. Markets had 45 of them; Engineering had 312 ^[S4]. Figure 10 breaks down the 45.

FIGURE 10

What LSEG Markets is hiring for: open roles by unit and city

A. By unit

Grouped from job titles by our research

Context: 661 live LSEG postings; Markets = 45 (6.8%); Engineering = 312. Highlight: London (B) and LSEG FX (A).

B. By city

Same 45 Markets postings

Manila alone has 19 of the 45 open Markets roles, nearly three times London's 7, mostly in operations, onboarding and PMO. Two of London's 7 are the internships. The hiring pattern confirms the split in Figure 5: London designs, sells and regulates; hubs run the machinery.

Source: LSEG Workday CXS API snapshot, 5 October 2026 [S4]; full list in research file open_roles.json. Unit groups are our classification of job titles ("department guess"), not Workday fields. Counts change daily.

The seven London Markets postings

Req	Role	What it tells you
R0123386	Business Management Summer Internship	This role
R0123387	Business Analyst Summer Internship	The sibling analytical stream; names Python, SQL, Tableau and Power BI ^[S5]
R0122459	Senior Market Supervision Surveillance Specialist	MAR surveillance for LSE and Turquoise ^[S10]
R0122748	Technical Account Manager (Analyst)	Client readiness and service comms ^[S11]
R0119909	Business Programme Manager, CDSClear	Transformation PMO across nine functions ^[S12]
R0122307	Senior Regulator, Primary Market and AIM Regulation	The RIE's own first-line regulator ^[S13]
R0118675	FX Market Surveillance Product Director	FX conduct monitoring being built ^[S14]

Source: [S4], 5 October 2026. Also Markets-related but tagged to other Workday divisions: Information Security Officer, Post Trade, LCH Ltd (R0119687); the graduate programmes R0123406 and R0123408, tagged "People".

Benchmark against peers (thin evidence)

Firm	What was visible on 5 Oct 2026	Evidence
LSEG	31 early-careers postings (18 graduate, 12 internship, 1 apprenticeship); a London business internship in Markets; a 12-month graduate programme with two pathways	[S3, S4, S37, S38] CONFIRMED
Nasdaq	2027 internships for Product Owner and Software Developer in Atlanta; no London business internship found	[S47] keyword search
CME Group	Software engineering and technology internships in Chicago; an AI Analyst placement in Belfast; no London business internship found	[S48] keyword search
Euronext	Trainee and apprenticeship programme (Paris, Porto); international mobility programme; internships at Borsa Italiana; durations not given	[S46] REPORTED
ICE; Deutsche Börse	Career pages did not return usable programme details	[S52, S53] gap

SOURCE UNCERTAIN

The peer check was a keyword search of job boards, not a full survey. It supports a careful claim: among the exchange groups checked, LSEG is the one with a visible London business (non-technology) summer internship tied to a Markets graduate programme. **INFERRED** Say "as far as I could see", not "the only one".

SAY THIS IN THE INTERVIEW

"Looking at your open roles, a big share of Markets operations hiring is in Manila and Colombo, with London focused on product, clients and regulation. So I'd expect any operational improvement work I did to involve those teams, and I'd want to learn how a London team and a hub split the work well."

Where this seat leads

The internship's main exit is the Business Graduate Programme. For this cohort that means a September 2028 start, because you finish your degree in summer 2028 [S1, S2, S37]. **INFERRED** on the exact date.

Stage	What the sources say	Evidence
Internship (June to August 2027)	Nine weeks in one Markets team; "the opportunity to progress into a Graduate role"	[S2, S37] CONFIRMED
Graduate programme (R0123406, London Markets)	12 months; global induction and "Divisional-led inductions"; an 8-week group project "aligned to LSEG goals"; "Ignite", a mid-point in-person offsite; 5 study days towards an industry qualification; permanent contract from day one, "aligned to one team"	[S6, S38, S261] CONFIRMED
Pathways	Two business pathways: Commercial ("develop your understanding of our markets, clients and commercial strategy") and Business Analyst . A separate Business Analyst graduate requisition exists (R0123408)	[S38, S7] CONFIRMED
After the programme	Programme hires are at the Associate career stage; postings show Senior Associate and Manager above it	[S2, S6, S10, S20] CONFIRMED labels; timing INFERRED

SOURCE UNCERTAIN

Rotations. The London Markets graduate JD says graduates "join LSEG's Markets division on the rotational programme" and lists "exposure/rotations" ^[S6]; the Business Analyst graduate JD mentions "your first rotation" ^[S7]. But the same JD says you are "aligned to one team", the current careers page does not mention rotations, and only an older, now-unreachable page described "two six-month rotations" ^[S38, S51]. Also, on 5 Oct 2026 R0123406 appeared on the main Careers site but not on the Graduate Careers board ^[S3, S4, S263]. Do not promise yourself rotations. Ask.

ASK THIS

"The graduate JD mentions a rotational programme but also says graduates are aligned to one team from day one. How do rotations work for Markets graduates today, and how often do interns convert into the same team they interned in?"

PART 2

The firm from the inside

LSEG as an operating model: who pays it, what it keeps, who it answers to, and where the Markets division you would join sits in the machine.

This part treats LSEG (London Stock Exchange Group) as a machine you could draw on a whiteboard, not as a brochure. Each section answers one plain question: where did it come from, how does money come in and go out, who has signed up to what, how is risk controlled, what has grown, why the share price fell, what the leaders say comes next, and where the bodies are buried. Every figure carries a source marker; the source table sits in Part 15.

In one breath: LSEG sells trusted information (data, indices, screening) on multi-year subscriptions, and market plumbing (venues and clearing houses) paid per trade or per unit of risk. You would join the plumbing side, Markets: about 40% of revenue and the fastest-growing division in H1 2026 ^[S70, S71].

A. Origins and the founding insight

The first product was data, not trading

In 1698, at Jonathan's Coffee House in London, John Castaing began publishing a list of stock and commodity prices called "The Course of the Exchange and other things" ^[S78] **CONFIRMED**. That is the founding insight worth remembering: the business that became LSEG started by **selling prices**. People paid for a trusted number. Trading rules came later, in 1801, when "the first regulated exchange comes into existence in London" ^[S78].

Today LSEG calls itself "a leading financial markets infrastructure and data provider" ^[S74]. In a sense the group has come full circle: the bulk of its income is again from selling trusted information, with the trading and clearing machinery as the second engine **INFERRED**.

KEY TERM

Financial market infrastructure (FMI): the shared systems that let markets work: exchanges (where buyers meet sellers), clearing houses (which guarantee trades), settlement systems and data feeds. If an FMI stops, many firms stop with it, which is why FMIs are tightly supervised.

From coffee house to FTSE 100 group

Four shifts made the modern group **INFERRED FRAMING**: **club to company** (1986 Big Bang; listed on its own market in July 2001) ^[S78]; **exchange to group** (Borsa Italiana, 2007) ^[S78]; **trading to clearing** (majority of LCH, 2013, the deal that made LSEG systemically important) ^[S78]; and **exchange to data and index giant** (FTSE Group 1995, Frank Russell 2014, Refinitiv 2021, about \$27bn) ^[S78, S84]. Refinitiv brought the Workspace desktop (then Eikon), real-time data, FXall and FX Matching, and the majority stake in Tradeweb ^[S300]. LSEG is now a FTSE 100 company, ticker LSEG ^[S70].

SOURCE UNCERTAIN

Dates the research did not re-verify: demutualisation (around 2000), FTSE becoming wholly owned (reported as December 2011), the Refinitiv announcement (reported as August 2019) and David Schwimmer's start as CEO (2018) ^[S78]. The history page itself omits the 2021 Borsa Italiana sale. Use the years, not the exact days, for these.

WHY THIS MATTERS

The two failed combinations in the table below (Deutsche Börse 2017, HKEX 2019) share one lesson: LSEG's clearing assets are so important that regulators and the board treat any change of control as a public-interest question ^[S80, S82] **INFERRED**. That is why LCH is run at arm's length with its own board, and why "open access" keeps coming up.

The deals that built it, and the ones that failed

Date	Deal	What it changed	Source
Oct 2007	Merger with Borsa Italiana	Created London Stock Exchange Group; first step beyond the UK.	^[S78] CONFIRMED
2010	Majority of Turquoise	A pan-European share trading venue founded in 2006 by nine banks; run "in partnership with the user community since 2010". LSEG holds 84.2% today.	^[S95, S300] REPORTED
May 2013	Majority of LCH Group	Clearing enters the group. Open access written into LCH's articles as a condition. Stake raised in 2018 and to 94.2% in 2024; deal agreed July 2026 to go above 95%.	^[S78, S305, S322, S121, S70]
Dec 2014	Frank Russell Company	US indices (Russell 2000 family) join FTSE: FTSE Russell.	^[S78] CONFIRMED
Mar 2016 to 29 Mar 2017	Failed: £21bn "merger of equals" with Deutsche Börse	Prohibited by the European Commission over a "de facto monopoly" in fixed income clearing. LSEG: it "regrets the Commission's decision".	^[S80, S81] CONFIRMED
Sep 2019	Rejected: HKEX's unsolicited ~£32bn approach	Board unanimously rejected it on "strategy, deliverability, form of consideration and value"; HKEX wanted LSEG to drop Refinitiv.	^[S82, S107] CONFIRMED
29 Jan 2021	Refinitiv, ~\$27bn, all shares	Data & Analytics, FX venues, Tradeweb stake. Sellers (a Blackstone-led group with Thomson Reuters) got about 37% economic, 29% voting interest in LSEG.	^[S78, S84] REPORTED for value
29 Apr 2021	Sale of Borsa Italiana to Euronext, ~€4.4bn	Sold to clear EU competition concerns on Refinitiv. Exact price unresolved (€4.325bn vs €4.4bn).	^[S83] REPORTED
12 Dec 2022	10-year Microsoft partnership	Microsoft buys ~4% from the Refinitiv sellers; LSEG commits to at least \$2.8bn of cloud spend; £250m to £300m extra cost over 2023 to 2025.	^[S79] CONFIRMED
May 2024	Refinitiv sellers exit	Thomson Reuters and Blackstone funds sell 17.3m shares at £91.50; Thomson Reuters fully out.	^[S85] REPORTED
Oct 2025	SwapClear revenue-share reset; 20% of Post Trade Solutions sold to 11 banks	£1.2bn paid to cut founding banks' surplus share from c.30% to 10% (2026 to 2045); 11 banks pay £170m for 20% of Post Trade Solutions.	^[S72] CONFIRMED

Mission and purpose, in their own words

Quote these exactly; they are the wording the research team actually read.

- **Purpose (Annual Report 2025, published early 2026):** "Our purpose is driving financial stability, empowering economies and enabling customers to create sustainable growth." [S74] The JD repeats it word for word.
- **David Schwimmer, 12 Dec 2022 (Microsoft deal):** "This strategic partnership is a significant milestone on LSEG's journey towards becoming the leading global financial markets infrastructure and data business, and will transform the experience for our customers." [S79]
- **Annual Report 2025 on the model:** "When other exchange groups focused on vertical integration of trading and clearing, we championed open access" [S300].
- **Results statements, 26 Feb and 30 Jul 2026:** "Our customers believe our solutions are more valuable in an AI world, not less." [S72, S70]
- **Schwimmer, 30 Jul 2026 call:** "As we've said before, our sector moves slowly. Given the range and complexity of issues to address, this is a marathon, not a sprint, and LSEG is the best running partner." [S71]

Values, from the JD and the Code of Conduct: Integrity, Partnership, Excellence and Change.

Partnership is defined as "Our open model is integral to how we do business" [S307], which is the open-access idea in values language **INFERRED**.

B. How LSEG makes money

£8,986m

Total income excl. recoveries, FY2025 [S72]

+7.1%

Organic constant currency growth, FY2025 [S72]

50.3%

Adjusted EBITDA margin, FY2025 (£4,523m) [S72]

73%

Recurring share of income incl. recoveries, 2025 [S74]

£4,799m

Income excl. recoveries, H1 2026, +8.4% organic [S70]

+11.9%

Markets division organic growth, H1 2026 (£1,920m) [S70]

58.6%

Markets adjusted EBITDA margin, H1 2026 [S70]

£2.8bn

Returned to shareholders in 2025 (dividends plus buybacks) [S72]

KEY TERM

Total income excl. recoveries: LSEG's headline revenue. "Recoveries" are fees it collects for other firms' content (for example other exchanges' prices) and passes on, so they are stripped out.

KEY TERM

EBITDA: earnings before interest, tax, depreciation and amortisation. Roughly the operating profit before paying for past investment. "Adjusted" strips out one-offs. The margin is EBITDA divided by income.

KEY TERM

Organic growth (constant currency): growth with acquisitions, disposals and exchange-rate moves removed. It answers "did the existing business sell more?" This is the number analysts watch.

KEY TERM

Recurring revenue: income that repeats without a new sale each time, such as subscriptions and licences. It is valued highly because it is predictable.

The four divisions: what each sells, to whom, and how well

Since the FY2025 results LSEG reports four divisions ^[S72, S70]. Markets was formed by merging the old Capital Markets and Post Trade divisions ^[S72, S76].

Division	What it sells	To whom	FY2025 income (organic)	H1 2026 income (organic)	EBITDA margin FY25 / H1 26
Data & Analytics	Workspace desktop (Eikon's successor), real-time and reference data feeds, analytics (Yield Book, Lipper, StarMine)	Banks, asset managers, wealth managers, corporates	£3,978m (+5.0%)	£2,061m (+5.1%)	40.7% / 42.3%
FTSE Russell	Index licences (subscription) plus asset-based fees on ETFs and funds that track its indices	ETF issuers such as BlackRock, fund managers	£954m (+7.3%)	£504m (+9.1%)	66.6% / 68.1%
Risk Intelligence	World-Check screening, digital identity and fraud, enhanced due diligence	Firms with screening duties, banks first INFERRED	£579m (+11.7%)	£310m (+9.7%)	57.5% / 59.4%
Markets	Trading venues (LSE, Turquoise, FXall, FX Matching, Tradeweb), clearing (LCH), post-trade services, treasury income on margin	Brokers, banks, asset managers, clearing members, issuers	£3,467m (+8.9%)	£1,920m (+11.9%)	55.6% / 58.6%

Sources: FY2025 ^[S72]; H1 2026 ^[S70]. "Other" income of £8m (FY2025) and £4m (H1 2026) not shown.

Two things to notice. First, Markets now earns a **higher margin than Data & Analytics** (58.6% vs 42.3% in H1 2026) even though D&A is the bigger division. Second, the highest-margin pound in the group is an index licence; the lowest is a desktop seat, which needs heavy content costs and engineering ^[S70]

INFERRED.

FIGURE 11

Where an LSEG pound comes from and where it goes (FY2025)

What each £1 of income keeps as adjusted EBITDA (pence), by division

Read top to bottom: each bar is drawn to the same scale (£9,346m = full width). Customers pay; four divisions earn it; content costs, people and investment take their share; about a quarter of income ends as cash for shareholders, and in 2025 LSEG returned more than it generated, using its borrowing headroom. Bottom panel: Markets keeps 55.6p of EBITDA per £1, well above D&A's 40.7p.

Source: LSEG preliminary results FY2025 [S72] (income, divisions, margins, cost of sales, opex, EBITDA, FCF, buybacks, dividends); Annual Report 2025 [S74] (people share of opex, capex, minorities, debt target); customer split from LSEG investor deck, May 2026 [S303]; H1 2026 margins [S70]. People and other opex split, tax/interest balance and the £0.4bn gap are estimates (est.) derived from these figures.

Inside Markets: the lines you might work on

Schwimmer on the H1 2026 call: "Remember that Markets is 40% of LSEG revenue." ^[S71] (Check: £1,920m / £4,799m = 40.0%.) The division reports seven lines ^[S70, S72]:

Line	What it is	FY2025	H1 2026 (organic)	Volume driver, H1 2026
Equities	London Stock Exchange and Turquoise trading, auctions	£412m	£230m (+12.2%)	UK average daily value traded £6.67bn (+33.5%)
Fixed Income, Derivatives & Other	Mostly Tradeweb (bond, swap, repo trading venues), consolidated at 100%	£1,539m	£864m (+13.0%)	Tradeweb ADV \$3.18trn (+24.8%)
FX	FXall (dealer-to-client) and FX Matching (dealer-to-dealer)	£272m	£145m (+7.6%)	FX ADV \$561bn (+5.8%)
OTC Derivatives	SwapClear, ForexClear, CDSClear (LCH), Post Trade Solutions	£641m	£355m (+13.6%)	SwapClear notional \$1,165trn (+29.4%)
Securities & Reporting	EquityClear, RepoClear, regulatory reporting	£229m	£124m (+8.2%)	RepoClear €334.2trn nominal in 2025 ^[S301]
Non-Cash Collateral	Fees on securities posted as margin	£117m	£59m (+3.5%)	Average non-cash collateral €209.6bn in 2025 ^[S301]
Net Treasury Income	Interest earned on cash margin at the clearing houses, after paying members their share	£257m	£143m (+12.6%)	Cash collateral £91bn at end 2025 ^[S74]
Total Markets		£3,467m	£1,920m (+11.9%)	

Sources: ^[S70, S72] unless marked. ADV = average daily volume.

The JD names five businesses. Mapped onto the reported lines **INFERRED**: **London Stock Exchange and Turquoise** sit in Equities; **LSEG FX** is the FX line; **Tradeweb** is most of Fixed Income, Derivatives & Other, which at £864m is 45% of Markets income in H1 2026; **LCH and post-trade** spread across OTC Derivatives, Securities & Reporting, Non-Cash Collateral and Net Treasury Income, together £1,244m in FY2025 and £681m in H1 2026 (36% of Markets).

KEY TERM

Net treasury income (NTI): clearing members post cash as margin. LCH invests it very safely and keeps part of the interest after paying members their share. It rises with margin balances and interest rates.

KEY TERM

Non-controlling interest (minority): when LSEG controls a firm it does not fully own (Tradeweb 50.9%), it reports 100% of its revenue, then subtracts the other owners' share of profit lower down: £334m in 2025 ^[S72, S74].

FIGURE 12

LSEG as layers: customers, front line, centre, capital and regulators

Money and orders flow down through the layers; services and permission to operate flow up. The Markets division (orange) is one of four front-line businesses; it leans on the centre for technology, risk oversight and capital, and on the bottom layer for its licences.

Source: customer mix [S303], May 2026; divisions [S72], shareholders and debt ratio [S74], Dec 2025; regulators [S94, S95, S105, S341], Elliott [S86]. Layer drawing is the author's simplification **INFERRED**.

The trace: from a customer's pound to dividends and buybacks

Follow one pound; Figure 11 draws the same chain to scale [S70, S72, S74] **INFERRED CHAIN** :

- A customer pays.** A bank pays for Workspace seats and data feeds (D&A). An ETF issuer pays FTSE Russell a fee tied to the fund's assets. A bank pays for World-Check. A trader pays per trade on LSE, Turquoise, FXall or Tradeweb. A clearing member pays clearing fees to LCH and posts margin, on which LCH earns treasury income.
- Cost of sales** (£1,113m in 2025) mostly pays for third-party content and revenue shares, such as the SwapClear surplus share to founding banks. Gross profit: £8,233m.
- Operating costs** (£3,711m adjusted, 71% people) leave adjusted EBITDA of £4,523m, a 50.3% margin.
- Investment and claims:** capex of £919m (10.2% of income), tax at about 24%, interest, and the minorities' share (Tradeweb's other owners above all).
- Equity free cash flow** of £2.4bn (guided at least £2.7bn for 2026) funds dividends (£718m cash in 2025) and buybacks (£2.1bn), within a target of 1.5x to 2.5x net debt to EBITDA (1.8x at Dec 2025, 2.1x

at June 2026).

KEY TERM

Capex (capital expenditure): money spent on long-lived assets, mostly software and platforms here. It does not hit EBITDA, but it does use cash. LSEG wants it down from 10.2% of income to about 8% by 2029 ^[S72].

KEY TERM

Share buyback: the company buys its own shares and cancels them, so each remaining share owns more of the profits. It returns cash without committing to a higher dividend every year.

KEY TERM

AEPS (adjusted earnings per share): profit per share excluding one-offs and acquisition amortisation. FY2025: 420.6p, +15.7% ^[S72].

How the money has grown

FIGURE 13

How LSEG grew: deals first, then steady organic growth

A Milestones from 2000, drawn to scale by date

B Total income excl. recoveries, £m, drawn to scale; growth, margin and staff below

Panel A: the big changes of shape came from deals, 2007 to 2021; red marks failed combinations. Panel B: since then growth has been organic and steady, about 6% to 8% a year, with margins rising. n/a = not retrieved.

Source: history ^[S78], deals ^[S79, S80, S82, S83, S84], Oct 2025 ^[S72], LSE 24 ^[S70], income 2022 to 2025 ^[S77, S76, S72], H1 figures ^[S70], organic growth and margins (excl. FX) ^[S73], staff at year end ^[S74].

Income excl. recoveries rose from £7,428m in 2022 to £8,986m in 2025, with organic growth between 6.3% and 7.7% every year and the EBITDA margin rising from 47.8% to 50.3% [S73, S77, S76, S72]. Adjusted EPS rose from 272.4p (2021) to 420.6p (2025) and the dividend from 107.0p (2022) to 150.0p (2025) [S73, S77, S72]. Staff numbers rose more slowly than income: 27,386 at end 2024, 28,516 at end 2025 [S74].

SOURCE UNCERTAIN: HEADCOUNT

The Annual Report gives 28,516 employees at 31 Dec 2025 [S74]. The JD says "25,000 people across 65 countries" and the May 2026 investor deck says "over 26,000 people in 65 countries" [S303]. The FY2025 results line "reduced headcount from 15,100 to around 14,200" refers to engineering, not the whole group [S300]. In interview say "about 28,500 at the end of 2025, per the annual report" and do not quote the JD figure as current.

C. The contracts: who gives what, who gets what

A useful way to understand any platform business is to ask what each party signs up to. Most of these are not literal single contracts but standing bargains, some written into rulebooks, articles and shareholder agreements.

Stakeholder	What they give LSEG	What they get	Evidence
Issuers (companies on the Main Market, AIM; private companies on the Private Securities Market)	Admission and annual fees; disclosure duties	Capital, a public price, liquidity for holders (including employees, via the PSM)	[S96, S70]
Trading members (brokers, banks, asset managers on LSE, Turquoise, FXall, Tradeweb)	Per-trade and connectivity fees; order flow, which itself becomes data	Liquidity, price discovery, evidence of best execution	H1 2026 UK ADV +33.5%, FX +5.8%, Tradeweb +24.8% [S70]
Clearing members (banks at LCH)	Clearing fees; initial and variation margin; default fund contributions	Counterparty risk removed; capital and margin efficiency from netting	£277bn of CCP collateral, end 2025 [S74]
SwapClear founding banks	Helped found SwapClear 25 years ago; keep the service central to their swaps business	A share of SwapClear's revenue surplus: c.30% (€0.2bn in 2024), cut to 15% for 2025 and 10% for 2026 to 2045, after LSEG paid £1.2bn	[S72, S304, S120] CONFIRMED
11 banks in Post Trade Solutions	£170m for 20% (Oct 2025); governance input	Equity upside; "replicating the original LCH model"	[S72] CONFIRMED
Data customers (banks, asset and wealth managers, corporates)	Multi-year subscriptions; £1.9bn of long-term contracts signed in Q4 2025, up to 7 years; about 16% of D&A run-rate revenue now on such deals	Trusted, licensed data and a workflow tool; increasingly data piped into their own AI tools via MCP	[S72, S73]
Index licensees (ETF issuers, fund managers)	Subscription fees plus fees linked to ETF assets (\$2.19trn tracking FTSE Russell indices at June 2026)	The right to sell a product tracking a recognised benchmark	BlackRock partnership extended 2025 [S72, S70]
Microsoft	Equity holder (4.1% at Dec 2025); Azure cloud; co-built products (Workspace in Teams, Excel and PowerPoint add-ins, data in Fabric)	At least \$2.8bn of LSEG cloud spend over 10 years; Microsoft estimated about \$5bn of extra revenue over the decade	[S79, S74], \$5bn [S104] REPORTED

Stakeholder	What they give LSEG	What they get	Evidence
Shareholders	Capital; patience with investment spend	Progressive dividend (17% compound growth over 20 years); buybacks of over £8bn since 2022, including those planned to Feb 2027	[S70, S74] Top holders, Dec 2025: QIA 6.2%, BlackRock 5.7%, Capital Group 5.1%, Microsoft 4.1%, Lindsell Train 4.1% [S74]
Elliott Management (activist)	A stake built by Feb 2026 (size not disclosed)	Reported asks: a portfolio review and a £5bn buyback; reportedly not a sale of the exchange. LSEG announced £3bn of buybacks on 26 Feb 2026; no causation claimed	[S86, S226, S72] REPORTED
Regulators and the state	Licences (RIE, MTF, CCP recognition)	Stable infrastructure; delivery of UK policy such as PISCES and the digital gilt	[S96, S70]

KEY TERM

Revenue surplus share: SwapClear's founding banks were promised a slice of its surplus revenue. LSEG paid £1.2bn to shrink that slice, which lifted group EBITDA margin by about 100bps straight away [S72].

KEY TERM

Activist investor: a fund that buys a stake and then pushes management publicly or privately for changes, such as buybacks, disposals or strategy shifts.

WHY THIS MATTERS: THE PARTNERSHIP PATTERN

LSEG keeps signing deals where customers co-own the infrastructure: founding banks in SwapClear, 11 banks in Post Trade Solutions, the user community in Turquoise (15.8% minority) [S72, S300]. The bargain is "use LSEG, but keep a seat and a share" **INFERRED**. It wins trust and flow; the cost is value leaking to minorities (Tradeweb 49.1%, PTS 20%, Turquoise 15.8%, LCH 5.6% at end 2025) and payments like the £1.2bn [S300, S301].

SOURCE UNCERTAIN: LCH OWNERSHIP

LSEG reached 94.2% of LCH Group after its 2024 purchase [S121]; the Annual Report shows 94.4% at end 2025 after a small October 2025 top-up [S300]; a July 2026 agreement (up to 1.05% more, €70m) takes it above 95% on completion [S70]. Say "about 94%, going above 95%". Never say 82.6%.

D. The risk and control architecture

LSEG is not one regulated firm. It is a set of separately licensed companies, each with its own regulator, board and capital. Regulation forces that: a clearing house takes on the risk of every member defaulting, so its money must be ring-fenced from the exchange's [S304] **INFERRED RATIONALE**.

Who supervises what

Entity	Legal status	Main supervisor	Notes and source
London Stock Exchange plc	Recognised Investment Exchange (RIE) under Part XVIII of FSMA 2000	FCA	Runs Main Market, AIM and the ISM (an MTF it operates as an RIE) [S95, S300, S346] REPORTED
Turquoise Global Holdings Ltd	Investment firm operating an MTF	FCA (UK); Dutch AFM for Turquoise Europe B.V., Amsterdam	84.2% owned [S95, S300] REPORTED

Entity	Legal status	Main supervisor	Notes and source
LSEG FX (FXall, Matching)	UK MTF; EU MTF in Ireland	FCA; Central Bank of Ireland	[S341] CONFIRMED
LCH Ltd (London)	Recognised Clearing House (CCP)	Bank of England	BoE non-objection needed for board appointments; own board, audit, risk and resilience committees [S304, S94] CONFIRMED
LCH SA (Paris)	CCP	ACPR (French prudential regulator); registered with US CFTC and SEC	BoE has an MoU to rely on French authorities [S105, S94] REPORTED
Tradeweb	Separately listed on Nasdaq (TW)	Not covered in this research	LSEG 50.9% economic, c.89.9% voting [S74, S137]

SOURCE UNCERTAIN

The AMF's role at LCH SA was not verified, and LCH SA's regulators were read from search snippets only [S105]. Say "LCH SA is supervised in France, by the ACPR among others" rather than listing bodies you cannot back up.

KEY TERM

RIE (Recognised Investment Exchange): the UK legal status of a full regulated exchange, granted and supervised by the FCA. The London Stock Exchange is one.

KEY TERM

CCP (central counterparty): a clearing house that becomes buyer to every seller and seller to every buyer. If one side defaults, the CCP still pays the other. LCH is LSEG's CCP group.

KEY TERM

MTF (Multilateral Trading Facility): a trading venue run by an investment firm under lighter rules than an exchange. Turquoise and FXall's venues are MTFs.

KEY TERM

Initial margin: collateral a member posts up front to cover the loss LCH could suffer closing out that member's positions if it failed. **Variation margin** moves daily with prices.

The LCH default waterfall, in order

LCH's own words: "The collateral and default fund contributions of the defaulting Clearing Member are utilised first, followed by the CCP's own funds and then by the default fund contributions of non-defaulting Clearing Members." [S93]

#	Layer	Whose money	Sizing rule or figure
1	Defaulter's initial margin	The failed member	Set to 99.7% confidence for most services (99% for Listed Rates), above regulatory minimums of 99% (listed) and 99.5% (OTC); "multiple intraday margin calls" [S93, S351]
2	Defaulter's default fund contribution	The failed member	"Defaulter-pays" principle [S93]
3	LCH's own capital ("skin in the game")	LCH, so ultimately LSEG	25% of LCH's minimum regulatory capital [S93]
4	Other members' default fund contributions	Surviving members, shared	Sized by stress tests to cover "multiple defaults in extreme market circumstances" [S74]

Scale: total margin and default fund collateral across LSEG's CCPs was **£277bn at 31 Dec 2025** (cash £91bn, non-cash £186bn), peaking at £303bn during 2025 (£334bn in 2024). The £90bn cash portfolio was 99.95% invested securely, with a weighted average maturity of 82 days ^[S74]. Track record: LCH says it has "managed 9 member defaults and, in all cases, losses were within the initial margin held" ^[S351]; in the 2008 Lehman default SwapClear handled a \$9trn book using about 35% of Lehman's initial margin ^[S354].

FIGURE 14**Anatomy of one front-line unit: LCH SwapClear**

SwapClear looks like one product but runs on group services: risk models, treasury, technology, legal and capital. In return it sends revenue, treasury income, a margin uplift and data back to the group. LSEG does not publish SwapClear's revenue on its own, so its line is shown as part of OTC Derivatives.

Source: SwapClear volumes and client trades 2025 ^[S72, S301]; ">90%" share is LSEG's own claim ^[S303]; margin and defaults ^[S351, S93]; treasury ^[S74]; members ^[S141, S304]; data in Workspace ^[S300]; regulator ^[S304]. The NTI share attributable to SwapClear is Inferred.

KEY TERM

Default fund: a pot every clearing member pays into, used only after the defaulter's own margin and contribution and the CCP's own capital are exhausted. It mutualises extreme losses.

KEY TERM

Skin in the game: the CCP's own money placed in the waterfall ahead of other members' funds, so management loses first if its risk models are wrong.

Three lines of defence and the group risk framework

"LSEG operates a three lines of defence model, providing appropriate segregation of duties and clear roles and responsibilities, including Risk, Compliance and Internal Audit." [S74]

- **First line:** the business owns its risks. Example: a "First Line Business Continuity Management team at LCH Ltd" running switch tests and recovery-site tests [S318].
- **Second line:** Risk and Compliance give independent oversight and challenge. Group Risk has central teams (policy, tooling, cyber, third-party risk) and coverage teams for divisions including Markets [S314].
- **Third line:** Internal Audit gives independent assurance [S74].

An Enterprise Risk Management Framework and a Group Risk Taxonomy feed risk appetite statements the Board approves each year. Committees include the Board Risk Committee, the Board Audit Committee and an executive Group Executive Risk Committee with sub-committees for financial, model, and technology and cyber risk [S74]. Each principal risk has a named executive owner: central counterparty risk sits with the Head of Markets, technology and cyber with the CIO, regulatory change with the General Counsel and CEO [S302].

KEY TERM

Three lines of defence: the people who take a risk manage it (1st), a separate team checks them (2nd), and auditors check both (3rd). The JD's "risk teams" track lives mostly in the first and second lines.

Why this produces stability INFERRED

The waterfall puts the defaulter's money first, so members have a reason to manage their own risk. LCH's capital comes next, so its managers carry real downside. Mutual funds are a last resort sized by stress tests. Commercially, stability comes from high retention (92.8% subscription revenue retention in H1 2026), multi-year data contracts and a mix of data and transaction income: the Annual Report calls this "all-weather growth" [S70, S74].

E. Strategy and business mix

What has grown

- **Group:** organic growth of 5.8%, 6.3%, 7.1%, 7.7%, 7.1% for 2021 to 2025, then 8.4% in H1 2026, with Q1 2026 at 9.8%, which LSEG called a record [S73, S70, S75].
- **Markets:** Schwimmer says annual growth "has averaged almost 10%" over five years: "There have been strong years and really strong years, but no weak years." [S71]
- **FTSE Russell:** ETF assets tracking its indices rose from \$1.43trn (end 2024) to \$1.83trn (end 2025) to \$2.19trn (June 2026); 44 new equity ETFs in 2025, a record [S72, S70].
- **Tradeweb:** ADV \$2.62trn in 2025 (+16.9%) and \$3.18trn in H1 2026 (+24.8%) [S72, S70].
- **SwapClear:** \$1,941trn notional cleared in 2025 (+21.2%) and \$1,165trn in H1 2026 (+29.4%) [S72, S70].
- **Slow part:** Workflows (the Workspace desktop) grew only 3.1% in 2025 and 2.8% in H1 2026, against 7.5% for Data & Feeds [S72, S70].

FIGURE 15**Revenue stability: subscription divisions vs Markets, and the 73% recurring line**

LSEG does not publish a recurring vs transactional split by year in the research files, so this chart uses a proxy: subscription divisions vs Markets. Markets' share has drifted up from about 34% to 40% as trading boomed. LSEG's own "recurring" figure (73% in 2025, red line) is higher than the subscription share because parts of Markets also recur, such as FX membership and data fees (about a quarter of FX revenue) [S303].

Source: FY2023 and FY2024 old five-division basis [S761]; FY2024 restated, FY2025 [S721]; H1 2025 and H1 2026 [S701]; recurring 73% (incl. recoveries) [S741]. Old-basis rows are faded because segments were restated and are not strictly comparable.

WHY THIS MATTERS FOR A MARKETS INTERN

Markets is the volume-driven, volatility-sensitive engine. H1 2026 was helped by "elevated market volatility" [S701]; the war involving Iran drove a spike in trading across asset classes [S223] **REPORTED**. A good interview question to ask: how much of the 11.9% is structural (new clients, products) and how much is cyclical? **INFERRED**

Guidance: what management has promised

Measure	2026 guidance (raised 30 Jul 2026)	Medium term 2027 to 2029 (set Feb 2026)
Organic income growth	7.0% to 7.5% (was 6.5% to 7.5%)	Mid to high single digits a year, with faster subscription growth
EBITDA margin	Up about 100bps at constant currency (was 80 to 100bps)	Underlying margin up about 150bps in total over 2027 to 2029
Capex	About 9.5% of income	Down to about 8% of income by 2029
Cash	Equity free cash flow at least £2.7bn	Double-digit compound growth in equity FCF per share
Tax rate	24% to 25%	Not stated in research

Sources: [S72, S701]. LSEG says it "consistently met or exceeded" its 2023 framework [S72]. Note the H1 2026 margin of 52.7% includes 140bps from the SwapClear revenue-share change that "will largely reverse in Q4 2026" [S701].

New: an AI pricing framework

In H1 2026 LSEG set out how it will charge for AI use: a recurring subscription to license its datasets for AI models; a recurring charge for MCP access, with usage bands to come; and AI Search priced into the annual Workspace price review up to a usage cap, with Deep Research as a premium add-on ^[S70]. LSEG also says it will stop reporting ASV as a KPI at the end of 2026 ^[S72].

KEY TERM

ASV (Annual Subscription Value): the yearly value of all subscription contracts at a date. Its growth (6.1% at June 2026) signals where subscription revenue is heading ^[S70].

KEY TERM

MCP (Model Context Protocol): an open standard for connecting AI applications to data sources. LSEG uses it to pipe licensed data into customers' AI tools.

F. LSEG as a public company: the derating, told straight

LSEG is listed on the London Stock Exchange, ticker LSEG, and is in the FTSE 100 ^[S70]. Its own share price is the market's running verdict on the strategy. Over 2025 and early 2026 that verdict turned sharply negative, even while the business kept growing.

The sequence

1. **Peak:** a close of 12,095p on 5 Feb 2025 ^[S90].
2. **31 Jul 2025, H1 2025 results:** shares fell 7.9% on the day as growth in subscription value (ASV) slowed; Bloomberg headline: "LSEG Shares Plunge on Slowing Growth in Subscription Value" ^[S90, S102, S103] **REPORTED**.
3. **3 Feb 2026, the AI scare:** down 12.8% in one day (8,234p to 7,180p) as worries that large language models, "like Anthropic's Claude", would let customers bypass terminals and aggregated data triggered a software selloff. Low close 7,170p on 4 Feb 2026, about 41% below the peak ^[S90, S88].
4. **11 Feb 2026, Elliott:** reports that the activist had built a stake; shares rose as much as 7%, settling 2.3% up. The stock had "fallen by more than 35% in the past 12 months" ^[S86, S87].
5. **26 Feb 2026, FY2025 results:** £3bn buyback plan and new 2027 to 2029 targets; close up 9.1% ^[S90, S72].
6. **11 Jun 2026:** Reuters: shares up 27% since the Elliott news but 23% below the 2025 peak; about 18 times forward earnings, about 30% below Moody's and 40% below MSCI; 90% of 20 analysts rate it buy ^[S88] **REPORTED**.
7. **18 Jun 2026, Redburn:** Rothschild & Co Redburn cut to neutral, target £120 to £104, putting about 30% of EBITDA at risk in a "realistic base case"; close down 7.0% ^[S89, S90].
8. **30 Jul 2026, record H1:** guidance raised, yet the close fell 6.4% (9,198p to 8,606p) as investors weighed the timing of AI monetisation ^[S90, S108].
9. **5 Oct 2026:** about 8,216p intraday ^[S90].

FIGURE 16**The share price story, 2025 to 2026: a sketch through sourced points**

This is not a daily chart. Dots are sourced daily closes joined by dashed straight lines; the true path between dots wiggled. Purple dashed lines mark events with a sourced percentage move but no sourced price level. The hollow grey dot is a low-confidence 52-week high from a snippet. The point: the business set records while the share price fell, so the market was pricing a future risk, not a current loss.

Source: Yahoo Finance daily closes ^[S90], accessed 5 Oct 2026; causes per ^[S88, S86, S89, S102, S108], 23 Apr 2026 high ^[S258] (snippet, low confidence); 5 Oct 2026 is intraday, not a close.

SOURCE UNCERTAIN

Results day, 30 Jul 2026: Yahoo closes show a 6.4% fall ^[S90]; Reuters wrote that shares "fell 3.1% on the day" ^[S223], likely at a different time of day. Say "fell on the day despite a record half". Market value: about \$52bn per an aggregator ^[S148], roughly £40bn on our own share-count estimate ^{INFERRED}; check before quoting.

The two sides of the argument**THE BEAR CASE**

Redburn: shifting to "modular, API- and AI-driven data consumption may prove structurally deflationary for parts of the model" ^[S89]. UBS's Michael Werner: "There is still a 'show me' story for AI. It's one thing to have usage, it's another to start charging people." ^[S88] Workflows growth is under 3% ^[S70].

THE BULL CASE

Schwimmer: "90% of our data revenues come from real-time or data that is proprietary." ^[S71] About 98% of revenue comes from proprietary data, IP and market infrastructure ^[S73]. MCP customers rose from 60 trialling (Feb 2026) to over 200 engaged (Jul 2026) ^[S72, S70]. Markets, untouched by the AI worry, grew 11.9% ^[S70].

KEY TERM

Derating: the share price falls further than profits, so the multiple investors pay for each pound of earnings shrinks. LSEG fell to about 18 times forward earnings (share price divided by next year's expected earnings per share) ^[S88].

SAY THIS IN THE INTERVIEW: "WHY JOIN A STOCK THAT FELL 40%?"

"The share price and the business told different stories. From the 2025 peak to the February low the shares fell about 41%, but over the same period income grew 7% and H1 2026 was a record half. The fall was about one fear: that AI tools shrink the value of terminals and aggregated data. The division I'm applying to, Markets, is mostly exchanges and clearing, the plumbing that AI trading still has to run through, and it grew 11.9% with a 58.6% margin. So I see the derating as a debate about one part of the group, and I'd rather join the part that's growing fastest while that debate is being settled."

DON'T SAY THIS

"The market has got it wrong" or "the stock is cheap." You do not know, and interviewers at a listed company are careful about share price talk. Talk about the business, not the price.

G. Leadership's view of the future

FIGURE 17

The group's leadership as LSEG publishes it (read 5 Oct 2026)

Eight group-function leaders and three division heads sit around the CEO. The Markets division you would join is led by Daniel Maguire, who is also CEO of LCH Group. Dashed boxes are roles whose holders the research did not find; no standalone Chief Strategy Officer is listed.

Source: LSEG Executive Team page [S306], read 5 Oct 2026 (dates as stated there; CFO appointed effective 1 Mar 2024 per [S70, S74]); Chair [S74], Zavery [S92], Hoggett [S96], Billy Hult [S237].

No CEO or Chair change was found as of 5 Oct 2026; David Schwimmer is CEO, Michel-Alain Proch CFO, Don Robert Chair [S70, S74]. The one board change: Amit Zavery, President, COO and Chief Product Officer of ServiceNow, joins as a non-executive director on 1 Dec 2026 [S92], reportedly to support the "LSEG Everywhere AI strategy" [S259].

What leadership says is coming

- **"More valuable in an AI world."** The title of both the FY2025 results and Q1 2026 presentations [S73, S75]. The claim: AI needs data, compute and models; compute is an arms race, models are commoditising, so trusted licensed data gains value [S71].
- **LSEG Everywhere:** AI-ready data delivered wherever customers work. Partnerships with Anthropic, Databricks, Microsoft Copilot Studio, OpenAI, Rogo and Snowflake (2025), then Amazon Quick and Google Gemini (H1 2026). MCP customers: over 60 trialling (Feb 2026), over 150 connected or onboarding (Apr 2026), over 200 engaged (Jul 2026) [S72, S75, S70].

- **Microsoft:** Workspace in Teams, Excel and PowerPoint add-ins, Open Directory (20+ customers onboarded), Autex and DMI on Azure ^[S72, S70]. Reuters reports some investors find the rollout disappointing ^[S88] **REPORTED**.
- **Digital markets infrastructure:** DMI launched Sept 2025 for private funds (six fund providers by H1 2026); Digital Settlement House (DiSH) in H1 2026; a Digital Securities Depository planned for H2 2026; an MoU with HSBC to support the UK's first digital gilt (DIGIT) by Q1 2027 ^[S72, S73, S70].
- **Private markets:** the Private Securities Market under PISCES (first operator approved 26 Aug 2025; first transactions in H1 2026, "including two high-profile UK unicorns" in July); Preqin and eVestment data partnerships; FTSE StepStone indices ^[S96, S71, S72].
- **LSE 24:** a 24/5 venue announced 21 Jul 2026, starting with exchange-traded products from 5pm to 7:50am London time, launching in H1 2027 subject to approval; client testing by end 2026 ^[S70, S97, S196].
- **Internal AI:** an AI coding platform with nearly 50% daily use; in-house engineers up from 49% to 60%; major incidents down 50% ^[S72].

Two quotes to hold: "Our Markets businesses had an exceptional first half, achieving double-digit growth through sustained investment. With our plans for LSE 24 and growing momentum of transactions on the Private Securities Market, we are opening up significant new market opportunities." (Schwimmer, 30 Jul 2026) ^[S70]. And Julia Hoggett: "LSE 24 will help support deeper liquidity, greater efficiency and broader participation in our markets" ^[S227].

Inference from hiring **INFERRED**

Live job ads show where effort is going ^[S313 to S319]: FX account managers asked to "identify upsell, cross-sell, and new business opportunities across FX trading, workflow, data"; FX venue onboarding in Manila; a business programme manager for CDS Clear coordinating risk, operations, product, technology, legal and finance; first-line business continuity at LCH Ltd; debt capital markets origination tasked with "market research and intelligence, competitive analysis". Add the strategy themes (forward-deployed engineers, AI pricing, 80+ Post Trade Solutions customers added in H1 2026, new venues: PSM, LSE 24, DiSH) ^[S70], and a Markets intern is most likely to meet: customer onboarding and analysis for FX, launch support for new venues, debt-listing and shareholder research, and risk reporting. That maps onto the JD's four tracks.

The centre: group functions

Part 3 goes deeper on teams. Here is what the research shows about the centre that every front-line business draws on.

- **Size and spread.** 28,516 employees at end 2025. India is the biggest country (8,541, about 30%), then the UK (5,043), Europe excluding the UK (3,388) and the US (3,218). External contractors were cut from about 11,000 to about 9,200 ^[S300].
- **Technology is the biggest function.** Engineering headcount fell from 15,101 to 14,244 in 2025 while the in-house share rose from 49% to 60%, target 80%; 95% of code is on a single platform ^[S300].
- **Operations hubs** appear in live ads: Bangalore, Colombo, Gdynia, Manila, Bucharest, Cluj, Bangkok, Nottingham, Exeter, Paris (LCH SA), New York, Buffalo and St Louis ^[S319].
- **Methods it names:** zero-based budgeting, insourcing, AI coding tools ("increased our velocity by 25%, while reducing major incidents by 50%"), AI Q&A cutting query resolution time by 40%, and a "unified revenue and billing platform" in progress ^[S300, S301].

- **Gaps:** no published headcount for Finance, Risk, Legal or HR, and no confirmed "COO office" or chief-of-staff structure inside Markets ^[S300, S319].

FIGURE 18**How a Markets business is wired into the centre**

Embedded roles sit inside the business and face its customers; connective roles join the business to the group; utility functions serve every business at scale. Business management, the role you are applying for, sits in the connective column: it translates between front line and centre. That placement is the author's inference from the JD.

Source: job ads ^[S313, S314, S315, S317, S318, S319], read 5 Oct 2026; Executive Team ^[S306], cross-business builds ^[S301, S302], engineering headcount ^[S300], FXall clients ^[S340], FX revenue ^[S72], Microsoft ^[S308]. Column labels are the author's framework ^{INFERRED}.

WHY THIS MATTERS

LSEG says "As our different businesses have continued to become more closely integrated, potential reputational exposure has increased" ^[S302]. Integration creates work at the joins: FXall functions moving into Workspace, Tradeweb pricing in Workspace, RepoAgent built by Post Trade Solutions and Tradeweb ^[S301, S302]. Those joins are where a business management intern adds value ^{INFERRED}.

H. Recent moves, October 2024 to October 2026

Date	Move	Source
27 Feb 2025	FY2024 results: income £8,494m, +7.7% organic	^[S76] CONFIRMED
30 Jun 2025	Eikon switched off for existing customers; move to Workspace complete	^[S72] CONFIRMED
26 Aug 2025	LSE becomes the first operator granted a PISCES Approval Notice (Private Securities Market)	^[S96] CONFIRMED
Sep 2025	Digital Markets Infrastructure (DMI) launched, first transaction	^[S72] CONFIRMED

Date	Move	Source
Oct 2025	11 banks buy 20% of Post Trade Solutions for £170m; £1.2bn SwapClear revenue-share reset, extended to 2045	[S72] CONFIRMED
Nov 2025	RepoAgent launched (Post Trade Solutions with Tradeweb)	[S72] CONFIRMED
Dec 2025	MCP server launched; AI-enhanced search in Workspace	[S70, S72] CONFIRMED
11 Feb 2026	Elliott stake reported	[S86, S87] CONFIRMED
26 Feb 2026	FY2025 results; £3bn buyback plan to Feb 2027; 2027 to 2029 targets; four-division reporting	[S72] CONFIRMED
23 Apr 2026	Q1 2026 update: +9.8% organic, a "record" quarter; £1.1bn bought back in Q1	[S75] CONFIRMED
H1 2026	Amazon Quick and Google Gemini data partnerships; TradeAgent; DiSH; Model-as-a-Service with Societe Generale; Russell 9000 announced; Tradeweb minority investment in Kalshi	[S70] CONFIRMED
13 Jul 2026	Wayve executes a trade on the Private Securities Market	[S235] REPORTED
21 Jul 2026	LSE 24 announced; HSBC digital gilt (DIGIT) MoU; deal to lift LCH stake above 95% (all July)	[S70, S196] CONFIRMED
30 Jul 2026	H1 2026 results: £4,799m, +8.4%; guidance raised; up to £1.35bn more buyback	[S70] CONFIRMED
1 Sep 2026	Plans for tokenised equity structures (xStocks) with Payward, to trade on LSE 24 in 2027 subject to approval	[S228] CONFIRMED
22 Oct 2026 (due)	Q3 2026 trading statement, revenue only. Not yet published on 5 Oct 2026: check it before any interview	[S91]
1 Dec 2026 (due)	Amit Zavery joins the Board	[S92] REPORTED

I. Skeletons, and what was not found

Every infrastructure firm has incidents. For LSEG, reliability is the product, so these matter more than at a normal company. Know them, state them plainly, and pair each with what changed.

When	What happened	Detail	Source
8 Sep 2008	TradElect outage	The trading platform was mostly unavailable for over seven hours on a heavy trading day; an analyst linked several outages to volume spikes. (Not 2009; a further crash was reported in Nov 2009, headline only.)	[S100] REPORTED
Aug 2020	Delayed market open	The LSE open was delayed by more than an hour and a half; LSEG blamed "a technical software configuration issue following an upgrade of functionality" and denied a cyber attack.	[S101] REPORTED
19 Jul 2024	Global Workspace outage	Blamed on a "third party global technical issue"; RNS news publication disrupted; LSE trading itself unaffected. A trader: "We are having the mother of all global market outages." That this was the CrowdStrike day is an inference.	[S98] REPORTED
2024	World-Check data leak	Hacking group GhostR claimed 5.3m World-Check records. LSEG: "This was not a security breach of LSEG/our systems... The incident involves a third party's data set, which includes a copy of the World-Check data file." A reputational issue for a division that sells trust.	[S99] REPORTED
2021 to 2026	Refinitiv, long and costly	Integration costs £166m (2024), £121m (2025); non-underlying amortisation £568m in H1 2026, mainly from Refinitiv. LSEG says synergies came "significantly ahead" of targets. No cost-overrun claim verified.	[S300, S70, S73]

When	What happened	Detail	Source
2024 to 2025	Data pricing scrutiny	FCA (29 Feb 2024): users "may be paying higher prices for the data they buy than if competition was working more effectively", but no referral. A Feb 2025 report claimed £4.93bn of surplus data fees across some exchanges; LSEG said it "contains multiple errors".	[S309, S310, S311]
2025	Open access cuts both ways	Euronext moved its clearing away from LCH SA; Securities & Reporting revenue fell 3.0% in 2025 as a result.	[S120, S301] CONFIRMED

What was searched for and NOT found

- **No LCH fines found.** Searches for Bank of England, ACPR and CFTC penalties against LCH found none. The Bank's £11.9m fine on Vocalink in July 2025 was described as the first time it had fined an FMI, which suggests, but does not prove, that LCH Ltd has not been fined by the Bank [S106] **INFERRED**. Absence of evidence is not proof.
- **No FTSE Russell index-error story found**, so none is claimed.
- **No credible-outlet exposé on Workspace complaints found.** A low-quality site mentions inconsistencies between Eikon and Workspace [S109]; do not rely on it.
- **No verified Refinitiv cost overrun.**
- **Elliott's stake size** and later statements were not read.
- So never say "LCH was fined for..." or "FTSE Russell had an index error in...": the research found neither.

YOUR OPINION GOES HERE

Prompt: "Is LSEG's habit of sharing economics with banks (SwapClear surplus, Post Trade Solutions stake) a strength or a cost?" **For strength:** it wins flow and trust that rivals cannot buy; SwapClear clears over 90% of cleared swap notional [S303]. **For cost:** LSEG paid £1.2bn to shrink one such deal and still leaks profit to minorities [S72, S300]. **Suggested position:** a strength, priced deliberately; the 2025 reset shows LSEG renegotiating the price, not abandoning the model.

SAY THIS IN THE INTERVIEW: THE 30-SECOND MODEL

"LSEG has two engines. About 60% of income is subscriptions for data, indices and screening; about 40% is Markets, the venues and clearing houses, which grew 11.9% in the first half with a 58.6% margin. The glue is trust: LCH runs open access, keeps banks inside as partners and has handled nine member defaults within initial margin. The live debate is whether AI erodes the data side; my interest is the Markets side, where volumes, new venues like LSE 24 and the Private Securities Market, and the partnership model are doing the growing."

PART 3

Why LSEG is built this way

LSEG is a set of separately licensed businesses held together by shared data, technology and customers, and kept apart on purpose where trust depends on it.

The short answer, and how to use this part

Part 2 explained what LSEG sells and how the money flows. This part answers the harder interview question: **why is it put together like this?** An interviewer who asks "why LSEG?" or "how does the Markets division fit with the rest of the group?" is checking whether you can connect the dots, which is the JD's own phrase. The answer has four parts, and each needs a mechanism, not an adjective.

Question	One-line answer	The proof to quote
1. Why separate regulated businesses?	Regulators require it, and open access only works if LCH cannot favour LSEG's own venues. That neutrality is what pulls in flow from everyone.	LCH articles: "No exchange will be favoured over any other" [S305]
2. How do they work together?	Through data, distribution and technology: venue data feeds products, Workspace carries FXall and LCH data, Microsoft runs the platform. Not through clearing favours.	RepoAgent (Post Trade Solutions + Tradeweb, Nov 2025) [S301]
3. What do customers get?	Liquidity, default protection, netting, margin efficiency, trusted data and access to capital. They accept the fees because the alternatives cost more in capital and risk.	Lehman 2008: \$9trn book handled using about 35% of Lehman's initial margin [S354]
4. What sits behind the front line?	28,516 employees, 30% in India, 14,244 engineers, about 9,200 contractors. Central functions (risk, technology, sales, legal) wire into Markets through named owners and coverage teams.	Group Risk has a "Coverage" team for Markets [S314]

KEY TERMS FOR THIS PART

RIE (Recognised Investment Exchange): the UK legal status of a full stock exchange, supervised by the FCA. London Stock Exchange plc is one. **MTF (Multilateral Trading Facility):** a trading venue run under lighter rules than an exchange; Turquoise and the LSEG FX venues are MTFs. **CCP (central counterparty):** a clearing house that becomes the buyer to every seller and the seller to every buyer, so one bank's failure does not spread. LCH is LSEG's CCP group. **Open access:** a CCP clears trades from any venue on the same terms, rather than only from its owner's venues. **Vertical silo:** one group owns the venue, the CCP and often the settlement system, and trades flow straight down inside the group.

Q1. Why a group of separate regulated businesses

From the outside, LSEG looks like one company. Legally, it is a parent holding a set of separately licensed businesses, several with outside owners. The ownership table below is the starting point. Part 2 covers what each business earns; here the point is the *shape*.

Business (legal entity)	What it is, and its licence	LSEG stake	Who else owns it
London Stock Exchange plc	RIE running the Main Market, AIM and the International Securities Market ^[S300, S346]	100%	None
Turquoise Global Holdings	Equity MTF, "majority owned by LSEG in partnership with the user community since 2010" ^[S300, S321]	84.2%	User banks, 15.8%
LCH Group (LCH Ltd, UK; LCH SA, France)	CCPs: SwapClear, ForexClear, RepoClear, EquityClear, CDSClear. LCH Ltd is a Recognised Clearing House supervised by the Bank of England ^[S304]	About 94% ^[S300, S121]	Remaining minorities; LSEG agreed in July 2026 to take its stake above 95% ^[S72]
Tradeweb Markets	Rates, credit, equities and money-market venues; listed on Nasdaq ^[S300, S303]	50.9% economic; c.89.9% of votes ^[S300, S137]	Public shareholders, 49.1% of economics
Post Trade Solutions	Compression and optimisation for uncleared derivatives ^[S300, S301]	80%	11 banks, 20% (bought for £170m, Oct 2025)
LSEG FX (FXall, FX Matching)	Dealer-to-client and dealer-to-dealer FX venues; EU MTF supervised by the Central Bank of Ireland, UK MTF by the FCA ^[S341]	100%	None (came with Refinitiv)
Data & Analytics, FTSE Russell, Risk Intelligence	Subscription businesses ^[S303]	100%	None

There are seven mechanisms behind this shape. The first four explain why the businesses are kept apart. The last three explain why LSEG still wants to own them all.

Mechanism 1: regulation forces separate entities with their own capital and boards

A CCP, in LCH's own words, "sits in the middle of trades as the buyer to every seller and the seller to every buyer. If either party defaults on the trade, the Company owns the defaulter's risk" ^[S304]. That risk has to be fenced off. LCH Ltd has its own board and its own audit, remuneration, risk and operational resilience committees, and the Bank of England supervises it ^[S304]. The exchange is an RIE supervised by the FCA; the FX MTFs are licensed separately in Ireland and the UK ^[S341]. **CONFIRMED**

The logic: if a problem in one business could drain capital from another, a failure at a data business could weaken the CCP that guarantees trillions of dollars of swaps. Separate entities with separate capital stop that. **INFERRED**

Mechanism 2: open access is written into LCH's constitution

When LSEG bought control of LCH.Clearnet in 2012 to 2013, the UK competition authority (the OFT) recorded that an open-access provision, "considered a core operating principle", would go into LCH's Articles of Association, the company's legal rulebook ^[S305].

THE CLAUSE TO KNOW BY HEART

"LCH.Clearnet's services must be offered on terms that are fair, reasonable, open and non-discriminatory, and on a basis such that LCH.Clearnet's risk is adequately controlled. No exchange will be favoured over any other and LSEG's trading services users will not be favoured over any other exchange's users." ^[S305] **CONFIRMED**

LCH Ltd still describes itself as "operating through an open access model that clears for major exchanges and platforms as well as a range of over-the-counter ('OTC') markets" ^[S304]. LSEG's 2025 Annual Report puts it as strategy: "When other exchange groups focused on vertical integration of

trading and clearing, we championed open access" ^[S300]. So LSEG cannot run LCH as a captive that only serves its own venues. It chose not to, and it is legally bound not to.

Mechanism 3: horizontal, not a vertical silo

The OFT described the two ways to build a CCP: "stand-alone companies such as LCH.Clearnet or vertically integrated with a trading venue such as Deutsche Börse/Eurex Clearing" ^[S305]. Deutsche Börse uses the same words about itself: its plans "are based on the Group's vertically integrated business model ... The broad coverage of the entire value chain continues to be a key success factor" ^[S127]. Figure 19 shows the two shapes side by side.

In a silo, the venue and its CCP pull each other along: trade on Eurex and you clear at Eurex Clearing. In LSEG's horizontal model, LCH competes for flow from any venue, and LSEG's own venues get no privileged route in. **CONFIRMED** for the descriptions; the competitive logic is **INFERRED**.

FIGURE 19**Two ways to build an exchange group: horizontal vs vertical silo**

Read across the layers. On the left, many venues (including rivals and bilateral bank trades) feed one CCP that must treat them all alike. On the right, the group's own venue feeds its own CCP and its own settlement house. Each model has a gain and a cost.

Source: OFT decision ME/5464-12, Dec 2012 [S305]; LCH Ltd accounts 2025 [S304]; LSEG Annual Report 2025 [S300]; LSEG prelims FY2025 [S301]; Deutsche Börse release and Annual Report FY2025 [S126, S127]; Clarus, Q3 2025 [S139]; Turquoise disclosure 2025 [S358]. 360T and Clearstream positions simplified.

Mechanism 4: user governance keeps the banks inside

Before 2013, LCH was "owned 83 per cent by its clearing members and 17 per cent by trading venues" [S305]. The banks that use a CCP are also the ones whose money is at risk if another member fails, so they want a say. The 2012 deal kept that say:

- LSEG appointed only 4 of 17 directors at the start, alongside user directors, venue directors and independent non-executives [S305].
- Important "push matters" needed "60 per cent of votes cast, which must consist of at least 25 per cent of user shareholders" [S305].
- Today "representatives of clearing members sit on the Company's Board", and the LCH Ltd Board Risk Committee includes clearing member and client representatives, "with no one constituent of

the Risk Committee having a majority" [S304].

- Product Advisory Groups and Risk Working Groups let participants comment on "risk policies, models and frameworks" [S304].

SOURCE UNCERTAIN

The 4-of-17 board and the 60%/25% voting rule are from the 2012 OFT decision. LSEG now owns about 94% of LCH, so those exact numbers have probably changed. What is confirmed for 2025 is the member seats on the board and the risk committee rule [S304]. Quote the 2012 rules as history, not as today's governance.

Mechanism 5: the bank-partnership model is repeated on purpose

LSEG keeps building the same deal: customers co-own or share in the infrastructure they use.

Where	The partnership	Source
SwapClear	"Founded in collaboration with clearing members 25 years ago". Founding banks got about 30% of the revenue surplus (€0.2bn in 2024). LSEG paid £1.2bn to cut this to 15% for 2025 and 10% from 2026 to 2045, while extending the deal.	[S304, S301] CONFIRMED
Post Trade Solutions	11 banks took 20% in Oct 2025, "replicating the original LCH model that continues to prove so successful for LCH and its customers".	[S301] CONFIRMED
Turquoise	Founded by banks; LSEG keeps a user minority (15.8%).	[S321, S358, S300] REPORTED history
Tradeweb	Before its IPO a group of dealer banks "collectively held a 46% ownership interest".	[S320] REPORTED , search snippet

The bargain for the banks is: use LSEG's infrastructure, but keep a seat and a share. For LSEG, the bargain buys loyalty and volume, at a price. INFERRED

Mechanism 6: venues create data, and data is what LSEG sells most

LSEG's investor deck has a page called "Our integrated offering creates more value" with four panels: "Creating our own data flywheel", "Fully integrated workflow", "End-to-end offering" and "Integrated enterprise offering" [S303]. A **flywheel** here means a loop where each part speeds up the next: trading creates prices, prices become data and indices, and data products bring customers back to trade.

The concrete evidence:

- Turquoise: "All data generated from the trading systems operated by Turquoise is collated and developed before being distributed via vendors or directly to end-users" [S358].
- FTSE Russell has switched "the price source for a number of our indices to Tradeweb" [S300], and the deck lists fixed income indices "sourced from Tradeweb" [S303].
- LSEG says "~98% of group revenues derived from proprietary data, IP and market infrastructure" [S303].

Open access helps the flywheel: the more venues clear at LCH, the more LCH data exists to sell into Workspace. INFERRED

Mechanism 7: the Refinitiv logic

The 2021 Refinitiv deal brought in FXall and FX Matching, the Workspace desktop, real-time data, and the majority stake in Tradeweb [S320, S300]. LSEG's stated pitch: "The combination of our trade lifecycle and data value chains is unmatched. We increasingly combine the two to develop differentiated

products" ^[S303]. A **trade lifecycle** is the chain from pre-trade data to execution, clearing, settlement and reporting; a **data value chain** is the chain from raw prices to cleaned data, analytics and indices. Refinitiv gave LSEG the second chain at scale, to sit beside the first.

What the structure costs

A good candidate states the price too. Each line below is a real cost with a number.

Cost	Evidence	Tag
Paying partners for loyalty	£1.2bn (£921m in 2025, £250m in 2026) to reduce the SwapClear surplus share; banks still get 10% until 2045 ^[S301] .	CONFIRMED
Profit that belongs to minorities	Outside owners hold 49.1% of Tradeweb, 20% of PTS, 15.8% of Turquoise and 5.6% of LCH ^[S300] . Adjusted non-controlling interests were £334m in 2025 ^[S72] .	CONFIRMED
Integration cost and time	Refinitiv integration costs were £121m in 2025 (£166m in 2024), four years after completion ^[S300] .	CONFIRMED
Open access cuts both ways	Securities & Reporting revenue fell 3.0% on "the final impact of the termination of the Euronext clearing agreement"; Net Treasury Income also fell on "loss of business from Euronext" ^[S301] .	CONFIRMED
Transformation risk	A principal risk: "platform and product upgrades, cloud migration, integration of acquisitions and the execution of the LSEG-Microsoft Partnership. These initiatives introduce execution risk" (owners: CEO, COO) ^[S302] .	CONFIRMED
Reputation spreads	"As our different businesses have continued to become more closely integrated, potential reputational exposure has increased" ^[S302] .	CONFIRMED
Slower decisions	LSEG cannot impose decisions on LCH alone: user directors, member-represented risk committee, consent rules ^[S305, S304] .	Facts CONFIRMED ; "slower" INFERRED
Lock-in to one tech partner	Minimum Microsoft cloud spend of \$2.8bn over 10 years, plus £250m to £300m extra cash costs over 2023 to 2025 ^[S308] .	CONFIRMED

Why open access pays for itself: the netting mechanism

If open access lets customers leave, why choose it? Because a CCP's product gets better as it gets bigger. **Netting** means offsetting a bank's bought and sold positions in the same product so it only posts margin on the difference. **Initial margin (IM)** is the collateral a member posts up front to cover losses if it fails. The more trades from more venues that sit in one CCP, the more of them cancel out, and the less margin each bank has to post. Figure 20 shows the mechanism with invented numbers.

FIGURE 20**Why open access and netting work: one pool offsets what separate pools cannot****ILLUSTRATIVE: invented round numbers to show the mechanism. Not LSEG data.****Bank A has three trades in the same swap product (units of risk; + = bought, - = sold)**

Venue 1 (an LSEG venue) +100	Venue 2 (a rival venue) -70	Bilateral with Bank B -20
--	---------------------------------------	-------------------------------------

A. Each venue clears at its own CCPCCP X  100 marginedCCP Y  70 marginedCCP Z  20 margined

Nothing offsets: each CCP sees one side only.
Total exposure margined: $100 + 70 + 20 = 190$

B. All three clear at one CCP

The CCP offsets the positions. Only the net 10 carries risk.

Exposure that needs margin (to scale, same units)**A. Split clearing**  **190****B. One CCP**  **10 (95% less)**

Why this is the business: every extra venue and member that clears at LCH adds positions that can offset existing ones, so margin per trade falls as the pool grows. Real initial margin is set on portfolio risk at 99.7% confidence [S351], not a simple sum, but the direction is the same [Inferred].

Same three trades, two set-ups. Split across three CCPs, every position is margined in full. In one CCP, the bought and sold positions cancel and only the net is margined. This is why banks want their trades in the deepest pool, wherever they were executed.

ILLUSTRATIVE numbers invented by the author. Margin method: LCH Group risk management page, accessed 5 Oct 2026 [S351]. Real-world scale: SwapClear ">90% share of cleared interest rate swap notional outstanding", LSEG deck May 2026 [S303].

Two real numbers show this at work. SwapClear holds over 90% of cleared interest rate swap notional outstanding, by LSEG's own claim ^[S303], and in 2023 it compressed 7.8 million trades ^[S356].

Compression means tearing up offsetting trades and replacing them with fewer, smaller ones that carry the same risk. A pool that big is hard for a rival to match, which is why open access gives LCH more than it takes away. ^{INFERRED}

SAY THIS IN THE INTERVIEW

"LSEG is built as separate regulated businesses partly because regulators require it, but mainly because LCH's value depends on being neutral. Its articles say no exchange will be favoured, so trades come in from rival venues and bilateral deals as well as LSEG's own. More trades in one pool means more netting and less margin for everyone, which is why SwapClear holds over 90% of cleared swaps. The cost is real: Euronext could take its clearing away, and it did."

DON'T SAY THIS

"LSEG is an integrated exchange that keeps trading and clearing in-house." That describes Deutsche Börse's model, not LSEG's. Also avoid "LCH is 82.6% owned": the current figure is about 94% ^[S300, S121].

YOUR OPINION GOES HERE

Prompt: Was the £1.2bn paid to SwapClear's founding banks worth it? **For:** it lifted group EBITDA margin by 100bps at once ^[S72] and locked the banks in until 2045. **Against:** the banks still take 10% for 20 years, and the cash could have funded buybacks. **Suggested position:** worth it, because it bought both margin and loyalty in the business with the deepest moat; but say you would want to see how the 10% share is measured and reviewed.

Q2. How the businesses work together

LSEG's language here is precise, and you should match it. Its Code of Conduct defines the value **Partnership** as: "Our open model is integral to how we do business. We forge long-term relationships; we work together to solve evolving needs and deliver strategic outcomes" ^[S307]. The 2025 Annual Report heads its integration section "Monetising our integrated business" ^[S300]. Note what these phrases claim: an open model, and an integrated *offering* to customers. They do not claim that trading and clearing are tied together.

Where collaboration actually lives

Each row is a link LSEG has named in a primary document. The right-hand column reads the wording precisely, so you do not overstate it in an interview.

Link	What LSEG says	How strong the claim is
RepoAgent (Post Trade Solutions + Tradeweb)	Launched Nov 2025; "helps banks and clients reduce settlement fails in the repo market"; "Reflecting the strength of collaboration within Markets" ^[S301, S300]	A joint product. The clearest example of two Markets businesses building together. CONFIRMED
FTSE Russell + Tradeweb	Price source for "a number of" indices switched to Tradeweb ^[S300]	A data supply link for some indices, not all. CONFIRMED
FXall into Workspace	"We have now added a large proportion of FXall's functionality" (H1 2026) ^[S302]	"A large proportion", not all. FXall still exists as a venue. CONFIRMED
Tradeweb into Workspace	"in the process of making Tradeweb available on the platform": first permissioned dealer pricing streams, then dealing between Tradeweb Institutional Viewer and Workspace ^[S302]	In progress, staged. CONFIRMED
LCH data and FTSE Russell in Workspace	"customers can now access FXall, FTSE Russell indices and LCH data via Workspace" ^[S300]	Distribution of data, not clearing access. CONFIRMED
ForexClear + CLS	CLSClearedFX redesigned July 2025, putting members' cleared FX into the main CLS settlement session ^[S304]	A partnership with an outside utility (CLS), not an internal one. CONFIRMED
Microsoft as shared technology	10-year partnership from Dec 2022: data platform to Azure, Workspace in Teams and Excel; Digital Markets Infrastructure "powered by Microsoft Azure"; Autex moved to Azure ^[S308, S301]	A common platform under several businesses. CONFIRMED

Link	What LSEG says	How strong the claim is
LSEG Everywhere	"agreed trusted, AI-ready data partnerships with leading platforms including Anthropic, Databricks, Microsoft, Open AI, Rogo and Snowflake, based on MCP infrastructure" ^[S301]	Data distribution into customers' AI tools. MCP (Model Context Protocol) is an open standard for connecting AI tools to data. CONFIRMED
One commercial contract	LSEG Data Access: long-term deals; £1.9bn of new agreements in Q4 2025, naming Citi, Bank of America and Standard Chartered ^[S300, S303]	Data and workflow contracts; not stated to include clearing or trading fees. CONFIRMED
Central sales	New executive role: Chris Coleman, Group Head of Sales and Account Management, from Jan 2026 ^[S306]	Signals a single account view of big customers. Effect on Markets not published. INFERRED

WHY THIS MATTERS

The pattern is clear: LSEG's businesses meet through **data, distribution, technology and account management**. They do not meet through clearing favours. That is the line the law draws (Figure 21), and it is what lets LSEG say "open model" and "integrated offering" in the same breath.

INFERRED

Where they deliberately do not work together

- **No clearing favours.** LCH must not favour LSEG venues or their users ^[S305].
- **Information barriers.** The OFT required "conflict of interest provisions and information barriers" so that rival venues could talk to LCH "assured of the confidentiality of those discussions from LSEG" ^[S305].
- **A listed subsidiary with its own board.** Tradeweb has its own share price, buybacks and board, and 49.1% of its economics belong to others ^[S300, S137]. Group decisions must respect Tradeweb's public shareholders. **INFERRED**
- **Client confidentiality.** The FX Global Code requires firms to "clearly and effectively identify and appropriately limit access to Confidential Information" (Principle 19) ^[S343], and LSEG's Code says staff "must never disclose confidential information... unless there is a legitimate need to know" ^[S307].

DON'T SAY THIS

"LSEG bundles SwapClear clearing with Tradeweb swaps trading", or "ForexClear is sold together with FXall". No LSEG statement ties these pairs commercially, and the open-access clause makes it unlikely ^[S305]. If you want to show you know the links, use RepoAgent, FTSE Russell pricing off Tradeweb, or FXall inside Workspace instead.

SAY THIS IN THE INTERVIEW

"The businesses meet through data, distribution and technology rather than through clearing. RepoAgent is the clearest joint product: Post Trade Solutions and Tradeweb built it together to reduce repo settlement fails. And LSEG says a large proportion of FXall's functionality is now inside Workspace. I'd be curious how the FX team measures whether clients actually move their workflow across."

FIGURE 21**The boundaries between LSEG businesses: what is shared, what is never shared**

Think of a building. The roof (green) is shared: technology, distribution, data, risk framework, sales and values run across every business. The walls (red bars) are legal and regulatory: each business has its own licence and, in four cases, outside owners. The basement (red) holds what may never cross a wall, each with the rule that stops it.

Source: LSEG Annual Report 2025 [S300]; LSEG prelims FY2025 [S301]; H1 2026 interim [S302]; LSEG deck May 2026 [S303]; LCH Ltd accounts 2025 [S304]; OFT decision Dec 2012 [S305]; LSEG Executive Team page [S306]; Code of Conduct [S307]; Microsoft release Dec 2022 [S308]; Tradeweb 10-K FY2025 [S137]; FX Global Code Dec 2024 [S343]; UK MAR Arts 7, 18 [S348, S349]; Turquoise disclosure 2025 [S358]. LCH SA regulator shown as "France" because the research only reports it (ACPR) via a filing snippet.

Q3. What customers get, and why they pay

Who the customers are

44,000+

Customers in over 170 countries, May 2026 [S303]

72%

Share of 2025 income from banking customers [S303]

2,400+

FXall institutional clients; 200+ liquidity providers [S340]

86

RepoClear live members, incl. 16 Sponsored Members [S304]

LSEG splits its 2025 total income (£9.3bn including recoveries) by customer community: Banking 72%, Buy-side and Wealth 14%, Corporates 14% [S303]. The deck footnote warns that some buy-side revenue is tagged as banking, so the buy-side share is understated. The older "40,000 customers" figure is out of date; use 44,000+ [S303].

Customer count	Figure	Note
FXall	"2,400+ institutional clients", "200+ liquidity providers", "500+ currency pairs" [S340]	An older fact sheet says 2,300 buy-side institutions [S342], counts differ by date
FXall Conversational Dealing	"more than 4,000 organizations and 14,000 users in more than 120 countries" [S342]	Chat-based dealing
FX Matching	"over 1,000 subscribers" [S303]	REPORTED , search snippet only
ForexClear	101 clients and 45 member entities (LCH Ltd accounts); "ForexClear Members 40" in 2025, 41 at H1 2026 (results KPI) [S304, S301, S302]	Different counting bases; flag if quoted
RepoClear	86 live members, including 16 Sponsored Members [S304]	CONFIRMED
Debt primary markets	"1,300 global borrowers in over 60 countries that raise \$500-600 billion annually" [S316]	From a job advert, not audited REPORTED

What they buy, and why they accept the fees

Customers do not buy "infrastructure". They buy six concrete things, each of which saves them money, capital or risk that they would otherwise carry. Figure 22 maps them.

1. Default protection that has been tested

When Lehman Brothers failed in September 2008, SwapClear held a "\$9 trillion OTC portfolio" of "over 66,000 trades", backed by "\$2 billion" of Lehman's initial margin. LCH used "only 35% of its initial margin", ran five currency auctions and had all positions dealt with by week three [S354]. No default fund money was used [S354, S355]. LCH says it has "managed 9 member defaults and, in all cases, losses were within the initial margin held" [S351]. **CONFIRMED** Part 2 explains the default waterfall that sits behind this.

KEY TERM

Default fund and waterfall: if a member fails, its own margin and default fund contribution are used first, then LCH's own capital ("skin in the game"), then other members' default fund contributions [S351]. Lehman never got past the first step.

2. Netting and compression free up capital

See Figure 20. LCH charges fees for compression, and OTC Derivatives revenue rose 11.6% in 2025 "driven by growth in clearing and compression activity" [S301, S304]. 7.8 million SwapClear trades were compressed in 2023 [S356], a 2025 figure was not found.

3. Margin efficiency

LCH sets initial margin at "an enhanced 99.7% confidence interval" ^[S351], which means the margin should cover losses on all but about 3 days in 1,000. ForexClear uses "historical simulation expected shortfall... ten years of historical market data" ^[S352]. Customers can post bonds rather than cash: average non-cash collateral was €209.6bn against €101.3bn of cash in 2025 ^[S301]. Cash tied up in margin earns little, so being able to post bonds instead is worth money to the customer. **INFERRED**

FIGURE 22

What a customer actually buys from LSEG

WHO BUYS

Share of 2025 income [S303]

Footnote: some buy-side revenue is tagged as banking [S303]

CUSTOMER COUNTS

Group: 44,000+ customers in 170+ countries [S303]

FXall: 2,400+ institutional clients, 200+ liquidity providers [S340]

RepoClear: 86 members; ForexClear: 40 members [S304, S301]

WHAT THEY BUY

Liquidity in one place

Buyers and sellers find each other at a fair price

Default protection

If a bank fails, the CCP pays its trades

Netting and compression

Fewer, smaller positions to hold capital against

Margin efficiency

Post bonds, not only cash

Data and benchmarks

Prices and indices they can trust and cite

Access to capital

Issuers raise debt from professional investors

PROOF THAT IT WORKS

Tradeweb ADV \$2.6trn (2025), \$3.2trn (H1 2026); FX ADV \$525bn (2025) [S301, S302]

Lehman 2008: \$9trn swap book, 66,000+ trades, about 35% of its IM used [S354]. 9 defaults, all within IM [S351]

7.8m SwapClear trades compressed in 2023 [S356]; OTC derivatives revenue +11.6% in 2025 on clearing and compression [S301]

IM at 99.7% confidence [S351]; average non-cash collateral €209.6bn vs €101.3bn cash, 2025 [S301]

Data quality issues raised by customers -51% while content +113% over four years [S301]

1,300 borrowers in 60+ countries raising \$500-600bn a year (job ad, Reported) [S316]

HOW LSEG IS PAID

Per-trade fees

Clearing fees; interest on margin (NTI)

Clearing and compression fees

Non-cash collateral fees

Subscriptions and licences

Admission and annual fees

Banks provide nearly three quarters of income, and they buy across all six rows. Each row pairs what the customer gets with a sourced proof and the way LSEG is paid for it. The proofs are why customers accept the fees: each one replaces a cost or a risk the customer would otherwise carry.

Source: LSEG deck May 2026 [S303]; FXall page [S340]; LCH Ltd accounts 2025 [S304]; LSEG prelims FY2025 [S301]; H1 2026 interim [S302]; CCP Global, "The Lehman Case" [S354]; LCH Group risk page [S351]; Markets Media, Jan 2024 (2023 data) [S356]; LSEG job ad R0120076, Sep 2026 [S316]. 2025 compression total not found; 2023 is the latest.

4. Liquidity in one place

SwapClear has over 90% of cleared interest rate swap notional outstanding ^[S303]. It cleared \$1,941 trillion of notional in 2025 and a record 13.4 million trades ^[S301, S304]. Tradeweb's average daily volume (ADV) was \$2.6 trillion in 2025 and \$3.2 trillion in H1 2026 ^[S301, S302]. Liquidity attracts liquidity: a buyer goes where most sellers already are.

5. Data accuracy

"Data quality issues raised by customers have fallen 51% despite total content volumes rising 113%" over four years ^[S301]. For a bank, a wrong price in a risk model is a regulatory and financial problem, so accuracy is part of what it pays for.

6. Access to capital

Debt issuers use LSE's markets to raise money from professional investors, with LSEG's own figure of 1,300 borrowers raising \$500 to \$600bn a year ^[S316]. Part 6 covers the primary markets process. **REPORTED**

The counter-case, with numbers from both sides

Interviewers respect a candidate who can state the critics' case fairly and then answer it. There is a real one.

The critic says	Evidence	LSEG's side, or the fair response
Data is overpriced	FCA wholesale data market study (29 Feb 2024): "users may be paying higher prices for the data they buy than if competition was working more effectively"; markets "concentrated, usually with no more than three key providers" ^[S309]	The same study: "we have not found evidence that firms cannot access the wholesale data they need"; no referral to the CMA (the competition regulator) ^[S309]
Exchanges earn surplus from data fees	Market Structure Partners (Feb 2025): some exchanges earned "an additional £4.93 billion in surplus revenue from market data fees since 2008"; it cites Turquoise turnover down 61% (2020 to 2022) while market data revenue rose 16.5% ^[S310]	LSEG replied that the report "contains multiple errors" and that retail data "has always been free" ^[S311] . The report was commissioned by an advocacy firm.
Users push back on fees	Data users considered legal action over CME licensing changes in 2025 ^[S324]	Not LSEG-specific; shows the pressure on the whole industry REPORTED
Banks build or co-own alternatives	Turquoise and Tradeweb were bank-founded ^[S320, S321] ; banks own 20% of PTS and 5.6% of LCH ^[S300]	LSEG's answer has been to bring the banks inside: "use LSEG, but keep a seat and a share" INFERRED
The desktop has a bigger rival	Bloomberg Terminal reported at \$31,980 a year from 2025 ^[S323] ; LSEG calls itself "#2 financial desktops" ^[S303]	Workspace price estimates (around \$22,000 per user) are low-confidence snippets; do not quote them as fact
Customers can walk	Euronext ended its clearing agreement with LCH SA; Securities & Reporting revenue fell 3.0% in 2025 ^[S301]	The price of open access; the same rule brings rival venues' flow in

YOUR OPINION GOES HERE

Prompt: Do customers get fair value for LSEG's data fees? **Side A:** the FCA found users may be paying more than with stronger competition, and only about three providers dominate ^[S309].

Side B: the FCA found no access problem, LSEG's data errors are falling while volumes rise ^[S309, S301], and customers keep signing long contracts (£1.9bn in Q4 2025) ^[S303]. **Suggested position:** value is real but pricing power is too; LSEG's job is to keep proving value with transparent licensing and fewer errors, because the regulator is watching.

Q4. The non-core side: people and central functions

Most of LSEG's people do not sit on a trading venue or in a clearing house. They build technology, manage data, run operations, sell, and control risk. The Business Management internship sits at the joins between these central teams and the Markets front line, so knowing the shape of the centre is useful.

The numbers

28,516

Employees at 31 Dec 2025
(27,386 a year earlier)
[S300]

8,541

Employees in India, the
largest country; about 30%
[S300]

14,244

Engineering headcount,
down from 15,101; 60% in-
house [S300]

c.9,200

External contractors, down
from c.11,000 [S300]

SOURCE UNCERTAIN: THREE HEADCOUNT FIGURES

The Annual Report says 28,516 employees ^[S300]. The JD and job ads say "25,000 people across 65 countries" ^[S317]. The May 2026 investor deck says "over 26,000 people in 65 countries" ^[S303]. Use the Annual Report figure and, if asked, say the advert copy looks older. Separately, the "15,100 to around 14,200" figure in the 2025 results is **engineering** headcount, not the group total; some summaries confuse the two (see Part 4).

FIGURE 23**Where people sit: the centre vs the front line****A. THE WHOLE WORKFORCE, END 2025 (to scale)****People by contract type****Employees 28,516 [S300]****Contractors**
c.9,200 [S300]**People by function (only engineering is published)****In-house c.60%****Contract**

Everything else, c.23,500 (est.): sales, operations, risk, finance, product, business management. No split is published [S300 gap]

Engineering 14,244 (down from 15,101) [S300]*Total workforce c.37,700 is est. (employees + contractors); the engineering split assumes the 14,244 count includes contractors, as the 60% in-house figure implies [Inferred].***B. EMPLOYEES BY COUNTRY, 31 DEC 2025 (to scale) [S300]***Job ads still say "25,000 people across 65 countries" [S317]; the May 2026 investor deck says "over 26,000" [S303]. The Annual Report count is used here.*

Engineering alone is about 38% of the whole workforce, and India employs more people than the UK and the US combined. LSEG does not publish how many people work in Markets or in each central function, so "front line vs centre" can only be estimated from these totals.

Source: LSEG Annual Report 2025, note 4 and strategic report [S300], figures at 31 Dec 2025; job locations from LSEG Workday search, 5 Oct 2026 [S319]; JD copy [S317]; investor deck May 2026 [S303]. Total workforce, engineering split and "everything else" are the author's estimates (Inferred).

The internal share of the workforce is 75% ^[S300], which matches 28,516 employees against about 9,200 contractors. LSEG is moving engineering in-house (49% to 60%, target 80%) ^[S300]. For an intern this means much operations and engineering work sits in hubs such as Bangalore, Colombo, Manila and Gdynia ^[S319], and London roles are often the ones that coordinate across them. **INFERRED**

The executive team, as LSEG lists it

This is the list on lseg.com, read on 5 Oct 2026 ^[S306]. LSEG lists names and titles; the grouping in the right-hand column is the author's.

Name	Role (LSEG's title)	Joined or appointed	Grouping INFERRED
David Schwimmer	Chief Executive Officer	not stated on page	Group leadership
Daniel Maguire	Group Head, LSEG Markets and CEO, LCH Group	ExCo since 2017	Business line: the internship's division
Gianluca Biagini	Co-Head of Data & Analytics	Aug 2025	Business line
Ron Lefferts	Co-Head of Data & Analytics	Aug 2025	Business line
Chris Coleman	Group Head of Sales and Account Management	Jan 2026	Commercial, cross-group
Michel-Alain Proch	Chief Financial Officer	Feb 2024 (Board Mar 2024)	Central function
Balbir Bakhshi	Chief Risk Officer	Jan 2021	Central function
Pascal Boillat	Chief Operating Officer	1 Jul 2024	Central function
Irfan Hussain	Chief Information Officer	Jan 2024	Central function
Catherine Johnson	General Counsel	not stated	Central function
Erica Bourne	Chief People Officer	Jan 2023	Central function
Steve John	Chief Corporate Affairs & Marketing Officer	Apr 2025	Central function

Two things to notice. First, no standalone Chief Strategy Officer is listed ^[S306]. Second, the research did not find FTSE Russell or Risk Intelligence heads on this page, so do not name them from memory.

How the centre wires into the Markets front line

Central functions connect to Markets in three ways: named risk owners, a three-lines control model, and teams embedded in or assigned to the business. Job adverts show what this looks like day to day.

1. Every principal risk has a named owner

Principal risk (H1 2026)	Executive lead(s)
Central counterparty risk	Head of Markets
Technology and cyber	CIO
Business continuity	COO, CRO, divisional group heads
Third-party risk	COO, divisional heads, CIO
Data	Divisional heads, COO
Regulatory change	General Counsel, CEO, divisional heads
Transformation	CEO, COO

Source: LSEG Interim Report H1 2026, principal risks [S302]. Confirmed.

2. Three lines of defence

"Accountability for risk management across the end-to-end product or service delivery sits within the first line of defence, independent oversight and challenge with the second line and objective, independent assurance with the third line" ^[S300]. In plain English: the business (first line) owns its risks; Risk and Compliance (second line) check and challenge; Internal Audit (third line) tests both independently.

3. What the job adverts say

Role (advert)	What it shows about the wiring
Director, Non-Financial Risk, Bangalore [S314]	Group Risk has central teams (Policy, Tooling, Cyber, Sustainability, third-party risk) and "Coverage (Data and Analytics, Markets, Post Trade and Operations)". It reports to a "Non-Financial Risk Committee, Executive Risk Committee, Audit Committee and Board". The team "should be seen as a strategic partner with deep relationships that proactively identifies, escalates and supports management of risks".
Senior Associate, First Line Business Continuity, LCH Ltd [S318]	A "First Line Business Continuity Management team at LCH Ltd" coordinating "EMIR switch testing, WAR site testing" (work-area recovery), third-party risk MI for "senior management, committees and Board forums", and "Central Bank Attestation Support".
Business Programme Manager, CDSClear, London [S315]	Coordinates "Risk, Operations, Product, Technology, Client Services, Legal, Compliance, Finance and Shared Services" and gives "decision support and recommendations to senior management, governance forums and steering committees". This is business management in practice.
Senior Account Manager, FX Sales, Singapore [S313]	Must "Identify upsell, cross-sell, and new business opportunities across FX trading, workflow, data, and related LSEG solutions" and lead "business reviews". The FX front line sells the whole group.
Debt Capital Markets, Business Development, New York [S316]	Works with "Issuer Services, FTSE Russell, Admissions, Regulation, RNS, LSEG FX and Data & Analytics" and must "Execute market research and intelligence, competitive analysis and assist with internal reporting for LSEG management".
Senior Analyst, FX Venue Onboarding, Manila [S317]	Onboarding in "FXall Admin", the "reference data and permissioning tool", including "Price Stream Entitlement requests". Front-line FX service run from a hub.

SOURCE UNCERTAIN

No published headcount exists for Finance, Risk, Legal or HR, and no COO-office or chief-of-staff structure for Markets was found in job searches [S319]. Treat any claim about the size of central teams as a guess.

What this means for the four internship tracks

JD track	Central functions you will touch	The evidence
FX customers	Central sales and account management; FX onboarding hubs; Workspace product teams	[S306, S313, S317, S302]
Market research (debt listings, valuations, shareholder analysis)	Issuer Services, Admissions, Regulation, RNS, FTSE Russell	[S316]
Business intelligence, strategy, operational improvement	Finance (KPIs), Technology, programme management across Risk, Ops, Legal	[S315, S301]
Risk	Group Risk coverage for Markets; LCH first-line continuity; third-party risk	[S314, S318, S302]

SAY THIS IN THE INTERVIEW

"From the job adverts, the centre is wired into Markets quite directly: Group Risk has a coverage team for Markets, LCH has its own first-line business continuity team, and FX account managers are asked to cross-sell data and workflow, not just trading. That's why I like a business management role: it sits where those central teams meet the customer-facing businesses."

Part 3 on one page

If asked	Answer in two sentences	Number to drop
Why is LSEG structured as separate businesses?	Regulators require ring-fenced entities, and LCH's articles forbid favouring LSEG venues. That neutrality draws flow from every venue, which makes netting better.	>90% of cleared IRS [S303]
Isn't that a weakness?	It has costs: Euronext left, minorities take a share of profit, integration is slow. LSEG accepts them because the pooled clearing franchise is worth more.	£121m integration costs 2025 [S300]
How do the businesses work together?	Through data, distribution and technology: RepoAgent, FTSE Russell prices from Tradeweb, FXall in Workspace, Microsoft underneath. Not through clearing favours.	RepoAgent, Nov 2025 [S301]
Why do customers pay?	Because each product replaces a cost or a risk: default protection, netting, margin efficiency, liquidity, trusted data, access to capital.	Lehman: 35% of IM used [S354]
What do critics say?	The FCA found users may overpay for data, and an advocacy report claims £4.93bn of surplus across some exchanges, which LSEG disputes.	FCA, 29 Feb 2024 [S309]
Who works behind the front line?	28,516 employees, 30% in India, and 60% of engineering now in-house, up from 49%. Central teams wire into Markets via named risk owners and coverage teams.	14,244 engineers [S300]

PART 4

How LSEG stands out

LSEG is not the biggest, fastest-growing or leanest exchange group, but it is the only one that combines a global swaps clearing utility, terminal-scale data, a global index house and multi-asset venues under one roof.

How to use this part

"Why LSEG and not ICE or CME?" and "Who are our competitors?" are standard interview questions. A weak answer lists firms. A strong answer says **which business line competes with whom, on what measure, with a number**, and admits where LSEG is behind. This part gives you the comparison tables, the design choices that separate the groups, six claims only LSEG can make, the places it does not lead, and a line-by-line competitor map.

READ THE NUMBERS WITH CARE

Every firm reports in its own currency and defines revenue differently (net revenue, revenue less transaction costs, total income excluding recoveries). The research keeps each number in its home currency ^[S120]. Where this part converts to US dollars, the rate is the author's round-number assumption (£1 = \$1.30, €1 = \$1.15), marked **INFERRED**. Say "roughly" when you compare sizes out loud. Market caps are a single aggregator snapshot from October 2026 ^[S148] **REPORTED**.

LSEG against its peers, side by side

The first table covers firms that run trading venues or clearing houses, which are the Markets division's direct rivals. The second covers the data and index firms that compete with LSEG's subscription divisions. All figures are for the year to 31 December 2025 unless stated.

Table A: venue and clearing peers

Firm	Mkt cap, Oct 2026	FY2025 revenue	Revenue mix	Headcount	Growth	Position against LSEG Markets
LSEG (London)	\$52.26bn	£8,986m total income excl. recoveries ^[S120]	D&A 44%, Markets 39%, FTSE Russell 11%, Risk Intelligence c.6% ^[S120, S72]	28,516 employees ^[S300]	+7.1% organic	The only group with terminal-scale data, a global index house, a global OTC CCP and a majority-owned listed bond venue
CME Group (Nasdaq)	\$94.61bn	\$6,520.6m ^[S122]	Clearing and transaction fees 81%, market data 12% ^[S122]	c.3,875 ^[S123]	+6%; record ADV 28.1m contracts	Futures giant; owns BrokerTec (rates), EBS (FX interbank) and CME Clearing ^[S122]
ICE (NYSE)	\$84.29bn	\$9.9bn net ^[S124]	Exchanges 55%, Fixed Income & Data 24%, Mortgage Tech 21%; recurring c.51% ^[S124]	12,844 ^[S125]	+7%; "20th consecutive year of record revenues"	Owens NYSE, ICE Futures Europe (Brent oil) and ICE Clear; leader in energy

Firm	Mkt cap, Oct 2026	FY2025 revenue	Revenue mix	Headcount	Growth	Position against LSEG Markets
Deutsche Börse (Frankfurt)	\$58.20bn	€5,189m net excl. treasury result (€6,026m incl.) [S126]	Trading & Clearing 45%, Investment Mgmt Solutions 26%, Securities Services 20%, Fund Services 9% [S126]	"over 16,000" [S127]	+9% excl. treasury	Vertical silo: Eurex trading, Eurex Clearing, Clearstream; owns 360T (FX)
Euronext (Paris, Amsterdam)	\$17.93bn	€1,823.2m underlying [S128]	Non-volume revenue 59% [S128]	Not verified	+12.1%	Seven EU exchanges; moved clearing in-house, out of LCH SA [S120]
Nasdaq	\$50.49bn	\$5,249m net of transaction costs [S130]	Market Services 23%; rest is software and data ("Solutions") [S130]	9,525 [S130]	+13% INFERRED	Remade itself as a software and data firm
Cboe Global Markets	\$28.32bn	\$2,429.1m net [S132]	Derivatives 55%, Data Vantage 26%, Cash & spot 19% [S132]	1,661 [S132]	+17%	Largest pan-European equities venue (25% share); Cboe FX spot ADV \$49.7bn [S133]
HKEX	\$60.88bn	HK\$29,161m [S134]	Not extracted	Not verified	+30%	No.1 IPO venue in 2025: HK\$286.9bn from 119 IPOs [S134]
Tradeweb (LSEG subsidiary, Nasdaq)	\$22.28bn	\$2,052.4m [S137]	Transaction fees 82.8%, subscriptions 15.9% [S137]	1,569 [S137]	+18.9%	Consolidated in LSEG Markets; ADV \$2.6trn, +16.9% [S120]
MarketAxess (Nasdaq)	\$5.77bn	\$846.3m [S138]	Mostly commissions	868 [S138]	+3.6%	US credit specialist; est. 18.4% of US high-grade, down from 19.0% [S138]

Market caps: CompaniesMarketCap, "As of October 2026", accessed 5 Oct 2026 [S148], Reported. Growth rates use each firm's own definition (organic, reported, or excluding treasury), so they are not strictly comparable. Nasdaq growth is the author's arithmetic from its 10-K table (4,649 to 5,249).

Table B: data and index peers

Firm	Mkt cap, Oct 2026	FY2025 revenue	Mix	Headcount	Position against LSEG's data businesses
LSEG data divisions	(part of LSEG)	D&A £3,978m (+5.0%); FTSE Russell £954m (+7.3%); Risk Intelligence £579m (+11.7%) [S72]	Subscription divisions together c.61% of group income INFERRED	Not split out	"#2 financial desktops" by its own claim [S303]; ranked second in market data [S129]
Bloomberg L.P.	Private	Not disclosed	Mostly Terminal subscriptions (not verified)	Not verified	Largest market data vendor [S129]; Terminal reported at \$31,980 a year [S323]; FXGO FX platform; competes with Tradeweb in bonds
S&P Global (NYSE)	\$113.87bn	\$15,336m (+8%) [S135]	Market Intelligence, Ratings, Indices, Commodity Insights, Mobility (split not extracted)	c.44,500 [S135]	Data rival to D&A (third in market data) and index rival to FTSE Russell via S&P DJI [S129]
MSCI (NYSE)	\$38.96bn	\$3,134.5m (+9.7%) [S136]	Recurring subscriptions 73%, asset-based fees 25% [S136]	6,268 [S136]	Index rival to FTSE Russell; valued at a richer multiple than LSEG [S146]

SOURCE UNCERTAIN

The market data ranking (Bloomberg first, LSEG second, S&P third) is based on 2023 data reported by Burton-Taylor, with no percentage shares given ^[S129]. Risk Intelligence income is £579m in the results ^[S72]; the competitor workstream derived "c.£587m" as a remainder, so use £579m.

Size against staffing

Revenue per employee is a rough measure of how labour-heavy a business model is. Exchanges and clearing houses run on automated systems, so a small team can handle huge volumes. Data businesses need people to collect, clean, sell and support content.

CORRECTION: LSEG'S HEADCOUNT

The competitor workstream divided LSEG's income by "c.14,200" people, giving c.£633k per head. That is wrong for a like-for-like comparison: 14,200 (precisely 14,244) is LSEG's **engineering** headcount, which fell from 15,101 ^[S300, S120]. The group had **28,516 employees** at the end of 2025 ^[S300]. The table below uses 28,516, which roughly halves LSEG's revenue per head to c.£315k.

INFERRED If an interviewer has seen the £633k figure, you can explain the difference.

Firm	FY2025 revenue	Headcount	Revenue per head (home currency)	Approx. US\$ per head INFERRED
CME	\$6,520.6m ^[S122]	c.3,875 ^[S123]	c.\$1.68m	\$1.68m
Cboe	\$2,429.1m ^[S132]	1,661 ^[S132]	c.\$1.46m	\$1.46m
Tradeweb	\$2,052.4m ^[S137]	1,569 ^[S137]	c.\$1.31m	\$1.31m
MarketAxess	\$846.3m ^[S138]	868 ^[S138]	c.\$975k	\$975k
ICE	\$9.9bn ^[S124]	12,844 ^[S125]	c.\$771k	\$771k
Nasdaq	\$5,249m ^[S130]	9,525 ^[S130]	c.\$551k	\$551k
MSCI	\$3,134.5m ^[S136]	6,268 ^[S136]	c.\$500k	\$500k
LSEG (corrected)	£8,986m ^[S120]	28,516 ^[S300]	c.£315k	c.\$410k (est.)
Deutsche Börse	€5,189m excl. treasury ^[S126]	"over 16,000" ^[S127]	under €325k	under \$375k (est.)
S&P Global	\$15,336m ^[S135]	c.44,500 ^[S135]	c.\$345k	\$345k

Revenue per head is the author's arithmetic from the cited revenue and headcount (Inferred). Conversions at £1 = \$1.30 and €1 = \$1.15 are round-number assumptions, not sourced rates. LSEG's per-head figure stays between MSCI and S&P Global for any pound between \$1.20 and \$1.40.

Two points to take from this. First, LSEG is **people-heavy**, and you should say so plainly: at about £315k per head it sits below every venue operator and below ICE, Nasdaq and MSCI, and only roughly level with S&P Global and Deutsche Börse once currencies are converted. The reason is the work: data collection and cleaning, customer support, operations and engineering are labour-intensive, and LSEG runs much of that from hubs, with 8,541 employees in India alone ^[S300]. It is not a lean exchange; it is a data company with a large Markets division. **INFERRED**

Second, inside LSEG the Markets businesses look like the venue cluster: Tradeweb alone earns about \$1.3m per head ^[S137], and Markets runs at a 55.6% EBITDA margin (58.6% in H1 2026) against 40.7% for D&A ^[S120, S72]. That is why Markets is the group's profit and growth engine. **INFERRED**

FIGURE 24**Size against staffing: venue operators sit on the steep lines, data firms on the shallow ones**

Each dashed line is a constant revenue per head. CME, Cboe and Tradeweb sit above the \$1m line with small teams; LSEG, S&P Global and Deutsche Börse sit near or below \$500k because data, content and service need people. LSEG's position is about its data businesses, not its Markets division, which is a venue and clearing business.

Source: FY2025 results and 10-Ks [S120, S122, S123, S124, S125, S126, S127, S130, S132, S135, S136, S137, S138]; LSEG employees from Annual Report 2025 [S300]. Revenue definitions differ by firm. LSEG (£) and Deutsche Börse (€) converted at the author's assumed rates, labelled est. on the chart (Inferred). Deutsche Börse plotted at 16,000, the floor of "over 16,000". Tradeweb's staff are also inside LSEG's 28,516.

Four design choices, and where each rival sits

Exchange groups differ less in what they do than in how they are built. Four design choices separate them. Figure 25 places each firm on each axis; the text below gives the evidence.

FIGURE 25**The competitive spectrum: LSEG sits at the open, user-partnered, data-heavy end****1. Where revenue comes from****2. How clearing connects to trading****3. Who governs and shares in the CCP****4. Strength as a listings venue (2025)**

LSEG (orange) is at the far end of axes 2 and 3, near the data end of axis 1, and at the weak end of axis 4. No other firm shares that combination. Position is the author's judgement from sources; on axis 1 the dots follow published revenue shares, which use different definitions.

Position is the author's judgement from sources (Inferred). Axis 1: CME [S122], Tradeweb [S137], Cboe [S132], ICE [S124], Euronext [S128], LSEG [S120], MSCI [S136], Nasdaq [S130], FY2025. Axis 2: Deutsche Börse [S127], Euronext and LSEG [S120, S301], OFT [S305]. Axis 3: LSEG [S120, S304]; CME, ICE, Eurex clearing ownership not individually sourced. Axis 4: EY [S142, S144], HKEX [S134], Euronext [S128], 2025.

Axis 1: transaction-heavy or subscription-heavy revenue

At the transaction end: CME (81% from clearing and transaction fees), Tradeweb (82.8% transaction fees), Cboe [S122, S137, S132]. At the subscription end: MSCI (73% recurring subscriptions), Nasdaq (about 77% Solutions) [S136, S130]. LSEG is near the data end, with about 61% of income from its three

subscription divisions; ICE sits in the middle at about 51% recurring ^[S120, S124]. **Why it matters for Markets:** the Markets division is LSEG's volume-driven, volatility-sensitive part, and it grew faster (+8.9%) than D&A (+5.0%) in 2025 ^[S120].

Axis 2: vertical silo or open access clearing

Deutsche Börse calls its model "vertically integrated" ^[S127]. Euronext pulled cash equity clearing out of LCH SA into its own CCP, which LSEG names as the reason Securities & Reporting revenue fell 3.0% ^[S120]. LSEG is the open-access end: SwapClear has "over 100 members" and clears 28 currencies ^[S141].

Watch out: the silo model is gaining in euro swaps, where Eurex rose to 13.5% in Q3 2025 from 8.4% a year earlier ^[S139] **REPORTED**.

Axis 3: exchange-owned or user-partnered clearing

LSEG owns about 94% of LCH ^[S121, S300], but keeps users inside: founding banks share 10% of SwapClear's revenue surplus until 2045, and 11 banks bought 20% of Post Trade Solutions for £170m ^[S120]. No comparable bank-equity structure was found at CME, ICE or Eurex clearing **INFERRED**, though this was not checked exhaustively.

Axis 4: strength as a listings venue

London had 23 IPOs raising £2.1bn in 2025, up 170% on £777.7m in 2024 ^[S142], and 7 IPOs raising £577m in H1 2026 ^[S143]. Hong Kong raised HK\$286.9bn from 119 IPOs, ranked first in the world ^[S134]; US proceeds rose 38% and led the world by value ^[S144]. 88 companies left London's main market in 2024 ^[S145] **REPORTED**. This is why listings are a small part of LSEG's revenue and why the JD's research track mentions debt listings.

A fifth difference: the listed subsidiary and the tech partner

LSEG controls Tradeweb with about 89.9% of the votes but only about half the economics ^[S137, S300], CME and ICE own their fixed income venues outright ^[S122, S124]. And LSEG's cloud deal is a product partnership as well as infrastructure: Microsoft owns about 4% of LSEG, LSEG committed to \$2.8bn of minimum cloud spend, and Workspace now runs inside Teams and Excel ^[S147, S120]. CME is moving to Google Cloud ^[S122].

Six things only LSEG can claim

Each claim below is phrased so that it is true and checkable. "Only" claims are the author's comparison across the peer set in Table A and B, so say "no other exchange group I looked at" rather than "no one in the world". **INFERRED**

1. It runs the world's swaps clearing utility

EVIDENCE

SwapClear cleared a record \$1,941 trillion of interest rate swap notional in 2025 (+21.2%) and 5.3 million client trades (+33%) ^[S120]. Clarus data: 99.995% of GBP SONIA swaps in Q1 2026; CME's best-ever share of USD OIS was only 4.3% ^[S140]. LSEG says SwapClear clears "95 percent of all 'vanilla' OTC interest rate swap products" ^[S141] (undated company claim).

WHY IT MATTERS

Clearing has network effects: offsets improve as more trades sit in one pool (Figure 20). That is a moat built over 25 years. The 2025 surplus deal with founding banks added 100bps to group EBITDA margin ^[S120].

2. One group owns terminal-scale data, a global index house, multi-asset venues and a global CCP

EVIDENCE

D&A £3,978m, FTSE Russell £954m, plus Tradeweb, FXall and FX Matching, LSE, Turquoise and LCH ^[S120]. ICE has data, exchanges and clearing but no FX venue or desktop of this scale; Deutsche Börse has 360T, Eurex and an index business but no terminal; Bloomberg has a terminal, FXGO and bond trading but no CCP or exchange.

INFERRED

WHY IT MATTERS

It is the basis for cross-selling and for distributing data everywhere customers work: "The combination of our trade lifecycle and data value chains is unmatched" ^[S303].

3. A bank-partnership model built into its infrastructure

EVIDENCE

Banks share 10% of the SwapClear revenue surplus until 2045 and own 20% of Post Trade Solutions ^[S120]; clearing members and clients sit on LCH's risk committee, with no constituent holding a majority ^[S304]. No comparable structure found at CME, ICE or Deutsche Börse clearing ^{INFERRED}.

WHY IT MATTERS

Banks are 72% of LSEG's income ^[S303]. Giving them a seat and a share makes them less likely to back a rival CCP, as they once did when founding Turquoise and Tradeweb.

4. A controlled, separately listed subsidiary worth over \$20bn

EVIDENCE

Tradeweb: revenue \$2,052m (+18.9%), ADV \$2.6trn, market cap \$22.28bn ^[S137, S120, S148]. LSEG holds about 89.9% of votes and 50.9% of the economics ^[S137, S300]. No other exchange group in the peer set consolidates a listed company of that size. **INFERRED**

WHY IT MATTERS

Tradeweb is the fastest-growing big piece of Markets, but about half of its profit belongs to outside shareholders, and it has its own board. Coordinating with it (RepoAgent, Workspace integration) is a live business management task ^[S301, S302].

5. Microsoft as shareholder and product partner

EVIDENCE

About 4% stake, 10-year term, \$2.8bn minimum cloud spend ^[S147]; Workspace in Teams, Excel and PowerPoint add-ins, Autex on Azure, data on Microsoft Fabric ^[S120]; AI data partnerships with Anthropic, Databricks, Microsoft, OpenAI, Rogo and Snowflake ^[S120].

WHY IT MATTERS

It puts LSEG's data inside the tools customers already use, which is LSEG's answer to the fear that AI tools will bypass terminals. Some investors see the rollout as slower than promised (see Part 2).

6. FX across the whole workflow

EVIDENCE

FXall (dealer-to-client) plus FX Matching (dealer-to-dealer): \$525bn average daily volume in 2025; ForexClear cleared \$48,113bn notional, up 31.4% ^[S120]. Deutsche Börse (360T) and Cboe FX lack an interbank matching platform of this scale plus FX clearing in the same group; CME has EBS but no dealer-to-client platform like FXall.

INFERRED

WHY IT MATTERS

The FX customer track in the JD sits here. A client can trade, confirm and clear FX within LSEG businesses, but each step is still a separate service under open access.

DON'T SAY THIS

"LSEG is the oldest exchange in the world" or other history claims that the competitor research did not verify. And do not say Tradeweb is wholly owned: it is majority-owned and separately listed ^[S137].

Where LSEG does not lead

Say these plainly if asked. An interviewer will trust your strengths more if you know the weaknesses.

Area	The numbers	Who leads
Valuation	LSEG market cap \$52.26bn, fifth among listed exchange operators; S&P Global (\$113.87bn) is over twice its size [S148]	CME, ICE, HKEX, Deutsche Börse
Share price and multiple	Shares fell 13% in one day on AI fears and were still 23% below the 2025 peak in June 2026, at about 18x forward earnings: about 30% below Moody's and 40% below MSCI [S146] REPORTED	MSCI, Moody's trade at higher multiples
Market data	Bloomberg holds the largest share; LSEG D&A is second [S129] (2023 data)	Bloomberg
Growth	LSEG +7.1% organic in 2025 against HKEX +30%, Cboe +17%, Nasdaq +13%, Euronext +12.1%, Deutsche Börse +9% excl. treasury [S120, S134, S132, S130, S128, S126] (definitions differ)	HKEX, Cboe
Futures	CME revenue \$6.5bn and a record 28.1m contracts a day [S122] ; LSEG has no comparable listed futures franchise INFERRED	CME
Energy	ICE energy revenue \$2.182bn, +16% [S124] ; Deutsche Börse commodities €612m [S126]	ICE
European cash equities	Cboe Europe: "record yearly Cboe overall market share of 25%" in 2025 [S133] ; Turquoise share not found	Cboe Europe
IPOs	London £2.1bn from 23 IPOs (2025) against Hong Kong HK\$286.9bn from 119 [S142, S134]	HKEX, US exchanges
Euro and yen swaps	Eurex 13.5% of euro swaps (Q3 2025) [S139] ; JSCC 40.3% of yen TONA (Q1 2026) [S140]	LCH still leads both, but its share is falling in euros
FX dealer-to-client volume	Bloomberg says FXGO ADV is above \$830bn (Mar 2025) against LSEG's total FX ADV of \$525bn (2025) [S149, S120] ; not like-for-like	Bloomberg (self-reported)
Revenue per employee	c.£315k (corrected), below every pure venue operator in Table A (above)	CME, Cboe, Tradeweb
US credit e-trading	MarketAxess is the specialist (est. 18.4% of US high-grade) [S138] ; though its share slipped and its revenue grew only 3.6% while Tradeweb's grew 18.9%	MarketAxess (but losing ground)

SAY THIS IN THE INTERVIEW

"LSEG isn't the biggest or fastest-growing exchange group. CME and ICE are bigger, Hong Kong wins on IPOs, Bloomberg leads in data. Where it is unmatched is the combination: SwapClear clears almost all sterling swaps, it has FX from client trading to clearing, and it owns the data and index businesses that sit on top. And it does it with an open-access model that keeps the banks inside."

Who are our competitors? Line by line

LSEG does not have one competitor. Each business line fights a different rival on a different measure. Answer business line by business line, starting with the Markets division because that is where the internship sits.

FIGURE 26

Market share snapshots: dominant in sterling swaps, contested in euros and yen, behind in European equities

Measures differ: Clarus counts cleared notional by currency; Cboe counts European on-exchange equity trading; MarketAxess estimates its own US high-grade share. Do not add or compare across rows.

Compare the top four rows: LCH's lead is near-total in sterling, very large overall, but five points smaller in euros than a year earlier. The bottom two rows show markets where a rival leads. Each bar is one firm's or one data vendor's measure at one date.

Source: Clarus Financial Technology, Q3 2025 (10 Dec 2025) [S139] and Q1 2026 (22 Apr 2026) [S140], Reported; LSEG investor deck, May 2026 [S303], company claim; Cboe volume release, 6 Jan 2026 [S133]; MarketAxess 10-K FY2025, 24 Feb 2026 [S138], company estimate.

Business line	LSEG asset	Main rivals	Best number	How to say it
Equities trading	London Stock Exchange, Turquoise	Cboe Europe; other MTFs	Cboe Europe 25% share of European equities, €12.8bn ADV (2025) [S133]; UK value traded £4.8bn a day, +14.3% [S120]	"In European equity trading, Cboe Europe is the biggest venue."
Listings	LSE Main Market, AIM, ISM	New York, Hong Kong, Euronext	HK\$286.9bn, 119 IPOs (HK) vs £2.1bn, 23 IPOs (London) [S134, S142]	"London is recovering, but New York and Hong Kong lead on IPOs."
FX trading	FXall (D2C), FX Matching (D2D)	Bloomberg FXGO; 360T (Deutsche Börse); Cboe FX; EBS (CME)	FXGO >\$830bn ADV (self-reported, Mar 2025) [S149]; DB FX & Digital Assets €182m, +12% [S126]; Cboe FX spot ADV \$49.7bn [S133]; LSEG FX \$525bn ADV [S120]	"Bloomberg bundles FXGO with the Terminal; LSEG answers by putting FXall inside Workspace."

Business line	LSEG asset	Main rivals	Best number	How to say it
Rates clearing	LCH SwapClear	Eurex Clearing (euro), JSCC (yen), CME (dollar)	Eurex 13.5% of euro swaps, up from 8.4% ^[S139] ; JSCC 40.3% of yen ^[S140] ; CME best-ever 4.3% of USD OIS ^[S140]	"The challenger in swaps clearing is Eurex in euros."
Bond and rates trading	Tradeweb	MarketAxess (US credit); Bloomberg; BrokerTec (CME)	MarketAxess est. 18.4% of US high-grade, revenue +3.6% ^[S138] ; Tradeweb revenue +18.9% ^[S137]	"Tradeweb is taking share from MarketAxess in credit."
Cash equity clearing	LCH SA, EquityClear	In-house CCPs of exchange groups (Euronext Clearing)	S&R revenue -3.0% after Euronext ended its clearing agreement ^[S120]	"Open access means a venue can take its clearing elsewhere."
Data and desktop	Workspace, data feeds (D&A)	Bloomberg; S&P Global Market Intelligence	Ranking Bloomberg 1, LSEG 2, S&P 3 (2023 data) ^[S129] ; Terminal reported at \$31,980 a year ^[S323]	"In data, LSEG is a strong number two to Bloomberg."
Index	FTSE Russell	MSCI; S&P Dow Jones Indices	MSCI revenue \$3,134.5m, 73% recurring subscriptions ^[S136] ; FTSE Russell £954m, ETF AUM linked \$2.19trn (Jun 2026) ^[S72, S70]	"In index, the rivals are MSCI and S&P."

Practice: "Who would you say are LSEG's biggest competitors?"

TESTING Whether you see LSEG as a set of businesses, not one firm. **STRUCTURE** "It depends on the business line" then three lines with a rival and a number each: swaps clearing (Eurex, 13.5% of euro swaps), FX (Bloomberg FXGO), equities trading (Cboe Europe, 25%). Close with data (Bloomberg) and index (MSCI). **WEAVE IN** Open access as the reason LCH competes for flow from every venue. **TRAP** Naming only "other exchanges like Nasdaq and NYSE"; LSEG's biggest fights are with Bloomberg, Eurex and Cboe.

Practice: "Why LSEG and not ICE or CME?"

TESTING Whether you know what makes LSEG different, with evidence. **STRUCTURE** One sentence on scale (CME and ICE are bigger); then two LSEG-only facts: the swaps clearing utility (99.995% of sterling SONIA swaps) and the open, bank-partnered model (10% surplus share to 2045, banks own 20% of PTS); then your fit with the Markets internship. **WEAVE IN** Figure 25: LSEG sits at the open, user-partnered end. **TRAP** Saying LSEG is "the biggest"; it is fifth by market cap among exchange operators ^[S148].

Practice: "Where is LSEG vulnerable to competitors?"

TESTING Honesty and judgement. **STRUCTURE** Pick two: euro swaps (Eurex rising from 8.4% to 13.5%) and data (Bloomberg first; FCA says users may overpay). Say what LSEG is doing about each: open access and margin efficiency in clearing; Workspace in Microsoft tools and long-term data contracts. **WEAVE IN** Euronext leaving LCH SA shows open access cuts both ways. **TRAP** Saying "AI will kill the data business" without numbers; LSEG says 90% of data revenue is real-time or proprietary ^[S71].

PART 5

The industry from zero

What financial market infrastructure is, how money moves through it, who pays for it, and the forces that will reshape it while you are at LSEG.

This Part assumes you know nothing about how markets are wired together. By the end you should be able to do three things in an interview: walk through a trade from start to finish and name the LSEG business at each step, explain how an exchange group makes money (and why it is mostly not from the stock exchange), and give a reasoned view on where the industry goes in the next three to five years.

WHY THIS MATTERS

The JD asks for people who "want to understand the full breadth of our organisation, how it fits together, how it functions". That is a direct request for this Part. The candidate who can say "LSE is the execution step, LCH is the clearing step, and the prices from both are resold by Data & Analytics" sounds like someone already inside the firm. **INFERRED**

What financial market infrastructure is

Think of a financial market as a giant marketplace. The traders (banks, fund managers, hedge funds) are the shoppers and stallholders. Financial market infrastructure is the plumbing that lets them deal safely: the shops, the tills, the receipts and the delivery vans. FMIs do not usually take bets themselves. They make it possible for others to trade, and they charge a toll for doing so. **INFERRED**

KEY TERM

FMI (financial market infrastructure): the shared systems that let financial trades happen and complete: trading venues, clearing houses, settlement systems, trade repositories, plus (in a wider sense) the index and data businesses that sit around them. LSEG calls itself a financial markets infrastructure and data group, not an exchange.

SOURCE UNCERTAIN

The "plumbing" analogy and the one-line definitions in the table below come from the WS4 research summary, which marks several of them as general knowledge (OTF, CSD, UnaVista). They are standard textbook definitions, but treat the LSEG examples for CSD and trade repository as Inferred rather than confirmed.

Eight kinds of FMI, in one table

Type	What it does, in one line	LSEG example	Main competitors
Exchange (in law a "regulated market", RM)	A rule-based place where securities are admitted (listed) and traded, under the strictest rules.	London Stock Exchange Main Market	Euronext, Deutsche Börse, Nasdaq, NYSE (ICE)

Type	What it does, in one line	LSEG example	Main competitors
MTF (multilateral trading facility)	A venue that brings many buyers and sellers together under fixed, non-discretionary rules, with lighter regulation than an exchange.	Turquoise; AIM and the International Securities Market (ISM) are MTFs run by LSE ^[S176]	Cboe Europe, Aquis
OTF (organised trading facility)	A venue for bonds and derivatives where the operator has some discretion over how orders meet. ^{INFERRED}	Not a focus here	Interdealer brokers
CCP (central counterparty, clearing house)	Steps into the middle of a trade: buyer to every seller, seller to every buyer. Collects margin so that if one side fails, the other still gets paid.	LCH (LCH Ltd, London; LCH SA, Paris): SwapClear, ForexClear, RepoClear, CDSClear	CME Clearing, Eurex Clearing, ICE Clear
CSD (central securities depository)	Keeps the official record of who owns which securities and moves them from seller to buyer at settlement.	Not LSEG's main UK business: the UK CSD is Euroclear UK & International ^{INFERRED}	Euroclear, Clearstream
Trade repository (TR)	Collects reports of derivatives trades so regulators can see risk building up. The Bank of England supervises TRs ^[S184] .	UnaVista ^{INFERRED}	DTCC, Regis-TR
Index provider	Designs and calculates indices such as the FTSE 100, and licenses them to fund managers who build index funds and ETFs.	FTSE Russell	S&P Dow Jones Indices, MSCI
Market data vendor	Collects, cleans and redistributes prices, news and reference data to screens and data feeds.	LSEG Data & Analytics (Workspace)	Bloomberg, S&P Global Market Intelligence, FactSet

Table source: WS4 section 4A.1. Competitor lists are Inferred unless marked; Bloomberg, LSEG and S&P Global as the top three data vendors is Confirmed ^[S188, S189].

KEY TERM

Regulated market vs MTF: both are trading venues. A regulated market is the "full" exchange, where admission brings the heaviest disclosure rules (for example a prospectus). An MTF is lighter. That is why LSE runs its Main Market as a regulated market but AIM (for growth companies) and ISM (for professional-only bonds) as MTFs ^[S176].

KEY TERM

Clearing house (CCP): after a trade is agreed, the CCP becomes the counterparty to both sides. It holds **margin** (collateral each member posts) and a **default fund** (a shared pot members pay into) so one firm's failure does not spread. Not a bank: it mutualises risk rather than lending.

The point to carry into interview. Most firms in this table do one or two of these jobs. LSEG does five at once: exchange (LSE), MTF (Turquoise, AIM, ISM), CCP (LCH), index provider (FTSE Russell) and data vendor (Data & Analytics). That "vertical" mix is why it describes itself as an infrastructure and data group rather than a stock exchange. ^{INFERRED} The competitor research backs this up: ICE has data, exchanges and clearing but no FX venue or desktop of LSEG's scale; Deutsche Börse has 360T, Eurex and an index arm but no terminal; Bloomberg has a terminal, FXGO and bond trading but no CCP or exchange ^[S120]. ^{INFERRED}

The trade lifecycle, step by step

Every trade, whether a share, a bond, a swap or a currency, goes through the same five steps. Learn them in order. The interviewer question "walk me through what happens when someone buys a share" is really a test of whether you know this chain.

1. **Pre-trade data.** Before trading, an investor looks at prices, quotes, news, indices and analytics. Data vendors and venues sell this. (LSEG Data & Analytics, LSE market data, FTSE Russell index levels.)
2. **Execution.** The buyer and seller agree a price and size, either on a venue (an exchange, an MTF, an RFQ platform like Tradeweb, an FX platform like FXall) or directly between two parties, which is called over the counter (OTC).
3. **Clearing.** The trade is confirmed and, if centrally cleared, a CCP like LCH becomes the counterparty to both sides and collects margin.
4. **Settlement.** Cash and securities actually change hands at a CSD, or for FX through a system like CLS. Under the UK's planned T+1 cycle, settlement must happen no later than one business day after the trade, from 11 October 2027 ^[S158]. **CONFIRMED**
5. **Post-trade reporting.** Trades are published (transparency) and reported to the regulator or a trade repository. Consolidated tapes pull published trade data from all venues into one feed ^[S155].

FIGURE 27**The trade lifecycle, and which LSEG business sits at each step**

LSEG has a business at four of the five steps. The gap is settlement, which in the UK is run by a separate CSD. The dashed box marks a third party. Use this picture when asked to "walk me through a trade".

Sources: WS4 lifecycle (section 4A.2); T+1 dates from FCA, 21 Nov 2025 [S158] (UK draft SI) and EU Reg 2025/2075 [S159]; LSEG business names from LSEG FY2025 results [S120]. UnaVista as LSEG's reporting service and Euroclear UK & International as UK CSD are general knowledge (Inferred).

KEY TERM

Netting: offsetting buys against sells so only the net amount needs settling or margining. The more trades sit in one CCP, the more can be netted, which lowers members' margin. This is the network effect behind LCH SwapClear's dominance. **INFERRED**

KEY TERM

T+1: settlement one business day after the trade date ("T"). The UK and EU both plan to move from two days to one on 11 October 2027 [S158, S159]. Less time to fix errors means more automation.

KEY TERM

Settlement risk and Pvp: in FX you pay one currency and wait for the other. If the counterparty fails in between, you lose the full amount (also called Herstatt risk). **PvP (payment versus payment)** settles both legs at once or not at all. CLS, operating since September 2002, is the main PvP system ^[S204]. About \$1.4tn a day of FX still settles with no protection ^[S205]. **CONFIRMED**

SAY THIS IN THE INTERVIEW

"If I buy a FTSE 100 share, I probably checked the price on a data screen first, which could be LSEG Data & Analytics. The order executes on the London Stock Exchange order book or on Turquoise. It is cleared by a CCP, settled at the CSD, and the trade price is published and resold as data. LSEG is at four of the five steps; settlement is the one it does not run in the UK. From October 2027 that settlement has to happen in one day, not two."

The JD's own wording maps onto steps 2 to 5: LSEG Markets helps customers "across the trade life cycle, ensuring compliance and efficiency in clearing and reporting obligations, while granting access to diverse liquidity pools". "Liquidity pools" is step 2 (venues), "clearing" is step 3, "reporting obligations" is step 5. **CONFIRMED**

Four distinctions interviewers assume you know

These four pairs come up in every markets conversation. Each one decides which LSEG business is involved and how it gets paid.

Distinction	Side A	Side B	LSEG link
Primary vs secondary	Primary: new securities are created and sold for the first time to raise money (an IPO, a new bond). The issuer gets the cash.	Secondary: existing securities trade between investors. The issuer gets nothing, but a liquid secondary market is why investors buy in the primary market.	LSE listing and debt capital markets teams work in primary. LSE, Turquoise, Tradeweb, FXall work in secondary.
Lit vs dark	Lit: orders are visible to everyone before trading (pre-trade transparency).	Dark: orders are hidden until after execution, so big investors can trade without moving the price.	Turquoise runs both a lit book and a dark book (Turquoise Plato). INFERRED
Order book vs RFQ	Order book (CLOB): continuously matches anonymous buy and sell orders by price, then time. How most shares trade.	RFQ (request for quote): a client asks a few dealers for a price and picks the best. How most bonds, swaps and much FX trade.	LSE is a CLOB; Tradeweb's core model is RFQ. LSE 24 "intends to draw on elements of central limit order book and request-for-quote functionality" ^[S196] . CONFIRMED
OTC vs exchange-traded	OTC: negotiated directly between two parties, often a bank and a client (most FX, bonds, swaps).	Exchange-traded: standardised products on a venue (shares, futures).	After 2008, G20 rules pushed standard OTC derivatives into central clearing, which is why LCH SwapClear is so large. INFERRED

KEY TERM

CLOB (central limit order book): a matching engine that lists every bid and offer by price and time and matches them automatically. Anonymous, continuous, good for small standard trades.

KEY TERM

RFQ (request for quote): the client sends a request to, say, five dealers, they reply with prices, the client picks one. Good for large or illiquid trades where nobody wants to show their hand in public.

KEY TERM

Liquidity: how easily you can trade something in size without moving its price. A "liquidity pool" is a place where many buyers and sellers meet. Liquidity attracts liquidity: traders go where other traders are, which is why venues compete hard and why market share is sticky once won.

INFERRED

Why the order book vs RFQ split matters for the JD. Shares trade mostly on order books, bonds and FX mostly by RFQ or bilateral dealing. Tradeweb (RFQ) contributed £1,539m to LSEG Markets in 2025 under "Fixed Income, Derivatives & Other", far more than the £412m from Equities ^[S120]. **CONFIRMED** So the RFQ world is where most of LSEG's trading income sits, not the famous order book. **INFERRED**

Who the customers are

FMI's serve six broad customer types. Each wants something different, and the same bank can be a customer of four LSEG businesses at once.

Customer	What they want from FMIs	Which LSEG business they mostly touch INFERRED
Issuers (companies, governments, supranationals)	A place to list and raise capital cheaply, a deep investor base, visibility, index inclusion.	London Stock Exchange (Main Market, AIM, ISM), FTSE Russell
Banks and dealers (the sell side)	Venues to trade and hedge, clearing to cut capital and margin costs, data to price trades.	LCH, Tradeweb, FX Matching, FXall, Data & Analytics
Asset managers (the buy side: pension funds, fund houses)	Best execution, low trading cost, reliable data, index licences for passive funds.	FTSE Russell, Tradeweb, Turquoise, Data & Analytics
Hedge funds and proprietary trading firms	Speed, liquidity, data feeds, access to clearing. BCG says non-banks will take about 30% of trading volumes by 2030 ^[S186] .	LSE, Turquoise, real-time data feeds, LCH client clearing
Corporate treasurers	FX execution to hedge currency exposure; debt listing (for example on ISM).	FXall, ISM
Retail brokers	Access to UK shares, ETPs and data; longer trading hours.	LSE, LSE 24 (planned) ^[S196]

Table source: WS4 section 4A.4. Needs are Inferred except the BCG figure.

KEY TERM

Buy side and sell side: the **sell side** is banks and dealers who make prices and sell products. The **buy side** is investors who buy them: asset managers, pension funds, insurers, hedge funds. **NBFI (non-bank financial institution)** covers hedge funds, proprietary traders and asset managers outside banking. BCG: "NBFIs are no longer peripheral players, they are central to how capital is being formed, intermediated, and traded" [S186].

How FMIs make money

There are five revenue lines. They behave very differently. Some rise when markets are busy; some are paid every year whatever happens.

Revenue line	What is charged	Who pays	Behaviour	LSEG example, FY2025
Transaction fees	A small fee per trade, per share or per bond traded.	Banks, asset managers, hedge funds, brokers	Cyclical: rises with volatility and volume INFERRED	Equities £412m; Fixed Income, Derivatives & Other (mainly Tradeweb) £1,539m; FX £272m [S120]
Clearing fees and net treasury income	A fee per trade cleared, plus interest earned on the margin the CCP holds. INFERRED	Clearing members (banks) and their clients	Volume-linked, sticky because of netting	OTC Derivatives £641m [S120]; SwapClear cleared \$1,941tn notional, up 21.2% [S120]
Listing fees	Admission fees when a security lists, annual fees after.	Issuers	Depends on IPO and bond issuance cycle	Not split out in our research
Data and connectivity	Real-time feeds, terminals (Workspace), reference data, analytics. Subscription.	Almost everyone	Recurring, very sticky	Data & Analytics £3,978m [S120]
Index licensing	Fees, often based on the assets tracking the index.	Asset managers, ETF issuers	Recurring, grows with markets	FTSE Russell £954m [S120]

£8,986m

LSEG total income excl. recoveries, FY2025 [S120]

c.61%

Share from subscription divisions (D&A, FTSE Russell, Risk Intelligence), Inferred [S120]

£3,467m

Markets division income FY2025, up 8.9% [S120]

30%

Data and tech share of all FMI revenue, from 21% five years ago [S185]

FIGURE 28
Who pays an exchange group, and for what

**LSEG FY2025 income in each pool,
£m, bars to scale**

Grouping of LSEG's reported
lines into these five pools is
ours (Inferred).

Banks and asset managers pay into almost every pool, so they are the customers who feel LSEG's pricing most. Data is the largest pool by far. Listing fees, the part people picture when they hear "stock exchange", are not even reported as a separate line in the results used here.

Source: LSEG preliminary results FY2025, 26 Feb 2026 [S120]: Data & Analytics £3,978m, FTSE Russell £954m, Risk Intelligence c.£587m (derived as remainder, Inferred), Markets lines Equities £412m, FIDO £1,539m, FX £272m, OTC Derivatives £641m. Other Markets lines (for example Securities & Reporting £229m) not shown. Customer needs from WS4 4A.4 (BCG [S186]).

KEY TERM

Recurring (subscription) vs transactional revenue: recurring revenue is paid on a contract whether or not markets are busy (data, index licences). Transactional revenue is paid per trade, so it jumps in volatile markets and falls in quiet ones. Investors pay a higher price for recurring revenue because it is predictable. LSEG's CEO in July 2026: "Growth in our subscription businesses is accelerating" [S195]. **CONFIRMED**

So what for a Markets intern? You would sit in the transactional part of a mostly subscription group. That is not a weakness. Markets grew faster than Data & Analytics in 2025 (8.9% vs 5.0%) and its margin rose to 55.6% [S120]. **CONFIRMED** And Markets feeds the data businesses: every trade on LSE, Turquoise or Tradeweb produces prices that are resold. **INFERRED**

DON'T SAY THIS

"LSEG makes most of its money from the stock exchange." It does not. Data & Analytics alone is about 44% of income, and the equities trading line is £412m out of nearly £9bn ^[S120]. Say "LSEG is a data and infrastructure group; the London Stock Exchange is the brand people know, not the biggest earner."

How LSEG differs from a bank, an asset manager and Bloomberg

Interviewers often test whether you understand what LSEG is *not*. Use these three contrasts.

Compared with	What they do	What LSEG does instead	The one-line difference
A bank	Lends, takes deposits and trades with its own balance sheet. It can lose money on positions.	Runs the venues and data that banks use. LCH manages default risk, but as a risk mutualiser funded by members' margin and default fund, not as a lender.	Banks take market risk; LSEG charges a toll on the road they drive on. INFERRED
An asset manager	Invests clients' money and earns a fee on assets under management.	FTSE Russell licenses the index that passive funds track and sells them data, but does not manage the money.	The asset manager runs the fund; LSEG sells it the recipe. INFERRED
Bloomberg	A private company built around its terminal and news; also runs FXGO and bond trading.	Listed on the LSE, and combines data with regulated market infrastructure (venues and clearing). Bloomberg and LSEG are the two largest market data vendors, followed by S&P Global ^[S188, S189] .	Bloomberg owns the screen; LSEG owns the screen and the plumbing. INFERRED

SOURCE UNCERTAIN

The vendor ranking (Bloomberg first, LSEG second, S&P third) comes from Burton-Taylor headlines based on 2023 data ^[S189]; the 2025 report confirms total spend of \$49.2bn but its market shares are paywalled ^[S188]. Say "one of the two largest", not a percentage.

The structural forces reshaping FMI now

Ten forces explain almost every headline about LSEG. The figure that follows groups the eight with clearest money effects into a single map; the table gives all ten with the evidence.

FIGURE 29

The industry shift map: money is moving from volume to subscriptions, data and new venues

The whole FMI revenue pool keeps growing while its mix shifts

About \$200bn by 2030 in the base case, roughly 8% a year (Oliver Wyman est.) [S185]

Read each row left to right: the grey box is where FMI money used to come from, the orange box is where it is moving. The middle shows the force and the number that proves it. LSEG has a foot in every orange box, which is the point to make in interview.

Sources: Oliver Wyman FMI report, Jun 2026 [S185] (forecasts, est.); Burton-Taylor via Mondo Visione, 26 Mar 2026 [S188]; Coalition Greenwich via The DESK, 2025 [S190]; BIS, Sep 2025 [S163]; LSEG H1 2026 results, 30 Jul 2026 [S195]; Morgan Stanley/Oliver Wyman [S191] (est.); Macfarlanes [S181]; Burges Salmon [S154]; European Commission, 31 Jan 2025 [S160]; A&O Shearman [S161]; Clarus, Dec 2025 [S139]; FCA [S155, S157, S165]; BCG, 14 Oct 2025 [S186] (est.). Old/new pool labels are Inferred.

#	Force	Evidence	What it means for LSEG
1	Shift to data and subscriptions	Global market data spend up 6.5% to a record \$49.2bn in 2025 ^[S188] , from \$42bn in 2023, when Burton-Taylor said AI had "elevated the value of market data" ^[S189] . CONFIRMED	Supports D&A and FTSE Russell, which are c.55% of income ^[S120] . INFERRED
2	Electronification of bonds and FX	About 44% of US investment-grade corporate bond volume was electronic in 2024; Tradeweb about 34% share vs MarketAxess 37% ^[S190] . REPORTED FX spot rose to 31% of turnover in 2025 from 28% ^[S163] .	Tradeweb grew revenue 18.9% in 2025 ^[S137] ; LSEG FX average daily volume \$525bn in 2025 ^[S120] .
3	AI as threat and opportunity	Oliver Wyman: AI threatens about \$12bn (9%) of FMI revenue, creates about \$9bn new, and offers over 20% cost reduction ^[S185] .	"LSEG Everywhere": AI-ready data via MCP, Amazon Quick and Google Gemini partnerships; 17,000 active AI Search users in Workspace ^[S195] .
4	Cloud and concentration risk	UK critical third parties (CTP) regime from 1 Jan 2025; first designations 13 Jul 2026 ^[S170] : AWS, Google Cloud, Microsoft, Oracle ^[S171] . REPORTED	LSEG's 10-year Microsoft partnership (Dec 2022) includes \$2.8bn minimum cloud spend ^[S147] .
5	Tokenisation and digital assets	Digital Securities Sandbox in force 8 Jan 2024, opened 30 Sep 2024 ^[S169, S168] . BoE consulting on tokenised assets as CCP collateral ^[S184] .	LSEG's "Digital Securities Depository collaboration with HSBC on DIGIT" ^[S195] .
6	Private markets growth	PISCES lets private company shares trade at set events ^[S152] . Mansion House Accord (13 May 2025): 10% of default funds in private markets by 2030, half in the UK ^[S181] . REPORTED	LSE Private Securities Market held its first auction on 25 Mar 2026 ^[S154] . REPORTED
7	Passive investing and indexing	Money moving to index funds benefits index providers. INFERRED No sourced share figure in our research.	FTSE Russell £954m ^[S120] .
8	Clearing mandates and geopolitics	EMIR 3 forces some EU firms to hold an active account at an EU CCP from 25 Jun 2025 ^[S161] ; EU equivalence for UK CCPs extended to 30 Jun 2028 ^[S160] .	Direct threat to LCH euro swaps; Eurex rose to 13.5% of EUR swaps in Q3 2025 from 8.4% ^[S139] . REPORTED
9	Buy-side pressure on data fees	FCA wholesale data study (29 Feb 2024): users "may be paying higher prices ... than if competition was working more effectively", but no significant intervention ^[S165] .	Pricing scrutiny on D&A and venue data; the risk is regulatory, not just commercial. INFERRED
10	Consolidated tapes	UK bond tape live 22 Jun 2026 ^[S155] ; equity tape procurement early 2027, live "in 2027 or early 2028" ^[S157] .	A cheaper public source of some trade data: a mild threat to venue data income, offset by an income share for contributors. INFERRED

KEY TERM

Tokenisation: representing a security or asset as a digital token on a shared ledger (DLT, distributed ledger technology). The promise is faster settlement and easier movement of collateral. The threat to incumbents is that token-native systems could bypass today's post-trade chain. The Bank of England's line: "Real-time payments, electronic securities settlement and central clearing were once novel concepts. Today, they are foundational to the functioning of the financial system" ^[S184].

KEY TERM

Consolidated tape (CT): one feed combining trade data from every venue for an asset class, so users do not have to buy data from each venue separately. The UK bond tape is run by ETS Connect UK ^[S155].

Where the industry goes in three to five years

There is no single consensus. Five credible sources point in four directions. You need to know each, and then pick a position.

View	Who says it	The numbers	What would prove it right
1. Steady compounding: data and AI winners	Oliver Wyman base case (Jun 2026)	FMI revenue grows about 8% a year to around \$200bn by 2030 (bull case \$230bn). Fastest growth in listed derivatives, commodities and digital assets. Winners focus on defensible cores after \$88bn of data and tech acquisitions ^[S185] (\$88bn REPORTED).	Subscription growth keeps accelerating; margins rise. OW says AI cost savings "could lift sector EBITDA margins from 52-54% to more than 60%" ^[S185] .
2. Disintermediation by AI and tokens	Oliver Wyman headwinds case; Morgan Stanley with Oliver Wyman	Growth slows to about 6% a year in an AI-headwinds case; tokenisation could shift 35% of current revenue (about \$45bn) to token-native infrastructure ^[S185] . Tokenised real-world assets \$2.3tn by 2030, mostly collateral mobility ^[S191] . REPORTED	Big asset managers settle tokenised funds outside CSDs; AI agents replace screens for routine analytics.
3. Non-banks and regulators reshape the client base	BCG (Oct 2025); FCA; EU	Non-banks take about 20% of corporate and investment banking revenue and 30% of trading volumes by 2030 ^[S186] . Regulators push down data costs (FCA study, tapes) ^[S165, S157] and the EU pulls euro clearing from London ^[S160] . INFERRED	Prop traders become top venue clients; EMIR 3 shifts measurable euro swap share to Eurex.
4. Modernise with Big Tech as partner or rival	McKinsey	The industry is "thriving" but disruption forces strategic change, with Big Tech partnering incumbents ^[S187] . REPORTED	More cloud co-development deals like LSEG with Microsoft ^[S147] .
Regulator's frame: adopt, but build trust	Bank of England (Oct 2025)	Technology can be adopted, but trust must be built; BoE consulting on tokenised CCP collateral ^[S184] . Its Omnibus Account (2021) already "supports the settlement of tokenised assets backed in central bank money" ^[S184] .	DSS entities go live; tokenised collateral accepted at CCPs.

SOURCE UNCERTAIN

Oliver Wyman's report was read through a summariser, and the \$88bn figure came from a snippet ^[S185]. The McKinsey report returned an error and was not read; only its headline framing is known ^[S187]. The Morgan Stanley figure is from press coverage ^[S191]. Quote these as "Oliver Wyman estimates" or "McKinsey has argued", never as facts.

The connecting thread. The views are not mutually exclusive. LSEG's own bets are a hedge across all of them: Workspace AI and "LSEG Everywhere" (view 1 and 4), the DIGIT collaboration with HSBC (view 2), LSE 24 and the Private Securities Market (view 3, courting new client types and private capital) ^[S195, S196]. **INFERRED**

YOUR OPINION GOES HERE

Prompt: "Where do you see our industry in five years?"

Side A (optimist): Oliver Wyman's base case of about 8% a year to around \$200bn by 2030 ^[S185], record data spend ^[S188] and accelerating subscriptions at LSEG ^[S195] say the incumbents keep compounding. Network effects in clearing (LCH has 99.995% of GBP SONIA swaps ^[S140]) are very hard to break.

Side B (disruption): Up to \$45bn of revenue could move to token-native rails ^[S185]; about \$12bn is exposed to AI ^[S185]; regulators are actively pushing data prices down ^[S165]; the EU is pulling clearing away ^[S160]. LSEG shares once fell 13% in a single day on AI fears ^[S146] **REPORTED**, so investors take the threat seriously.

Suggested position: "I think the core plumbing (clearing, venues, benchmarks) gets more valuable, not less, because AI and tokens both need trusted data and trusted settlement. The pressure falls on undifferentiated analytics and on per-unit data pricing. The winners will be groups that turn their data into something AI can use and that own the post-trade rails tokenised assets will need. The signals I would watch are PvP adoption in FX, DSS firms going live, take-up of the tapes, and whether EMIR 3 moves real euro swap share." **INFERRED**

SAY THIS IN THE INTERVIEW

"Oliver Wyman says data and technology have gone from 21% to 30% of FMI revenue in five years. That is the shift in one number, and LSEG is ahead of it because about 61% of its income is already subscription-based." ^[S185, S120]

Part 5 in ten lines

1. FMI is the plumbing: venues, clearing houses, depositories, repositories, plus index and data businesses.
2. LSEG does five of these jobs at once: exchange, MTF, CCP, index provider, data vendor. **INFERRED**
3. The lifecycle: pre-trade data, execution, clearing, settlement, post-trade. LSEG is at four of five; not UK settlement. **INFERRED**
4. Primary market raises money; secondary market trades it afterwards.
5. Shares trade on lit order books; bonds, swaps and FX mostly by RFQ or OTC. Tradeweb's £1,539m dwarfs Equities' £412m ^[S120].
6. Five revenue lines: trading, clearing, listing, data, index. Data & Analytics is the largest at £3,978m ^[S120].
7. LSEG is not a bank (no proprietary risk), not an asset manager (no client money), and not Bloomberg (it owns venues and a CCP). **INFERRED**
8. Market data spend was a record \$49.2bn in 2025 ^[S188]; data and tech are 30% of FMI revenue ^[S185].
9. Forces: electronification, AI, cloud concentration, tokens, private markets, EU clearing politics, data price regulation, consolidated tapes.
10. Have a view: core plumbing gets more valuable; generic analytics and per-unit data pricing face pressure. **INFERRED**

PART 6

The role's own industry and its regulation

The four markets an intern could land in, how they got here, the rules being rewritten around them right now, and the one sentence to say about each rule.

Part 5 explained the industry in general. This Part zooms into the specific businesses named in the JD: London Stock Exchange, LSEG FX, Tradeweb, Turquoise and LCH. The UK is in the middle of the biggest rewrite of its market rules since 1986. Almost every rule below has a date between mid-2024 and late 2027, which is exactly when you would intern (June 2027) and graduate (summer 2028).

INFERRED

HOW TO USE THIS PART

Every regulation has a card with four rows: **When** (exact date and instrument), **What** (plain English), **Why LSEG** (what it changes for the business) and **Say** (the one sentence to use in interview). The colour of the card's top edge matches its area in Figure 31: **Listings**

Trading and data

Clearing and settlement

FX

Resilience and tech

Where an intern could sit: four sub-industries

The JD lists four kinds of work. Each maps naturally onto one sub-industry, though in practice teams overlap. **INFERRED**

Sub-industry	LSEG business	JD duty it fits	Size signal	Rule-sets that shape it
UK primary markets and debt listings	London Stock Exchange: Main Market, AIM, International Securities Market (ISM), Sustainable Bond Market, Private Securities Market (PSM)	"Research analysis into global markets which could have a focus on debt listings, valuations, and shareholder and geographic analysis"	23 IPOs raising £2.1bn in 2025 ^[S142, S192]	UK Listing Rules, POATRs, PISCES, stamp duty relief
FX electronic trading	LSEG FX: FXall (dealer-to-client), FX Matching (dealer-to-dealer); LCH ForexClear	"Solve problems for our FX customers ... maintain relationships ... deal with post sale activity"	\$525bn average daily volume in 2025; FX revenue £272m, up 7.5% ^[S120]	FX Global Code, settlement risk work, BIS data
Clearing	LCH: SwapClear, ForexClear, RepoClear, CDSClear	"Risk teams ... monitoring and analysing risks, and interpreting data"	SwapClear cleared \$1,941tn notional in 2025, up 21.2% ^[S120]	EMIR 3, EU equivalence, Bank of England FMI rules, T+1
European equities trading (plus bonds via Tradeweb)	London Stock Exchange order book, Turquoise; Tradeweb for bonds	"Delivery of business intelligence, strategic initiatives, and operational improvements"	UK average daily value traded £4.8bn, up 14.3% ^[S120]	STO removal, consolidated tapes, UK MAR, T+1, LSE 24

£3,467m

LSEG Markets division income FY2025, up 8.9% [S120]

55.6%

Markets adjusted EBITDA margin FY2025 (52.1% in 2024) [S120]

+11.9%

Markets organic growth, H1 2026 [S195]

£4,799m

Group income ex recoveries H1 2026, +8.4% organic constant currency [S195]

How we got here: the history in six steps

Date	Event	What happened	Why it still matters
Jul 1963	First Eurobond (Autostrade)	\$15m, 15 years, 5.5% coupon, lead-managed from London by S G Warburg [S174]. CONFIRMED Listed in Luxembourg, not London [S175]. REPORTED	The origin of London as a centre for international debt, the heritage behind ISM and the debt listings team.
27 Oct 1986	"Big Bang"	Fixed commissions scrapped, foreign firms allowed to buy UK brokers, firms allowed to be both broker and dealer, floor trading replaced by screens [S178]. REPORTED	Created the modern electronic, international LSE.
1 Nov 2007	MiFID (EU)	EU rules allowed exchanges and MTFs to compete for trading [S203].	How Turquoise and Chi-X emerged: venue competition is why the LSE no longer has all UK share trading. INFERRED
3 Jan 2018	MiFID II / MiFIR	More transparency, research unbundling, share and derivatives trading obligations, more reporting [S203]. REPORTED	Built today's reporting and data rules; much of the UK rewrite since 2023 is adjusting it.
Jan 2021	Brexit, end of transition	EU share trading moved from London to Amsterdam. Amsterdam averaged €9.2bn a day in January 2021 vs London €8.6bn [S179]. REPORTED	Lost EU share volumes; the reason the UK started to rewrite its own rules.
2023 to 2026	The UK rebuild	STO scrapped (29 Aug 2023), Listing Rules rewritten (29 Jul 2024), PISCES (Jun 2025), prospectus regime replaced (19 Jan 2026), bond tape live (22 Jun 2026), T+1 planned (11 Oct 2027) [S167, S150, S152, S151, S155, S158].	The live agenda you are being hired into.

DON'T SAY THIS

"The first Eurobond was listed in London in 1963." It was arranged in London by S G Warburg, but listed on the Luxembourg Stock Exchange [S174, S175]. Say: "The Eurobond market was born in London in 1963 with the Autostrade deal, led by Warburg, even though the bond itself was listed in Luxembourg." Getting this detail right is exactly the kind of care a debt listings team notices.

KEY TERM

Eurobond: a bond issued in a currency other than that of the country where it is issued, sold to international investors. ICMA: "It is generally accepted that the Eurobond market began with the Autostrade issue for the Italian motorway network in July 1963" [S174].

KEY TERM

MiFID / MiFID II / MiFIR: EU rules on investment services and trading venues. After Brexit the UK kept its own amended version, "UK MiFIR", which it is now changing piece by piece. **FSMA 2023** (the Financial Services and Markets Act 2023) is the law that lets it do so.

Primary markets and debt listings

This is the London Stock Exchange's home turf: helping companies and governments raise money. The equity side has had a hard decade; the debt side is quieter but steady. Since 2024 the government and FCA have changed nearly every rule an issuer touches. **INFERRED**

KEY TERM

IPO (initial public offering): a company's first sale of shares to the public, with admission to trading. **Prospectus:** the legal document describing the security and the issuer, so investors can judge it.

KEY TERM

Listing vs admission to trading: "listing" means joining an official list with its rules; "admission to trading" means the venue lets the security trade. On a regulated market you usually need both; on an MTF like AIM or ISM the exchange alone admits. **INFERRED**

UK Listing Rules (UKLR)

LISTINGS

WHEN FCA PS24/6 published 11 Jul 2024; rules in force 29 Jul 2024 **[S150]**

WHAT Scraps the old "premium" and "standard" listing segments "in favour of a new commercial companies category for equity shares" **[S150]**, commonly called ESCC (equity shares in commercial companies) **REPORTED**. Fewer hurdles: for example, no mandatory shareholder votes on most large deals and easier dual-class share structures **[S202]** **REPORTED**. The FCA called it "the most significant changes to the UK's listing regime in over 3 decades" **[S150]**.

WHY LSEG Lowers the cost and friction of listing in London, so the LSE can win IPOs back from New York and Amsterdam. EY says "recent reforms to the UK's listing regime are beginning to have a tangible impact" **[S142]**.

SAY "Since July 2024 London has one main listing category instead of two, which removes a big reason founders chose New York."

POATRs: the new prospectus regime

LISTINGS

WHEN Public Offers and Admissions to Trading Regulations 2024; FCA rules PS25/9 (and PS25/10 for public offer platforms), both 15 Jul 2025; in force 19 Jan 2026 **[S151]**

WHAT Replaces the UK Prospectus Regulation inherited from the EU. PS25/9 creates a new FCA sourcebook, the Prospectus Rules: Admissions to Trading on Regulated Markets (PRM) **[S151]**.

WHY LSEG Changes the cost of raising money on the Main Market, for both shares and bonds, because the prospectus is one of the most expensive parts of a listing. **INFERRED** The JD's "debt listings" research sits right on top of this.

SAY "Since 19 January 2026 prospectuses for London's regulated markets sit under the FCA's new PRM rules, so the question for the debt listings team is whether that makes the Main Market more competitive with MTF routes like ISM."

SOURCE UNCERTAIN

Detailed POATRs thresholds (for example a 75% limit for further share issues without a prospectus, or protected forward-looking statements) and the SI number were not on the FCA page read for this pack. Do not quote them. If asked, say you know the regime went live on 19 January 2026 under PS25/9 and that you would want to check the thresholds.

PISCES and LSE's Private Securities Market

LISTINGS

WHEN Sandbox regulations laid 15 May 2025, in force 5 Jun 2025; FCA PS25/6 rules in force 10 Jun 2025; sandbox ends 5 Jun 2030 unless extended ^[S152]

WHAT "PISCES is a new type of share trading platform. It allows buyers and sellers of shares in private companies to trade those shares during intermittent trading periods" ^[S152]. It is secondary trading only: no new money is raised ^[S154] **REPORTED**.

WHY LSEG LSE's PISCES venue is the Private Securities Market (PSM). FCA approval reported 26 Aug 2025 ^[S153] **REPORTED**; rules published 5 Feb 2026; first auction 25 Mar 2026, for a Tradeable Private Equity Investment Company holding shares in Oxford Science Enterprises ^[S154] **REPORTED**. LSEG's H1 2026 results cite "first Private Securities Markets transactions" ^[S195] **CONFIRMED**. A new product line and a possible pipeline to the Main Market. **INFERRED**

SAY "PSM lets private companies get used to a London trading venue before they IPO; I would track how many PSM companies later move to the Main Market."

UK Listing Relief (stamp duty)

LISTINGS

WHEN Autumn Budget 26 Nov 2025; applies to shares newly listed on a UK regulated market on or after 27 Nov 2025 ^[S182]

WHAT A three-year relief from the 0.5% stamp duty reserve tax (SDRT) on buying shares in newly listed companies ^[S182] **REPORTED**. EY also refers to "the newly announced UK Listing Relief" ^[S192].

WHY LSEG Makes newly listed UK shares cheaper to buy, which helps IPO demand. Only applies to regulated markets, so it favours the Main Market over AIM. **INFERRED**

SAY "For three years, investors buying a new London listing pay no stamp duty: a direct nudge towards the Main Market."

Pension and savings reforms: Mansion House, Leeds, ISAs

LISTINGS

WHEN Edinburgh Reforms 9 Dec 2022 ^[S199]; Mansion House Compact 10 Jul 2023; Mansion House Accord 13 May 2025 ^[S181]; Leeds Reforms 15 Jul 2025 ^[S180]; cash ISA limit cut from 6 Apr 2027 ^[S183]

WHAT Compact: nine DC pension providers aim for at least 5% of default funds in unlisted equities by 2030. Accord: 17 signatories, at least 10% of main default funds in private markets by 2030, half in the UK ^[S181] **REPORTED**. Leeds Reforms aim to make the UK the number one destination for financial services by 2035 ^[S180] **REPORTED**. Cash ISA limit falls to £12,000 (overall £20,000 unchanged) to push savers towards shares ^[S183] **REPORTED**.

WHY LSEG More domestic money for UK companies, both private (PSM, private markets data) and listed (retail demand). The government is explicitly trying to fix the demand side of the listings problem, not only the rules. **INFERRED**

SAY "The reforms attack both sides of the drought: rules for issuers (UKLR, POATRs) and money from pensions and savers (Mansion House, ISAs)."

Debt listings: Main Market, ISM and the Sustainable Bond Market

The JD singles out "debt listings". This is less glamorous than IPOs but London has deep roots in it, going back to the 1963 Eurobond. LSE offers two main routes and one label on top. **INFERRED**

- **Main Market:** the regulated market, used for debt listings including gilts and sovereign bonds **INFERRED**. Prospectuses now fall under the FCA's PRM rules ^[S151].
- **International Securities Market (ISM):** an MTF for debt sold to professional investors; launched 8 May 2017 with first admissions on 15 May 2017; admission is approved by LSE, not via the FCA's Official List ^[S176] **REPORTED**.
- **Sustainable Bond Market:** launched 11 Oct 2019, building on the Green Bond Segment from 2015. LSE says it "was the first major exchange to launch a dedicated Green Bond Segment" ^[S177] **CONFIRMED**.

FIGURE 30

How a bond gets listed in London: Main Market vs International Securities Market

Dashed box = generic step: the detail is not in our research, so it is described in general terms only.

The core difference is who signs off. On the Main Market the FCA's prospectus rules apply; on the ISM, London Stock Exchange approves admission itself and the market is for professional investors only. Fees, timetables and minimum sizes are not in our research, so they are deliberately left out.

Sources: Norton Rose Fulbright guide to the ISM, 2017 [S176]; FCA PS25/9, 15 Jul 2025 [S151]; LSEG Sustainable Bond Market release, 11 Oct 2019 [S177]; FCA bond tape page [S155]. Main Market as the venue for gilts and sovereign debt, the Official List step and UK MAR obligations are Inferred (general knowledge).

KEY TERM

Professional investors: banks, fund managers, insurers and other institutions treated as able to look after themselves, so the rules for selling to them are lighter than for retail savers. ISM is built for them, which is why it can be quicker and simpler than a regulated market listing. **INFERRED**

SOURCE UNCERTAIN

Our research does not contain ISM or Main Market fees, timetables, minimum denominations, the number of bonds listed, or LSEG's debt listings revenue. Figure 30 therefore keeps those steps generic. If the debt listings team comes up, ask about these rather than guess: "How do issuers choose between ISM and the Main Market today?" is a strong question.

Equities trading, transparency and market data

Share trading in London is split across the LSE order book, MTFs like Turquoise and Cboe Europe, dark books and bank systematic internalisers. The rules here decide where trades can happen and who owns the data they produce. **INFERRED**

KEY TERM

Systematic internaliser (SI): a bank or firm that trades against its own book with clients on an organised, frequent basis. It competes with venues for the same share trades. **Pre-trade transparency** means publishing bids and offers before trading; **post-trade transparency** means publishing the price and size after. A **deferral** lets a dealer delay publishing a large trade so it can hedge.

Share trading obligation (STO) revoked

TRADING AND DATA

WHEN 29 Aug 2023, by commencement of FSMA 2023 **[S167]**

WHAT "On 29 August 2023, the Share Trading Obligation (STO) in Article 23 of UK MiFIR was revoked" **[S167]**. The STO forced certain share trades onto venues; firms can now trade those shares more freely, including on non-UK venues. **INFERRED**

WHY LSEG Removes a Brexit-era friction for UK firms trading EU shares, but also removes a rule that pushed flow onto venues like LSE and Turquoise. Mixed for LSEG. **INFERRED**

SAY "The UK dropped the share trading obligation in August 2023, which made London more open, but it means LSE and Turquoise have to win flow on quality, not by rule."

Bond and derivatives transparency

TRADING AND DATA

WHEN FCA PS24/14, published 5 Nov 2024; rules in force 1 Dec 2025 **[S156]**

WHAT "A simpler and more timely post-trade transparency regime based on fewer deferrals" for bonds and derivatives **[S156]**.

WHY LSEG More bond trade data published faster: good for price discovery, and the foundation for the bond consolidated tape. Tradeweb is a bond venue that publishes data under these rules. **INFERRED**

SAY "PS24/14 is the bond transparency rulebook; it is not the tape itself, it is the data the tape is built from."

UK bond consolidated tape

TRADING AND DATA

WHEN FCA authorised ETS Connect UK (Etrading Software) in May 2026; "launched the UK bond CT service on 22 June 2026"; 5-year term **[S155]**

WHAT One feed combining bond trade reports from all UK venues. The contract value of about £4.8m and a High Court case that delayed the award (lifted Dec 2025) come from press snippets only **[S155]** **REPORTED**.

WHY LSEG Gives bond investors a cheap consolidated view of trades. A mild competitive threat to venue data sales, and a reason for Tradeweb and LSEG to sell richer data on top. **INFERRED**

SAY "The UK bond tape went live on 22 June 2026, run by ETS Connect UK, not by LSEG, so LSEG's data value has to come from analytics, not raw trade prints."

UK equity consolidated tape**TRADING AND DATA**

WHEN FCA CP26/31 (policy statement plus consultation), first published 19 Nov 2025, updated 31 Jul 2026; procurement early 2027; operating "in 2027 or early 2028" ^[S157]

WHAT The equity tape will include post-trade data plus "the first level of pre-trade data (the attributed best bid and offer)". The tape provider (CTP) must share income with data contributors ^[S157].

WHY LSEG LSE and Turquoise will be contributors and may get an income share, but the tape also offers a cheaper alternative to buying each venue's data. **INFERRED** Including pre-trade best bid and offer makes this more powerful than a post-trade-only tape. **INFERRED**

SAY "The equity tape includes best bid and offer, not just trades, and it shares revenue with venues, so for LSE it is part threat, part new income line."

FCA wholesale data market study**TRADING AND DATA**

WHEN Final report and press release, 29 Feb 2024 ^[S165]

WHAT Found "users may be paying higher prices for the data they buy than if competition was working more effectively", but Sheldon Mills said: "We do not believe the case has been made for significant interventions. However, we will examine ways to help support wholesale data being provided on fair, reasonable and transparent terms" ^[S165]. A snippet reports operating margins of key wholesale data providers of 30% to 60%+ over 2017 to 2022 ^[S165] **REPORTED**.

WHY LSEG LSEG is one of the largest data providers. No big intervention, but the regulator is watching pricing, and the tapes are partly a response. **INFERRED**

SAY "The FCA looked hard at data pricing in 2024 and stopped short of intervening; LSEG's licence to price data is earned, not guaranteed."

UK MAR and market cleanliness**TRADING AND DATA**

WHEN UK Market Abuse Regulation; FCA market cleanliness statistic 2025: 41.1% ^[S166]

WHAT UK MAR bans insider dealing, unlawful disclosure of inside information and market manipulation; issuers must disclose inside information promptly and keep insider lists **INFERRED**. The FCA's market cleanliness statistic (share of takeovers with abnormal share price moves before the announcement) was 41.1% in 2025; the 5-year average is 33.74% ^[S166]. The FCA says the revised method gives "systematically higher" figures ^[S166].

WHY LSEG Venue operators must monitor for abuse. A rising cleanliness number is a reputational issue for London as a market. **INFERRED** It also connects directly to LSEG's value of Integrity.

SAY "The 2025 market cleanliness figure was 41.1%, but the FCA changed its method, so I would not read it as a sudden jump without checking the footnote."

KEY TERM

Inside information: precise, non-public information that would move a security's price if known. **Insider list:** the record an issuer keeps of everyone with access to it.

LSEG's own move: LSE 24. Announced 21 July 2026, LSE 24 is a separate venue trading 24 hours a day, five days a week. It "will be available for client testing by the end of 2026, with Exchange Traded Products (ETPs) launching as the first asset class in H1 2027, subject to regulatory approval" ^[S196].

CONFIRMED It will mix order book and RFQ functionality ^[S196]. This is not a regulation, but it lands in the middle of the regulatory timeline and answers the retail demand that the ISA changes are trying to create. **INFERRED**

FX electronic trading

FX is the largest market in the world, and London is its centre. LSEG FX runs FXall, where banks trade with clients (dealer-to-client, D2C), and FX Matching, where banks trade with each other (dealer-to-dealer, D2D), with LCH ForexClear clearing some FX derivatives ^[S120].

\$9.6tn

Global FX turnover a day, Apr 2025, up 28% from \$7.5tn in 2022 ^[S163]

37.8%

UK share of global FX (\$4,745bn a day), down from 38.0% ^[S162]

89.2%

Share of FX trades with the US dollar on one side ^[S163]

\$1.4tn

FX settled each day with no protection, about 10% ^[S205]

Other facts worth holding: spot is 31% of turnover and FX swaps 42%; the top four centres (UK, US, Singapore, Hong Kong) account for 75% ^[S163]. The UK is also 49.6% of global OTC interest rate derivatives turnover ^[S162]. **CONFIRMED** The Bank of England: "The UK remains the single largest centre of foreign exchange activity with share of 37.8% of global turnover" ^[S162].

KEY TERM

Spot FX: exchanging currencies for near-immediate delivery (usually two days). **FX swap:** a spot trade plus a reverse forward trade, used by banks and corporates to manage funding. Swaps are the biggest single product at 42% of turnover ^[S163].

KEY TERM

D2C and D2D: dealer-to-client platforms (FXall) let corporates and asset managers request prices from several banks. Dealer-to-dealer platforms (FX Matching) let banks trade with each other, usually on an order book. LSEG runs both.

FX Global Code: 2024 review

FX

WHEN GFCX three-year review completed 10 Dec 2024; updated Code published Jan 2025 ^[S164]

WHAT A voluntary set of 55 principles of good practice for the FX market, written by the Global Foreign Exchange Committee (GFCX) and first published in 2017 ^[S204] **REPORTED**. The 2024 review aimed "to strengthen the Code's guidance on FX settlement risk and to increase transparency around certain types of FX transactions and the use of client-generated data" ^[S164].

WHY LSEG FXall's clients (banks, corporates, asset managers) sign statements of commitment to the Code. Questions about how platforms use client data and how settlement risk is reduced are live client topics an FX intern would hear. **INFERRED**

SAY "The FX Global Code was updated in December 2024 to tighten guidance on settlement risk and on how client data is used, which is exactly what a platform like FXall has to answer to."

FX settlement risk: the BIS measurement

FX

WHEN BIS Quarterly Review, 15 Jun 2026, based on the April 2025 Triennial Survey ^[S205]

WHAT "Just over one third of the average daily settlement volume in April 2025, or \$5.2 trillion, was settled via PvP, which eliminates settlement risk" ^[S205]. About 10%, or \$1.4tn a day, settled with no protection at all ^[S205]. CLS has offered PvP since September 2002 ^[S204] **REPORTED**.

WHY LSEG Settlement risk is the biggest unsolved problem in FX. Any LSEG FX workflow that helps clients route more trades into PvP or clearing (ForexClear) answers a regulator-backed need. **INFERRED**

SAY "BIS found about \$1.4 trillion of FX a day still settles with no protection, so post-trade is where FX innovation will be judged."

LSEG FX in numbers. Average daily total volume \$525bn in 2025, up 9.6%; ForexClear notional cleared \$48,113bn, up 31.4% ^[S120] **CONFIRMED** H1 2025 average daily volume was \$530bn, up 14.2% ^[S198] **REPORTED** , and ForexClear was reported up 45% in H1 2026 ^[S198, S195] **REPORTED** . Note the different periods before comparing them.

Clearing and settlement

LCH is LSEG's most strategically valuable asset and its most politically exposed. It dominates swap clearing in most currencies, and the EU wants a bigger share of euro clearing at home. **INFERRED**

\$1,941tn

SwapClear IRS notional cleared 2025, +21.2% ^[S120]

86.5%

LCH share of EUR swaps Q3 2025; Eurex 13.5% (from 8.4%) ^[S139]

99.995%

LCH share of GBP SONIA swaps, Q1 2026 ^[S140]

94.2%

LSEG ownership of LCH Group ^[S121]

EMIR 3 and the active account requirement

CLEARING

WHEN EU; in force 24 Dec 2024; active account requirement applies from 25 Jun 2025 ^[S161]

WHAT Some EU firms must hold an "active account" at an EU CCP and clear part of their euro and Polish zloty interest rate derivatives and euro short-term interest rate derivatives through it: at least five trades per sub-category per reference period ^[S161] **REPORTED** .

WHY LSEG A direct attempt to move euro swap clearing from LCH to EU CCPs such as Eurex. Eurex's share of EUR swaps rose from 8.4% to 13.5% in a year to Q3 2025 ^[S139] **REPORTED** . LCH's defence is netting: splitting a portfolio across two CCPs raises margin for the user. **INFERRED**

SAY "EMIR 3's active accounts went live in June 2025; the test is whether euro swap share keeps moving to Eurex or whether the cost of splitting netting sets keeps users at LCH."

EU equivalence for UK CCPs

CLEARING

WHEN European Commission decision 31 Jan 2025; three-year extension to 30 Jun 2028, applying from 1 Jul 2025 ^[S160]

WHAT Lets EU firms keep using UK CCPs like LCH. Commissioner Albuquerque: "With this extension of equivalence for UK CCPs we are safeguarding EU financial stability and avoiding short-term risks", and the extension "will allow the recently agreed EMIR 3 measures to start taking effect, increasing clearing in the EU and reducing our exposure to UK CCPs" ^[S160].

WHY LSEG The single most important date for LCH. Without renewal, EU members could face limits on using LCH after 30 Jun 2028. **INFERRED**

SAY "EU equivalence for LCH runs to 30 June 2028; that is the cliff edge, and the EU said openly it is buying time for EMIR 3 to pull clearing home."

UK CCP rules move to the Bank of England

CLEARING

WHEN FSMA 2023 rule-making powers; BoE consultation Jul 2025 on an FMI Rulebook; final rules no earlier than mid-2026 ^[S197]

WHAT The Bank of England gains powers to write its own rules for CCPs and CSDs, replacing retained EU law (UK EMIR) ^[S197] **REPORTED** . Separately, it is "consulting ... on ... permitting tokenised assets as eligible collateral for CCPs" ^[S184].

WHY LSEG LCH Ltd's UK rulebook will be rewritten by its home regulator, and tokenised collateral could change what members post as margin. **INFERRED**

SAY "LCH's rulebook is moving from retained EU law to a Bank of England FMI Rulebook, and the Bank is even consulting on tokenised collateral."

SOURCE UNCERTAIN

Whether the Bank of England's final CCP rules were published in 2026 is not known from our research ^[S197]. The EMIR 3 legal citation is also unverified. Say "the Bank consulted in July 2025" rather than "the new rules are in force".

T+1 settlement

CLEARING

WHEN UK draft SI, "The Central Securities Depositories (Amendment) (Intended Settlement Date) Regulations 2026", published 20 Nov 2025, comments to 27 Feb 2026; T+1 "from 11 October 2027" ^[S158]. EU Regulation (EU) 2025/2075, OJ 14 Oct 2025, applies from 11 Oct 2027 ^[S159]

WHAT Trades in shares and bonds must settle one business day after the trade, not two. UK and EU move on the same day, so cross-border trades stay aligned ^[S158, S159].

WHY LSEG Less time to fix errors means more automation and same-day trade checks; less counterparty risk; LCH and venue operations must adapt. Risk teams will watch settlement fails. **INFERRED** It lands four months after a June 2027 internship starts.

SAY "T+1 arrives on 11 October 2027 in both the UK and EU, which halves the time to fix a broken trade, so operations and risk teams will be judged on automation."

SOURCE UNCERTAIN: T+1 LEGAL STATUS

Only the **draft** UK statutory instrument (November 2025) is confirmed ^[S158]. Whether the final SI has been made in 2026 is not verified. Say "the UK has legislated in draft for T+1 on 11 October 2027, the same day as the EU", not "the law is in force". The EU regulation is published ^[S159] but was read via a secondary source.

The commercial backdrop. In 2025 LSEG paid £1.2bn to cut the founding banks' share of SwapClear's revenue surplus from c.30% to 15% for 2025 and 10% from 2026 to 2045 ^[S120]. **CONFIRMED** LSEG's H1 2026 margin improved partly due to "the change in the SwapClear revenue share agreement in H2 2025" ^[S195]. A record \$502tn of notional was cleared in Q3 2025 ^[S198] **REPORTED**.

Resilience, technology and digital assets

These rules matter because LSEG is critical plumbing: if LCH or the LSE stops, markets stop. They are also where LSEG's cloud strategy meets regulation. **INFERRED**

UK operational resilience

RESILIENCE

WHEN Deadline 31 Mar 2025 ^[S172]

WHAT Firms must be able to stay within "impact tolerances" (the maximum tolerable disruption) for their important business services ^[S172] **REPORTED**.

WHY LSEG Applies across LSEG's UK regulated entities: the LSE, LCH Ltd, and others. **INFERRED**

SAY "Since March 2025 UK firms like the LSE and LCH must be able to keep their important services within set limits of disruption."

DORA (EU Digital Operational Resilience Act)		RESILIENCE
WHEN	Regulation (EU) 2022/2554; applies from 17 Jan 2025 [S173]	
WHAT	EU rules on ICT (technology) risk, incident reporting, testing and oversight of tech suppliers [S173]	
REPORTED		
WHY LSEG	Applies to LSEG's EU entities such as LCH SA in Paris. INFERRED	
SAY	"DORA means LSEG's EU businesses, like LCH SA, run under a second, EU tech resilience regime alongside the UK's."	

UK critical third parties (CTP) regime		RESILIENCE
WHEN	FCA PS24/16, 12 Nov 2024; regime from 1 Jan 2025; first designations in force 13 Jul 2026 [S170]	
WHAT	HM Treasury can designate a tech supplier whose failure would threaten UK financial stability, bringing it under direct regulatory oversight [S170]. Those designated were AWS, Google Cloud, Microsoft and Oracle [S171]	
REPORTED		
WHY LSEG	LSEG has a 10-year partnership with Microsoft, including a \$2.8bn minimum cloud spend, and Microsoft bought about 4% of LSEG [S147]. LSEG's main cloud partner is now directly overseen. INFERRED	
SAY	"Microsoft, LSEG's main cloud partner, was designated a critical third party in July 2026, which shows regulators now see cloud as market plumbing too."	

Digital Securities Sandbox (DSS)		RESILIENCE
WHEN	DSS Regulations (SI 2023/1398) in force 8 Jan 2024; opened to applications 30 Sep 2024; runs to Dec 2028, may be extended [S169, S168]	
WHAT	A Bank of England and FCA regime for testing trading and settlement of securities on distributed ledgers [S168, S169] REPORTED	
WHY LSEG	LSEG mentions a "Digital Securities Depository collaboration with HSBC on DIGIT" [S195]. The sandbox is where tokenised settlement is tested in the UK. INFERRED	
SAY	"The DSS has been open since September 2024, and LSEG is working with HSBC on DIGIT, so tokenisation is a live project, not a slide."	

The regulation timeline

Figure 31 puts every dated item on one to-scale axis. The table after it is the full list, including the pre-2018 history.

FIGURE 31

Regulation timeline for LSEG's markets businesses, 2018 to 2028

KEY (filled = happened; hollow = planned or scheduled after 5 Oct 2026)

1 3 Jan 18	MiFID II applies: transparency and reporting	19 5 Jun 25	PISCES regs in force; PS25/6 rules 10 Jun
2 Jan 2021	Brexit: EU share trading moves to Amsterdam	20 25 Jun 25	EMIR 3 active account requirement applies
3 9 Dec 22	Edinburgh Reforms announced	21 15 Jul 25	PS25/9 prospectus rules; Leeds Reforms
4 10 Jul 23	Mansion House Compact: 5% unlisted by 2030	22 14 Oct 25	EU T+1 regulation published
5 29 Aug 23	Share trading obligation revoked (FSMA 2023)	23 20 Nov 25	UK draft T+1 statutory instrument
6 8 Jan 24	Digital Securities Sandbox in force	24 27 Nov 25	UK Listing Relief from 0.5% stamp duty starts
7 29 Feb 24	FCA wholesale data market study	25 1 Dec 25	PS24/14 bond transparency rules in force
8 29 Jul 24	UK Listing Rules in force (PS24/6)	26 19 Jan 26	POATRs prospectus regime in force
9 30 Sep 24	Digital Securities Sandbox opens	27 25 Mar 26	First LSE Private Securities Market auction
10 5 Nov 24	PS24/14 bond transparency rules published	28 15 Jun 26	BIS: \$1.4tn a day of FX settles unprotected
11 10 Dec 24	FX Global Code three-year review complete	29 22 Jun 26	UK bond consolidated tape live
12 24 Dec 24	EMIR 3 in force (EU)	30 13 Jul 26	First critical third party designations
13 1 Jan 25	UK critical third parties regime starts	31 31 Jul 26	Equity tape policy CP26/31 updated
14 17 Jan 25	EU DORA applies	32 H1 2027	LSE 24: ETPs planned for H1 2027
15 31 Jan 25	EU extends UK CCP equivalence to 30 Jun 2028	33 6 Apr 27	Cash ISA limit falls to £12,000
16 31 Mar 25	UK operational resilience deadline	34 11 Oct 27	T+1 settlement in UK and EU (UK SI draft)
17 Apr 2025	BIS Triennial Survey month: \$9.6tn a day	35 2027-28	Equity tape live "in 2027 or early 2028"
18 13 May 25	Mansion House Accord: 10% private markets	36 30 Jun 28	UK CCP equivalence in EU ends unless renewed

Positions are to scale by date. Notice the bunching: almost everything that matters lands between mid-2024 and late 2027, the window in which you would intern and join as a graduate. The two hollow purple markers on the right, T+1 (Oct 2027) and the EU equivalence cliff for UK CCPs (Jun 2028), are the dates to remember.

6 Apr 2027	● Listings	Cash ISA limit £12,000	Nudges savers to shares	Retail demand for UK equities	[S183]
H1 2027 (planned)	● Trading and data	LSE 24 ETP launch	24/5 venue, subject to approval	New trading hours	[S196]
11 Oct 2027	● Clearing	UK and EU T+1	Settlement next business day	Major ops change in your graduate year	[S158, S159]
2027 or early 2028 (planned)	● Trading and data	UK equity tape operating	Consolidated equity data	Venue data income share	[S157]
30 Jun 2028	● Clearing	EU equivalence for UK CCPs ends unless renewed	Cliff edge	LCH	[S160]
5 Jun 2030	● Listings	PISCES sandbox regulations expire	Must be made permanent or end	PSM future	[S152]

Table source: WS4 section 4B.14, with area added. Dates marked "planned" depend on approvals or on legislation not yet confirmed as final.

Competitive map by sub-industry

LSEG is not one competitor; it is a set of separate fights. Answer "who are our competitors?" by business line, with one number each. **INFERRED**

Sub-industry	LSEG business	Main rivals, with a number	Where LSEG stands
Listings	London Stock Exchange	Hong Kong (HK\$286.9bn from 119 IPOs in 2025, No.1 globally [S134]); New York (US IPO proceeds up 38% in 2025 [S144] REPORTED); Euronext ("leading position for equity listings" in Europe [S128])	Weak on IPO volume: £2.1bn from 23 IPOs in 2025 [S142]. Strong heritage in international debt. INFERRED
European equities trading	LSE order book, Turquoise	Cboe Europe ("record yearly Cboe overall market share of 25%" in 2025, €12.8bn average daily notional [S133]); Euronext; Aquis; bank SIs	Turquoise share not found in research. UK average daily value traded £4.8bn, up 14.3% [S120].

Sub-industry	LSEG business	Main rivals, with a number	Where LSEG stands
Fixed income e-trading	Tradeweb (LSEG has c.89.9% of votes ^[S137])	MarketAxess (revenue \$846.3m, up 3.6%; US high-grade share est. 18.4% ^[S138]); Bloomberg; Trumid ^[S190]	Tradeweb revenue \$2,052.4m, up 18.9%; ADV \$2.6trn ^[S137, S120] . Gaining.
FX	FXall, FX Matching, ForexClear	Bloomberg FXGO (ADV "more than \$830 billion", Mar 2025 ^[S149] REPORTED); 360T (Deutsche Börse FX & Digital Assets €182m, up 12% ^[S126]); Cboe FX (spot ADNV \$49.7bn ^[S133]); EBS (CME) ^[S122]	\$525bn ADV in 2025 ^[S120] . Unique in owning D2C, D2D and FX clearing together. INFERRED Volume measures are not like-for-like.
Clearing	LCH	Eurex (13.5% of EUR swaps, Q3 2025 ^[S139]); CME (best-ever USD OIS share 4.3%, Q1 2026 ^[S140]); JSCC (40.3% of JPY TONA ^[S140]); ICE Clear; Euronext Clearing (took cash equity clearing in-house ^[S120])	Dominant: 99.995% of GBP SONIA swaps ^[S140] . Euronext's exit cut Securities & Reporting revenue 3.0% ^[S120] .
Data and indices (for context)	Data & Analytics, FTSE Russell	Bloomberg (largest), S&P Global (revenue \$15,336m ^[S135]), FactSet; MSCI (revenue \$3,134.5m ^[S136]), S&P DJI	Second-largest data vendor ^[S188, S189] .

KEY TERM

Vertical silo vs open access: a vertical silo owns trading and clearing for its products and keeps them together (Deutsche Börse describes its "vertically integrated business model" ^[S127]). Open access means a CCP clears trades from many venues. LCH is the open-access model, partly owned with banks; Euronext pulling its clearing in-house is the silo model winning one round ^[S120].

Current issues in these markets

1. The London listings drought, and the first signs of recovery

88

Companies that left the LSE in 2024, most since 2009 ^[S145, S200]

23 / £2.1bn

IPOs and proceeds in 2025 (9 Main Market, 14 AIM), up 170% on £777.7m ^[S142, S192]

7 / £577m

IPOs and proceeds in H1 2026, vs £183m in H1 2025 ^[S143, S193]

HK\$286.9bn

Hong Kong IPO proceeds 2025, 119 IPOs ^[S134]

The story has turned from "London is dying" to "London is recovering from a low base". EY: "There were 11 IPOs in the UK in Q4 2025 raising £1.9bn" ^[S192], and EY's Scott McCubbin said "recent reforms to the UK's listing regime are beginning to have a tangible impact" ^[S142]. But the base is small: Hong Kong raised HK\$286.9bn, many times London's total even allowing for the currency difference ^[S134]. **INFERRED** Visma, valued at around €19bn, chose London but postponed its IPO to 2027 ^[S194] **REPORTED**.

SOURCE UNCERTAIN

Two research files describe the 88 departures differently: "left the LSE" ^[S200] and "left the main market" ^[S145], both citing EY. Say "88 companies left in 2024". The H1 2026 figures are Confirmed in one file ^[S143] and Reported in the other ^[S193], both give 7 listings and £577m.

YOUR OPINION GOES HERE

Prompt: "Is London's listings market fixed?"

Side A (yes, turning): the rules are rewritten (UKLR, POATRs), the tax nudge is in place (UK Listing Relief), pension money is being pointed at UK assets (Mansion House), and 2025 proceeds rose 170% ^[S150, S151, S182, S181, S142].

Side B (not yet): volumes are tiny next to Hong Kong and New York, 88 companies left in 2024, and big names like Visma keep postponing ^[S134, S145, S194].

Suggested position: "The supply-side rules are mostly fixed; the demand side, meaning domestic pension and retail money, is the slower fix. I would judge it by 2027 and 2028 Main Market IPO counts, and by whether PSM companies graduate to the Main Market." ^{INFERRED}

2. Other live issues

- **Euro clearing politics.** EMIR 3 active accounts and the 30 Jun 2028 equivalence date ^[S161, S160].
- **Data pricing and AI.** The FCA's view on data prices ^[S165], plus investor worry that AI erodes data businesses: LSEG shares fell 13% in one day on AI fears and were still 23% below their 2025 peak in June 2026 ^[S146] **REPORTED**.
- **T+1 readiness** for 11 Oct 2027 ^[S158], and FX settlement risk of \$1.4tn a day ^[S205].
- **New hours and new markets.** LSE 24 (ETPs from H1 2027, subject to approval) and PSM ^[S196, S154].

What customers value today

Customer value	Evidence it matters now	Which LSEG markets business it tests
Lower total cost, especially data	FCA found users may be overpaying for data ^[S165] ; tapes create cheaper alternatives ^[S155, S157] .	LSE and Turquoise data; Tradeweb data
Resilience and uptime	UK operational resilience deadline, DORA, CTP regime ^[S172, S173, S170] .	All, especially LCH and the LSE
Deep liquidity	Liquidity attracts liquidity; Cboe's 25% European share shows clients move when they find it elsewhere ^[S133] .	LSE, Turquoise, FXall, FX Matching
Capital and margin efficiency	EMIR 3 forces some euro clearing into EU CCPs, which can break netting ^[S161] ^{INFERRED} .	LCH SwapClear, ForexClear
AI-ready data	LSEG's "LSEG Everywhere" and 17,000 AI Search users ^[S195] .	Data feeds from venues
Longer trading hours	LSE 24 ^[S196] , ISA reform pushing retail to shares ^[S183] .	LSE
Easier cross-border access	UK and EU T+1 on the same day ^[S158, S159] ; STO removal ^[S167] .	LSE, Turquoise, LCH
Lower settlement risk	\$1.4tn a day of FX unprotected ^[S205] ; FX Global Code update ^[S164] .	LSEG FX, ForexClear

The list of what customers value is Inferred from S165, S186 and S195 (WS4 4B.13); the evidence column is sourced.

The one regulatory point per JD duty

HIGHEST-LEVERAGE TECHNICAL POINT

If you only remember one regulatory point per placement area, make it these. Each is chosen because it is dated, specific, affects revenue or risk directly, and is likely to be on the team's desk in summer 2027. **INFERRED**

JD duty area	The one point	Why it is the highest-leverage	How to say it
FX customers ("solve problems for our FX customers")	Settlement risk and the December 2024 FX Global Code update [S164, S205]	\$1.4tn a day still settles unprotected [S205] ; the Code now says more on settlement risk and use of client data [S164] , both things clients will ask a platform about.	"Clients will want to know how we help them cut settlement risk and how we use their data; both are now in the Code."
Research into global markets / debt listings	POATRs in force 19 Jan 2026, and the ISM vs Main Market choice [S151, S176]	The prospectus is a big cost of a regulated market listing; ISM sits outside the PRM sourcebook as an MTF INFERRED , so the new rules change the trade-off between the two routes.	"I would want to know whether POATRs has shifted bond issuers between ISM and the Main Market since January 2026."
Business intelligence, strategy, operational improvements	T+1 on 11 Oct 2027 [S158, S159]	The biggest operational change in the window; it touches venues, clearing and clients at once, and the UK legal text was only a draft when last checked [S158] .	"T+1 is the operational project of 2027: same day in the UK and EU, half the time to fix a failed trade."
Risk teams	EMIR 3 active accounts and EU equivalence to 30 Jun 2028 [S161, S160]	Directly affects LCH's euro swap share and member margin; the 2028 date is a hard cliff edge; Eurex share is already rising [S139] .	"I would watch the Eurex share of euro swaps each quarter as the early warning for LCH."

Part 6 in one-liners

- "The Eurobond market began in London in 1963, though the Autostrade bond was listed in Luxembourg." [\[S174, S175\]](#)
- "UKLR from 29 July 2024 gave London one main listing category instead of two." [\[S150\]](#)
- "POATRs replaced the prospectus regime on 19 January 2026 under FCA PS25/9." [\[S151\]](#)
- "PISCES has been law since 5 June 2025; LSE's version, the Private Securities Market, held its first auction on 25 March 2026." [\[S152, S154\]](#)

- "London IPOs: 23 raising £2.1bn in 2025, up 170%, from a very low base." [\[S142\]](#)

PART 7

What is happening right now

Fifteen stories from the last ten months, what each one means for LSEG and for your seat, and the dates that will move before your interview.

This part is your commercial awareness file. Interviewers on the Markets side expect you to know what their business did this year, not just what LSEG is. Every story below follows the same pattern: what happened, why LSEG cares, which of the four internship duty areas it touches, and a question or opinion you can use. The four duty areas come straight from the job description ^[JD]:

FX customers solving problems for LSEG FX clients. **Markets research** research into global markets, including debt listings, valuations, shareholder and geographic analysis. **BI and strategy** business intelligence, strategic initiatives and operational improvement. **Risk** monitoring and analysing risks and preparing data for risk projects and reporting.

HOW TO USE THIS PART

Do not try to memorise all fifteen stories. Pick three you find genuinely interesting, one of them from the Markets division, and learn them well enough to explain in 60 seconds and give an opinion on. Use the rest as background so that nothing an interviewer mentions surprises you. Re-read the "Diary of dates" table the night before any stage, because some of these stories will have moved on.

State of play, 5 October 2026

Here is the one-page picture. If you only read one page of this part, read this one.

£4,799m

LSEG H1 2026 total income excl. recoveries, +8.4% organic ^[S220, S221]

+11.9%

Markets division H1 growth, fastest of four; £1,920m, about 40% of group ^[S221, S71]

52.7%

H1 adjusted EBITDA margin (49.5% a year earlier) ^[S221]

7.0-7.5%

FY2026 organic growth guidance, raised on 30 Jul; analysts expected 7.8% ^[S220, S223]

~8,216p

LSEG share price, 5 Oct 2026 intraday; peak 12,095p (Feb 2025). See Source uncertain box ^[S90, S258]

3.75%

Bank Rate, held 17 Sep 2026 on a 6-3 vote; three wanted 4% ^[S241]

5.38%

UK 10-year gilt yield, 25 Sep 2026, near two-decade highs ^[S243] **REPORTED**

7 IPOs

UK listings in H1 2026 (3 Main Market, 4 AIM), raising £577m, +215% ^[S229]

The macro and political backdrop

- **A war involving Iran in H1 2026** caused an energy price shock and "a spike in trading activity across all major asset classes" ^[S223]. The Bank of England refers to "the energy

LSEG in four sentences

- LSEG had a record first half, and Markets (your division) was the growth engine at +11.9% ^[S221].
- The share price is still far below its February 2025 peak because investors fear AI tools will

shock" ^[S241]. This is the main reason exchange and clearing volumes were so high in H1.

- **New Prime Minister and Chancellor.** Andy Burnham became Prime Minister on 20 July 2026 ^[S242] **CONFIRMED**. John Healey replaced Rachel Reeves as Chancellor ^[S243, S244] **REPORTED**. Reeves gave the 14 July Mansion House speech just before she left ^[S245].
- **Autumn Budget on 28 October 2026** ^[S243]. The bond market is pressing the new Chancellor: gilt yields near their highest in almost two decades mean higher government borrowing costs.
- **Inflation is sticky.** CPI was 3.1% in August and the Bank expects slightly above 4% in early 2027 ^[S241]. The next rate move could be up, not down.

undercut its data business; it fell 12.8% in one day on 3 February 2026 ^[S90, S224].

- The activist hedge fund Elliott arrived in February and LSEG has since run record buybacks: £2.1bn in H1 at an average £88.39, and up to £1.35bn more by February 2027 ^[S221, S226].
- Markets is betting on "always on" and "digital": LSE 24, tokenised shares, the digital gilt and the Private Securities Market ^[S221, S227, S228, S246].

DON'T SAY THIS

"Rachel Reeves is the Chancellor." She was replaced in July 2026 ^[S244]. The Chancellor delivering the 28 October Budget is John Healey.

SOURCE UNCERTAIN: THE SHARE PRICE

Two share-price figures sit in the research. WS2 has about 8,216p intraday on 5 October 2026 from Yahoo Finance daily data, with a close of 8,090p on 2 October ^[S90]. WS5 has "about 8,090p" from a MarketBeat search snippet ^[S258], which is low confidence. They are consistent (one is Friday's close, the other Monday's intraday), but neither was checked live. The results-day fall also differs: Reuters reported a 3.1% fall during the day ^[S223], while the daily close was down 6.4% ^[S90]. **Check the live price on the morning of any interview and quote it as "around".**

LSEG group and its share price

1. Record half, guidance raised, but the shares fell

LSEG H1 2026 Interim Results and Interim Report, 30 Jul 2026 ^[S220, S221], Reuters via Global Banking & Finance Review, 30 Jul 2026 ^[S223] **CONFIRMED**

What happened. LSEG's income for January to June 2026 was £4,799m, up 8.4% on an organic basis (stripping out currency moves and acquisitions). Its adjusted EBITDA margin, the share of income left after running costs, rose to 52.7% from 49.5%. Adjusted earnings per share rose 17.2% to 244.9p and the interim dividend rose 17% to 55.0p ^[S221]. All four divisions grew: Data & Analytics +5.1%, FTSE Russell +9.1%, Risk Intelligence +9.7%, Markets +11.9% ^[S221]. LSEG raised full-year growth guidance to 7.0% to 7.5%. Yet the shares fell, because analysts had expected about 7.8% ^[S223]. Citi's Andrew Lowe wrote "Guidance may disappoint"; RBC's Ben Bathurst said AI vulnerabilities had been "overblown" ^[S223].

Two details that matter for Markets. First, LSEG agreed in July to buy up to 1.05% more of LCH Group for €70m, taking its stake above 95% ^[S221]. Second, LSEG cut the share of SwapClear surplus revenue paid to its founding banks from about 30% to 15% for 2025 and 10% from 2026 to 2045. That lifted the margin, but LSEG warns the year-on-year uplift "will largely reverse in Q4 2026" because of when the 2025 benefit was booked ^[S221].

Why it matters to LSEG. The results show the business is growing faster than at any time in five years, while the share price is still being judged on the AI question rather than on the numbers **INFERRED**. The Q4 margin reversal is a known, flagged item: if it appears in the press after the full-year results, it is not a surprise.

Why it matters to your seat. **BI and strategy** **Risk** Your division is the growth engine of the group. But part of that growth came from war-driven volatility, which can fade **INFERRED**. Strategy teams will be asked how much of H1 is repeatable.

YOUR QUESTION OR OPINION

Ask: "Markets grew 11.9% in a very volatile half. How much of that is structural, from new clients and products like Forward First Fixing, the Private Securities Market and Post Trade Solutions, and how much is cyclical volatility? How does the business plan for a calmer second half?"

Position you could take: the volume surge is cyclical, but products that save clients time (FFF) or create new markets (PSM) keep growing when volatility falls, so those are the lines to watch.

Figure 32 puts the year on one page. Read it top to bottom: the dots show how crowded July was, and the shaded band shows that the volume surge happened in H1, before the political change.

FIGURE 32

Ten months of LSEG news on one timeline

A. The ten months to scale (each dot is one event below)

B. What each event was (numbers match the dots)

Jan	1	19 Jan	New UK prospectus regime (POATRs) in force: simpler debt disclosure, retail "Access Bonds" [S254]
Feb	2	3 Feb	LSEG shares fall 12.8% in a day on fears that AI tools bypass data products [S90, S224]
	3	11 Feb	Activist investor Elliott's stake becomes public; it pushes for a portfolio review and bigger buyback [S223, S226]
	4	26 Feb	FY2025 results plus a £3bn share buyback [S222]
Mar	5	25 Mar	First auction on LSE's Private Securities Market (PISCES) [S236]
	6	31 Mar	FXall Forward First Fixing hits a US\$82bn daily peak [S238]
Apr	7	23 Apr	Q1 trading update: +9.8% organic growth, a record quarter [S75]
May	8	19 May	Forward First Fixing passes US\$1.5tn cumulative volume [S238]
Jun	9	22 Jun	UK bond consolidated tape (ETS Connect UK) goes live [S248]
Jul	10	13 Jul	Wayve runs a US\$85m employee share auction on the PSM [S235]
	11	13 Jul	HSBC Orion first live depository in the Digital Securities Sandbox; MoU with LSEG for the digital gilt [S246]
	12	14 Jul	Reeves' last Mansion House speech: ISA reform, digital gilt "by early next year" [S245]
	13	20 Jul	Andy Burnham becomes PM; John Healey replaces Reeves as Chancellor [S242, S243]
	14	21 Jul	LSE 24 announced: a 24/5 venue, ETPs first in H1 2027 [S227]
	15	30 Jul	H1 results: income +8.4%, Markets +11.9%, guidance raised, shares fall [S220, S223]
	16	30 Jul	Tradeweb Q2: record US\$3.0tn average daily volume [S237]
Sep	17	1 Sep	LSE launches tokenised equity structures and a Payward partnership [S228]
	18	17 Sep	Bank of England holds at 3.75%; three of nine vote to hike [S241]
	19	25 Sep	10-year gilt yield 5.38% as a bond sell-off squeezes the Budget [S243]
	20	29 Sep	US 23-hours-a-day trading confirmed to start 6 Dec 2026 [S251]
Oct	21	1 Oct	Airtel Money IPO priced at £1.96 (£5.3bn value); listing due 14 Oct [S232]

■ LSEG group and share price

■ Digital and tokenisation

■ Markets division

■ Policy, politics, macro

■ Listings and PISCES

■ Peers and competitors

Seven of the 21 events fall in 13 to 30 July: a new PM and Chancellor, Mansion House, LSE 24, the digital gilt link, the first big PSM trade and the H1 results. Volume-driven growth belongs to the H1 shaded band; the political and rates stories belong to the autumn.

Source: WS5 stories and source IDs as shown on each line [S220 to S259]; LSEG share-price data [S90] and Q1 update [S75] from WS2. Dates as published, 2026. Event selection is the author's.

2. Elliott, the AI sell-off and the buyback

RTE, 26 Feb 2026 ^[S222]; Reuters via Global Banking & Finance (snippet) ^[S226]; Resultsense summary of Reuters analysis, 12 Jun 2026 ^[S224]; Bloomberg headline only ^[S225] **REPORTED**

What happened. In early February 2026 LSEG shares fell almost 13% in one day after Anthropic launched Claude Cowork plug-ins, which sparked fears that AI tools would let customers bypass LSEG's data products ^[S224]. The daily close was down 12.8% on 3 February ^[S90]. On 11 February the activist hedge fund Elliott's stake became public ^[S223]. An activist investor buys a stake and then publicly pushes management to change strategy. Elliott asked for a portfolio review and a £5bn buyback ^[S226]. On 26 February LSEG announced a £3bn buyback ^[S222]. By 12 June the shares were up 27% from the Elliott news but still 23% below the 2025 peak, and 90% of analysts rated LSEG a buy ^[S224]. BofA's Hubert Lam: "They are part of the AI ecosystem rather than competing against it" ^[S224]. On 1 December 2026 Amit Zavery, President of ServiceNow, joins the board to support the "LSEG Everywhere" AI strategy ^[S259] **REPORTED**.

Why it matters to LSEG. The company has to prove it is an AI winner, not an AI loser, and pay cash back to shareholders while it does so. Elliott sees the roughly 51% Tradeweb stake as a possible source of cash ^[S226]; LSEG says it has no plans for asset sales **REPORTED, SNIPPET**.

Why it matters to your seat. **BI and strategy** **Markets research** Shareholder analysis is in the JD. Elliott is a live case study of who owns a listed company and how they apply pressure.

SOURCE UNCERTAIN: THE SIZE OF ELLIOTT'S ASK

Reuters (via S226) reports a **£5bn** buyback ask; RTE wrote "**\$5 billion**" ^[S222]. The Bloomberg article is paywalled and was not read ^[S225]. Say "a buyback of around five billion" and do not commit to a currency.

YOUR QUESTION OR OPINION

Ask: "Elliott argued the group is worth more in pieces. From the Markets side, what would be lost if the Tradeweb stake were sold?" **Both sides:** keeping Tradeweb gives LSEG data, Workspace integration of Tradeweb dealer pricing ^[S221] and the biggest line in Markets; selling would raise cash and might shrink the "conglomerate discount" investors apply to mixed groups. **Suggested position:** keep it, because Tradeweb is the largest single line in your division and its data feeds the rest of the group **INFERRED**.

Markets division momentum

Figure 33 (after the LCH story) shows where the 11.9% came from. Every line grew, but clearing and Tradeweb grew fastest. Notice that volumes (panel B) grew far faster than revenue (panel A). That gap is normal: big clients get volume discounts, and fees are not charged per dollar of notional **INFERRED**.

3. LCH: record clearing, with EMIR 3 in the background

LSEG Interim Report H1 2026 ^[S221] **CONFIRMED**; EMIR 3 commentary from Eurex, J.P. Morgan and others ^[S257] **REPORTED**

What happened. A clearing house (CCP) stands in the middle of a trade so that if one side goes bust, the other still gets paid. LCH's SwapClear cleared US\$1,165 trillion of interest rate swap notional in H1, up 29.4%. Client trades rose 23.8% to 3.283m. ForexClear (FX clearing) cleared US\$33.3 trillion, up

45.2%, with 41 members. OTC Derivatives revenue rose 13.6%. LSEG added more than 80 Post Trade Solutions customers and launched TradeAgent with 11 customers live ^[S221].

The policy threat. Under the EU's EMIR 3 rules, since 25 June 2025 large EU firms must hold an "active account" at an EU clearing house (in practice Eurex) for euro and zloty interest rate derivatives and clear a representative number of trades there. The first reports were due by 31 July 2026. Roughly 80% of euro interest rate derivatives are cleared outside the EU, mainly at LCH; Eurex has about 20% ^[S257].

SOURCE UNCERTAIN

The 80% / 20% split comes from search snippets and partly from Eurex, LCH's competitor, which has an interest in the number ^[S257]. Use it as "roughly four-fifths" and attribute it.

Why it matters to LSEG. SwapClear is a crown jewel. Any EU rule that forces business to Frankfurt is a strategic risk. So far, volumes are still at records ^[S221] **INFERRED**.

Why it matters to your seat. **Risk** **BI and strategy** Risk teams watch margin and member exposures; strategy teams watch whether euro volume is leaking to Eurex.

YOUR QUESTION OR OPINION

Ask: "With the first active-account reports in, has the requirement moved meaningful euro swap volume to Eurex, or is it mostly a box-ticking exercise?" **Suggested position:** H1 records suggest the threat is slow-moving; the bigger date is the end of EU equivalence for UK CCPs on 30 June 2028 ^[S160].

FIGURE 33**Markets division H1 2026: what grew****A. Revenue growth by Markets line, H1 2026 (organic)**

Bar = growth rate; bracket = H1 2026 revenue. Orange = faster than the division.

**B. Activity growth behind the revenue, H1 2026**

Volumes grew much faster than revenue: pricing tiers and mix mean volume is not revenue.

Four lines grew faster than the division's 11.9%: LCH's OTC Derivatives, Tradeweb-driven Fixed Income, Net Treasury Income and Equities. FX revenue grew slower (+7.6%) even though FX is a whole internship track, so FX teams are focused on new products like Forward First Fixing.

Source: LSEG Interim Report H1 2026 [S221] (also cited as S70 in WS2), six months to 30 Jun 2026, organic constant-currency growth on H1 2025. Revenue lines sum to £1,920m. Tradeweb ADV +24.8% is the H1 figure from S70; Tradeweb Q2 alone was +18.2% [S237].

4. LSEG FX: Forward First Fixing records and Euromoney wins

LSEG FX update, 19 May 2026 [S238]; LSEG FX updates page [S239]; Interim Report [S221] **CONFIRMED**; FX Markets snippet [S240] **REPORTED**

What happened. A "fixing" is a benchmark exchange rate set at a fixed time, such as the WM/Reuters 4pm London fix, which LSEG owns [S221]. Asset managers often must trade at the fix. Forward First Fixing (FFF) on FXall lets them pre-arrange the forward part of those trades electronically, hours ahead. FFF passed US\$1.5tn of cumulative volume, with a US\$82bn daily peak on 31 March 2026, 30+ asset manager and corporate clients and 18 partner banks. LSEG is waiving FFF brokerage fees for the rest of 2026, and cites a 90%+ cut in manual processing for its largest client [S238]. Q2 2026 was another

record quarter at over US\$330bn ^[S221]. Across LSEG FX, average daily volume was US\$561bn in H1 (+5.8%) and FX revenue £145m (+7.6%). US Streaming FX Spot ran its first trades on AWS Outposts with about 70% lower latency ^[S221]. LSEG won Euromoney 2026 World's Best FX Venue and Best Venue for FX Spot, did the first Deposits trade on FXall and integrated LoopFX ^[S239]. A "Split Risk" credit-intermediated forwards service is in preparation ^[S240].

Why it matters to LSEG. FX revenue grew slower than the rest of Markets. Products that remove a manual job for a client are how FX wins share without relying on volatility **INFERRED**.

Why it matters to your seat. **FX customers** The JD's first bullet is "Solve problems for our FX customers". FFF is the best example in this pack of exactly that: a client pain point (manual processing), a product, and a measured result.

YOUR QUESTION OR OPINION

Ask: "At what point does adoption justify switching FFF fees on, and how would you avoid losing clients when you do?" **Both sides:** waiving fees speeds adoption and builds a habit; but every month free makes it harder to charge later. **Suggested position:** switch on fees in tiers once the largest clients depend on the workflow, and lead with the operational savings rather than the price.

5. Tradeweb Q2 2026: record volumes, AI and prediction markets

Tradeweb results release, Business Wire via Nasdaq.com, 30 Jul 2026 ^[S237] **CONFIRMED**

What happened. Tradeweb is an electronic marketplace where large investors trade bonds, swaps and similar products. LSEG owns about 51% of it ^[S226]. Q2 revenue was US\$558.9m (+9.0%) and average daily volume US\$3.0 trillion (+18.2%), with records in rates futures, US high-yield credit, convertibles, swaps, options and repo. Adjusted EBITDA margin was 54.4%. CEO Billy Hult highlighted Tradeweb AiEX adoption, TARA (an AI credit research assistant), European credit portfolio trading and a deeper partnership with Kalshi, a prediction-markets firm ^[S237]; Tradeweb also took a minority stake in Kalshi ^[S221]. A snippet reports August ADV of US\$2.8tn (+13.7%) **REPORTED, SNIPPET**.

Why it matters to LSEG. Tradeweb drives the largest single line in Markets (£864m in H1) ^[S221], and it is the asset Elliott points to ^[S226].

Why it matters to your seat. **Markets research** **BI and strategy** Debt markets research and competitor tracking both run through Tradeweb data.

YOUR QUESTION OR OPINION

Ask: "Is owning 51% of a separately listed Tradeweb a strategic advantage, through Workspace integration and data, or a valuation discount the market will keep pushing on?" **Suggested position:** an advantage today because it is growing faster than the group; the debate becomes real only if growth slows.

6. LSE 24: a new 24-hours-a-day, five-days-a-week venue

LSEG press release, 21 Jul 2026 ^[S227], Interim Report ^[S221] **CONFIRMED**

What happened. London Stock Exchange will launch LSE 24, a separate trading venue running 17:00 to 07:50, Monday to Friday, with a 30-minute pause from 18:30 to 19:00. Client testing is due by the end of 2026. Exchange Traded Products (funds that trade like shares) come first in H1 2027, then equities,

subject to regulatory approval. The Main Market keeps its 08:00 to 16:30 hours. LSEG says the venue supports "digital, algorithmic and agentic trading" ^[S227, S221]. Julia Hoggett, CEO of LSE plc: "LSE 24 will help support deeper liquidity, greater efficiency and broader participation in our markets" ^[S227].

Why it matters to LSEG. It captures Asian and US investor hours and gives tokenised products a home (Story 11). The risks are thin overnight liquidity and wider spreads, the gap between buy and sell prices **INFERRED**.

Why it matters to your seat. **BI and strategy** **Risk** The JD says interns "assist the product lifecycle". A venue going from announcement to client testing to launch during your internship is exactly that, and a new venue needs new risk monitoring.

YOUR QUESTION OR OPINION

Ask: "What would you measure in the first six months to decide whether LSE 24 is working: share of ETP volume traded overnight, number of participants, spread quality, or new international clients?" **Suggested position:** participants and spreads first, because volume follows only if trading costs overnight are acceptable.

London listings and PISCES

7. Airtel Money prices London's biggest IPO in years

Airtel Africa RNS via Investegate, 1 Oct 2026 ^[S232] **CONFIRMED**; Reuters, 23 Sep 2026 ^[S231]; PitchBook via Yahoo, 28 Sep 2026 ^[S230] **REPORTED**

What happened. An IPO (initial public offering) is when a company first sells shares to the public on a stock exchange. Airtel Money, the mobile-money arm of London-listed Airtel Africa, set its IPO price at £1.96 a share, valuing it at £5.3bn (about US\$7.0bn). Existing shareholders sell 270m shares plus up to 27m over-allotment shares (extra shares the banks can sell if demand is strong). It joins the Main Market with admission expected on 14 October 2026, with about 16.5% to 17.5% of shares in public hands ^[S232]. The company raises no new money: this is a "secondary" sale by existing investors ^[S231]. Reuters said it could be London's largest IPO since 2021 at about US\$800m ^[S231]. Early valuation talk was US\$8bn to 9bn ^[S230, S231], so it priced below that **INFERRED**. CEO Ian Ferrao: "We believe in London and I think it's going to be a good home for us" ^[S231].

Why it matters to LSEG. London has had more companies leave than join for years ^[S230]. A large African fintech choosing London is a proof point for the 2024 listing rule reforms and the stamp duty holiday on new listings **INFERRED**. The exchange earns admission fees, annual fees and trading revenue; FTSE Russell may add the shares to UK indices, which creates index-fund demand **INFERRED**.

Why it matters to your seat. **Markets research** This is "shareholder and geographic analysis" in real life: who the early investors were (TPG, Mastercard, QIA ^[S231]) and why an Africa-focused issuer picked London.

YOUR QUESTION OR OPINION

Ask: "Airtel Money priced below its early talk. Is the bigger risk for London's IPO recovery valuation, where issuers feel New York pays more, or supply, where private equity owners use continuation funds instead of IPOs?" **Suggested position:** supply, because PitchBook names several big names that delayed or chose other routes (Story 8), and price can be fixed by more deals but supply cannot be forced.

8. The UK IPO market is recovering, slowly

EY, 8 Jul 2026 ^[S229] **CONFIRMED** ; PitchBook via Yahoo Finance, 28 Sep 2026 ^[S230] **REPORTED**

What happened. In H1 2026 there were 7 UK IPOs (3 Main Market, 4 AIM, the junior market) raising £577m, up 215% on H1 2025's £183m. Q2 alone had 5 listings raising £564m. Q1 was hit by the Middle East conflict and AI and tech valuation resets ^[S229]. PitchBook notes AS Watson, Loveholidays and Visma all pushed back London IPO plans, and the RAC chose a continuation vehicle instead ^[S230]. EY's Scott McCubbin: "the focus is shifting from 'if' to 'when'" ^[S229].

Policy support now in force. The new prospectus regime (POATRs) has applied since 19 January 2026, with simpler debt disclosure and "Access Bonds" for retail investors ^[S254]. Companies listing from 27 November 2025 get a three-year stamp duty (SDRT) holiday ^[S255]. FTSE Russell cut the minimum free float for non-UK companies from 25% to 10% from June 2026 ^[S253].

Why it matters to your seat. **Markets research** **BI and strategy** Debt listings sit in the same team. The POATRs changes to debt disclosure and retail "Access Bonds" are directly relevant to the debt listings work in the JD **INFERRED** .

YOUR QUESTION OR OPINION

Ask: "Proceeds are up from a very low base. Which leading indicator best separates a genuine recovery from a one-off: intention-to-float announcements, pricing versus the range, or how shares trade after listing?" **Suggested position:** post-IPO performance, because it decides whether the next issuer's investors come back.

9. PISCES gets real trades: Wayve's US\$85m auction

Crowdfund Insider, 13 Jul 2026 ^[S235] **REPORTED** ; Interim Report ^[S221] **CONFIRMED** ; first auction ^[S236]

What happened. PISCES is a new UK framework that lets private (unlisted) companies hold occasional auctions for their shares: a halfway house between private and public. LSE runs it as the Private Securities Market (PSM). The first auction, for a Tradable Private Equity company holding shares in Oxford Science Enterprises, was announced on 20 February with its first trading event on 25 March 2026 ^[S236]. In July UK self-driving AI company Wayve ran a US\$85m auction so employees could sell vested shares ^[S235]. LSEG says the PSM "successfully hosted its first transactions, with an encouraging pipeline building" ^[S221].

Why it matters to LSEG. It builds relationships with fast-growing private companies before they are ready to IPO, a possible future listing pipeline **INFERRED** .

Why it matters to your seat. **Markets research** **BI and strategy** Shareholder analysis for private companies, and measuring whether a new product is working.

YOUR QUESTION OR OPINION

Ask: "Could PISCES delay IPOs, because companies get employee liquidity without listing? How would you measure whether it feeds or cannibalises the Main Market?" **Suggested position:** it can do both; track how many PSM companies later list, and how long after.

Digital and tokenisation

10. Mansion House and the digital gilt: HSBC and LSEG link up

Mondo Visione (speech text), 14 and 15 Jul 2026 ^[S245], Ledger Insights, Jul 2026 ^[S246], Interim Report ^[S221] **CONFIRMED**

What happened. Rachel Reeves' last Mansion House speech covered ISA and advice reform, pensions investing an extra £10bn in private markets, stablecoins, tokenised deposits, and the UK becoming the first G7 country to issue a digital sovereign bond "by early next year" ^[S245]. A depository is where ownership of securities is recorded; a digital one records it on a distributed ledger, allowing near-instant settlement. On 13 July HSBC Orion became the first firm approved to go live as a Digital Securities Depository in the Bank of England's Digital Securities Sandbox. HSBC and LSEG signed an MoU (memorandum of understanding) for a link: HSBC Orion as the issuer-side depository, LSEG's depository as the investor-side one. The digital gilt, called DIGIT, is due by Q1 2027 ^[S246, S221].

Why it matters to LSEG. It puts LSEG in the plumbing of tokenised government debt, alongside its Digital Markets Infrastructure (DMI) and the new Digital Settlement House (DiSH) ^[S221].

Why it matters to your seat. **Markets research** **BI and strategy** Debt listings and digital markets research meet here.

YOUR QUESTION OR OPINION

Ask: "Why do you think LSEG chose to be the investor-side depository rather than compete to be the issuer-side one for DIGIT?" **Suggested position (Inferred):** the investor side is where LSEG's existing client relationships are, and it keeps LSEG in the flow of every future digital issue, not just one.

11. London Stock Exchange launches tokenised equity structures, with Payward

LSEG press release, 1 Sep 2026 ^[S228] **CONFIRMED**

What happened. A token is a digital record of ownership held on a blockchain. A tokenised share represents a real share but can move between digital wallets and potentially trade around the clock. LSE is launching UK tokenised equity structures, including xStocks (tokens backed one-for-one by listed shares). It intends to list xStocks and trade them on LSE 24 in 2027, subject to regulatory approval. Payward is the partner for connecting regulated infrastructure to digital-native distribution ^[S228]. Julia Hoggett: tokenisation "must develop in a way that preserves the trust, rights and role of regulated markets" ^[S228].

SOURCE UNCERTAIN

Payward is described in WS5 as the parent of the Kraken crypto exchange, but that comes from general knowledge and was not checked in the research sweep. Say "Payward" and let the interviewer add the rest.

Why it matters to LSEG. It ties three threads together: LSE 24, DMI and the Digital Securities Depository. It is also defensive, because ICE (owner of NYSE) and OKX plan a venue for 24/7 tokenised US stocks **REPORTED, SNIPPET** **INFERRED** .

Why it matters to your seat. **BI and strategy** **Risk** New product launches need both a business case and a risk framework.

YOUR QUESTION OR OPINION

Ask: "How do you protect shareholder rights and market integrity when a tokenised share trades at 3am on a crypto-native channel? Is the regulated venue the moat?" **Suggested position:** yes; the regulated venue is what makes a token trustworthy, which is exactly Hoggett's line.

Policy, regulation and the macro picture

12. Bank of England holds at 3.75%; three members vote to hike

Bank of England Monetary Policy Summary, 17 Sep 2026 ^[S241] **CONFIRMED**

What happened. Bank Rate is the Bank of England's base interest rate; it drives mortgage, savings and borrowing costs. The Monetary Policy Committee voted 6-3 to hold at 3.75%. Greene, Mann and Pill wanted 4%. CPI inflation was 3.1% in August and is projected at about 3.75% in Q4 2026 and slightly above 4% in early 2027. The Bank also set out a plan to run its gilt holdings down to zero, unwinding £368bn by the end of 2034, about £46bn a year on average ^[S241].

Why it matters to LSEG. Rate uncertainty drives hedging (swaps cleared at LCH) and FX trading. LCH also earns Net Treasury Income on cash collateral, which grew 12.6% in H1 ^[S221]; that income rises and falls with interest rates **INFERRED** .

Why it matters to your seat. **FX customers** **Risk** Sterling moves on rate expectations, and risk reporting needs this context.

YOUR QUESTION OR OPINION

Ask: "Higher-for-longer rates helped Net Treasury Income at LCH. Is that a revenue line LSEG wants investors to value, given it falls if rates fall?" **Suggested position:** treat it as useful but cyclical, and judge Markets on fee income.

13. A global bond sell-off squeezes the Budget

London Business News, 25 Sep 2026 ^[S243] **REPORTED** ; IG and TechTimes snippets ^[S244]

What happened. A gilt is a UK government bond. When its yield goes up, the government pays more to borrow. The UK 10-year gilt yield rose to 5.38%, close to the previous week's peak, with yields "climbing towards their highest level in almost two decades". The 30-year US Treasury yield reached 5.444%, the highest since 2004 ^[S243]. Nigel Green of deVere: "Britain's budget is being written in the bond market right now" ^[S243].

SOURCE UNCERTAIN

Search snippets say rising yields cut the Chancellor's fiscal headroom (spare room under his own borrowing rules) from £23.6bn to roughly £13bn ^[S244]. These are snippets only. Do not quote the numbers; say "headroom has shrunk".

Why it matters to LSEG. Volatile rates markets increase trading and hedging, which helps Tradeweb and SwapClear. Higher gilt volatility also raises margin calls at clearing houses, a risk issue for LCH **INFERRED**.

Why it matters to your seat. **Risk** **FX customers** Risk teams monitor exactly these moves; FX client teams see sterling volatility around Budgets.

YOUR QUESTION OR OPINION

Ask: "If gilt volatility stays high into the Budget, does it show up first in SwapClear sterling volumes or in Tradeweb gilt trading, and how does the Risk team think about margin spikes for clients?" **Suggested position:** this question shows the "connect the dots" skill the JD asks for: one macro event, two businesses, one risk.

14. The UK bond consolidated tape goes live; T+1 is coming

Etrading Software, WatersTechnology and The TRADE snippets ^[S248] **REPORTED**; UK Accelerated Settlement Taskforce ^[S247]

What happened. A consolidated tape is one combined feed of trade prices for a product, so investors see the whole market rather than one venue. ETS Connect UK, authorised by the FCA on 20 May 2026, launched the UK bond tape on 22 June 2026, combining post-trade bond data from all UK venues and reporting services ^[S248]. Separately, the UK moves to T+1 settlement (trades settle the next business day instead of two days later) on 11 October 2027 ^[S247], with interim milestones on same-day allocations and confirmations by December 2026 **REPORTED, SNIPPET**.

Why it matters to LSEG. LSEG is both a data seller and a venue operator. A public tape competes a little with paid data but improves bond transparency, which can attract more trading **INFERRED**. T+1 squeezes post-trade processes at LCH and across venues **INFERRED**.

Why it matters to your seat. **Markets research** **BI and strategy** **Risk** Debt market transparency, and an operational change landing in your graduate year.

YOUR QUESTION OR OPINION

Ask: "Does the bond tape help or hurt LSEG overall, given it owns venues that contribute data and sells data products?" **Suggested position:** a small net positive for Markets, because more transparent bond markets trade more, and Tradeweb benefits from that.

Peers and competitors

15. The US moves to 23-hour trading; rivals do deals

WilmerHale client alert, 29 Sep 2026 ^[S251] **CONFIRMED**; Deutsche Börse and Euronext snippets ^[S249, S250] **REPORTED**

What happened. The US Securities and Exchange Commission conditionally approved 23-hours-a-day, five-days-a-week trading on five US exchanges (24X, Cboe EDGX, MEMX, Nasdaq, NYSE Arca). Overnight trading is expected to start on 6 December 2026, with an 8pm to 4am New York time session ^[S251]. ICE and OKX plan a venue for 24/7 tokenised US stocks **REPORTED, SNIPPET**. Among European peers, Deutsche Börse agreed a roughly €5.3bn deal for fund platform Allfunds in January, completing in H1 2027 ^[S249], and Euronext posted record Q2 revenue of €511.0m (+9.9% like-for-like) and rebranded Athens Exchange as Euronext Athens ^[S250].

Why it matters to LSEG. Extended hours is now a race. If US shares trade overnight from December, global investors may expect the same from London **INFERRED** . LSE 24 is LSEG's answer.

Why it matters to your seat. **BI and strategy** Competitor tracking is the heart of business intelligence work.

YOUR QUESTION OR OPINION

Ask: "With US 23x5 trading from December 2026 and LSE 24 starting with ETPs in H1 2027, does London risk being second, or is starting with ETPs a deliberate lower-risk sequence?" **Suggested position:** deliberate. ETPs already have market makers who can quote prices overnight, so liquidity is easier to build than for single shares **INFERRED** .

Six themes that connect the stories

Interviewers reward "connecting the dots", a phrase in the JD. These six themes turn fifteen stories into a view. Each has one sentence you can say out loud.

Theme	Stories that show it	What to say in one sentence
1. Volatility was a tailwind, but it is cyclical	H1 results (1), LCH (3), FX (4), Tradeweb (5), gilts (13) [S221, S223, S237]	"H1 was helped by Iran-war volatility, so the interesting question for 2027 is how much of Markets' 11.9% survives a calmer market, and products like FFF and Post Trade Solutions are the structural part."
2. LSEG must prove it is an AI winner	Elliott and the AI sell-off (2), board appointment [S224, S259, S221]	"The market still prices LSEG as an AI risk, even though Markets, where I want to work, sells trading and clearing that AI cannot replace."
3. Markets is going "always on" and "digital"	LSE 24 (6), tokenisation (11), DIGIT (10), US 23x5 (15) [S227, S228, S246, S251]	"LSE 24, tokenised shares and the digital gilt are one strategy: keep London's regulated venues relevant when investors want to trade any time, in any form."
4. London primary markets: early recovery, still fragile	Airtel Money (7), IPO data (8), PISCES (9) [S229, S230, S232, S235]	"Proceeds are up from a very low base and Airtel Money is a real test, but big names are still delaying, so I would watch post-IPO performance before calling a recovery."
5. Activism and capital allocation	Elliott (2), buybacks and LCH buy-in (1), Tradeweb stake (5) [S221, S222, S226]	"Elliott's arrival brought record buybacks, and the open question for Markets is whether the Tradeweb stake is a strategic asset or a source of cash."
6. Politics and regulation shape post-trade	New PM and Chancellor, BoE (12), Budget (13), EMIR 3 (3), tape and T+1 (14) [S241, S242, S243, S247, S257]	"Between EMIR 3 pulling at euro clearing, T+1 in October 2027 and a Budget written in the bond market, the Risk and post-trade teams have a very full two years."

SAY THIS IN THE INTERVIEW

"What struck me reading LSEG's H1 results is that Markets grew 11.9% while the share price debate is all about AI and data. Some of that growth was war-driven volatility, which will fade. The parts I find most interesting are the ones that should keep growing anyway, like Forward First Fixing on FXall, which cut manual processing by over 90% for its biggest client, and the Private Securities Market." **[S221, S238]**

Diary of dates to watch

These are the dated events in the research between now and the end of your graduate year. The first four all land before the application deadline closes, so check each one the day after it happens.

Date	Event	What to check, and why it matters to you	Source
14 Oct 2026	Airtel Money admitted to the Main Market	First-day trading versus the £1.96 price. A strong debut helps the IPO recovery story.	S232
22 Oct 2026	LSEG Q3 2026 trading statement (revenue only)	Did Markets keep double-digit growth after H1's volatility? The freshest numbers before any interview.	S252
Late Oct 2026	Tradeweb Q3 results; Tradeweb monthly volumes (first week of each month)	Whether rates and credit volumes stayed high.	S237, reading list
28 Oct 2026	UK Autumn Budget, Chancellor John Healey	Gilt and sterling reaction; anything on listings, stamp duty or ISAs.	S243
30 Oct 2026	Application deadline (rolling, may close early)	Apply well before; applications are reviewed as they arrive.	JD
1 Dec 2026	Amit Zavery joins LSEG board	A signal of how seriously the board takes the AI strategy.	S259
6 Dec 2026	US 23-hour exchange trading starts	Competitive pressure on LSE 24's timing.	S251
By Dec 2026	UK T+1 interim milestone (same-day allocations and confirmations)	Snippet only; verify on the Taskforce site.	S247
End 2026	LSE 24 client testing; Q4 SwapClear margin uplift "largely reverses"	Product readiness; do not be surprised by a margin dip in the full-year results.	S227, S221
By Q1 2027	First UK digital gilt (DIGIT) issued, HSBC and LSEG depository link	Whether LSEG's investor-side depository is live.	S246, S221
Feb 2027	End of the further £1.35bn buyback window; FY2026 results	Capital return and the 2027 to 2029 growth framework.	S221
6 Apr 2027	Cash ISA cap falls to £12,000 for under-65s (total stays £20,000)	Meant to push savers towards shares.	S256
H1 2027	LSE 24 launches with ETPs; Deutsche Börse and Allfunds deal completes	Likely live during your internship (June 2027).	S227, S249
2027	xStocks tokenised shares listed and traded on LSE 24 (subject to approval)	Digital strategy in practice.	S228
11 Oct 2027	UK and EU move to T+1 settlement	Major operations change in your graduate year.	S247
30 Jun 2028	EU equivalence for UK clearing houses ends unless renewed	The cliff edge behind EMIR 3; key for LCH.	S160

Reading list and a 15-minute routine

You do not need a paid subscription to stay current. The reading list in the research compresses to the table below; "Access" is the researcher's best understanding as of 5 October 2026 and some items were not checked.

Source	Good for	Access	Use for
LSEG Investor Relations and Media Centre	Results, trading statements, financial calendar, launches [S220, S227, S252]	Free	All tracks
LSEG FX updates page	FXall, Matching, FFF, awards [S238, S239]	Free	FX customers
LCH monthly highlights (SwapClear, ForexClear)	Clearing volumes and records	Free	Risk
londonstockexchange.com: new issues, PSM pages	IPOs, debt listings, PISCES	Free	Markets research
Tradeweb Investor Relations	Monthly volumes, quarterly results [S237]	Free	Markets research
RNS via Investigate	Company announcements such as IPO prices [S232]	Free	Markets research

Source	Good for	Access	Use for
Bank of England, FCA, HM Treasury	Rates, listings rules, Budget, Digital Securities Sandbox [S241, S256]	Free	Risk, BI and strategy
The TRADE, Markets Media, Global Custodian	Market structure, venues, post-trade, T+1	Mostly free	BI and strategy
FX Markets, Risk.net	FX venues, clearing, derivatives [S240]	Paywalled (headlines free)	FX customers, Risk
Ledger Insights	Tokenisation, digital securities [S246]	Mostly free	BI and strategy
Reuters	Fast, factual LSEG news and analyst quotes [S223]	Free with registration	All tracks
City AM; EY IPO Eye / PwC IPO Watch	Free London markets coverage; quarterly IPO data [S229]	Free	Markets research
FT, Bloomberg, Financial News	Scoops, deep City coverage [S225, S234]	Paywalled	Headlines only

THREE READING-LIST WARNINGS

Treat share prices from aggregator sites as low confidence and check the live price on the day. Many free sites republish Reuters copy with their own "takeaways" added; quote only the Reuters text. Reuters supplies news into LSEG Workspace, so mention that relationship if you quote it in an LSEG interview [\[S223\]](#). For a paywalled article, quote only the headline and date unless you have read it.

The 15-minute daily routine

MINUTES 0 TO 5: LSEG ITSELF

Scan LSEG press releases and RNS. On the first working day of each month, add Tradeweb's monthly volumes. Write one line: "What did LSEG announce, and which division?"

MINUTES 5 TO 10: THE MARKET

One Reuters LSEG or exchanges story, then City AM's markets page. Note one number: the gilt yield, sterling, or an IPO price. Ask: "Would this raise or lower volumes at LCH, Tradeweb or FXall?"

MINUTES 10 TO 15: ONE SPECIALIST

Rotate: Monday The TRADE, Tuesday FX Markets headlines, Wednesday Global Custodian, Thursday Ledger Insights, Friday Bank of England or FCA news. Finish by writing a one-sentence opinion.

Adapted from the draft reading list, which suggests about 20 minutes a day (10 daily, plus specialist sources twice a week and regulators weekly). Event days override the routine: on 22 October (Q3 statement) and 28 October (Budget), spend the 15 minutes on that event alone [\[S252, S243\]](#).

THE HABIT THAT PAYS OFF

Keep a running note of the "one-sentence opinions" from the routine. By the video interview you will have twenty or more, and the strengths-based format rewards candidates who sound like they enjoy following markets, not ones who crammed the night before.

PART 8

Forming your own view

Eleven live arguments about LSEG, each with both sides in numbers, the signpost that would change your mind, and a position you can defend in a minute.

Interviewers at LSEG are not testing whether you can recite the annual report. The JD asks for people who can "connect the dots and think strategically" and "analyse information to draw conclusions and propose solutions" (JD). The fastest way to show both is to hold a view on a live question, back it with one number, and name the risk to your own view. This Part gives you eleven such questions, each with the bull case (good for LSEG), the bear case (bad for LSEG), a signpost to watch and a suggested position in a purple **Your opinion goes here** box. Change the suggestions if the evidence persuades you: an opinion you argued yourself into sounds different from one you memorised.

The argument map: where to spend your preparation

Not every argument deserves equal effort. Figure 34 places the eleven arguments on two axes: how much the question matters to LSEG's value and strategy, and how settled the evidence is today. Top-left (big and open) is where a reasoned opinion earns most credit; top-right (big and settled) is where you need the facts cold.

FIGURE 34

The argument map: what matters most, and what is still open

Numbers match the arguments below. Purple quadrant (1, 2): your reasoning gets marked. Navy quadrant (5, 6, 9, 10, 11): know the facts exactly.

Source: author's judgement based on the evidence cited in each argument below (LSEG reports [S70, S72, S74], Redburn via Investing.com [S89], FCA [S309], Oliver Wyman [S185]). Placement is opinion, not data.

How to form and defend a view in 60 seconds

KEY TERM

Bull case / bear case: the optimistic and pessimistic arguments about a company or decision. Analysts use the words for any two-sided debate, not just share prices. **Signpost:** a specific, dated piece of evidence that would tell you which side is winning. Naming one is what separates an opinion from a guess.

Every answer in this Part follows the same five-step shape. Learn the shape once and you can use it on any question, including ones not in this pack.

Step	What you say	Time	Worked example (Argument 11)
1. Claim	Your answer in one sentence. Pick a side.	5 s	"Markets is the part of LSEG I would bet on for the next two years."
2. Mechanism	Why it is true: the cause, not an adjective.	15 s	"Its revenue comes from trading and clearing volumes, and from customers who post margin, so it grows when markets are busy and it is not the part AI tools threaten."
3. Number	One figure, with its date.	10 s	"In H1 2026 it grew 11.9%, against 5.1% for Data & Analytics, at a 58.6% margin." [S70]
4. Risk	The best argument against you, said by you first.	15 s	"Some of that came from volatility around the Iran war, and a 140bp margin boost from the SwapClear deal reverses in Q4." [S223, S70]
5. What you'd watch	A dated signpost.	10 s	"So I'd watch the Q3 statement on 22 October: if Markets still grows high single digits in a calmer quarter, the structural case holds." [S91]

SAY THIS IN THE INTERVIEW

"My view is X, because Y. The number that persuades me is Z. The best argument against me is W, so the thing I'd watch is V." Five sentences, under a minute, and every one carries information.

DON'T SAY THIS

"There are pros and cons on both sides." This is the most common non-answer in assessment centres. It tells the interviewer you read both sides and could not decide. Decide, then show you know what would change your mind.

Two rules make the method work under pressure. First, **the mechanism carries the answer**. "LSEG is well positioned" is an adjective; "LCH must clear for rival venues on non-discriminatory terms, so banks trust it with their swaps" is a mechanism [\[S305\]](#). Second, **conceding the risk makes you more credible, not less**. Interviewers at an infrastructure firm spend their days managing risk. A candidate who names the risk to their own view sounds like a colleague.

1. AI: threat or gift to LSEG's data business?

Why it is live. On 3 February 2026 LSEG shares fell 12.8% in a single day, as worries that large language models "like Anthropic's Claude" could let customers bypass terminals triggered a software sell-off [\[S90, S88\]](#). From a 12,095p peak (5 Feb 2025) to a 7,170p close (4 Feb 2026), the fall was about 41% [\[S90\]](#).

INFERRED. LSEG's response is the title of its own results deck: "More valuable in an AI world" [\[S73\]](#). This is the single biggest debate about the company, and you will almost certainly be asked about it.

KEY TERM

MCP (Model Context Protocol): an open standard for plugging AI tools into data sources. LSEG uses it so that a customer's AI assistant can pull LSEG's licensed data directly ^[S72]. **EBITDA:** earnings before interest, tax, depreciation and amortisation; a rough measure of operating profit. **Workflows:** the part of Data & Analytics that sells desktop seats on Workspace, LSEG's terminal.

Bull case: AI is a gift

The data is proprietary. Schwimmer: "90% of our data revenues come from real-time or data that is proprietary" ^[S71]. An AI model cannot invent a live price or a clearing house's trade record. About 98% of group revenue comes from "proprietary data, IP and market infrastructure" ^[S73].

Customers are connecting. MCP customers went from over 60 trialling (Feb 2026) to over 150 (Apr) to over 200 engaged (Jul) ^[S72, S75, S70]. Workspace AI Search has 17,000 active users and Deep Research 7,000 ^[S70].

LSEG distributes through the AI firms, not against them. "LSEG Everywhere" partnerships with Anthropic, Databricks, Microsoft, OpenAI, Rogo and Snowflake, then Amazon Quick and Google Gemini ^[S72, S70]. BofA's Hubert Lam: "They are part of the AI ecosystem rather than competing against it" ^[S224].

Customers are signing longer. In Q4 2025 major institutions signed long-term contracts worth £1.9bn, up to 7 years ^[S72]. Burton-Taylor: market data spend rose 6.5% to a record \$49.2bn in 2025 ^[S188].

A pricing plan exists. H1 2026 set out a framework: subscriptions to license datasets for AI models, a recurring MCP access charge with usage bands, AI Search priced into Workspace up to a cap, Deep Research as a premium add-on ^[S70].

Bear case: AI is a threat

Redburn's 30%. Rothschild & Co Redburn (18 Jun 2026) said about 30% of EBITDA faces downside in a "realistic base case", concentrated in "workflow and aggregation-driven revenues", and called API and AI consumption "structurally deflationary for parts of the model". Shares fell 7.0% that day ^[S89, S90].

REPORTED.

The desktop is already slow. Workflows grew only 3.1% in 2025 and 2.8% in H1 2026, against 7.5% for Data & Feeds ^[S72, S70]. If AI agents do the work a human did on a terminal, seat counts are what shrink.

Usage is not revenue. UBS's Michael Werner: "It's one thing to have usage, it's another to start charging people" ^[S88]. Even after record H1 2026 results the shares fell 6.4%, with coverage citing AI monetisation timing ^[S90, S108].

The industry view is two-sided. Oliver Wyman: enterprise AI threatens about \$12bn (9%) of FMI revenue, mostly undifferentiated analytics and data ^[S185]. Blue Whale's Stephen Yiu: "I don't believe the risk of disruption from AI is minimal" ^[S88].

The valuation says "not proven". About 18x forward earnings in June 2026, against about 24x on average since Refinitiv; about 30% below Moody's and 40% below MSCI ^[S88, S89].

REPORTED.

WHAT WOULD CHANGE YOUR MIND

- **Q3 trading statement, 22 Oct 2026** ^[S91]: does Data & Analytics growth hold above 5%, and does Workflows stabilise?
- **FY2026 results (Feb 2027):** whether the AI licence and MCP charges show up as named revenue. A useful line: "The test is whether new AI charges show up in subscription growth and gross sales by the full-year results" ^[S70] **INFERRED**.
- **A warning sign:** LSEG says it will retire ASV (annual subscription value, the forward-looking subscription KPI) at the end of 2026 ^[S70]. That may be sensible, but sceptics will read it as less visibility. Watch what replaces it.

YOUR OPINION GOES HERE

Suggested position: AI is a net gift to LSEG's proprietary and real-time data, and a real threat to the desktop seat. The two are different businesses inside one division. The Markets division, where this internship sits, is largely outside the blast radius: AI does not replace a clearing house or a regulated venue.

One sentence: "AI makes the data more valuable and the terminal less necessary, so I'd judge LSEG on whether data and feeds growth outruns the slowdown in Workspace seats."

Defend it with: 90% of data revenue is real-time or proprietary ^[S71]; Workflows at 2.8% growth ^[S70]. Concede: the pricing is not yet proven, which is why the shares trade at a discount.

2. Should LSEG break up or sell parts?

Why it is live. On 11 February 2026 reports emerged that Elliott, the activist hedge fund, had built a stake ^[S86]. It reportedly pushed for a portfolio review and a £5bn buyback ^[S226] (RTÉ wrote "\$5 billion", so the currency differs between sources ^[S222]). LSEG announced a £3bn buyback on 26 February ^[S72]. Reported reasoning: Elliott reportedly does *not* want a sale or spin-off of the exchange ^[S86], but it sees the Tradeweb stake as a possible source of cash ^[S226] **REPORTED**.

KEY TERM

Conglomerate discount: when a group of businesses is valued by the market at less than the sum of what each would be worth on its own, often because investors cannot see each part clearly.

Non-controlling interest (minority interest): the share of a subsidiary's profit that belongs to its other shareholders. LSEG consolidates 100% of Tradeweb's revenue but owns only about 50.9% of its economics ^[S74].

Bull case for selling or splitting	Bear case: keep it together
The market already prices the parts. Tradeweb has its own Nasdaq listing and a market value of about \$22.3bn ^[S148] , against about \$52.3bn for all of LSEG ^[S148] REPORTED . A stake that visible is easy to turn into cash for buybacks.	The joins are where the new revenue is. FXall functionality is largely in Workspace; Tradeweb pricing streams are next ^[S302] . FTSE Russell now uses Tradeweb as the price source for some indices ^[S300] . RepoAgent was built by Post Trade Solutions with Tradeweb ^[S301] . Each of these is harder if Tradeweb is sold.
Value leaks to minorities anyway. Adjusted non-controlling interests were £334m in 2025 and £194m in H1 2026, growth "mainly reflecting strong performance of the Tradeweb business" ^[S72, S70] .	Tradeweb is growing fastest. Revenue \$2,052m in 2025, up 18.9% ^[S137] ; ADV \$3.2trn in H1 2026, up 24.8% ^[S70] . Selling your fastest-growing asset to fund buybacks is hard to explain to long-term holders INFERRED .
A discount exists. About 18x forward earnings vs about 40% more for MSCI ^[S88] . A simpler group might be easier to value INFERRED .	The flywheel is the strategy. LSEG's own pitch: "The combination of our trade lifecycle and data value chains is unmatched" ^[S303] . Trading creates data; Turquoise sells its trade data through vendors ^[S358] .
Management is open to it. Schwimmer: "We're always evaluating our business, and if there's anything that it makes sense to consider, that is something that we're always thinking through" ^[S223] .	The buyback already answers the activist. Over £8bn of buybacks since 2022 including those planned to Feb 2027 ^[S70] . Schwimmer reports "good, constructive dialogue with Elliott" ^[S223] .

WHAT WOULD CHANGE YOUR MIND

- Any Elliott letter or stake change after the H1 results. None was verified as of 5 Oct 2026 ^[S223].
- Progress on **Tradeweb in Workspace**: if dealing between Tradeweb and Workspace goes live and shows usage, the "keep" case strengthens ^[S302].
- Whether the valuation gap to MSCI and Moody's narrows as AI fears fade. If it closes without a sale, the break-up case weakens.

YOUR OPINION GOES HERE

Suggested position: Keep the Markets businesses together, including Tradeweb. The integration work (Workspace, FTSE Russell pricing, RepoAgent) only pays off with control, and selling the fastest-growing asset to buy back shares swaps growth for a one-off. Accept that LSEG will keep using buybacks to answer the activist.

One sentence: "I'd keep Tradeweb, because the integration into Workspace and FTSE Russell only works with control, and the buyback programme already returns cash without selling the growth."

Concede: if the Workspace integration stalls, the strategic case for holding a minority-leaking stake gets weaker every year.

3. Is London's listings market fixable?

Why it is live. London lost 88 companies from its main market in 2024, the most since 2009 ^[S145, S200] **REPORTED**. The government and FCA have since rewritten the rules. Airtel Money, priced on 1 October 2026, is the biggest test so far ^[S232]. This matters for the JD's research track ("debt listings, valuations, and shareholder and geographic analysis").

KEY TERM

UKLR: the UK Listing Rules, in force 29 July 2024, which replaced the premium and standard segments with one category for commercial companies ^[S150]. **POATRs:** the Public Offers and Admissions to Trading Regulations, which replaced the UK prospectus regime on 19 January 2026 ^[S151]. **PISCES:** a sandbox that lets private companies' shares trade at occasional auctions; LSE's version is the Private Securities Market (PSM) ^[S152].

Bull case: it is being fixed

The rules changed. The FCA called UKLR "the most significant changes to the UK's listing regime in over 3 decades" ^[S150]. POATRs in force 19 Jan 2026 ^[S151]. Three years' stamp duty relief for new listings from 27 Nov 2025 ^[S182].

Proceeds are rising. 2025 proceeds up 170% on £777.7m in 2024 ^[S142]; H1 2026: 7 IPOs raising £577m, up 215% on £183m ^[S229].

Airtel Money chose London. Priced at £1.96, a £5.3bn market value, admission expected 14 Oct 2026 ^[S232]. Reuters: possibly London's largest IPO since 2021 at about \$800m ^[S231]. CEO: "We believe in London" ^[S231].

Bear case: the problem is deeper

The base is tiny. London raised £2.1bn from 23 IPOs in 2025 ^[S142]; Hong Kong raised HK\$286.9bn from 119 ^[S134]. Proceeds percentages look big because the starting point was so low.

Big names keep delaying. PitchBook: AS Watson, Loveholidays and Visma pushed back London plans, and the RAC chose a continuation vehicle instead of an IPO ^[S230] **REPORTED**.

But below early talk, and no new money. Early valuation talk was \$8bn to \$9bn ^[S230, S231]; it priced at about \$7.0bn ^[S232]. Existing shareholders are selling, so the company raises nothing ^[S231].

Bull case: it is being fixed	Bear case: the problem is deeper
A pipeline before IPO. PSM held its first auction on 25 Mar 2026 ^[S154]; Wayve ran an \$85m employee-share auction ^[S235]. FTSE Russell cut minimum free float for non-UK companies from 25% to 10% ^[S253]. Savers are being nudged. Cash ISA limit falls to £12,000 from 6 April 2027 ^[S183]; Mansion House Accord: 10% of default pension funds in private markets by 2030, half in the UK ^[S181].	PISCES might delay IPOs. If staff can sell shares on PSM, a company has less reason to list ^{INFERRED}. The PISCES sandbox expires on 5 June 2030 unless made permanent ^[S152]. Listings are a small revenue line. Equities (trading plus listing) was £412m of a £3,467m Markets division in 2025 ^[S72]. Even a full fix moves group revenue only a little ^{INFERRED}.

WHAT WOULD CHANGE YOUR MIND

- **Airtel Money's first weeks of trading from 14 Oct 2026** ^[S232]. A strong aftermarket helps the next issuer price in London.
- **Autumn Budget, 28 Oct 2026** ^[S243]: any change to stamp duty or ISAs under the new Chancellor, John Healey.
- **Visma in 2027** ^[S194]: a roughly €19bn tech company choosing London would be a stronger signal than any rule change.

YOUR OPINION GOES HERE

Suggested position: Fixable, and improving, but not fixed. The rule changes remove excuses; they do not create demand. The underrated story is debt: LSE's International Securities Market and Sustainable Bond Market serve issuers who never make the IPO headlines, which is why the JD names "debt listings" rather than IPOs.

One sentence: "The rules are no longer the problem; demand is, so I'd judge recovery by how the next three large IPOs trade after listing, not by the number of rule changes."

Concede: Airtel Money priced below early talk and raised no new money for the company ^[S231, S232].

4. Will 24-hour trading matter?

Why it is live. On 21 July 2026 LSEG announced LSE 24, a separate venue running 17:00 to 07:50 London time, Monday to Friday, with a 30-minute pause from 18:30 ^[S227]. Client testing is due by the end of 2026 and exchange-traded products (ETPs, such as ETFs) launch first in H1 2027, then equities, subject to regulatory approval ^[S227]. In the US, the SEC has conditionally approved 23-hour trading on five exchanges, expected to start on 6 December 2026 ^[S251].

Bull case: it matters	Bear case: it is a sideshow
Investors are global. LSE 24 captures Asian and US investor hours ^{INFERRED}. Julia Hoggett: it will "support deeper liquidity, greater efficiency and broader participation" ^[S227]. Competitors are moving. US 23×5 from 6 Dec 2026, 8pm to 4am ET session ^[S251]; ICE and OKX reportedly plan a 24/7 venue for tokenised US stocks ^[S251] ^{REPORTED}. Not moving would be the risk. It is a platform for new products. LSE intends to list xStocks (tokenised versions of listed shares) and trade them on LSE 24 in 2027 ^[S228]. LSEG describes LSE 24 as supporting "digital, algorithmic and agentic trading" ^[S227]. Mixed trading model. LSE 24 will draw on both order-book and request-for-quote functionality ^[S196], which suits a market with fewer participants.	Overnight liquidity is thin. Few market makers, wide spreads, and the risk that a bad overnight price damages trust in the venue ^{INFERRED}. London goes second. US exchanges start in December 2026; LSE 24 ETPs arrive in H1 2027 ^[S251, S227]. Revenue will start small. ETPs first means a narrow product set; the Main Market keeps 08:00 to 16:30 ^[S227]. UK equities revenue is a minor line in group terms ^[S72] ^{INFERRED}. Operational strain. Longer hours mean longer support, surveillance and risk monitoring ^{INFERRED}.

WHAT WOULD CHANGE YOUR MIND

- How many firms join **client testing by end-2026** ^[S227].
- US experience after 6 Dec 2026: what share of volume trades overnight, and how wide spreads are ^[S251].
- In the first six months: share of LSE-listed ETP volume traded overnight, number of participants, spread quality, new international clients **INFERRED**.

YOUR OPINION GOES HERE

Suggested position: It matters strategically more than financially. Starting with ETPs is sensible sequencing: lower risk, a natural fit for overseas and retail investors, and a ready home for tokenised products. Early revenue will be small; the cost of not having it, once US markets run overnight, would be larger.

One sentence: "LSE 24 is a defensive option more than a revenue line, and starting with ETPs lets London learn from the US launch before it moves single stocks overnight."

5. Open access: strength or leak?

Why it is live. When LSEG took control of LCH in 2012-13, the competition regulator (the OFT) recorded that open access would go into LCH's articles: services "must be offered on terms that are fair, reasonable, open and non-discriminatory... No exchange will be favoured over any other and LSEG's trading services users will not be favoured over any other exchange's users" ^[S305]. That neutrality is why the whole market uses LCH. It also means customers can leave, and one did: Euronext moved its cash equity clearing out of LCH SA.

KEY TERM

Open access vs vertical silo: in a vertical silo, an exchange group owns the trading venue and its clearing house and keeps the trades in-house (Deutsche Börse describes its "vertically integrated business model" ^[S127]). Under open access, the clearing house clears trades from any venue on equal terms, and the venue can use any clearing house.

Bull case: open access is the moat

Neutrality wins the flow. SwapClear has over 90% of cleared interest rate swap notional outstanding (LSEG's figure) ^[S303], \$1,941trn notional cleared in 2025, up 21.2% ^[S301]. In GBP SONIA swaps the share was 99.995% in Q1 2026 ^[S140] **REPORTED**.

Netting rewards one big pot. The more trades sit at one clearing house, the more they offset and the less margin each member posts **INFERRED**. That is why members stay even when they could leave.

It is LSEG's identity. "When other exchange groups focused on vertical integration of trading and clearing, we championed open access" ^[S300]. LSEG's value "Partnership" is defined as "Our open model is integral to how we do business" ^[S307].

Regulators trust neutrality. The EU extended equivalence for UK clearing houses to 30 June 2028 ^[S160].

Bear case: open access lets value walk out

Euronext left. Securities & Reporting revenue fell 3.0% on "the final impact of the termination of the Euronext clearing agreement", and Net Treasury Income fell on "loss of business from Euronext" ^[S301].

The silo is gaining in euros. Eurex's share of EUR swaps rose to 13.5% in Q3 2025 from 8.4% a year earlier; LCH fell to 86.5% from 91.6% ^[S139] **REPORTED**.

Politics can force a leak. EU EMIR 3 requires some EU firms to hold an "active account" at an EU clearing house from 25 June 2025 ^[S161]. The EU Commissioner said the aim is "reducing our exposure to UK CCPs" ^[S160].

LSEG venues get no advantage. Under open access LCH must not favour LSEG venues ^[S305], so LSEG cannot bundle clearing to win trading.

WHAT WOULD CHANGE YOUR MIND

- The first EMIR 3 active-account reports, due by 31 July 2026: did euro swap volume actually move to Eurex? ^[S257] **REPORTED** .
- Clarus quarterly CCP share data for EUR swaps ^[S139]: a steady climb above 15% for Eurex would be a warning.
- The EU decision on UK clearing house equivalence before **30 June 2028** ^[S160].

YOUR OPINION GOES HERE

Suggested position: A strength, and the leak is the price of it. Euronext's exit cost a few per cent of one revenue line; neutrality is what earns SwapClear its dominant share. The real threat is political (EMIR 3), not commercial.

One sentence: "Open access is why banks trust LCH with over 90% of cleared swaps; losing Euronext's equity clearing was the price of that trust, and a fair one."

Concede: Eurex's euro share has risen ^[S139]. If you are asked, say you would watch whether that is policy-driven box-ticking or real migration.

6. Is market data too expensive?

Why it is live. On 29 February 2024 the FCA published its wholesale data market study. It found "users may be paying higher prices for the data they buy than if competition was working more effectively", in markets "concentrated, usually with no more than three key providers" ^[S309]. It also said "we have not found evidence that firms cannot access the wholesale data they need" and made no referral to the competition authority ^[S309]. LSEG is one of the three biggest data vendors ^[S188].

Bull case for LSEG: the price reflects value

No significant intervention. FCA's Sheldon Mills: "We do not believe the case has been made for significant interventions" ^[S165].

Quality is improving. Customer-raised data quality issues fell 51% while content volumes rose 113% over four years ^[S301].

Customers stay and sign longer. Subscription revenue retention 92.8% ^[S70]; £1.9bn of long-term contracts signed in Q4 2025 ^[S72].

Tapes share income back. The equity tape provider must share income with data contributors ^[S157], which may include LSE and Turquoise **INFERRED** .

Bear case: customers overpay

The regulator's own finding. Users "may be paying higher prices... than if competition was working more effectively" ^[S309]. Operating margins of key providers reportedly rose from about 30% to over 60% over 2017-22 ^[S165] **REPORTED** .

An advocacy report goes further. Market Structure Partners claimed some exchanges earned an extra £4.93bn from data fees since 2008, citing Turquoise turnover down 61% (2020-22) while data revenue rose 16.5% ^[S310]. LSEG said the report "contains multiple errors" and retail data "has always been free" ^[S311].

Cheaper alternatives are arriving. UK bond consolidated tape live 22 Jun 2026 ^[S155]; equity tape to start "in 2027 or early 2028" ^[S157].

Desktop prices are high. A Bloomberg Terminal was reported at \$31,980 a year from 2025 ^[S323] **REPORTED, LOW CONFIDENCE** ; LSEG competes at the same end.

SOURCE UNCERTAIN

The £4.93bn figure comes from a report commissioned by an advocacy firm and reported by The TRADE ^[S310]; LSEG disputes it ^[S311]. The 30% to 60% margin figure came from a search snippet of the FCA study, not the full annex ^[S165]. Quote both as claims, not facts.

WHAT WOULD CHANGE YOUR MIND

- Any FCA follow-up on "fair, reasonable and transparent terms" ^[S165].
- How the new AI and MCP usage charges are priced ^[S70]: usage bands could look like fairer pricing, or like a new toll.
- Take-up of the bond tape and the equity tape procurement in early 2027 ^[S157].

YOUR OPINION GOES HERE

Suggested position: Prices are high relative to the cost of producing data, but they reflect what customers are willing to pay for accuracy and trust, and the regulator chose transparency over price control. LSEG's risk is reputational, not regulatory: if customers feel squeezed, they help build alternatives.

One sentence: "The FCA found customers may overpay but chose not to intervene, so the pressure on LSEG will come from customers and consolidated tapes, not from a price cap."

This is a good moment to show the customer view: "If I were an FX client, I'd want to know what I'm paying for that I can't get from the bond tape."

7. Tokenisation: hype or real?

Why it is live. On 1 September 2026 London Stock Exchange announced UK tokenised equity structures, including xStocks (1:1 backed tokenised versions of listed shares), and a partnership with Payward to connect regulated infrastructure to digital-native distribution ^[S228]. In July, HSBC Orion became the first firm approved to go live as a Digital Securities Depository in the Bank of England's sandbox, with LSEG's depository as the investor-side link for the UK's first digital gilt (DIGIT), due by Q1 2027 ^[S246, S221].

KEY TERM

Tokenisation: representing a security as a digital token on a shared ledger (a blockchain), so ownership can move and settle almost instantly ^[S246]. **Depository:** the record of who owns which securities. **Digital Securities Sandbox (DSS):** a Bank of England and FCA regime for testing this; it opened on 30 September 2024 ^[S168].

Bull case: it is real	Bear case: it is mostly hype
The state is issuing. Rachel Reeves's Mansion House speech (14 Jul 2026) committed to the UK being the first G7 country to issue a digital sovereign bond "by early next year" ^[S245].	The numbers are forecasts. Morgan Stanley and Oliver Wyman's \$2.3trn of tokenised real-world assets by 2030 is a base case, mostly collateral mobility ^[S191] REPORTED.
LSEG is building plumbing. Digital Markets Infrastructure launched Sept 2025, six fund providers onboarded; Digital Settlement House launched H1 2026; Digital Securities Depository planned H2 2026 ^[S72, S70].	Trust has to be built. The Bank of England frames it cautiously: the technology can be adopted, but trust must be earned ^[S184]. Hoggett herself: tokenisation "must develop in a way that preserves the trust, rights and role of regulated markets" ^[S228].
Collateral is the killer use. The Bank of England is consulting on "permitting tokenised assets as eligible collateral for CCPs" ^[S184]. LCH holds £277bn of member collateral ^[S74], so faster collateral movement matters directly INFERRED.	It could disintermediate incumbents. Oliver Wyman: tokenisation could shift 35% of current FMI revenue (about \$45bn) to new token-native infrastructure ^[S185].
Rivals are moving. ICE and OKX reportedly plan 24/7 tokenised US stocks ^[S251] REPORTED.	Early and small. xStocks trading on LSE 24 is planned for 2027, subject to approval ^[S228]. No revenue figure exists yet.

WHAT WOULD CHANGE YOUR MIND

- **DIGIT issuance by Q1 2027** ^[S246]: does it settle cleanly through the HSBC and LSEG link?
- The Bank of England's decision on tokenised collateral at clearing houses ^[S184].
- Regulatory approval for xStocks on LSE 24 ^[S228].

YOUR OPINION GOES HERE

Suggested position: Real in the plumbing, hype at the retail edge. Tokenised gilts and collateral solve a genuine problem (moving collateral fast between clearing houses and banks). Tokenised shares for retail are early. LSEG's sensible bet is to be the regulated venue and depository whichever way it goes, which is exactly the Payward and HSBC structure.

One sentence: "Tokenisation is real where it speeds up collateral and settlement, and LSEG's smart move is to be the regulated infrastructure underneath it rather than compete with crypto venues."

8. Will T+1 hurt or help?

Why it is live. T+1 means a trade settles (cash and securities change hands) one business day after the trade, rather than two. HM Treasury published a draft statutory instrument on 20 November 2025 to make T+1 standard in the UK "from 11 October 2027" ^[S158]. The EU moves on the same day ^[S159]. That is during your graduate year if you convert.

Bull case: it helps LSEG	Bear case: it hurts
Less risk in the system. One day less between trade and settlement means less time for a counterparty to fail, and potentially lower margin needs INFERRED. LSEG sells the fix. RepoAgent (Post Trade Solutions with Tradeweb) "helps banks and clients reduce settlement fails in the repo market" ^[S301]. Tighter deadlines make that product more valuable INFERRED. UK and EU align. The same date on both sides avoids cross-border mismatches ^[S158, S159].	Less time to fix mistakes. Breaks that were fixed on day two now need fixing the same day. Expect more settlement fails at first INFERRED. Operating cost and strain. LCH, venues and their clients must adapt processes and systems ^[S158] INFERRED. Interim deadlines. T+0 allocations and confirmations milestones are reported for December 2026 ^[S247] REPORTED, SNIPPET.

SOURCE UNCERTAIN

Only the *draft* statutory instrument is confirmed ^[S158]. Whether the final instrument has been made in 2026 was not verified. Say "planned for 11 October 2027".

YOUR OPINION GOES HERE

Suggested position: A short-term operational headache and a long-term help. LSEG's Markets businesses make money from volume and from solving post-trade pain, and T+1 creates pain that customers will pay to remove.

One sentence: "T+1 cuts risk but squeezes operations, and LSEG wins if products like RepoAgent help clients hit the tighter deadline."

Best used for the Risk rotation: "Risk teams will want daily data on settlement fails in the months either side of 11 October 2027."

9. Was the £1.2bn SwapClear deal good value?

Why it is live. SwapClear was "founded in collaboration with clearing members" ^[S304], and its founding banks were entitled to about 30% of SwapClear's "revenue surplus". In October 2025 LSEG paid £1.2bn (£921m in 2025 and £250m in 2026) to cut that share to 15% for 2025 and 10% from 2026 to 2045, while extending the arrangement ^[S301]. It is the cleanest business case in this Part, and the kind of analysis the BI rotation does.

£1.2bn
Paid to founding banks, 2025-26 ^[S301]

30% to 10%
Banks' surplus share, 2026 to 2045 ^[S301]

+100bp
Immediate uplift to group EBITDA margin ^[S72]

€0.2bn
2024 surplus figure quoted by LSEG ^[S120]

A back-of-envelope payback (your own working, label it as such)

- LSEG says the change improved group EBITDA margin by 100bp ^[S72]. 1% of £8,986m income is about £90m a year **INFERRED**.
- That fits a banks' share of roughly €0.2bn being cut by half for 2025 (30% to 15%) ^[S120] **INFERRED**.
- From 2026 the share falls to 10%, so LSEG keeps about two-thirds of what it used to pay: roughly €0.13bn a year at 2024 size **INFERRED**.
- Over 20 years (2026 to 2045) that is about €2.7bn before growth and before discounting, against £1.2bn paid. Payback is roughly a decade at 2024 size, and faster if SwapClear keeps growing (notional cleared +21.2% in 2025 ^[S301]) **INFERRED**.

SOURCE UNCERTAIN

LSEG's wording is "c.30% of SwapClear's revenue surplus which in 2024 amounted to €0.2 billion" ^[S120]. It can be read as the banks' share being €0.2bn, or the whole surplus being €0.2bn. The 100bp margin uplift is consistent with the first reading, which the working above uses. The arithmetic also mixes pounds and euros. Present it as a method, not a valuation.

Bull case: good value	Bear case: expensive
Immediate and lasting. +100bp group margin and 2 to 3% accretive to adjusted EPS in 2025 ^[S72] .	Part of the boost is timing. In H1 2026, 140bp of the margin gain came from this change, and LSEG says the year-on-year uplift "will largely reverse in Q4 2026" ^[S70] .
Keeps the banks inside. The banks still get 10% to 2045, so they keep a reason to clear at SwapClear ^[S301] . The same model was repeated when 11 banks bought 20% of Post Trade Solutions for £170m ^[S301] .	Banks keep a cut for 20 years. LSEG paid £1.2bn and still shares 10% of the surplus until 2045 ^[S301] .
Bought at a record. SwapClear cleared a record \$1,941trn and 13.4m trades in 2025 ^[S301, S304] ; \$1,165trn in H1 2026, +29.4% ^[S70] .	Bought ahead of a policy risk. EMIR 3 aims to pull euro clearing to the EU ^[S161] ; equivalence currently ends on 30 June 2028 ^[S160] .

YOUR OPINION GOES HERE

Suggested position: Good value, if SwapClear keeps its share. LSEG effectively prepaid for a larger slice of a growing business while keeping its banks inside the tent. The risk is political (euro clearing), not commercial.

One sentence: "On my rough maths it pays back in about a decade at 2024 volumes, faster with growth, and it keeps the founding banks committed to 2045; the risk is EU policy on euro clearing."

A strong question to ask the interviewer: "How does the Markets team decide when user ownership is worth the cost?"

10. Bloomberg vs LSEG in FX and data

Why it is live. Bloomberg is the largest market data vendor; LSEG is second [S129, S188], and LSEG itself describes its position as "#2 financial desktops" [S303]. In FX, Bloomberg's FXGO is the platform LSEG's FXall competes with most directly [S149]. Bloomberg is private, so most of its numbers are self-reported.

KEY TERM

D2C and D2D: dealer-to-client platforms, where banks quote prices to asset managers and corporates (FXall, FXGO), and dealer-to-dealer platforms, where banks trade with each other (LSEG's FX Matching) [S303].

Bull case for LSEG	Bear case: Bloomberg wins
LSEG owns the whole FX workflow. FXall (D2C) with 2,400+ institutional clients and 200+ liquidity providers [S340], FX Matching (D2D), and ForexClear, which cleared \$48.1trn notional in 2025, up 31.4% [S301]. Bloomberg has no clearing house or exchange [S120] INFERRED.	Bloomberg's FX volume claim is bigger. FXGO reported ADV above \$830bn in March 2025 [S149] vs LSEG FX \$525bn for 2025 [S120]. The measures are not like-for-like (different counting and periods).
Recognised in 2026. Euromoney 2026 World's Best FX Venue and Best Venue for FX Spot [S239].	Bloomberg also wins awards. Euromoney named FXGO the world's best multi-dealer platform in 2025 [S149].
Solving specific client pain. Forward First Fixing passed \$1.5trn cumulative volume, with a 90%+ cut in manual processing for the largest client [S238]; over \$330bn in Q2 2026 alone [S221].	Bloomberg bundles. FXGO sits inside the Terminal, so the desktop sells the venue INFERRED. LSEG is still moving FXall into Workspace [S302].
Open distribution. LSEG sells data into other people's tools: Microsoft Teams and Excel, Snowflake, Databricks, AI assistants via MCP [S72, S70]. Bloomberg's model is built around its own terminal [S129] INFERRED.	Workspace is the weak spot. Workflows growth was 2.8% in H1 2026 [S70]; LSEG is the challenger on desktops by its own account [S303].

WHAT WOULD CHANGE YOUR MIND

- Adoption of FXall inside Workspace. LSEG says "a large proportion of FXAll's functionality" is now there [S302]; the question is whether clients move.
- Whether LSEG switches on fees for Forward First Fixing after waiving them for the rest of 2026 [S238].
- A like-for-like FX venue market share source. None was found in this research.

YOUR OPINION GOES HERE

Suggested position: LSEG will not out-Terminal Bloomberg, and it should not try. It wins by owning the full FX chain (client venue, interbank venue, clearing, settlement link) and by delivering data wherever customers already work, including inside AI tools.

One sentence: "Bloomberg wins the desk; LSEG can win the workflow, because it runs trading, matching and clearing in FX and sends its data into whatever tool the client uses."

For the FX customer rotation, this is the debate to know well. Do not claim LSEG bundles ForexClear with FXall: open access makes that unlikely and no LSEG statement says so.

11. Is Markets the hidden engine of LSEG?

Why it is live. The public debate about LSEG is about AI and data. But the CEO told analysts in July 2026: "Remember that Markets is 40% of LSEG revenue" ^[S71]. Markets (London Stock Exchange, Turquoise, Tradeweb, LSEG FX, LCH and Post Trade Solutions) is the division this internship sits in.

40%

Markets share of group revenue, H1 2026 (£1,920m of £4,799m) ^[S71, S70]

+11.9%

Markets organic growth H1 2026; fastest division ^[S70]

58.6%

Markets EBITDA margin H1 2026, vs 42.3% for D&A ^[S70]

~10%

Average annual Markets growth over five years, "no weak years" ^[S71]

Bull case: it is the engine

Growth, every year. Schwimmer: "There have been strong years and really strong years, but no weak years" ^[S71]. FY2025 Markets +8.9% vs D&A +5.0% ^[S72].

Margin now beats data. 58.6% vs 42.3% for D&A in H1 2026 ^[S70]. Only FTSE Russell (68.1%) is higher ^[S70].

Structural products, not just volume. 80+ Post Trade Solutions customers added in H1 2026; FFF records; first PSM transactions ^[S221].

Least exposed to the AI fear. No AI model replaces a clearing house or a regulated venue ^[S120] **INFERRED**.

Bear case: it is riding a cycle

Volatility did the work. Reuters: "The Iran war prompted a spike in trading activity across all major asset classes" ^[S223]. LSEG's own FX commentary credits "elevated market volatility" ^[S221].

A one-off flatters the margin. 140bp of the H1 group margin gain came from the SwapClear deal and "will largely reverse in Q4 2026" ^[S70].

Rate-sensitive income. Net Treasury Income (interest earned on members' cash collateral) was £143m in H1 2026, up 12.6% ^[S70], and falls if rates fall **INFERRED**.

Leakage. Tradeweb drives much of the growth, but about half its economics belong to other shareholders ^[S300]. Redburn also flags Markets cyclical ^[S89].

WHAT WOULD CHANGE YOUR MIND

- **Q3 trading statement, 22 Oct 2026** ^[S91]: growth in a calmer quarter is the test of "structural vs cyclical".
- **Q4 2026:** the size of the margin reversal LSEG has warned about ^[S70].
- The Bank of England's rate path (held at 3.75% on 17 Sep 2026, 6-3 vote with three for a rise) ^[S241], for Net Treasury Income.

YOUR OPINION GOES HERE

Suggested position: Yes, Markets is the engine, and it is under-discussed because the AI debate is louder. Separate it into two parts in your head: a cyclical part (volume, volatility, interest rates) and a structural part (new clients, new products, clearing share). Interview answers that make that split stand out.

One sentence: "Markets is 40% of LSEG and its fastest-growing part, and the useful question is how much of the 11.9% would survive a quiet quarter."

This is the best argument to use in a "Why LSEG?" answer, because it shows you know where the division you are joining sits in the group (see Part 12).

Using these arguments in each stage

You will not get to deliver eleven opinions. Pick two or three you are most comfortable with, and match them to the stage and the rotation you are asked about.

Stage or rotation	Best arguments	How to use them
Immersive Online Assessment (untimed)	9, 11	When an exercise gives you data, reach for the method in Argument 9: rough payback, label assumptions, state the uncertainty.
Strengths-based video interview	1, 11	Strengths interviews ask what energises you. "I enjoy working out what a number really means, like how much of Markets' 11.9% growth is volatility" shows curiosity for data in your own voice.
Assessment centre group exercise	2, 5	Both are trade-offs with no single right answer. Use the five-step method, then invite challenge: "What would make you disagree?"
FX customers rotation	10, 8	FXall vs FXGO; T+1 and settlement pain for clients.
Research (debt listings, shareholder and geographic analysis)	3, 7	Airtel Money as shareholder and geographic analysis; DIGIT as debt market change.
Business intelligence and strategy	9, 4, 11	Payback maths; LSE 24 success metrics; structural vs cyclical growth.
Risk	5, 8, 9	EMIR 3 and equivalence; settlement fails under T+1; concentration at SwapClear.

DON'T SAY THIS

Do not present a Reported figure as settled fact (for example the Redburn 30% or the MSP £4.93bn). Say "Redburn argued" or "an advocacy report claimed". Do not call Rachel Reeves the Chancellor: John Healey has held the post since 20 July 2026 ^[S243, S244]. Do not cite an FT or Bloomberg article you have not read.

PART 9

The interview process, question bank and questions to ask

Four stages, what each one tests, how to prepare in the four weeks before the deadline, 58 questions with answer scaffolds, and ten questions that show you did the reading.

The process at a glance

LSEG runs the same four-stage process across its business early careers postings: application, an untimed online assessment, a recorded strengths-based video interview, and a half-day virtual assessment centre ^[S260, S261, S262] **CONFIRMED**. The same wording appears on the FTSE Russell Business Graduate Programme and the Business Analyst Summer Internship, so this is a standard process, not something built for this role ^[S261, S262].

4

Stages: application, online assessment, video, assessment centre [S260]

30 Oct

Closing date, rolling review, "may close early" [S260]

9 weeks

Internship length, starting June 2027, London [S260]

1

Applications allowed: only your first is reviewed [S260]

KEY TERM

Rolling review: applications are read as they arrive, not all at once after the deadline. LSEG says applications "are reviewed on a first-come, first-served basis, so we strongly encourage you to complete all required assessments as early as possible" ^[S266]. In practice, places can fill before 30 October. Applying in the first half of October is safer than applying in the last week **INFERRED**.

FIGURE 35

The LSEG intern funnel: where you are now

You are at the top of the funnel. Each stage tests something different, so preparing for the next stage is not the same job as passing this one. Bar widths show order, not numbers.

Source: LSEG Workday posting R0123386 [S260], read 5 Oct 2026; LSEG Business Programme hints page [S264]; Cappfinity hub page source [S265]; Glassdoor snippets [S291, S292] (anecdote, low-medium); GraduatesFirst [S286] (test-prep vendor); ISE case study, 1 Aug 2024 [S270].

Stage	What LSEG says	What it really tests	Confidence
1. Application and CV	"The first stage of the recruitment process involves making an application and submitting your resume." One application only [S260].	Eligibility (penultimate-year undergraduate finishing summer 2028), right to work, and the JD's five asks: interest in markets, data curiosity, connecting the dots, resilience, collaboration [S260].	CONFIRMED
2. Immersive Online Assessment	"Untimed", "designed to give you an insight into what it's like to work at LSEG" [S260], "an interactive assessment designed to help us understand your strengths, potential and approach to solving real-world challenges" [S264].	Your natural strengths and judgement in a simulated job, with numerical and verbal items built into the story [S289].	CONFIRMED (format); vendor INFERRED

Stage	What LSEG says	What it really tests	Confidence
3. Video interview	"a series of questions using a strength-based-interview style" [S260], "your experiences, motivations, strengths and what inspires you about a career at LSEG" [S264].	Energy and authenticity: what you do well and enjoy, and whether your motivation for LSEG is specific.	CONFIRMED (style); format REPORTED
4. Assessment centre	"a half day assessment centre which involves several different types of exercises"; "all our assessment centres are held virtually" [S260], a chance to "meet our people" [S264].	How you work with others, how you analyse a pack and recommend, and fit in a final interview [S286, S292].	CONFIRMED (shape); exercises REPORTED
5. Offer	"If you're successful, you'll receive an offer to join LSEG" [S264].	Placement into one of the five businesses depends on "your skills and interest and how they align with the needs of the business" [S260].	CONFIRMED

Stage 1: the application and CV

What is confirmed

- You apply on Workday with an application and a resume (CV). The posting went live on 21 September 2026 and closes on 30 October 2026, but "may close early" [S260] **CONFIRMED**.
- "Please review all the graduate programme opportunities and make one application." If you apply more than once, LSEG reviews only the first [S260]. Pick this posting deliberately. Do not apply to the Business Analyst internship as a backup.
- Eligibility: penultimate-year undergraduate due to finish in summer 2028; LSEG says ideal candidates have the right to work in the UK without restrictions for the programme [S260].
- Hybrid working, 3 days a week in the office at 5 Canada Square [S260].

What the screen is probably looking for

LSEG does not say how CVs are screened. The safest reading is that the screen checks the JD's own list **INFERRED**. The JD asks for a "demonstrable interest in financial markets, which you've built through your studies, work experience or extracurricular activities", "a curiosity for data", the ability to "connect the dots and think strategically", "focus, resilience and the flexibility to adapt", and collaboration with "strong communication skills" [S260]. It adds one line that matters for every later stage: "You will stand out to us if you can demonstrate and recognise that what you achieve is equally important as how you achieve it" [S260].

JD ask [S260]	Where to show it on your CV	Worked placeholder (replace with your own)
Interest in financial markets	A line under education or a "Interests" line with a specific activity	[Society role] "Wrote fortnightly market note for [society], [n] readers; covered [topic]."
Curiosity for data	Any project where you cleaned, counted or charted something	[Module or job] "Built a spreadsheet of [x] records to find [y]; result: [z]."
Connect the dots	A bullet that links two things (cause and effect)	"Linked [customer complaints] to [rota gaps]; proposed [change]."
Focus, resilience, flexibility	Part-time work alongside study; a setback you recovered from	"Worked [n] hours a week during term while achieving [grade]."
Collaboration and communication	Team roles with your specific contribution	"One of [n] in a team; I owned [part]; we delivered [result]."
"How" as well as "what"	Bullets that say how you did it, not just the outcome	"Kept [stakeholder] updated weekly, which [effect]."

WHY THIS MATTERS

Your CV is also the raw material for stages 3 and 4. Every bullet should be a story you can tell for 90 seconds. If a bullet cannot survive "tell me more about that", cut it or rewrite it **INFERRED**.

Stage 2: the Immersive Online Assessment

What it is

LSEG calls it an "untimed Immersive Online Assessment" designed "to give you an insight into what it's like to work at LSEG" ^[S260]. Its hints page describes "an interactive assessment designed to help us understand your strengths, potential and approach to solving real-world challenges", and tells you to visit an "Assessment Preparation Hub" first ^[S264] **CONFIRMED**.

KEY TERM

Immersive assessment: an online test built as a story. You play a new joiner, read emails and data, and answer questions as the day unfolds. There is no separate "maths test" and "verbal test"; the numbers sit inside the story ^[S289]. **Situational judgement test (SJT):** a question that gives you a work scenario and asks what you would do, or how you would rank possible actions.

Who probably runs it: Cappfinity

The words "Assessment Preparation Hub" on LSEG's page link to hub.preparationplus.com. That page's HTML title is "Cappfinity Preparation Hub" and its description reads "Powered by Cappfinity" ^[S264, S265]. So LSEG's partner for this stage is very likely Cappfinity (formerly Capp) **INFERRED, HIGH CONFIDENCE**. LSEG does not name the vendor in text.

SOURCE UNCERTAIN

Three test-prep sellers say LSEG uses SHL timed numerical, verbal and logical tests, and one mentions a telephone interview ^[S286, S287, S288]. One unverified snippet claims a shift to Aon and SHL ^[S299]. These do not match LSEG's own 2026 wording (untimed, immersive, video) and may describe older cycles or other roles. The live Cappfinity link is the stronger evidence for the 2027 cycle. Practical answer: prepare mainly for an immersive strengths simulation, with a little timed numerical practice as insurance.

What it probably looks like

This is Cappfinity's general format, from a third-party guide that does not mention LSEG ^[S289] **REPORTED**:

- One storyline set in a realistic role, with situational "strengths" questions.
- Numerical and verbal tasks built into the story (for example, read a short data table in an email, then answer a question about it).
- Sometimes a written or short video task.
- Sections "often generously timed or untimed".
- Some questions ask both what you would do and how much you would enjoy doing it.

One Glassdoor snippet from an LSEG graduate candidate describes a "Behavior Assessment with personality, behavior and logic tests without time limit", with mainly behavioural questions that were "very well-crafted" ^[S291] **REPORTED, ANECDOTE** .

How to prepare

Do this	Why
Use the Cappfinity Preparation Hub linked from LSEG's page before you start ^[S264] .	It is the official route and has technical guidance.
Answer as yourself, not as the ideal candidate.	Strengths tests compare answers across many items. Faking one profile across a long test is hard and shows as inconsistency INFERRED ^[S289] .
Read every email, attachment and table in the scenario.	The numbers you need sit inside the story ^[S289] .
Use the untimed format: do it in one quiet sitting with a calculator and paper.	"Untimed" removes the speed penalty, so accuracy is what counts INFERRED .
Rank actions with three filters: the client, the rules, the team.	LSEG's values put Integrity first ("We earn trust by acting responsibly") ^[S271] . The answer that protects clients and follows process usually beats the heroic shortcut INFERRED .
Do 2 or 3 short numerical sets (percentages, growth rates, reading tables).	Insurance against the SHL claims, and useful for the AC case ^[S286] .
Complete it soon after the invite, within the deadline in the email.	Review is first-come, first-served; deadlines come in the invitation ^[S266, S269] .

DON'T DO THIS

Do not pick "I would really enjoy this" for every task. A real person dislikes some work. Steady, honest preferences read better than a wall of maximum scores **INFERRED** .

Stage 3: the strengths-based video interview

Format, from what candidates report

LSEG confirms the style and themes: strengths-based questions about "your experiences, motivations, strengths and what inspires you about a career at LSEG" ^[S260, S264] **CONFIRMED** . The mechanics come only from anecdotes:

- About 8 questions, no overall time limit, "unlimited time to prepare", but "only one attempt to record an answer of 1-2 minutes" (Glassdoor, graduate programme) ^[S291] **REPORTED, ANECDOTE** . The count may differ by year or track.
- The invite tended to arrive about a day after the online assessment; waiting 2 to 3 days with no invite was seen by some as a bad sign (TheStudentRoom, 2026 graduate threads) ^[S293] **REPORTED, LOW CONFIDENCE** .
- Cappfinity describes its own video product as "fully asynchronous", meaning you record alone and someone reviews later ^[S290]. Whether LSEG uses Cappfinity for the video too is not stated **INFERRED, MEDIUM CONFIDENCE** .

KEY TERM

Strengths-based interview: an interview that asks what you are naturally good at and what gives you energy, not only what you have done. The idea is that people perform best in work that uses their strengths and that they enjoy. **Competency interview:** the older style, asking for past evidence of set behaviours ("Tell us about a time you..."), usually answered with STAR (Situation, Task, Action, Result).

FIGURE 36

Strengths vs competency interviews: same examples, different question

	Competency interview Proves you CAN do it	Strengths interview Used at LSEG stage 3 [S260]
Core question	"Can you do this? Show me a time you did."	"What do you do well AND find energising? Will this work suit you?"
Typical prompt	"Tell us about a time you met a tight deadline."	"Do you prefer starting tasks or finishing them?" [S289]
Answer shape	STAR: situation, task, action, result. Most time on the action.	Honest preference, one short real example, how often you use it.
What scores	Evidence of set behaviours, marked against a framework.	Evidence plus fit: does your natural energy match the work?
What assessors notice	Clear structure, specific actions, a measurable result.	Pace, detail and tone that sound lived, not learned. Consistency across answers (Inferred).
Prep that works	Rehearse 6 to 8 STAR stories until the order is automatic.	Know your real energisers and drains; keep true stories ready.

Overlap: both reward real, specific examples. The AC interview may mix both styles (Inferred).

The stories you tell can be the same. What changes is the question behind them: a competency interview asks for proof, a strengths interview also asks whether you enjoyed it and would want to do it again.

Source: LSEG posting R0123386 [S260] and hints page [S264] for the strengths style; Cappfinity format and example prompts from a third-party guide [S289] and Cappfinity's product page [S290]. The comparison itself is Inferred.

How Capp-style assessors are thought to score energy and authenticity

Neither LSEG nor Cappfinity publishes a scoring rubric in the sources read. What follows is inferred from Cappfinity's own format material and its example prompts ("How do you feel when you are looking at data?", "How do you deal with setbacks?", "How do you stay motivated?") [S289, S290] **INFERRED**.

Signal	What it probably looks like on video	How to produce it honestly
Energy	Pace picks up, detail increases, you use "I" and present tense when describing the thing you enjoy.	Only claim energisers you can talk about for two minutes without notes. Detail is the tell, not volume.
Authenticity	Answers sound remembered, not recited. Small specifics (a date, a number, what someone said).	Prepare bullet prompts, never scripts. Record practice answers and delete any that sound read.

Signal	What it probably looks like on video	How to produce it honestly
Self-awareness	You can name what drains you and how you manage it.	Pick a real drain that is not central to the role (see C2).
Consistency	Your strengths match across the online test, the video and the AC.	Decide your 3 or 4 core strengths now and let all stories point to them.
Motivation for LSEG	A specific reason, tied to one business or fact, not "a global leader".	One fact per answer is enough: for example Markets income £1,920m in H1 2026, up 11.9% ^[S285] .

Recording checklist

- Test camera, microphone and connection the day before.
- Camera at eye level, face lit from the front, plain background.
- Use the untimed preparation window to jot 3 bullet prompts, then look at the camera, not the notes.
- Aim for 90 seconds. The reported window is 1 to 2 minutes ^[S291].
- Answer first, in one sentence. Then one example. Then the link to LSEG.
- If you stumble, keep going. A small recovery looks human; you only get one take ^[S291].
- Smile where it is natural, especially when talking about what you enjoy.
- Do all questions in one sitting so your energy stays even.

SAY THIS IN THE INTERVIEW

For "What inspires you about a career at LSEG?" (LSEG's own theme ^[S264]): "I get most energy from understanding how a system works end to end. LSEG is one of the few places where you can see a trade from the venue, through clearing at LCH, to reporting, inside one group. The internship lets me see that from the inside." Then give your own example of enjoying a system or process.

Stage 4: the virtual assessment centre

Confirmed: half a day, virtual, "several different types of exercises", details sent with the invite, and "a chance to get to know LSEG, meet our people and discover more about the opportunity" ^[S260, S264]

CONFIRMED. Business Management does not list a technical test, unlike the analyst or engineering tracks ^[S260].

Likely exercise	What has been reported	What it tests	How to prepare
Group exercise	"Small teams to solve a business case or scenario" ^[S286] . Tech-track anecdote: 4 candidates, about 30 min reading a pack, then about 30 min discussion with 2 assessors listening; each person given a factor (ESG, economic, political, technological) to argue; assessors watched group behaviour more than content ^[S292] .	Listening, building on others, time-keeping, reaching a decision together.	Practise a 30-minute group discussion with friends. Assign one person to watch only behaviour and give feedback.
Case study	"Analyse a business scenario, review data, and propose solutions" ^[S286] . Tech-track anecdote: 30 minutes to review a long pack about a fictional website ^[S292] .	Finding the signal in a lot of material, prioritising, a clear recommendation.	Practise reading a 10-page pack in 20 minutes and writing a one-page recommendation: answer first, 3 reasons with numbers, risks, next steps.
Interview	A final interview with "senior managers or team leaders" ^[S286] .	Motivation, values, depth on one business, questions you ask.	Use the question bank below; pick 2 questions to ask from the list at the end of this Part.

Likely exercise	What has been reported	What it tests	How to prepare
Meet our people	LSEG says the AC includes a chance to "meet our people" ^[S264] .	Probably informal, but treat it as observed ^{INFERRED} .	Have one genuine question about each person's day-to-day work.

SOURCE UNCERTAIN

The detailed AC anecdote is from the technology graduate scheme, not the business track, and the dates of the Glassdoor reviews are unknown ^[S292]. The test-prep description ^[S286] is generic. Treat the exercise list as likely, not certain, and read the invite email carefully.

Virtual AC habits that help

- In the group exercise, say other people's names when you build on their points ("Building on Priya's point about cost..."). It shows listening on camera, where body language is hard to read ^{INFERRED}.
- Offer to keep time early. It is a real contribution and it is visible ^{INFERRED}.
- In the case, state the recommendation in the first 20 seconds of your presentation. A summary without a decision is a common way to lose marks (see H2).
- Keep a printed one-page fact sheet (H1 2026 Markets numbers, the five businesses, the four values) beside your screen for the interview, but do not read from it.

Timelines: what is known and what is not

Date or gap	What	Source and confidence
21 Sep 2026	Posting live on Workday (JD copy says about 29 Sep; small discrepancy, not material)	^[S260, S263] CONFIRMED
5 Oct 2026 (today)	You are at stage 1. Graduate_Careers board shows 19 postings	^[S263] CONFIRMED
Within days of applying	Online assessment invite; the deadline to complete it is in the email	^[S266, S269] CONFIRMED (deadline in email); speed ^{INFERRED}
About 1 day after the online assessment	Video interview invite (2026 graduate threads)	^[S293] REPORTED, LOW
Not published	Time from video to AC; time from AC to offer. LSEG says there is "no fixed timeframe" for results	^[S269] CONFIRMED (no fixed time)
30 Oct 2026	Closing date, unless it closes early	^[S260] CONFIRMED
June 2027	9-week internship starts, London	^[S260, S267] CONFIRMED
Summer 2028	You graduate; the graduate programme you would join would be the intake after the current September 2027 one	Eligibility ^[S260] ; intake year ^{INFERRED}

WHY THIS MATTERS

A notable gap: the London Business Management and Sales Graduate Programme (R0123406) was not on the board on 5 October 2026, while New York's version was ^[S263]. It may have closed or paused ^{INFERRED}. That is a hint that LSEG postings can fill and close fast. Apply early.

After the internship: the graduate programme

The JD says the internship "has been crafted to simulate our Business Graduate Programme" and that interns play a part "just like they would do as a graduate" ^[S260]. So the target after the summer is a return offer onto that programme **INFERRED**.

What the Business Graduate Programme looks like

- 12 months; the current intake starts September 2027 ^[S268].
- Two business pathways: Commercial and Business Analyst ^[S268].
- An 8-week group project, offsite skills training and AI upskilling ^[S268].
- FTSE Russell's version: "a 12-month development journey", global induction, a mid-point offsite called "Ignite", 5 study days; graduates join permanently ^[S261].

What is known about conversion

- LSEG won the ISE Best Graduate Development Programme Award 2024 ^[S270].
- ISE reported an "8-fold increase in programme participants in one year", a "42% increase in intern conversions in one year" and a "35% increase in offer acceptance rate" ^[S270]. These are relative changes from 2024, not rates.
- The actual intern-to-graduate conversion rate and the intake size are not published ^[S270].

DON'T SAY THIS

"I know 42% of interns convert." That is wrong: 42% is the rise in conversions in one year, not the share of interns who convert ^[S270].

Pay and practicalities (low confidence)

LSEG publishes no intern salary in the posting ^[S260]. Glassdoor snippets show London "Summer Intern" pay of about £37,000 to £38,000 a year pro rata, and general intern pay of £36,000 to £40,000 ^[S295]. **REPORTED, LOW CONFIDENCE**. Glassdoor also shows a model "estimate" of £69,000 to £100,000 for this internship; ignore it, it is very unlikely to be real pay ^[S295].

£37 to 38K

Annual rate, pro rata, Glassdoor snippet, low confidence ^[S295]

£6.5K est.

Rough 9-week gross at £37.5K a year (my arithmetic, est.)

3 days

In the office each week, hybrid ^[S260]

Associate

Career stage on the posting ^[S260]

The JD lists benefits for the role, including a wellness allowance, an employee assistance programme, private medical insurance, dental, gym, life insurance, income protection, pension and MyOffers ^[S260]. How many of these apply to a 9-week intern is not stated **INFERRED**. Do not ask about pay before an offer.

Your preparation plan: 4-week countdown

Today is Monday 5 October 2026. The deadline is Friday 30 October, but review is rolling, so the plan front-loads the application into week 1 and uses weeks 2 to 4 to get ready for stages 2 to 4, which can arrive quickly ^[S266, S293].

Week	Main tasks	Market events to read that week
Week 1 Mon 5 to Sun 11 Oct Apply	Read the JD twice and Parts 1 to 3 of this pack. Draft the CV against the JD table in stage 1. Write your 60-second "why LSEG" and "why Markets". Build your story bank (8 stories, table below). Submit by Friday 9 October ; Sunday 11 October at the latest.	LSEG H1 2026 results: Markets income £1,920m, +11.9% [S285] . LSE 24 announcement (21 Jul 2026) [S278] .
Week 2 Mon 12 to Sun 18 Oct Online test	Use the Cappfinity Preparation Hub as soon as the invite comes [S264] . Do 2 numerical sets. Take the assessment in one quiet sitting. Then start video prep: answer the 10 strengths questions (group C) on camera; review and re-record.	Airtel Money listing on the Main Market, admission expected 14 Oct 2026 [S232] ; a live example of shareholder and geographic analysis.
Week 3 Mon 19 to Sun 25 Oct Video	Record motivation (A, B) and values (I) answers. Learn the 8 market basics (group F) to "explain it to a friend" level. If the video invite arrives, do it within 2 days, after one warm-up recording.	LSEG Q3 trading statement, 22 Oct 2026 [S252] . Read the Markets section: did volumes stay strong after the volatile first half [S285] ?
Week 4 Mon 26 to Fri 30 Oct AC ready	Practise one case pack (20 min read, 10 min write) and one group discussion with friends. Choose your 2 questions to ask. Prepare a one-page fact sheet. If you have not applied yet, apply now; do not wait for the 30th.	Autumn Budget, 28 Oct 2026: gilt yields and sterling moves feed into Tradeweb, SwapClear and FX activity [S243] INFERRED .

Preparation by stage

Stage	Hours to budget (est.)	Core prep	Use in this pack
Application	6 to 8	CV tailored to the JD's five asks; every bullet a story	Stage 1 table; Parts 1 to 3
Online assessment	3 to 4	Prep hub; numerical practice; decide your strengths	Stage 2; questions H4 and C1 to C10
Video interview	6 to 8	Record and review 15 to 20 answers; 90-second target	Groups A, B, C, I; Figure 36
Assessment centre	8 to 10	Case and group practice; market basics; questions to ask	Groups D to J; questions to ask; Part 10

Hours are my estimates for planning, not sourced figures.

Your story bank (fill in from your own CV)

Your CV is not known to this pack, so the stories below are slots, not content. Find one true story for each. Most questions in the bank can then be answered with one of these eight.

Slot	The story should show	Covers questions	Your story (placeholder)
1. Customer	You solved a problem for a customer, user or member	D1, H3, I2, B2	[Job / society role, what they needed, what you did]
2. Data	You found something in numbers and someone acted on it	D2, C6, G1, G3	[Dataset, insight, who changed their mind]
3. Fix	You improved a process	D5, I4, C1	[Before, your idea, after, by how much]
4. Setback	Something went wrong and you owned it	D4, C8, C2	[What failed, what you did next, what changed]
5. Team	You made a team work better	C7, D3, H1, I3	[Team, your role, the tension, the outcome]
6. Pressure	You met a deadline with competing demands	D6, C3, C10, H4	[Deadline, trade-offs, result]
7. Learning	You learned something hard, fast	C4, C5, A4	[Topic, how you learned, proof]
8. Integrity	You kept a promise or did the right thing at a cost	I1, J2, J4	[Promise, obstacle, cost, result]

How to use the question bank

The 58 questions below come from the themes LSEG names for each stage, common strengths-style prompts, and the JD's four exposure areas ^[S260, S264, S289]. LSEG has not published its questions ^{INFERRED}. Each item has four parts:

- **Testing:** what the assessor is really scoring.
- **Structure:** a shape for the answer. A scaffold, not a script. In a strengths format, answers that sound learned score worse than answers that sound real ^[S289] ^{INFERRED}.
- **Weave in:** one LSEG fact you can use if it fits, with its source. One fact per answer is enough.
- **Trap:** the common way to lose marks.

Group	Count	Most likely at
A. Motivation and why LSEG	6	Video, AC interview
B. Why Markets	5	Video, AC interview
C. Strengths (Cappfinity-style)	10	Online assessment, video
D. Behavioural and competency	6	AC interview
E. Commercial awareness	7	AC interview, case
F. Markets basics for beginners	8	AC interview
G. Data and analysis	4	Online assessment, case
H. Case and assessment centre	4	AC
I. Values	4	Video, AC interview
J. Ethics and compliance	4	Online assessment (SJT), AC

Stage mapping is my inference from LSEG's stage descriptions [S260, S264] and reported formats [S286, S289, S291, S292].

Questions A to B: motivation and Markets

A. Motivation and why LSEG (6)

Q1 (A1). Why LSEG?

TESTING whether your interest is specific and real, and whether you see LSEG as more than "the stock exchange".

STRUCTURE (1) one concrete moment that got you interested in market infrastructure; (2) one thing about LSEG's model you find interesting; (3) what you want to learn in 9 weeks and how it links to your next step. **WEAVE IN** the Markets Division "combines the Group's flagship trading and clearing businesses" (LSE, Turquoise, LSEG FX, Tradeweb, LCH) with risk, collateral and reporting capabilities ^[S273]; LCH must clear on "fair, reasonable, open and non-discriminatory" terms, even for rival venues ^[S305]. **TRAP** talking only about prestige or the building; reciting the purpose statement with no personal link; confusing LSEG with LSE (the university).

Q2 (A2). Why this internship and not an investment bank?

TESTING self-awareness, and whether infrastructure is a choice, not a fallback. **STRUCTURE** what draws you to the "plumbing" (venues, clearing, data) over deal-making; one example of you enjoying systems, process or client service; what this internship lets you see (the trade lifecycle end to end). **WEAVE IN** the JD: interns "help customers across the trade life cycle", across clearing and reporting ^[S260]. **TRAP** criticising banks; giving "work-life balance" as the main reason.

Q3 (A3). What do you know about the business areas an intern could join?

TESTING whether you read the JD and can describe each business in one plain sentence. **STRUCTURE** name the five (LSE, LSEG FX, Tradeweb, Turquoise, LCH) ^[S260]; one line each; the two that interest you most and why. **WEAVE IN** H1 2026 Markets income £1,920m, up 11.9% at constant currency ^[S285]; Markets is about 40% of group revenue ^[S71]. **TRAP** a list of names with no understanding; a fixed preference so strong you seem inflexible (LSEG places you using what it learns) ^[S260].

Q4 (A4). What inspires you about a career at LSEG?

TESTING energy and motivation; this is LSEG's own wording for the video stage ^[S264]. **STRUCTURE** one thing that energises you; a short story that shows it; a link to a specific LSEG activity. **WEAVE IN** LSE 24, a planned venue running 17:00 to 07:50, with ETPs first in H1 2027, subject to approval ^[S278]; the Private Securities Market's first transactions in H1 2026 ^[S285]. **TRAP** "fast-paced and dynamic" with nothing behind it.

Q5 (A5). Where do you see yourself after this internship?

TESTING whether you are likely to convert and stay. **STRUCTURE** you hope to return on the Business Graduate Programme; show you know its shape; stay open on the exact area. **WEAVE IN** 12 months, Commercial and Business Analyst pathways, an 8-week group project ^[S268]; "Ignite" mid-point offsite and 5 study days on the FTSE Russell version ^[S261]. **TRAP** naming a different employer as your long-term plan.

Q6 (A6). Tell us about yourself.

TESTING concise communication and a link to the role. **STRUCTURE** present (degree, one interest), past (two relevant experiences), future (why this role now). 60 to 90 seconds. **WEAVE IN** the JD's "demonstrable interest in financial markets ... through your studies, work experience or extracurricular activities" ^[S260]. **TRAP** reading your CV line by line.

B. Why this division: Markets (5)**Q7 (B1). Which of LSE, LSEG FX, Tradeweb, Turquoise or LCH would you most like to join, and why?**

TESTING specific interest plus flexibility. **STRUCTURE** first choice with a reason tied to a skill; a second choice; say you are open. **WEAVE IN** (pick one) FX revenue £145m in H1 2026, up 7.6%, with average daily volume \$561bn ^[S285]; ForexClear notional cleared \$33,311bn, up 45.2% ^[S285]; UK equities average daily value traded £6,671m, up 33.5% ^[S285]. **TRAP** picking a business you cannot describe.

Q8 (B2). The JD mentions solving problems for FX customers. What are an FX client's goals?

TESTING client empathy and basic FX. **STRUCTURE** who the clients are (asset managers, corporates, banks); what they want (good price, low cost, reliable execution, a clean audit trail); how a venue helps. **WEAVE IN** Forward First Fixing did over \$330bn in Q2 2026, a record ^[S285]; LSEG cites a 90%+ cut in manual processing for its largest FFF client ^[S238]. **TRAP** talking about FX as retail speculation.

Q9 (B3). How would you approach research into debt listings, valuations, and shareholder and geographic analysis?

TESTING analytical thinking and knowing what a debt listing is. **STRUCTURE** define the question; pick data sources; describe the analysis; say how you would present it. **WEAVE IN** the JD's exact words ^[S260]; Airtel Money's Main Market IPO, priced 1 Oct 2026 at £1.96 a share, about 16.5% to 17.5% in public hands ^[S232], as a live example of shareholder analysis. **TRAP** overclaiming technical skills.

Q10 (B4). What do risk teams in a market infrastructure business do?

TESTING why risk matters at a clearing house or venue. **STRUCTURE** monitor (exposures, margin, operational risk); analyse (data, stress); report and deliver projects. **WEAVE IN** JD: "monitoring and analysing risks, and interpreting data in readiness for the delivery of risk projects or reporting" ^[S260]; LSEG runs a "three lines of defence model" ^[S74]. **TRAP** treating risk management as compliance only.

Q11 (B5). What is the difference between a trading venue and a clearing house, and why might one group own both?

TESTING joined-up thinking; the JD asks you to "connect the dots" ^[S260]. **STRUCTURE** a venue matches buyers and sellers; a clearing house stands between them after the trade; owning both supports end-to-end workflow, but LCH runs on open access. **WEAVE IN** CEO on the Q1 2026 call: "straight through FXall execution capabilities into ForexClear" ^[S284]; LCH's open-access rule: "No exchange will be favoured over any other" ^[S305]. **TRAP** claiming LSEG sells venue and clearing as a bundle (no LSEG statement says so, and open access makes it unlikely) ^[S305].

Questions C: strengths

General scaffold for every strengths question: a genuine answer about what you enjoy and do well, then a short real example, then how often you use it ^[S289, S290] **INFERRED**. Short, honest, specific. These questions have no "right" answer, only consistent and believable ones.

Q12 (C1). What energises you?

TESTING real motivators, and whether they fit a fast, client-facing, data-heavy role. **STRUCTURE** name the thing; why; a recent example; how it would show up at LSEG. **WEAVE IN** the JD's "curiosity for data" and "connect the dots" ^[S260]. **TRAP** answering what you think they want; "I love challenges" with no detail.

Q13 (C2). What drains your energy?

TESTING self-awareness and honesty. **STRUCTURE** a real drain; how you manage it; why it will not stop you doing the job. **WEAVE IN** nothing from LSEG; this answer is about you. **TRAP** a fake weakness ("perfectionism"); naming something central to the role, such as talking to clients.

Q14 (C3). How do you stay organised when you have lots going on?

TESTING planning and focus; the JD asks for "focus, resilience and the flexibility to adapt" ^[S260]. **STRUCTURE** your system; a time it was tested; what you changed afterwards. **WEAVE IN** story slot 6 (pressure). **TRAP** listing apps with no example.

Q15 (C4). Tell us about a time you learned something new quickly.

TESTING learning speed, which you need to get up to speed on market structure in 9 weeks. **STRUCTURE** context; how you learned (sources, people, practice); proof you got it; what you would do differently. **WEAVE IN** how you taught yourself what a CCP does while preparing for this role (see F1). **TRAP** choosing something trivial.

Q16 (C5). What do you enjoy more: starting a task or finishing it?

TESTING natural preferences; no correct answer ^[S289] **INFERRED**. **STRUCTURE** honest preference; example; how you cover the other side. **WEAVE IN** the JD's "instant reaction and long-term vision are equally important" ^[S260], if you want a link. **TRAP** "both equally" with no detail.

Q17 (C6). How do you feel when you are looking at a big set of data?

TESTING data curiosity (JD) ^[S260]; this is close to a Cappfinity example prompt ^[S289]. **STRUCTURE** honest reaction; what you do first; an example where you found something useful. **WEAVE IN** story slot 2 (data). **TRAP** claiming expertise in tools you have barely used.

Q18 (C7). When are you at your best in a team?

TESTING collaboration and role awareness; LSEG's Partnership value ^[S271]. **STRUCTURE** your natural role; example; how you adapt when the team needs something else. **WEAVE IN** Partnership: "We forge long-term relationships; we work together to solve evolving needs" ^[S307]. **TRAP** always being "the leader".

Q19 (C8). How do you react when plans change at short notice?

TESTING resilience and adaptability. **STRUCTURE** first reaction (honest); how you reset; a real example. **WEAVE IN** "Heightened market volatility and geopolitical uncertainty drove exceptional clearing activity" in Q1 2026, then Q2 moderated [S285]; the JD's "instant reaction and long-term vision" [S260]. **TRAP** claiming you never feel stress.

Q20 (C9). What would your friends say you are naturally good at?

TESTING self-insight, and consistency with your other answers. **STRUCTURE** one strength; one example from outside study; one link to the role. **WEAVE IN** nothing needed. **TRAP** a list of five adjectives.

Q21 (C10). Do you prefer lots of things at once, or one thing in depth?

TESTING fit with being "an individual contributor" who also works "as a team" [S260]. **STRUCTURE** preference; example; how you cope with the other mode. **WEAVE IN** the JD's four exposure areas, which range from fast client work (FX) to deeper research (debt listings) [S260]. **TRAP** an answer that contradicts what you said in Q14.

Questions D to E: behavioural and commercial

D. Behavioural and competency (6)

Use STAR, but keep the Situation to two sentences. Spend most of the time on what you did and the result. Expect follow-ups in a live interview: "What would you do differently?"

Q22 (D1). Tell us about a time you solved a problem for a customer or user.

TESTING client focus; the FX role is customer facing [S260]. **STRUCTURE** the customer's goal; the problem; your action; the result; what you learned. **WEAVE IN** link to the JD's "maintain relationships with existing customers ... and deal with post sale activity" [S260]. **TRAP** a story where you only escalated.

Q23 (D2). Tell us about a time you used data to change someone's mind.

TESTING analysis plus communication. **STRUCTURE** question; data; insight; how you presented it; outcome. **WEAVE IN** the JD's "analyse information to draw conclusions and propose solutions" [S260]. **TRAP** no actual numbers.

Q24 (D3). Tell us about a time you worked with someone difficult.

TESTING maturity and the Partnership value [S271]. **STRUCTURE** situation; your understanding of their view; what you did; outcome; the relationship after. **WEAVE IN** nothing needed. **TRAP** blaming the other person.

Q25 (D4). Tell us about a time you failed.

TESTING resilience and honesty; the JD says "what you achieve is equally important as how you achieve it" [S260]. **STRUCTURE** the failure (own it); what you did next; what changed. **WEAVE IN** nothing needed. **TRAP** a disguised success.

Q26 (D5). Tell us about a time you improved a process.

TESTING fit with "strategic initiatives, and operational improvements" in the JD [S260]. **STRUCTURE** what was inefficient; your idea; how you got buy-in; measurable change. **WEAVE IN** FFF as LSEG's own example of a process fix for clients (90%+ less manual processing for its largest client) [S238]. **TRAP** an improvement with no evidence.

Q27 (D6). Tell us about a time you met a tight deadline.

TESTING prioritisation and calm. **STRUCTURE** the deadline; trade-offs you chose; result; what you would change. **WEAVE IN** story slot 6. **TRAP** missing the deadline and not owning it.

E. Commercial awareness (7)

Q28 (E1). What is a recent LSEG development that interests you?

TESTING real reading beyond the careers page. **STRUCTURE** what happened; why it matters for customers; one risk or open question. **WEAVE IN** (choose one) LSE 24: announced 21 Jul 2026, client testing by end 2026, ETPs first in H1 2027 [S278], tokenised equity structures and a Payward partnership, 1 Sep 2026 [S228], HSBC and LSEG depository link for the DIGIT digital gilt by Q1 2027 [S285, S246]. **TRAP** a story you cannot discuss for two minutes.

Q29 (E2). How does LSEG make money in its Markets business?

TESTING the business model. **STRUCTURE** trading fees (equities, FX, fixed income via Tradeweb); clearing fees (LCH); post-trade and reporting services; net treasury income on collateral. **WEAVE IN** H1 2026: Equities £230m, Fixed Income, Derivatives & Other £864m, FX £145m, OTC Derivatives £355m, Securities & Reporting £124m [S285]. **TRAP** saying LSEG earns money when share prices go up.

Q30 (E3). Why did Markets revenue grow so strongly in early 2026?

TESTING linking macro events to the business. **STRUCTURE** volatility drives trading and hedging; more hedging means more clearing; volumes moderated in Q2; separate the cyclical from the structural. **WEAVE IN** "Heightened market volatility and geopolitical uncertainty drove exceptional clearing activity" [S285], structural growers: FFF, Post Trade Solutions (80+ customers added in H1), the Private Securities Market [S285]. **TRAP** assuming volatility is always good; it can stress risk systems and clients.

Q31 (E4). What challenges does the London Stock Exchange face?

TESTING a balanced view. **STRUCTURE** competition for listings and trading; regulation; LSEG's response (new venues, private markets, digital). **WEAVE IN** UK IPO proceeds in H1 2026 were £577m from 7 IPOs, up 215% from a low base [S229], US exchanges plan 23-hour trading from 6 Dec 2026 [S251], LSE 24 is London's answer [S278]. **TRAP** only negative headlines; made-up IPO numbers.

Q32 (E5). How is AI changing financial market infrastructure?

TESTING forward thinking with a sense of risk. **STRUCTURE** data delivered into AI tools; automation of workflows; risks (governance, resilience). **WEAVE IN** LSE 24 is designed to support "digital, algorithmic and agentic trading" [S227], the Q1 2026 call mentioned customers accessing data through MCP servers [S284]. **TRAP** hype with no control or risk angle.

Q33 (E6). Who are LSEG's competitors in Markets?

TESTING a market map. **STRUCTURE** by business: other exchanges and MTFs for equities; other FX venues; other clearing houses; electronic bond platforms. **WEAVE IN** Deutsche Börse ties Eurex trading to Eurex Clearing, a "vertical" model, while LSEG chose open access [S305, S300]; EU rules require some euro swap clearing at an EU CCP, in practice Eurex [S257], US exchanges moving to 23x5 [S251]. Name only competitors you have checked yourself. **TRAP** inventing market shares.

Q34 (E7). What is tokenisation and why does LSEG care?

TESTING curiosity and plain explanation. **STRUCTURE** define it simply (a digital record of ownership on a shared ledger); one LSEG example; one risk. **WEAVE IN** LSEG's Digital Settlement House (DiSH), Digital Securities Depository, six fund providers on Digital Markets Infrastructure [S285], Julia Hoggett: tokenisation "must develop in a way that preserves the trust, rights and role of regulated markets" [S228]. **TRAP** crypto speculation talk.

Questions F to G: markets basics and data

F. Markets knowledge for beginners (8)

Practise each of these to "explain it to a friend in 30 seconds" level. Plain words beat jargon.

Q35 (F1). What does a central counterparty (CCP) do?

TESTING the core LCH idea. **STRUCTURE** after a trade, the CCP becomes buyer to every seller and seller to every buyer; it collects margin (collateral); if a member defaults it uses that member's margin and default fund first, then its own funds, then other members' default fund ^[S93]. **WEAVE IN** LCH says it has "managed 9 member defaults and, in all cases, losses were within the initial margin held" ^[S351]; Daniel Maguire led the unwinding of Lehman's LCH-cleared bond and repo portfolio from 1 Sep 2008 ^[S273]. **TRAP** saying a CCP removes all risk.

Q36 (F2). What is a spot FX trade versus a forward?

TESTING basics for the FX desk. **STRUCTURE** an exchange of currencies; spot settles quickly (typically two business days for most pairs); a forward settles on a future date at a rate agreed today; used for hedging. **WEAVE IN** LSEG FX average daily volume \$561bn in H1 2026 ^[S285]. **TRAP** mixing up FX venues and banks.

Q37 (F3). What does it mean to list a bond on the London Stock Exchange?

TESTING the "debt listings" area in the JD ^[S260]. **STRUCTURE** the issuer admits debt securities to a market; gains visibility and investor access; must meet disclosure rules; investors gain transparency. **WEAVE IN** LSE delivers "international equity, fixed income, exchange-traded funds, and investment vehicles" ^[S278]; a new UK prospectus regime applies from 19 Jan 2026, including "Access Bonds" for retail ^[S254]. **TRAP** confusing listing with trading volume.

Q38 (F4). What is the difference between an exchange and an MTF like Turquoise?

TESTING market structure. **STRUCTURE** both are regulated venues where many buyers and sellers meet; an exchange also runs listings; an MTF (multilateral trading facility) trades shares listed elsewhere; Turquoise is pan-European. **WEAVE IN** LSEG calls Turquoise a "pan-European trading venue" ^[S277]; LSEG owns 84.2% ^[S300]. **TRAP** saying Turquoise lists companies.

Q39 (F5). What is an interest rate swap and why clear it?

TESTING SwapClear basics. **STRUCTURE** two parties swap fixed for floating interest payments; used to hedge rate risk; clearing cuts bilateral risk and is required for many trades. **WEAVE IN** SwapClear notional cleared \$1,165trn in H1 2026, up 29.4% ^[S285]. **TRAP** confusing notional (the reference amount) with money at risk.

Q40 (F6). What does Tradeweb do?

TESTING knowing the biggest Markets revenue line. **STRUCTURE** electronic marketplaces for rates, credit, equities and money markets; moves bond trading from phone to screen. **WEAVE IN** Tradeweb average daily volume \$3.2trn in H1 2026, up 24.8% ^[S285]; LSEG is the majority owner, about 50.9% economic interest ^[S74], and Tradeweb is separately listed ^[S300]. **TRAP** calling Tradeweb wholly owned.

Q41 (F7). What is an ETP, and why would LSE 24 start with them?

TESTING whether you read the LSE 24 release. **STRUCTURE** exchange-traded products give exposure to an index or asset; investors in other time zones want them; London is a big ETP centre. **WEAVE IN** the release calls ETPs "a natural starting point" given London's position as "a leading international ETP hub" ^[S278]. **TRAP** confusing ETPs with mutual funds.

Q42 (F8). What is the trade lifecycle?

TESTING the JD's own framing. **STRUCTURE** pre-trade (data, price); execution (venue); clearing (CCP); settlement; reporting. Map each to an LSEG business: LSE, Turquoise, Tradeweb or FXall to trade, LCH to clear, regulatory reporting after ^[S273, S284]. **WEAVE IN** JD: "across the trade life cycle, ensuring compliance and efficiency in clearing and reporting obligations" ^[S260]. **TRAP** skipping clearing or reporting.

G. Data and analysis (4)

Q43 (G1). Here is a table of monthly volumes by venue. What stands out?

TESTING numeracy and picking the signal; likely in the online test or AC case **INFERRED** [S264, S289]. STRUCTURE the biggest change; a possible cause; the extra data you would want; one recommendation. WEAVE IN practise on real figures: ForexClear +45.2% against FX revenue +7.6% in H1 2026 [S285]. Why might clearing volume grow faster than venue revenue? TRAP describing every number.

Q44 (G2). How would you measure whether a new product launch is working?

TESTING metrics thinking. STRUCTURE the objective; leading and lagging measures (customers live, volume, revenue, retention); a review point. WEAVE IN TradeAgent launched with 11 customers live; Post Trade Solutions added 80+ customers in H1 2026 [S285]; FFF fees are waived for the rest of 2026 [S238], so revenue is the wrong first measure there. TRAP revenue only.

Q45 (G3). Which tools have you used to analyse data?

TESTING honesty and level. STRUCTURE tool; what you built; what it showed; what you want to learn next. WEAVE IN the JD asks for "a curiosity for data", not a coding level [S260]. TRAP overclaiming Python or SQL.

Q46 (G4). Estimate how many trades a day an equity venue might handle.

TESTING structured estimation (possible, not reported). STRUCTURE state assumptions; build up step by step; sense-check; say what data you would use to verify. WEAVE IN you could anchor on UK equities average daily value traded of £6,671m in H1 2026 [S285], then assume an average trade size and say it is an assumption. TRAP refusing to estimate; presenting guesses as facts.

Questions H to J: AC, values and ethics

H. Case and assessment centre style (4)

Q47 (H1). Group exercise: rank these factors (economic, political, ESG, technological) by impact on a business.

TESTING collaboration more than content [S292] **REPORTED**. STRUCTURE agree the goal and a time plan; give your factor briefly; build on others by name; help the group decide; summarise. WEAVE IN if technology comes up, LSE 24 and tokenisation [S278, S228]; if political, the Autumn Budget on 28 Oct 2026 [S243]. TRAP talking over others; staying silent; arguing for your factor at any cost.

Q48 (H2). Case study: review an information pack and recommend a course of action.

TESTING analysis, prioritising, a clear decision. STRUCTURE recommendation first; 3 reasons with numbers; risks and mitigations; next steps. WEAVE IN only the facts in the pack; outside facts can look like you ignored the brief **INFERRED**. TRAP summarising the pack without a decision; running out of time.

Q49 (H3). A client is unhappy about a service outage. What do you do?

TESTING client handling, integrity, escalation. STRUCTURE acknowledge; get the facts; escalate properly; keep the client informed; follow up and learn. WEAVE IN LSEG's 19 Jul 2024 Workspace outage (RNS disrupted; LSE trading unaffected) shows why updates matter [S98]. TRAP promising compensation you cannot authorise.

Q50 (H4). You have three urgent requests from different teams. How do you prioritise?

TESTING judgement; also a classic immersive SJT format [S289] **INFERRED**. STRUCTURE impact and urgency; clarify deadlines; communicate trade-offs; escalate if needed. WEAVE IN client and regulatory deadlines first, because Integrity is about delivering "on our promises" [S271]. TRAP trying to do everything alone.

I. Values: Integrity, Partnership, Excellence, Change (4)

LSEG states: "At LSEG, our values are Integrity, Partnership, Excellence, and Change" ^[S271]. Use its own definitions; assessors notice when you do.

Q51 (I1). Integrity ("We stand by our principles and deliver on our promises"). Tell us about a time you kept a promise when it was hard.

TESTING reliability and ethics ^[S271]. STRUCTURE the promise; the obstacle; what you did; the cost; the result. WEAVE IN "We earn trust by acting responsibly" ^[S271]. TRAP a rule-breaking story framed as initiative.

Q52 (I2). Partnership ("We forge long-term relationships"). Tell us about a long-term relationship you built.

TESTING relationship skills for the FX client role. STRUCTURE who; how you built trust over time; a moment it paid off. WEAVE IN LSEG defines Partnership as "Our open model is integral to how we do business" ^[S307]; banks still co-own Post Trade Solutions (20%) ^[S300]. TRAP a one-off networking event.

Q53 (I3). Excellence ("combining unique, diverse perspectives"). Tell us about a time a different view improved your work.

TESTING openness and inclusion ^[S271]. STRUCTURE your first view; the other view; what changed; the result. WEAVE IN nothing needed. TRAP tokenism.

Q54 (I4). Change ("We embrace change"). Tell us about a change you drove or adapted to.

TESTING adaptability, and a link to LSEG's innovation agenda ^[S271]. STRUCTURE the change; your response; outcome; what you learned. WEAVE IN LSE 24, DiSH, the Digital Securities Depository ^[S278, S285]. TRAP a change you resisted with no learning.

J. Ethics and compliance (4)

Q55 (J1). A friend asks about a listing you heard about at work before it is public. What do you do?

TESTING understanding of inside information and confidentiality. STRUCTURE do not share; explain you cannot discuss work; report under policy if needed. WEAVE IN LSEG's Code of Conduct: "If you witness or learn about inappropriate conduct ... you must follow the Speak Up Policy and not look the other way" ^[S307]. Do not quote rules you have not read. TRAP "I would just give a hint".

Q56 (J2). A colleague's spreadsheet error went into a client report. What do you do?

TESTING integrity and tact. STRUCTURE check; raise it privately and quickly; escalate if not fixed; focus on the client. WEAVE IN LSEG's first line of defence owns risk "across the end-to-end product or service delivery" ^[S300]; that includes you. TRAP ignoring it to avoid conflict.

Q57 (J3). Why does a market operator care so much about operational resilience?

TESTING understanding of the systemic role. STRUCTURE markets and CCPs are critical infrastructure; outages hurt confidence; regulators expect resilience. WEAVE IN the 8 Sep 2008 TradElect outage lasted over 7 hours ^[S100]; Maguire on LCH's new Chair: "deep expertise in governance, risk and operational resilience" ^[S276]. TRAP treating it as only an IT topic.

Q58 (J4). A client offers you an expensive gift after you helped them. What do you do?

TESTING awareness of conflicts of interest. STRUCTURE thank them; do not accept without checking policy; declare it. WEAVE IN Integrity: "acting responsibly" ^[S271]. TRAP accepting quietly.

Ten questions to ask them

A good question shows you read something recent, thought about it, and want to know how the work really happens. Ask one or two, chosen for the person in front of you (see Part 10). Check every fact again in the week of your AC.

#	Question	Why this signals research	Best for / source
1	LSE 24 goes to client testing by the end of 2026, with ETPs first in H1 2027. What has early client feedback on the 17:00 to 07:50 window been, and would an intern see that work?	Uses the exact hours and sequence from a July 2026 release, and asks about clients, not hype.	Practitioner, LSE side [S278]
2	The Q1 2026 call described straight-through execution from FXall into ForexClear. From a client's point of view, what changes when execution and clearing connect like that?	Shows you read a results call transcript and understand venue and clearing as steps in one workflow, without assuming a bundle.	Practitioner, FX or LCH [S284, S305]
3	Turquoise Europe in Amsterdam got new leaders in March 2026. What does success for Turquoise look like over the next year?	Few candidates know Turquoise has a separate European arm or that its leadership changed this year.	Practitioner, equities [S277]
4	The Private Securities Market hosted its first transactions in H1 2026. Does the primary markets team see it as a route towards a later public listing?	Links a new product to the core listing business, the "connect the dots" ask in the JD.	Practitioner, primary markets [S285, S260]
5	With the HSBC depository link for the DIGIT digital gilt due by Q1 2027, which skills will Markets graduates need in 2028 that they do not need today?	Pairs a live digital project with a career question that suits any interviewer.	Any; good for senior people [S285]
6	Q2 2026 volumes moderated after an exceptional Q1. How does your team plan for quieter markets?	Shows you understand that volatility drives volume and that it is cyclical.	Practitioner [S285]
7	The JD says LSEG places interns using what it learns in the process. How is that decided, and can preferences change?	Practical and polite; shows you read the JD closely.	Recruiter, early careers [S260]
8	The ISE case study reported a 42% rise in intern conversions in one year. What do interns who convert tend to do differently?	Uses a little-known source and frames the 42% correctly as a rise.	Recruiter or graduate [S270]
9	TradeAgent launched with 11 customers live. How do commercial and risk teams work together on launches like that?	Picks a small, specific fact from the interim report and asks about how teams work.	Practitioner, risk or commercial [S285]
10	LSEG's "About" text now says "LSEG. Make more possible." How has that changed the way client-facing teams describe LSEG?	Shows you noticed a brand change in the boilerplate of recent releases.	Recruiter or practitioner [S278]

DON'T ASK THIS

Anything answered on the careers page (length, location, start date) [S260]. Pay or holiday before an offer. "What is LSEG's share price doing?" Questions that ask an interviewer to comment on Elliott, takeovers or confidential plans **INFERRED**.

SAY THIS IN THE INTERVIEW

A clean way in: "I read in the H1 report that [fact]. I was curious about [specific angle]. How does that look from where you sit?" It credits your source, shows the reading, and hands the floor back to them.

PART 10

Who might be assessing you

No interviewers are named, so this Part works from types: who is likely at each stage, what they score, how to read them live, and the public record of the people who run Markets.

Interviewer types by stage

LSEG does not say who reviews videos or sits on assessment centres. The table below combines what is confirmed (formats), what is reported (anecdotes and a test-prep site), and what is inferred [S260, S264, S286, S290, S292].

FIGURE 37

Who you might meet at each stage, and what they score

Stage	Recruiter, early careers	Automated or Capp-trained	Practitioner (business)	Graduate or alumni	What they score
1. Application CV screen					Eligibility, right to work, a clear CV, evidence of interest in markets. Inferred from the JD [S260]
2. Immersive online assessment					Consistent strengths answers, sound judgement, numbers inside the story. Vendor Inferred, high [S264, S265, S289]
3. Video recorded, reviewed later					Energy, authenticity, motivation for LSEG, a specific example each time. Reviewer not published [S264, S290]
4. AC group 2 observers (anecdote)					Listening, building on others by name, keeping time, a group decision. Reported, tech track [S292]
5. AC case pack and recommendation					The signal in the data, a clear recommendation, risks, next steps. Reported [S286, S292]
6. AC interview and "meet our people"					Depth on one business, motivation, values in LSEG's words, a smart question. "Senior managers" Reported [S286, S264]

Reported, or inferred with high confidence

Possible (Inferred); not confirmed by LSEG

The online assessment has no live person: answers are scored against a strengths model (Inferred).

Only one cell is solid among the live stages: a business practitioner in the final interview. Everywhere else you are guessing who is watching, so pitch to what the stage scores, not to a person.

Source: LSEG posting R0123386 [S260] and hints page [S264]; Cappfinity hub [S265] and product page [S290]; third-party Cappfinity guide [S289]; GraduatesFirst [S286] (test-prep vendor); Glassdoor technology graduate anecdote [S292] (snippet, date unknown). Interviewer types are Inferred.

How to pitch to each type

Type	What they probably care about	How to pitch	Avoid
Recruiter, early careers	Motivation, values, whether you will accept and convert, fit for the cohort.	Show you understand the programme (9 weeks, placement by skills and interest [S260], the graduate programme after [S268]). Use LSEG's value wording [S271]. Be warm and organised.	Deep jargon they may not need; asking about pay.
Automated or Capp-trained reviewer	Strengths, energy, consistency across answers [S289, S290] INFERRED .	Answer first, one true example, a link to LSEG. Let real enthusiasm show in the detail. Keep your 3 or 4 core strengths consistent.	Scripted answers; claiming to enjoy everything.
Practitioner from the business	Whether you understand what their team does and could be useful in week one.	Go deeper on one business. Use one number and the "why" behind it (for example ForexClear notional +45.2% in H1 2026 [S285]). Ask a question from Part 9 that fits their area.	Reciting five numbers; pretending to know their product in detail.
Graduate or alumni assessor	Would you be a good colleague on the programme? (Common at many firms; not confirmed at LSEG INFERRED .)	Be specific and human about the programme: the 8-week group project, the "Ignite" offsite [S268, S261]. Ask what surprised them.	Over-formality; asking them to judge their seniors.

Reading the room and adapting live

In a live interview you get signals. Use them to give the interviewer what they need, not to manage them. All points below are **INFERRED** from the stage formats.

Signal	Likely meaning	Good response
They ask for detail ("How exactly did you...?", "What was the number?")	Probably a practitioner, scoring depth.	Give the number and the reason. Shorter context, more mechanism.
They ask about motivation and values	Probably scoring fit.	Use LSEG's value words, linked to a real story [S271].
They look down or start typing while you speak	Often note-taking against a score sheet.	Keep going at an even pace; pause briefly after key points so they can write.
They cut in or move on early	They have what they need, or time is short.	Stop, do not finish the speech. "Happy to say more on that later."
A follow-up challenges your view	Testing reasoning under pressure, not your conclusion.	Take the point seriously, say what would change your mind, hold your view if it still stands.
A question you cannot answer	Testing honesty.	"I don't know that figure. My reasoning would be..." Never invent a number.
Silence after your answer	Thinking, writing, or waiting to see if you add more.	Ask "Would you like me to go into more detail on any part?"
In the group exercise, someone dominates	The observers are watching how others respond [S292].	Bring in a quiet person by name; summarise to move the group on.

DON'T DO THIS

No manipulation tactics. Deliberate mirroring, flattery, or dropping the names of senior leaders you have never met will look false, and assessors are trained to notice **INFERRED**. The aim of reading the room is to answer the question they are really asking.

Markets leaders: public professional backgrounds

WHY THIS MATTERS

This is strictly public, professional information from LSEG pages, press releases and trade press. It is here so you understand who shapes the division and what they say in public, not so you can recite it. Do not mention a leader's name to look clever. Mention one only when it is relevant to the question, and then cite the public statement, not the person's career. Titles change: LSEG reshuffled several Markets roles in 2025 and 2026, so check again in the week of your AC [S275, S276, S277].

Name	Role (as of source)	Since	Career path	Public themes	Source	Confidence
David Schwimmer	CEO, LSEG	2018	About 20 years at Goldman Sachs (Global Head of Market Structure; Global Head of Metals & Mining); lawyer at Davis Polk. Yale, Harvard Law, Fletcher.	Results calls; Markets growth; AI and data; FXall integration	[S273, S284, S71]	CONFIRMED
Daniel Maguire	Group Head, LSEG Markets; CEO, LCH Group	CEO LCH and ExCo since 2017	Joined LCH 1999; Head of SwapClear, ForexClear, LCH Group COO; J.P. Morgan 2005 to 2008; back at LCH 1 Sep 2008, led trading and unwinding of Lehman's LCH-cleared bond and repo book; built LCH US in New York 2010 to 2014. Tradeweb board; ISDA board.	CCP regulation, LIBOR transition, Brexit; governance and resilience	[S273, S274, S276]	CONFIRMED
Julia Hoggett	CEO, London Stock Exchange plc; Head of Digital and Securities Markets	Appointed Dec 2020, started 2021	FCA (Director of Market Oversight; Head of Wholesale Banking Supervision); BAML; DEPFA (CEO DEPFA ACS Bank); J.P. Morgan debt capital markets from 1997. Cambridge.	LSE 24; PISCES; tokenisation and trust in regulated markets	[S278, S279, S227, S228, S96]	CONFIRMED ; not on the Group Executive page read 5 Oct 2026 [S273]
Charlie Walker	Deputy CEO, London Stock Exchange plc; oversees primary markets	Deputy CEO Sep 2023; LSEG 2018	J.P. Morgan Cazenove equity capital markets before LSEG.	High-quality markets for capital raising and trading	[S280, S277]	CONFIRMED
Tom Stenhouse	CEO, Turquoise (subject to regulatory approval) and Head of Product	Mar 2026	LSEG release does not give his earlier history; a previous equities trading role is in trade press only and was not read here.	Not found	[S277]	CONFIRMED role only
Susi de Verdelon	CEO, LCH Ltd	Feb 2025	Joined LCH 2017; Group Head of SwapClear and Listed Rates; ex-Goldman Sachs MD. Oxford. ISDA board.	"A culture of excellence"; risk management leadership	[S275, S274]	CONFIRMED
James Pearson	Head of FX, LSEG	Head of FX from May 2024 (trade press)	Joined LCH as Head of ForexClear, 1 Jun 2021; before that Global Head of FX Trading at RBS; Nomura, Lehman, Citi, HSBC trading desks.	FX swaps technology and workflow (Full FX interview, May 2026)	[S281, S282, S283]	CONFIRMED 2021; current title REPORTED

Name	Role (as of source)	Since	Career path	Public themes	Source	Confidence
Andrew Batchelor	Head of ForexClear	LCH 2021	ForexClear COO and Head of Product; 20 years at Barclays (incl. Global FX COO). Chartered Accountant.	Full FX interview, May 2026	[S274, S283]	CONFIRMED
John Horkan	COO, Markets and LCH Group; Head of Americas	LCH 2012	SwapClear COO; 19 years at BofA Merrill Lynch and J.P. Morgan. CFTC Global Markets Advisory Committee since 2019.	Not researched	[S274]	CONFIRMED
Nick Rustad	Head of LCH SwapClear and Listed Rates	Not stated	J.P. Morgan (Global Head of Futures and Derivatives Clearing); Taula Capital; former FIA Chair.	Not researched	[S274]	CONFIRMED
Simon McQuoid-Mason	New Product Development, Market Structure and Business Development, LSE and Turquoise	Dec 2025; BD added Mar 2026	Not stated in the release.	Not found	[S277]	CONFIRMED
Billy Hult	CEO, Tradeweb	Jan 2023	About 15 years as Tradeweb President before.	AI adoption (AiEX), automation, prediction markets	[S298, S237]	REPORTED (snippet)
Patricia (Trish) Cuddy	Group Head of People, Markets and Americas	LSEG over 10 years	Before that HR at ICE and NYSE. Quoted in ISE 2024 as "Group Head of HR, Post Trade and Capital Markets".	Graduate programme design; external reputation	[S274, S270]	CONFIRMED ; same person in both sources INFERRED, HIGH
Chris Coleman	Group Head of Sales and Account Management	Jan 2026	State Street (Global Head of Sales and Client Coverage).	Not researched	[S273]	CONFIRMED
Head of Early Careers	Not publicly named	n/a	No person attributed. Not searched on LinkedIn, to avoid identity errors.	n/a	WS7 gap	Gap

SOURCE UNCERTAIN

Three identities or titles need care. **James Pearson's** current "Head of FX" title rests on trade press (May 2024 and May 2026); no LSEG release was found [S282, S283]. **Trish Cuddy** appears under two different titles in two sources; that they are the same person is an inference [S274, S270]. **Julia Hoggett** is quoted as CEO of London Stock Exchange plc in July and September 2026 releases [S278, S228] but was not listed on the Group Executive Team page as read on 5 Oct 2026 [S273]. If any of these comes up, use the title from the most recent LSEG release.

What their public statements say they care about

These are quotes read in full during research. Each theme is followed by what it suggests for your answers **INFERRED**.

Who	What they said (verbatim)	What it tells you
Schwimmer , H1 2026 call	"Remember that Markets is 40% of LSEG revenue." [S71]	Leadership wants investors to see Markets, not only data and AI. Knowing the Markets numbers is on message.
Schwimmer , H1 2026 call	"There have been strong years and really strong years, but no weak years." (on Markets growth) [S71]	Consistency is the selling point. A good question: how does the team keep growth steady when volatility fades?
Schwimmer , H1 2026 report	"Our Markets businesses had an exceptional first half, achieving double-digit growth through sustained investment. With our plans for LSE 24 and growing momentum of transactions on the Private Securities Market, we are opening up significant new market opportunities." [S70, S221]	New venues and products are the growth story. LSE 24 and the PSM are safe, relevant topics.
Schwimmer , Q1 2026 call	"We have straight through FXall execution capabilities into ForexClear, so the kind of end-to-end processing." [S284]	End-to-end workflow matters. This supports a trade-lifecycle answer (F8).
Maguire , May 2026 release	"Her deep expertise in governance, risk and operational resilience will provide a distinct perspective as we continue to grow our global offering." (on LCH's new Chair) [S276]	Governance, risk and resilience sit next to growth in the Markets leader's words. Show you see both.
Hoggett , LSE 24 release	"The launch of LSE 24 marks an important step in the evolution of our markets, providing clients with greater flexibility beyond traditional trading hours and supporting more digital, connected global markets." [S278]	Clients and access come first in how LSE describes innovation.
Hoggett , tokenisation release	"Tokenisation has the potential to change how investors access...financial markets, but it must develop in a way that preserves the trust, rights and role of regulated markets." [S228]	Innovation inside regulation. Do not pitch crypto enthusiasm; pitch trusted infrastructure.
Walker , Mar 2026 release	"We remain committed to operating high quality markets that support our customers' evolving capital raising and trading needs." [S277]	Market quality and customer needs. Useful framing for debt listings and primary markets answers.
de Verdelon , Jan 2025 release	"I am committed to driving forward our strategic vision, fostering a culture of excellence, and strengthening our position as a market leader in risk management." [S275]	At LCH, being good at risk is the product. Matches the Excellence value [S271].
Cuddy , ISE 2024	"Critical to Post Trade's future success is maintaining our position as a leader in the external environment." [S270]	The people side links the graduate programme to the firm's market position. Show awareness of the outside world.

The pattern

Across the quotes, four themes repeat: steady growth in Markets, new venues and digital products (LSE 24, PSM, tokenisation), end-to-end workflow, and trust through risk management and resilience **INFERRED**. An answer that links growth to trust ("new products only work if clients trust the infrastructure") speaks the same language as the people who run the division.

Referencing a public statement appropriately

SAY THIS IN THE INTERVIEW

"In the LSE 24 release in July, LSEG said it wanted to give clients flexibility beyond normal trading hours. I wondered how you test demand for an overnight session before launch."

It cites the source (a release), uses the idea, and asks a question. The person's name is optional; the source is not.

DON'T SAY THIS

"As Julia Hoggett said..." to someone who does not work on LSE, or "I saw Daniel Maguire worked at J.P. Morgan". Careers of senior people are not interview content. Comments on activists, share price or rumoured deals are also off limits **INFERRED**.

- **Name the document, not the person**, unless the interviewer works directly in that leader's area and the quote is on point.
- **Quote accurately or paraphrase**. If you are unsure of exact words, say "LSEG said something like..." Never invent a quote.
- **Date it**. "In the July release" shows currency and lets them correct you if things have moved on.
- **Turn it into a question**. A public statement is a starting point for curiosity, not proof of insider knowledge.
- **Stay professional**. Use only what leaders said in their roles. Nothing personal, nothing from social media.

PART 11

The scenario playbook

One answer method, one priority order, and 36 rehearsed situations built from how LSEG Markets actually works, so a hard question meets a steady frame instead of a scramble.

Every later stage of this process puts you in a situation and watches what you do. The Immersive Online Assessment is very likely a Cappfinity-style simulation: one storyline, emails and data to read, and "what would you do" choices scored against a strengths model [S264, S265, S289] **INFERRED**. The strengths video gives you one take of roughly one to two minutes per question, according to a candidate anecdote [S291] **REPORTED**. The virtual assessment centre includes group work, where (on another LSEG track) two assessors watched group behaviour more than content [S292] **REPORTED**.

Across all three, the assessor scores two things: what you would do, and how you hold yourself while you decide. The JD says it directly: they want people who "recognise that what you achieve is equally important as how you achieve it" [S260]. This part gives you a fixed method so that the "how" stays calm even when the "what" is hard.

The frame-holding method

Use the same four steps for every scenario, in every stage. In a live interview the whole answer runs 45 to 75 seconds. In the recorded video you can let the "Act" step run longer, up to about two minutes in total, but keep the shape.

FIGURE 38

The four-step answer protocol: steady, sort, act, close

Timeline of a live answer (seconds)

The four steps run left to right in every answer; Steady is the dark block in the first five seconds. In the recorded video, stretch Act but never drop Close. The phrases are deliberately plain so you can say them under pressure. Most of the time goes on Act; Steady and Close are short but they are what assessors remember.

Source: method built for this pack **INFERRED**. Video answer length 1 to 2 minutes is a candidate anecdote [S291]; strengths-style scoring [S264, S289].

KEY TERM

Frame: the structure you hold an answer in. If you have a frame (steps, an order of priorities, a closing line), a hostile follow-up only moves you inside the frame. Without one, every follow-up feels like starting again. **Situational judgement:** a test format that describes a work situation and asks what you would do. It scores judgement, not knowledge.

Each step in detail

Step	Exact words to use	What it does for you	Common mistake
1 Steady 0 to 5 s	"Let me check I have this right: you're asking what I'd do when the client can't connect and needs to trade before the fix."	Buys three seconds, shows you listen, and sets the boundaries of the problem so a follow-up can't silently change it.	Answering before the question finishes. Saying "Great question".
2 Sort 5 to 20 s	"Two things matter here: getting the client trading again, and not cutting corners on how. The second one sets the limits on the first."	Shows judgement before action. Names the collision out loud, which is what the priority order below resolves.	Listing six considerations. Saying "it depends" and stopping there.
3 Act 20 to 60 s	"First I'd log it with the incident team. Then I'd check whether it's one client or many. Then I'd call the client back by 8:20 with what we know."	Concrete verbs, named owners, a time. One LSEG fact (for example, that outages are a named principal risk ^[S302]) shows you know where you are.	"I would communicate effectively with stakeholders." No verbs, no names, no times.
4 Close 60 to 75 s	"So the client hears from us when we said, the incident is logged, and nothing I promised is outside my control. Afterwards I'd ask what the root cause was."	Restates outcome, owner and record. Ends the answer cleanly so the next question starts from strength.	Trailing off: "...so yeah, something like that."

SAY THIS IN THE INTERVIEW

If you lose your place mid-answer, use the frame to find it: "So, to bring that together: first..., then..., and I'd make sure it's on record." It sounds deliberate, not lost.

The priority order when good things collide

Most scenario questions are not about right versus wrong. They are about two good things that cannot both win: a client's speed against a check, a senior person's request against another's, helpfulness against confidentiality. Decide the order now, at your desk, so you never have to invent it on camera.

For LSEG Markets the order follows from what the businesses are. LSEG's venues and clearing houses are regulated market infrastructure: London Stock Exchange plc is a Recognised Investment Exchange, LCH Ltd is a Recognised Clearing House supervised by the Bank of England, and the FX venues are MTFs authorised by the FCA and the Central Bank of Ireland ^[S300, S304, S341] **CONFIRMED**. The Bank of England supervises CCPs to "protect and enhance financial stability in the UK" ^[S357]. LSEG names its own cyber risk as one that could "pose systemic risks" ^[S302]. A shortcut here is not a private matter between you and one client.

FIGURE 39**The priority order for collisions: higher tiers win, and speed comes last****THE ONE SENTENCE THAT HOLDS EVERY FRAME**

"I'd keep it within the rules, treat every customer the same, follow and record the process, and then move as fast as I possibly can inside those lines."

Read top to bottom. When two goods collide, the higher tier wins, and you then work hard to deliver as much of the lower tier as you can. Speed is last in the order, not least in effort.

Source: regulated status [S300, S304, S341]; open-access wording, OFT decision 2012 [S305]; FX Global Code P19, P20 (Dec 2024) [S343]; three lines of defence, Annual Report 2025 [S300]; Integrity value, Code of Conduct [S307]. Ordering is this pack's judgement **INFERRED**.

Why this order, tier by tier

- **Tier 1 beats everything** because the firm's licence to operate is the product. LSEG's Integrity value reads: "We stand by our principles and deliver on our promises. We earn trust by acting responsibly" [S307]. The Code of Conduct prohibits trading on "confidential, proprietary, inside and/or material non-public information" [S307], and UK MAR defines inside information as precise, non-public and likely to have a significant effect on prices [S349].
- **Tier 2 beats process** because fairness is written into LSEG's structure, not just its values. When LSEG took control of LCH, the OFT recorded that "No exchange will be favoured over any other and LSEG's trading services users will not be favoured over any other exchange's users" [S305]. LSEG's Partnership value begins: "Our open model is integral to how we do business" [S307]. In FX, the Global Code requires firms to "clearly and effectively identify and appropriately limit access to Confidential Information" (Principle 19) [S343].
- **Tier 3 beats speed** because LSEG puts accountability for risk "within the first line of defence", with second-line oversight and third-line assurance [S300]. As an intern you are in the first line. Your job is to follow the control, escalate, and write it down, not to decide that a control does not apply today.
- **Tier 4 is still a duty.** The JD says the division needs "instant reaction and long-term vision" [S260]. Never use the order as an excuse to be slow. The best answers say what you would do in the next ten minutes.

Collision	Winner	What you say
Client wants a trade amended now; amendments need the operations process	3 over 4	"I'll get it to the team who can amend it properly, and I'll tell you within the hour where it stands."
Loyal client asks what another bank is doing	2 over 4	"I can't talk about any other client, and you'd want the same for you. Here's what I can share."
Senior colleague asks you to backdate a log entry	1 over 3	"I can add a note today that explains the timing. I can't change the date it was done."
Issuer wants faster admission than the review window	2 over 4	"Every issuer gets the same review. I can make sure nothing on our side adds delay."
Manager wants a flattering chart for an external deck	1 over 4	"I'll show both periods with context so it holds up if a client checks."

DON'T SAY THIS

"I'd just use my judgement." It sounds like you will make up the order on the day. Say the order:
 "Rules first, then fairness, then the process, then speed, and I'd push hard on speed inside those."

Eight ways interviewers break a frame

Good interviewers push. They are not trying to catch you out for sport. They want to see whether your answer was a real decision or a memorised line. Each push below has a counter. The counter always does the same thing: it accepts the new information, then puts it back inside your frame.

How to tell a better reason from pressure

The hardest skill is knowing when to change your mind. Change it when the interviewer gives you a new **fact** ("the client is already approved for that route", "the control owner has signed a waiver"). Hold it when they give you only new **pressure** ("the MD is angry", "everyone else does it", "you'll lose the client"). Say which one it is: "That's new information, so I'd change step two" or "I understand that's uncomfortable, and I'd still do it this way." Assessors are often scoring exactly this distinction **INFERRED**.

FIGURE 40**Eight frame-breakers and their counters****1 Interruption***"Sorry to stop you, but what about the client?"***COUNTER**

"Good point. Let me take that now, then finish the step I was on." Answer it in two lines, then return: "So, back to step two..."

2 Flat contradiction*"No. That's wrong. You wouldn't do that."***COUNTER**

"Which part would you do differently?" If they are right: "You're right, I'd change that. The rest still holds because..."

3 Silence*Nothing. They look at you and wait.***COUNTER**

Count three in your head. Then: "So, in short, I'd do X because Y. Would you like me to go deeper on any part?" Do not start retreating.

4 Escalation*"Now the client says they'll call your CEO."***COUNTER**

"That raises the stakes. It doesn't change the order. I'd still do X, and I'd now tell my manager straight away rather than at the end."

5 Authority squeeze*"Your MD tells you to just do it. Now what?"***COUNTER**

"I'd want to help them get it done. I'd ask whether there's an approved route, and if not, I'd escalate it rather than skip it."

6 False choice*"Lose the client or bend the rule. Pick one."***COUNTER**

"I don't think those are the only two options. I'd keep the rule, and then work very hard for the client inside it. Here's how..."

7 Knowledge trap*"What exactly is LCH's margin model for FX?"***COUNTER**

"I don't know the detail, and I won't guess. What I do know is... and I'd check it with... before I used it with a client."

8 Invitation to badmouth*"Your old team sounds hopeless, didn't it?"***COUNTER**

"I'd rather talk about what I could control. What I learned was... and what I'd do now is..." Stay generous about absent people.

Every counter has the same shape: acknowledge, then return to your frame. None of them argues, and none of them gives up the decision you already made unless you hear a genuinely better reason.

Source: method built for this pack **INFERRED**. Interviewer tactics are common practice, not LSEG-specific; LSEG has not published its interview questions [WS6, S264].

CHANGING YOUR MIND WELL

"That's a fair challenge. If the owner has already approved an exception, then yes, I'd use it and make sure it's logged. I'd change my answer on that point."

CHANGING YOUR MIND BADLY

"Oh, OK, then I suppose I would just do it."
This tells the assessor that your first answer was a guess and that pressure works on you.

Staying calm physically

Your body leaks stress before your words do. Prepare the room and your breathing the way you prepare content.

Breathing

- Before each question (or while the video prep timer runs): breathe in through the nose for four, out through the mouth for six. Twice. A longer out-breath slows you down.
- When a hard follow-up lands: breathe out first, then say your Steady line. The out-breath is your three seconds.

Posture on video

- Camera at eye level (books under the laptop). Face lit from the front, not a window behind you.
- Sit back in the chair, then lean in slightly. Feet flat. Hands visible and still on the desk or moving gently with your points.
- Look at the camera lens when making your main point and when closing, not at your own face on screen.

Notes

- One index card behind or beside the camera: the four steps, the priority order, three numbers. Not a script: reading shows on camera.
- For the virtual assessment centre: a blank sheet for notes during reading time, with your priority order written at the top.

Water and pace

- A glass of water in reach. A sip is a legitimate two-second pause in a live interview.
- Speak slower than feels natural. Pause at full stops. Under stress most people speed up by a third.
- In the recorded video, the anecdote is one take per answer ^[S291] **REPORTED**. Use the untimed prep to sketch the four steps, not to write sentences.

WHY THIS MATTERS

In a strengths-based format, assessors watch for energy and authenticity as well as content ^[S264, S289]. Calm, unhurried delivery reads as confidence. A rushed, perfect script reads as rehearsal.

The scenario ladder: 36 cards

Each JD duty line, plus the two behaviour lines, gets three scenarios: easy (do you know the basics), medium (two goods collide), hard (pressure or an ethical edge). Practise them aloud with the four-step protocol, timing yourself. The figure is the map; the cards follow in the same order.

FIGURE 41**The scenario ladder: every duty line, three rungs**

JD duty line	EASY	MEDIUM	HARD
1 FX customers: solve problems, know goals	1E What can FXall do for us?	1M Too many rejected trades (last look)	1H "Which bank should we send flow to?"
2 Keep customers informed, relationships	2E Prepare a client business review	2M FXall outage: the client calls at 8:05	2H "Off the record, what is Bank X doing?"
3 Post-sale activity	3E New price stream not showing	3M Trade break at 4pm	3H Invoice dispute and an exit threat

Rows follow the JD's own duty lines in order; columns climb in difficulty. Hard cards usually add an ethical edge or a senior person's pressure on top of the medium problem. Practise one full row a day.

Source: duty lines from the JD, req R0123386 [S260]; scenario content from WS9 fact base [S300 to S357]. Scenarios are illustrative practice cases, not reported LSEG interview questions **INFERRED**.

How to read a card

Setup is the situation. **Trap** is the answer most candidates give. **Say** is a model answer in the four-step shape: adapt the words, keep the order. **Why** gives the LSEG fact behind it. **Twist** is the follow-up push, and *Hold* is how to keep your frame.

Line 1: Solve problems for FX customers and understand their goals

1E. "What can FXall do for us?"

EASY

SETUP A mid-sized asset manager is new to FXall. Their treasurer says: "We need to show our board we get good prices, and we spend too long on manual work."

TRAP Reciting a feature list before you know which feature matters.

SAY "Can I check I have the two goals right: evidence of good execution, and less manual work? For evidence, FXall's Trade Performance Reporting lets you evaluate the cost and effectiveness of your execution. For manual work, trades can flow straight through to your own systems by FIX API or your treasury system, with confirmations and settlement instructions handled on the platform. I'd suggest we agree one measure for each goal now and look at it together in three months."

WHY FXall offers confirmations, settlement instructions, Trade Performance Reporting and STP (straight-through processing: no re-keying) ^[S340]. The JD asks you to "understand their business goals" ^[S260]. Leading with their goals, not your product, is the Partnership value: "we work together to solve evolving needs" ^[S307].

TWIST "Just tell us which execution method is cheapest." *Hold*: "It depends on your trade sizes and currency pairs. FXall has request-for-quote, bank price streams, an anonymous order book and algorithms like TWAP ^[S342]. I'd rather show you your own data than give a general answer that's wrong for you."

1M. Too many rejected trades (last look)

MEDIUM

SETUP A hedge fund client says one liquidity provider keeps rejecting their trades after quoting. "They're using last look against us. What are you going to do about it?"

TRAP Agreeing the bank is cheating, or defending the bank. Either way you have judged a third party on one client's say-so.

SAY "I take that seriously, so let me get the facts: which provider, which pairs, what times, how many rejects. Last look is a final chance for a provider to accept or reject a request at its quoted price, and the FX Global Code says providers using it should be transparent and disclose it to clients. So I'd pull your own Trade Performance Reporting so you can see the reject pattern, point you to that provider's last-look disclosure, and raise the pattern internally with the team that manages liquidity providers. I'll come back to you by Thursday with what I've found."

WHY FX Global Code Principle 17 (Dec 2024) ^[S343]; GFCX guidance says last look "should not be used for purposes of information gathering" ^[S344] **REPORTED**. Reporting data comes from FXall ^[S340]. The split (provider owns disclosure, venue supplies data) is this pack's reading **INFERRED**.

TWIST "Just tell us which other banks don't do it." *Hold*: "Which providers you trade with is your choice, and I'll help you set that up. I can't rank providers using other clients' trading. Your data, yes; theirs, no."

1H. "Which bank should we send our flow to?"**HARD**

SETUP A corporate treasurer wants you to name the best bank among FXall's providers and hints that FXall should rank banks using what it sees across all clients. "You see everything. Help us."

TRAP Feeling helpful and giving a name, or hinting at what other clients see. Both break fair treatment (tier 2) and confidentiality.

SAY "I want you to get the best result, and I'll do that with your data, not anyone else's. FXall has over 200 liquidity providers; your own execution reports will show which fill you well on your pairs and sizes. What I can't do is use other clients' trading to rank banks for you: that's confidential to them, in the same way yours is to you. If it helps, I'll walk your team through reading your own reports next week."

WHY 200+ liquidity providers, 2,400+ institutional clients ^[S340]. FX Global Code P19 and P20: limit access to confidential information and do not disclose it externally ^[S343]. Code of Conduct: never disclose confidential information without a legitimate need to know ^[S307]. A venue that picks favourites among providers loses the trust that makes it a venue **INFERRED**.

TWIST "Another platform would do this for us." *Hold:* "Then I'd ask how they protect your data too. The rule that stops me sharing theirs is the rule that protects yours."

Line 2: Maintain relationships and keep customers informed**2E. Prepare a client business review****EASY**

SETUP Your manager asks you to draft slides for a quarterly business review with a large FXall client next week.

TRAP Ten charts of volumes with no story, and no link to what the client said they wanted last time.

SAY "I'd start from the goals the client set last quarter. Then three sections: what they traded and how it changed; where their workflow had friction, such as rejects, breaks or support tickets; and two options for next quarter. I'd check every number against the source system before it goes in, and ask you which commercial topics, like new products, it's right to raise."

WHY LSEG's FX Senior Account Manager ad says the role leads "business reviews" and should "identify upsell, cross-sell, and new business opportunities across FX trading, workflow, data, and related LSEG solutions" ^[S313]. A new Group Head of Sales and Account Management joined in Jan 2026 ^[S306].

TWIST "Client cancelled. Send it by email instead." *Hold:* "I'd send a one-page summary with the three points and the numbers, and offer a 15-minute call. Same content, shorter."

2M. FXall outage: the client calls at 8:05**MEDIUM**

SETUP 8:05 London time. A client can't connect to FXall and has month-end hedges to do. They're angry and want a fix time.

TRAP Guessing the cause, promising a fix time you don't own, or going quiet until you know more.

SAY "I'd say: 'I hear you, and I'm on it now. I'll call you back by 8:20 with what we know, even if it isn't much.' Then I'd log it through the incident process straight away, check whether it's one client or many, and ask the support team whether there's an approved alternative route for them to trade. At 8:20 I call back, as promised. I won't guess the cause or promise a fix time I don't control."

WHY LSEG's H1 2026 principal risks include technology risk, where "system outages... could impact customer access" ^[S302]. The 2024 Workspace outage disrupted RNS publication and drew market-wide attention ^[S98]

REPORTED. In infrastructure, reliability is the brand **INFERRED**.

TWIST "Can't you just do the trade for me over the phone?" *Hold:* "I can't execute trades for you; that isn't my role. What I can do is find out in the next few minutes which approved routes are open to you."

2H. "Off the record, what is Bank X doing?"**HARD**

SETUP Over coffee, a long-standing, friendly client asks: "Off the record, is [big bank] pulling back from emerging market FX? You must see it."

TRAP A hint, a smile, or "I can't say, but...". A nod is disclosure.

SAY "I'd say it plainly and warmly: 'I can't talk about any other client's activity, on or off the record, and you'd want me to say exactly the same about you.' Then I'd move to what I can offer: our published volume figures, public market data, or a look at their own trading."

WHY FX Global Code P19 and P20 ^[S343]; Code of Conduct need-to-know rule ^[S307]. Confidentiality is part of how LSEG's structure was approved: information barriers so rivals can deal with LCH "assured of the confidentiality of those discussions" ^[S305].

TWIST "Come on, just yes or no." *Hold:* "Even yes or no is information. The answer's the same, and I'd still like to help with what I can share."

Line 3: Deal with post-sale activity**3E. New price stream not showing****EASY**

SETUP A client asked to receive a new bank's price stream on FXall last week. It still isn't showing.

TRAP Promising "it'll be on today" without knowing who has to approve what.

SAY "I'd find the request first. Permissioning on FXall runs through FXall Admin, the reference data and permissioning tool, as a price stream entitlement request. I'd check whether it was submitted, who still has to act, for example the bank agreeing to stream to this client, and tell the client today exactly what is pending and with whom."

WHY LSEG's FX Venue Onboarding ad lists "Price Stream Entitlement requests" in "FXall Admin" ^[S317]. PriceStream is disclosed bank streams ^[S342]. That the bank must agree is this pack's reading of "disclosed" ^{INFERRED}.

TWIST "Can't you just switch it on yourself?" *Hold:* "I don't have that access and I wouldn't want it. Entitlement controls protect both you and the bank."

3M. Trade break at 4pm**MEDIUM**

SETUP A client's back office says the confirmation for a large EUR/USD forward shows a different value date from their record. Settlement is close.

TRAP Telling the client which side is right, or trying to amend the trade yourself to be helpful.

SAY "Steady: 'Let me take the trade ID and both versions.' Sort: the risk is settling on the wrong date, so time matters, and amendments must be controlled. Act: I'd send it straight to the operations team that owns confirmations, and make sure the counterparty bank is contacted through the proper channel. Close: I tell the client who is handling it and when they'll hear back, and I log it so we can see whether the same break keeps happening."

WHY FX Global Code P46: confirm trades "as soon as practicable"; P48: "identify and resolve confirmation and settlement discrepancies as soon as practicable"; P45: amendments "in a carefully controlled manner" ^[S343]. FXall provides confirmations and STP ^[S340].

TWIST "The bank says it's our error." *Hold:* "It might be. The fix is the same: find the source, correct it through the controlled process, and if it's ours, say so and fix the cause."

3H. Invoice dispute and an exit threat**HARD**

SETUP A client says this quarter's invoice is far higher than they expected and they will move to a rival venue unless it's fixed. They want a credit on this call.

TRAP Offering a discount you have no authority to give, or blaming the billing team.

SAY "I'd acknowledge it and not argue on the call. Then I'd get the invoice and the contract, find exactly which line they dispute, and check with billing whether it's higher usage, a fee change they were told about, or an error. I'd come back by a set time with the explanation. If it's our error, we fix it. Any credit or price change is for my manager to decide, and it has to be consistent with how we treat other clients."

WHY FX revenue mixes transaction fees (about 75%) with recurring membership and data fees (about 25%) [S303], so a bill can rise with usage. LSEG is building a "unified revenue and billing platform" [S301]. LSEG FX fee schedules were not found in research.

TWIST "Your competitor offered us half price." *Hold:* "I'll pass that on accurately today. I won't match a price on the call; I'll make sure the person who decides hears it."

SOURCE UNCERTAIN

How LSEG FX handles billing queries, and its fee schedules, were not found in public sources. Treat 3H as a general method, not a description of LSEG's process.

Line 4: Research into global markets and debt listings**4E. ISM or Main Market? A one-page answer****EASY**

SETUP Your manager asks for a one-page comparison for an overseas issuer choosing where to list a bond.

TRAP Copying an old LSE brochure that still talks about the "UKLA" and the "Prospectus Directive".

SAY "I'd set out three rows. Who it's for: the International Securities Market is for qualified, professional investors; the Main Market can serve a wider investor base. Who decides admission: on ISM, the Exchange; it isn't on the FCA's Official List. What document: ISM uses admission particulars, and exempt issuers don't need them. I'd use the January 2026 rulebook terms, because the older info pack predates the current regime, and I'd flag the timings as 'check current'."

WHY ISM Rulebook (Jan 2026): MTF for qualified investors, admission "determined by the Exchange", not on the Official List, admission particulars not required for exempt issuers [S346]. The ISM info pack cites UKLA and the Prospectus Directive and is out of date [S347].

TWIST "So which is better?" *Hold:* "It depends on who the issuer wants to sell to. I'd lay out the trade-offs and let the issuer decide with its advisers."

4M. "Can we list on ISM by Friday?"**MEDIUM**

SETUP Monday morning. An issuer's adviser emails: they want ISM admission on Friday. They haven't submitted draft particulars yet.

TRAP Saying yes to keep them happy.

SAY "I'd do the arithmetic first. The Exchange aims to comment within three days of a first submission and two days of later ones, and wants final documents and a signed ISM Form 1 by 9am one business day before admission. Submit today, and first comments could come by Thursday, with the final-documents deadline also Thursday at 9am. So Friday is at serious risk. I'd tell them that honestly, say what would have to be true for it to work, check with the admissions team whether the express route or an exemption applies, and give a realistic date."

WHY "Competitive turnaround times (3+2)"; 9am one business day before; decision via a Dealing Notice on RNS [S347]; express route exists [S346]. The info pack is older than the 2026 rulebook, so current timings need checking.

TWIST "Their CEO is very well known. Can't you push it through?" *Hold:* "Every issuer gets the same review. I can make sure nothing on our side adds delay and that they know exactly what we need."

4H. "Pick a window that looks better"**HARD**

SETUP Your research for an external client presentation shows London listings are recovering from a low base. A senior colleague asks you to choose a time window that makes the trend "look stronger".

TRAP Quietly cherry-picking, or refusing in a way that embarrasses them.

SAY "I'd offer a version that is both strong and fair: 'Can I show the recent rise and the longer period side by side, with context? For example, 2025 UK IPO proceeds were up 170% to £2.1bn, but from a weak 2024. If we only show the flattering window and a client checks, we lose more than a slide.' Then I'd build it that way."

WHY 2025: 23 UK IPOs raising £2.1bn, up 170% on £777.7m ^[S192]; 88 companies left the LSE in 2024 ^[S200]
REPORTED . Integrity: "We earn trust by acting responsibly" ^[S307]. LSEG is itself a listed company, so its external numbers are scrutinised **INFERRED** .

TWIST "It's only internal, relax." *Hold:* "Then let's label the window clearly, so nobody reuses it externally by mistake."

Line 5: Valuations, shareholder and geographic analysis**5E. Who owns this issuer, and where?****EASY**

SETUP Build a shareholder and geographic breakdown of a listed company from public data. Practise on LSEG itself.

TRAP Mixing figures from different dates in one table with no dates shown.

SAY "One dated public source per number. For LSEG at December 2025: Qatar Investment Authority 6.2%, BlackRock 5.7%, Capital Group 5.1%, Microsoft 4.1%, Lindsell Train 4.1%. I'd group holders by type: sovereign, index, active, strategic. I'd flag what's missing: Elliott built a stake in February 2026 but its size wasn't disclosed. For geography, I'd be clear that revenue 'by location of service provider' is where LSEG's entity sits, not where the customer is."

WHY Top holders and revenue by location, Annual Report 2025 ^[S74]; Elliott stake ^[S86].

TWIST "Can you find out who's buying this week?" *Hold:* "From public disclosures, yes. Not from our own venues' data about named clients. That isn't mine to use."

5M. Two sources give different numbers**MEDIUM**

SETUP You need LSEG's headcount for a slide. The Annual Report says 28,516 at end 2025; the job advert says 25,000; the investor deck says over 26,000.

TRAP Picking one silently, or averaging them.

SAY "I'd use the Annual Report figure, 28,516 at 31 December 2025, because it is audited and dated, and footnote the others as older marketing copy. The general habit: name the source, the date and the definition, and show the gap if it matters."

WHY 28,516 ^[S300]; "over 26,000 people in 65 countries" ^[S303]; "25,000 people across 65 countries" in job ads ^[S317]. The JD's curiosity for data means checking definitions ^[S260].

TWIST "Just use the round number, it's a slide." *Hold:* "Happy to say 'about 28,500'. I wouldn't use 25,000: it's a different, older number, not a rounding."

5H. "A valuation in an hour, please"**HARD**

SETUP A senior colleague needs a rough valuation of a private company that is thinking about listing, for a meeting in an hour. Data is thin.

TRAP A single precise number that looks authoritative, or "I can't, there's not enough data".

SAY "I'd give a range, not a point, with the method in one line and the two assumptions that move it most, labelled 'indicative, internal, estimate'. I'd add what would change it. And because a possible listing that isn't public could be inside information, I'd keep the file and the conversation to the people who need it."

WHY UK MAR Art 7: inside information is precise, non-public and price-sensitive ^[S349]; Code of Conduct need-to-know ^[S307]. Valuations shift: Visma (about €19bn reported) chose London then postponed to 2027 ^[S194]

REPORTED

TWIST "The company wants to quote the top of your range in its pitch." *Hold:* "It's an internal estimate, not advice; that's for their advisers. I'd tell my manager about the request."

Line 6: Delivery of business intelligence**6E. Build the Markets KPI one-pager****EASY**

SETUP Your manager wants a one-page summary of Markets volumes for a team meeting.

TRAP A table of numbers with no definitions and no "so what".

SAY "I'd use the KPIs LSEG publishes, with definitions. H1 2026: UK average daily value traded £6.67bn, up 33.5%; Tradeweb ADV \$3.2trn, up 24.8%; FX ADV \$561bn, up 5.8%; SwapClear notional \$1,165trn, up 29.4%. One headline line on top: volumes rose everywhere, fastest in UK equities and SwapClear, slowest in FX. Then one of my own measures, clearly labelled: revenue per unit of volume."

WHY KPI table, H1 2026 ^[S302]. ADV means average daily volume. Revenue capture (for example FX revenue £272m on \$525bn ADV in 2025) is this pack's metric, not one LSEG publishes ^[S301] **INFERRED**.

TWIST "Make it fit in one sentence." *Hold:* "Markets volumes grew across the board in H1 2026, led by UK equities and SwapClear, with FX the slowest."

6M. FX volume jumps 40% overnight**MEDIUM**

SETUP Your dashboard shows FX average daily volume up 40% day on day. Your manager wants the daily note out in 30 minutes.

TRAP Reporting it as news without checking.

SAY "I'd check before I report. Is it real: a market event, month-end, a holiday elsewhere? Is it data: a duplicated feed, a currency conversion, a changed definition? I'd compare against the source system and known events. If I can't settle it in 30 minutes, the note goes out on time with the figure flagged 'under review' and a time for the update."

WHY LSEG reported "exceptional" clearing activity in Q1 2026 on volatility ^[S285], so big moves can be real. LSEG says customer-raised data quality issues fell 51% over four years ^[S301]: data quality is a measured priority.

TWIST "The MD has already seen it and is pleased." *Hold:* "Then it matters more that I tell them today if it's wrong."

6H. Two seniors, two market share numbers**HARD**

SETUP Two senior people want LSEG FX's market share. One wants it against total global FX turnover; the other against a narrower electronic market. Each wants their version on the slide.

TRAP Picking the more senior person's version, or the more flattering one.

SAY "I'd show both, each with its definition, and say which question each answers. For example, LSEG FX's \$561bn ADV against BIS global turnover of \$9.6tn a day is about 6%, but BIS includes FX swaps, which are 42% of turnover, and the dates differ, so it's a rough estimate. Then I'd ask my manager to agree which one goes on the slide, and copy both people."

WHY BIS April 2025: \$9.6tn a day, swaps 42% ^[S163]; LSEG FX ADV H1 2026 ^[S302]. $561 / 9,600 = 5.8\%$ is this pack's arithmetic across different dates **INFERRED**, est.

TWIST "Just pick one, I need it tomorrow." *Hold:* "Then I'd pick the one that matches the question on the slide, write the definition under it, and tell the other person so no one is surprised."

Line 7: Strategic initiatives**7E. Measure FXall use inside Workspace****EASY**

SETUP You're asked how to measure whether FX clients are actually using FXall inside the Workspace desktop.

TRAP One vanity metric ("number of logins").

SAY "I'd measure adoption, depth and outcome. Adoption: the share of FXall clients who trade through Workspace at all. Depth: trades per client and which workflows they use. Outcome: support tickets, onboarding time and whether retention or cross-sell changes. I'd split by client type, and say where we only have proxies."

WHY "We have now added a large proportion of FXAll's functionality" to Workspace ^[S302]. The FX account role targets cross-sell "across FX trading, workflow, data" ^[S313].

TWIST "We don't have outcome data yet." *Hold:* "Then I'd track adoption and depth now, define outcome measures, and set a date to review them."

7M. Size LSE 24 demand in two days**MEDIUM**

SETUP You have two days to give a first view on demand for overnight trading of ETPs on LSE 24.

TRAP A confident single number with hidden assumptions.

SAY "I'd start with who would trade between 17:00 and 07:50 London time: investors in Asia and the US, and UK retail investors after work. For each, one piece of evidence and one assumption. I'd give a range and the two assumptions that drive it, and list what client testing should tell us."

WHY LSE 24: separate 24/5 venue, 17:00 to 07:50, ETPs first in H1 2027, client testing by end 2026 ^[S278]. ETP means exchange-traded product, such as an ETF.

TWIST "The product head loves it. Just make the case." *Hold:* "I'll build the strongest honest case, risks included. A case that hides them won't survive the committee."

7H. "Give our venue users an LCH discount"**HARD**

SETUP In a brainstorm a colleague proposes cheaper clearing at LCH for customers who trade on LSEG's own venues. "Easy cross-sell."

TRAP Enthusiasm. It sounds commercial, and it collides with LSEG's founding rule for LCH.

SAY "I like connecting the businesses, but I think this one hits a hard line. LCH has to offer services on fair, reasonable, open and non-discriminatory terms, and LSEG's trading users can't be favoured over other exchanges' users. So I'd redirect to connections that are allowed: workflow, like FXall inside Workspace, or joint products like RepoAgent from Post Trade Solutions and Tradeweb."

WHY OFT decision on open access [S305], LCH's "open access model" today [S304], RepoAgent [S301], FXall in Workspace [S302]. No LSEG statement ties ForexClear to FXall commercially (research gap).

TWIST "Deutsche Börse ties trading and clearing and does fine." *Hold:* "It does. It's a different model. LSEG chose open access, and that's part of why the market trusts LCH with over 90% of cleared interest rate swap notional [S303]."

Line 8: Operational improvements**8E. Map the FX onboarding steps****EASY**

SETUP You're asked to map how a new FX client is onboarded, end to end.

TRAP Proposing fixes before you know the process.

SAY "I'd map it as it is today before suggesting anything: each step, who does it, how long it takes, and where work is handed over or redone. I'd talk to the people who do each step, including teams in other locations, and check my map with them. Then I'd mark the two or three biggest delays."

WHY Onboarding of buy-side and sell-side clients runs in FXall Admin, from Manila among other places [S317], LSEG runs operations hubs across several countries [S319].

TWIST "The Manila team does half of it. Just guess their part." *Hold:* "I'd rather book 20 minutes with them. Guessing their part is how maps go wrong."

8M. "We like the old spreadsheet"**MEDIUM**

SETUP You find a manual spreadsheet step that causes repeated errors. The team that uses it doesn't want to change.

TRAP Arguing from opinion, or going over their heads.

SAY "I'd bring data, not opinion: how many errors in the last three months, how long each took to fix. I'd ask the team what they like about the spreadsheet, because there's usually a reason. Then I'd suggest a small trial run alongside the old way, so nothing breaks, and give the team the credit if it works."

WHY LSEG reports engineering changes that "increased our velocity by 25%, while reducing major incidents by 50%", and an AI Q&A tool that cut query resolution time 40% across 22,000 queries a month [S301]. Change value: "We embrace change" [S307].

TWIST "The last intern's idea broke things." *Hold:* "That's why I'd run it in parallel and keep the old way until it's proven."

8H. Your fix removes a four-eyes check**HARD**

SETUP Your process improvement would save hours a week, mainly by removing a second-person check on client settlement details. Your manager likes the time saving.

TRAP Proposing the removal because it makes your project look good.

SAY "A four-eyes check is a control, so I wouldn't remove it in my proposal. I'd propose automating it instead: a system check that flags mismatches. Any change to the control goes through its owner and the second line. If they agree it's redundant, it can go properly, and on record."

WHY Three lines of defence ^[S300], LSEG's control framework includes "material control assessments and attestations" ^[S314]. FX Global Code P51: standard settlement instructions maintained by staff segregated from sales and trading ^[S343]. See the composure set below for the live version of this.

TWIST "Nobody even looks at that check." *Hold:* "Then let's ask the control owner to confirm that in writing. If it's truly redundant, it'll be easy to remove properly."

Line 9: Risk monitoring and analysis**9E. Explain the default waterfall in 60 seconds****EASY**

SETUP "Explain to a new joiner what happens at LCH if a member defaults."

TRAP Jargon without order, or getting the order wrong.

SAY "LCH stands between buyer and seller, so if a member fails, LCH takes on its trades. The losses are absorbed in order. First, the defaulter's own margin and default fund contribution. Next, LCH's own capital, its 'skin in the game'. Only then the other members' default fund. Initial margin is set at 99.7% confidence, and LCH says all nine member defaults it has managed stayed within initial margin. Lehman's \$9 trillion swap book used about 35% of its margin."

WHY Waterfall order, 99.7%, nine defaults ^[S351]; Lehman ^[S354]. Initial margin is collateral posted upfront to cover a member's possible losses.

TWIST "And if that's not enough?" *Hold:* "There are further tools in LCH's rules, but I don't know the detail beyond the waterfall, and I'd check rather than guess."

9M. Member asks to pay a margin call later**MEDIUM**

SETUP On a volatile day a clearing member's operations contact asks you to "have a word with risk" to delay an intraday margin call by a few hours, as a favour.

TRAP Treating it as a relationship favour, or promising anything.

SAY "I'd say: 'I'll pass that to the risk team now, exactly as you've put it. I can't promise anything: margin calls follow the same rules for every member.' Then I'd pass it on in writing straight away, tell the member who will reply, and leave the decision with risk."

WHY ^[S305] LCH makes "multiple intraday margin calls" ^[S351]; LCH must treat users on non-discriminatory terms

TWIST "They're one of the founding banks." *Hold:* "That's why the rules have to be the same. Members sit on the risk committee, and no one group has a majority ^[S304]."

9H. Limit breach found at 6pm on Friday**HARD**

- SETUP** Compiling a risk report on Friday evening, you notice a metric went over its limit two days ago. Nobody has flagged it.
- TRAP** Leaving it until Monday, or quietly fixing the data so it disappears.
- SAY** "I'd do a quick check that it isn't my own data error, five minutes, not a reason to wait. Then I'd tell my manager tonight with the evidence: what, when, how far over. If I can't reach them, the next person on the escalation path or the risk team. I'd log it as a risk event as the process requires. I wouldn't speculate on the cause."
- WHY** LSEG's control framework includes "risk event and issue management standards" and a Group Risk team that "proactively identifies, escalates" ^[S314], first line owns risk ^[S300].
- TWIST** "It's probably nothing. It can wait." *Hold:* "Probably. A Friday flag that turns out to be nothing costs ten minutes. A Monday surprise costs much more."

Line 10: Interpreting data for risk projects and reporting**10E. Vendor risk data into committee MI****EASY**

- SETUP** You're given a spreadsheet of third-party (vendor) risk ratings and asked to turn it into a one-page report for a committee.
- TRAP** Pasting the whole spreadsheet in small font.
- SAY** "I'd ask what decision the committee makes with it. Then: exceptions first (anything red or getting worse), the trend since last time, and each red item with its owner and next action. The full list goes in an appendix."
- WHY** LCH first-line roles produce third-party risk MI (management information) "for senior management, committees and Board forums" ^[S318]. Third-party risk is a named principal risk ^[S302].
- TWIST** "They don't like red. Can it look greener?" *Hold:* "I'll show the red honestly with the action next to it. That's what the committee needs to do its job."

10M. Pack due today, one feed missing**MEDIUM**

- SETUP** A committee risk pack is due at 5pm. The data feed for one entity hasn't arrived.
- TRAP** Copying last month's figure in, or missing the deadline without warning.
- SAY** "I'd tell my manager now, not at 4:55. Then I'd deliver on time with the gap clearly marked: 'data not received; last confirmed value X at date Y; update by Z'. I'd chase the data owner and log why it was late."
- WHY** LCH Ltd's Board has Risk and Operational Resilience committees ^[S304]; Data is a named principal risk ^[S302].
- TWIST** "Just use last month's figure. No one will notice." *Hold:* "I can show last month's figure, labelled as last month's. I can't present it as today's."

10H. Your analysis says the model is wrong**HARD**

- SETUP** Your back-testing suggests a margin model under-covers one product in stressed markets. Your manager says: "Models team owns that. Leave it."
- TRAP** Dropping it, or going straight over your manager's head.
- SAY** "I'd say: 'I may well be wrong, and I'd like to learn why. Could we send my two-page write-up to the model owner so they can check it?' I'd make the note short and factual: data, method, result, limits. If it were blocked and I still believed it mattered, LSEG has Speak Up channels, but I'd expect the normal route to work."
- WHY** Model risk, including margining, is a named principal risk ^[S302]. Code of Conduct: "not look the other way"; no retaliation ^[S307]. Speak Up received 192 reports in 2025 ^[S300].
- TWIST** "You're an intern. You don't understand the model." *Hold:* "That's possible. That's exactly why I'd like the owner to tell me where I'm wrong."

Line 11: Individual contributor and team work across the product lifecycle

11E. A vague task on day three

EASY

- SETUP** Your manager says: "Have a look into post-trade for FX clients," then goes into a meeting.
- TRAP** Spending three days on something nobody needed.
- SAY** "I'd write down my understanding and send it: 'I'm reading this as: which post-trade problems FX clients raise most, in a one-page note by Thursday. Unless you'd like something different, I'll start there and check in on Wednesday.' Then I start."
- WHY** The JD expects you to be "an individual contributor" [S260]. Post-trade on FXall covers confirmations, settlement instructions and reporting [S340].
- TWIST** "No reply by Wednesday." *Hold:* "I'd send a two-line update and keep going on my stated plan."

11M. The dominator in the group exercise

MEDIUM

- SETUP** At the assessment centre, one candidate talks over everyone and pushes their option.
- TRAP** Fighting them for airtime, or going silent.
- SAY** "I'd build on their point, then widen it: 'That's a strong point on cost. Can we hear from everyone quickly before we decide? Priya, you mentioned the risk angle earlier.' I'd suggest criteria we agree on, keep an eye on time, and summarise near the end so the group decides."
- WHY** An LSEG technology-track anecdote describes four candidates, about 30 minutes' reading then 30 minutes' discussion, two assessors watching group behaviour [S292] **REPORTED**.
- TWIST** They dismiss your idea. *Hold:* "Fair. Let's test both against the criteria we agreed."

11H. Launch date set, operations not ready

HARD

- SETUP** You track a product launch plan. Operations says client reporting isn't tested. The product lead wants to go anyway and asks you to mark it green.
- TRAP** Marking it green to keep the peace, or making the go/no-go call yourself.
- SAY** "My job is to make the risk visible, not to decide. I'd mark it amber with the reason, the owner and the impact, and make sure it's in front of whoever decides the launch. If they accept the risk, that's their call, and it's recorded."
- WHY** LSEG business programme roles coordinate "Risk, Operations, Product, Technology..." and give "decision support and recommendations to senior management, governance forums and steering committees" [S315]. Transformation is a named principal risk [S302].
- TWIST** "If you mark it amber, the launch slips and it's on you." *Hold:* "If it's amber, it's amber. A visible risk that's accepted is fine; a hidden one isn't."

Line 12: Fast pace, resilience and changing demands

12E. Priorities flip on Wednesday

EASY

- SETUP** Halfway through your project, your manager moves you to an urgent new one.
- TRAP** Visible frustration, or leaving the first project in a mess.
- SAY** "I'd confirm the new priority and deadline, then park the first project cleanly: a short note of where it stands and what's next, so I or anyone can pick it up. I'd tell the people waiting on it. Then full focus on the new one."
- WHY** The JD asks for "focus, resilience and the flexibility to adapt to changing demands" [S260].
- TWIST** "Can you do both?" *Hold:* "Yes, if the first moves to next week. Which matters more to you this week?"

12M. Three urgent asks at the same time**MEDIUM**

SETUP An FX account manager wants a client deck by 3pm; the risk team wants a data pull by 2pm; your manager wants a research summary by end of day.

TRAP Saying yes to all three and doing all of them badly.

SAY "I'd sort by the priority order and real deadlines: the risk data first, because it feeds a control; then the client deck, because a client is waiting; then the internal summary. I'd tell each person when they'll get it. If two deadlines truly clash, I'd ask my manager to decide rather than choose between two senior people myself."

WHY Priority order above. The JD's "instant reaction and long-term vision" [\[S260\]](#).

TWIST "All three say theirs is most important." *Hold:* "Then it's my manager's call, and I'd make it easy: one message, three asks, my suggested order."

12H. Volatile day, manager on leave**HARD**

SETUP Gilt yields jump in the run-up to the Budget, volumes spike, client calls pile up, and your manager is on leave.

TRAP Acting beyond your role to look capable, or freezing.

SAY "I'd stay in my lane and make it work hard. Check who's covering for my manager, and tell them what's coming in. Triage calls: anything about access, risk or settlement goes straight to the right team; everything else gets a callback time. Keep a log of every request and who owns it. At the end of the day, send the cover a summary."

WHY Q1 2026 brought "exceptional clearing activity" on volatility [\[S285\]](#), gilt yields rose before the 28 Oct 2026 Budget [\[S243\]](#) **REPORTED**. Business continuity is a named principal risk [\[S302\]](#).

TWIST "A client asks where you think sterling is going." *Hold:* "I don't give market views. I can point you to our published data and the right team."

The composure set: five hard scenarios

These five are the ones most likely to rattle you, because each puts a senior person, a client or your own mistake in the way of the right answer. Each has a decision tree. The first two trees below are drawn; the other three are written as steps. Learn the questions in the trees, not the wording.

C1. Two senior people want the same scarce thing

Setup. Two directors each ask you, on the same morning, to spend tomorrow on their analysis. Or two account managers each want the one client slot left in next week's product demo. Each says theirs is the priority.

#	Ask yourself	If yes	If no
1	Do I know each request's real deadline and what it's for?	Go to 2.	Ask both: "What decision does it feed, and by when?"
2	Is there a real clash, or can both be done with a small change (half a day each, a later slot)?	Go to 3.	Propose the split to both, in writing.
3	Does one request involve a control, a regulator or a client commitment already made?	That one goes first (priority tiers 1 to 3). Tell the other person why, and when you'll start theirs.	Go to 4.
4	Is it my place to choose between two senior people?	(It rarely is.)	Take it to your line manager with both asks and a suggested order. Copy nobody into a fight.

SAY THIS IN THE INTERVIEW

"I wouldn't pick between two directors myself. I'd find out what each piece is for and when it's needed, see if both can be done with a small change, and if not, take both requests to my manager with a suggested order. Both directors would hear the same thing from me."

C2. A senior person asks you to skip a control

Setup. A senior colleague, under deadline, says: "Just send the client file without the second sign-off. I'll take responsibility."

FIGURE 42

Decision tree: when a senior person asks you to skip a control**ONEVERY BRANCH**

Never skip silently and never fake the record. "I'll take responsibility" does not move the control. If pressure continues, use Speak Up: LSEG says it "does not tolerate retaliation".

No branch ends in "skip it". The tree only decides how fast you escalate and who you tell. The one honest shortcut is an exception route that already exists and is approved by the control's owner.

Source: three lines of defence, LSEG Annual Report 2025 [S300]; control assessments and issue management [S314]; Speak Up, "not look the other way", no retaliation, Code of Conduct [S307]. Tree structure is this pack's method **INFERRED**.

SAY THIS IN THE INTERVIEW

"I'd want to help them hit the deadline, so I'd first check exactly which check it is and whether there's an approved exception. If there isn't, I'd tell them I can't skip it, and I'd escalate straight away to get the second signer moving. 'I'll take responsibility' is kind, but it doesn't change who owns the control."

C3. You overhear possible inside information or another client's flow

Setup. In a shared kitchen, or on an open Teams call, you hear that a named company is about to announce a bond deal or a takeover, or how much a named bank traded yesterday. Later a friend at university, who trades shares, asks "anything interesting at work?"

FIGURE 43**Decision tree: when you come across possible inside information****NEVER, ON ANY BRANCH**

Trade on it, hint at it, or "just check" the price or the pipeline. Your friend gets: "Nothing I can talk about, but I can tell you what the job's like." LSEG's Code bans dealing on inside or confidential information and limits it to a legitimate need to know. Unlawful disclosure of inside information is itself an offence under UK MAR, separate from dealing.

"Not sure" counts as "yes". The tree never asks you to decide alone whether something is inside information: when in doubt, you stop and tell Compliance. That protects you as much as the market.

Source: UK MAR Art 7 definition [S349]; Art 18 insider lists, identity, reason, date and time, kept at least five years [S348]; Code of Conduct on confidential and inside information [S307]; MAR bans unlawful disclosure (WS4 general summary, not re-verified) **INFERRED**.

KEY TERM

Insider list: a record that issuers (and people acting for them) must keep of everyone with access to inside information, with the reason and the date and time of access, kept for at least five years [S348]. **Information barrier:** rules and systems that stop confidential information flowing between teams that shouldn't share it [S305].

C4. A mistake you made is in a report already sent to a client

Setup. On Tuesday you find that a chart in Monday's client report used the wrong month's volume. Your manager sent it to the client.

#	Ask yourself	If yes	If no
1	Am I sure it's an error? (Five minutes to check, not a day.)	Go to 2.	Note what you checked; mention it to your manager anyway.

#	Ask yourself	If yes	If no
2	Could it change a client's decision, or touch a regulated report?	Tell your manager within the hour, in person or by call, then in writing.	Still tell your manager today. Small errors hidden become big errors found.
3	Has my manager decided how to tell the client?	Prepare the correction: what was wrong, the right figure, what it changes. Short and plain.	Offer a draft correction; don't contact the client yourself.
4	Do I know why it happened?	Fix the cause: a check step, a source label, a template.	Find out before the next report goes.

SAY THIS IN THE INTERVIEW

"I'd tell my manager straight away: what's wrong, what the right figure is, and whether it changes anything for the client. I wouldn't quietly resend it. Then I'd fix the cause, probably by adding a check against the source before anything goes out. Integrity at LSEG is 'deliver on our promises', and a correct report is the promise."

C5. Acting on incomplete information against a deadline

Setup. At 4pm you need to send a recommendation by 5pm. One key data point won't arrive until tomorrow.

#	Ask yourself	If yes	If no
1	Do I know what decision the deadline serves, and who makes it?	Go to 2.	Ask now: one line to the requester.
2	Is the decision easy to reverse if the missing data changes the answer?	Recommend on the best estimate, label every assumption, say what would change it, and when you'll update.	Go to 3.
3	Does it touch a regulatory filing, a client commitment, or risk limits?	Escalate now: ask for the deadline to move or for a senior person to accept the gap on record.	Send a range with the missing piece clearly named, and a time for the update.

SAY THIS IN THE INTERVIEW

"I'd first ask whether the decision can be undone. If it can, I'd send my best answer on time with the assumptions in bold and a time for the update. If it can't, or it touches risk or a regulator, I'd say so now and ask for either more time or a senior decision to go ahead with the gap. Late and labelled beats on time and wrong."

The CV grill

At the assessment centre interview, expect at least one line of your CV to be tested three levels deep. Your CV details aren't in this pack, so this section gives the method, eight attacks with frame-holding answers, and a drill. The worked examples are placeholders: replace them with your own.

How a three-levels-deep attack works

Level	What they ask	What they are testing
1. What	"Tell me about the investment society role."	Can you explain it plainly in 20 seconds?

Level	What they ask	What they are testing
2. How and how much	"How did you grow attendance? From what to what? How do you know?"	Is there a real number, and did you measure it honestly?
3. Why you, and what if	"Wasn't that just because term started? What would have happened without you? What would you do differently?"	Can you separate your contribution from luck and the team, and do you learn?

The frame for a CV grill is the same four steps, with one rule added: **never claim more at level 3 than you claimed at level 1**. Inflation shows up at the third question, not the first.

Eight attacks and how to hold the frame

A1. "So what did you do? Not the team. You."

HOLD "The team did the event; my part was the sign-up process and the reminder emails. That's where attendance moved." Name your part precisely. Credit others without shrinking yourself.

A2. "That number seems high. How did you measure it?"

HOLD "From the sign-up sheet, comparing the four weeks before with the four weeks after. It isn't a controlled test, so some of it may be the time of term." Give the method and its limit before they do.

A3. "That sounds like an easy job."

HOLD "Parts of it were. The hard part was [one specific thing], and that's where I learned [skill]." Don't defend everything; locate the hard bit.

A4. "Why did you leave after only eight weeks?"

HOLD "It was a fixed eight-week role; I finished it and handed over [what]." State the fact, then the handover. No apology, no story.

A5. "You say you're interested in markets, but nothing here shows it."

HOLD "Fair: it's not in a job title yet. It shows in [one habit or project]. For example, I've been following how London's FX share held at 37.8% in the latest BIS survey ^[S162] and what that means for a venue like FXall." Then stop.

A6. "Tell me about this grade / this gap."

HOLD "That module went badly because [one honest reason]. What I changed was [habit], and my next result was [result]." One sentence of cause, two of change.

A7. "What would your manager there say your weakness was?"

HOLD "Probably that I took too long to ask for help early on. By the end I was checking in after the first hour on anything unclear." Real, specific, already improving. No disguised strengths.

A8. "Why should any of that matter to us at LSEG?"

HOLD "Because the internship asks for [JD phrase, for example 'curiosity for data... to draw conclusions and propose solutions'] ^[S260], and this is where I did that: [one line]." Map to the JD's own words.

The four-line drill for every CV bullet

For each bullet on your CV, write four lines on a card. If you can't fill a line, the bullet is weak: change the bullet or prepare harder.

Line	Question it answers
1. What	What was it, in one plain sentence a stranger understands?

Line	Question it answers
2. Number	What changed, from what to what, measured how? (If no number exists, say what you would have measured.)
3. Your part	Which decisions or actions were yours, not the team's?
4. Differently	What would you do differently now, and why?

WORKED PLACEHOLDER 1: REPLACE WITH YOUR OWN

PLACEHOLDER bullet: "Events officer, university finance society: grew weekly market briefing attendance."

What: I ran a 30-minute weekly briefing on one market story for society members.

Number: PLACEHOLDER: average attendance went from about 15 to about 40 over one term, from the sign-up sheet.

My part: I changed the format to one chart and one question, and moved sign-up to a form with a reminder the day before.

Differently: I'd have kept the old format for two weeks alongside, so I could tell how much was the format and how much was the start of term.

WORKED PLACEHOLDER 2: REPLACE WITH YOUR OWN

PLACEHOLDER bullet: "Retail assistant: cut weekly stock-check time."

What: I suggested a new order for the weekly stock count in a busy shop.

Number: PLACEHOLDER: the count went from about three hours to about two, measured over four weeks.

My part: I timed each section, spotted that we walked the floor twice, and proposed one route. My manager approved it; the team ran it.

Differently: I'd have asked the evening team first. They had a reason for the old order (deliveries), and the first week went badly because I hadn't asked.

WHY THIS MATTERS

Placeholder 2 is deliberately close to scenario 8M (the old spreadsheet). The best CV stories double as scenario evidence: when an assessor asks "what would you do?", you can say "I've done a version of this" and give the four lines. That is what a strengths-based assessor hopes to hear ^[S264].

DON'T SAY THIS

"We increased engagement significantly." No owner, no number, no method. Under a level-2 question it collapses. Every bullet you can't defend at level 3 should come off the CV before you submit.

How to practise this part

Reading the cards is not practice. Saying them out loud, against a clock, on camera, is. Use this ten-day plan in the run-up to each stage, and score yourself with the rubric after every recording.

Day	Do this	Done when
1	Learn the four steps and the priority order. Write both on your index card.	You can say both from memory in 20 seconds.
2 to 5	Three rows of the ladder a day (nine cards). Answer each aloud, timed, before reading the model answer.	Every answer lands between 45 and 75 seconds and ends with a Close.
6	Ask a friend to read you the Twists cold, using the eight frame-breakers.	You held your frame on at least six of eight, and could say why you changed on the others.

Day	Do this	Done when
7	Talk through the five composure trees from memory, with the drawings face down.	You can name each question in each tree.
8	Run the four-line drill on every CV bullet. Cut any bullet you can't defend at level 3.	Every bullet has a number, your part, and a "differently".
9	Record six random cards on video, one take each, camera at eye level.	Watching back, you look at the lens to close and don't rush.
10	Rest. Read the cheat sheet (Part 13) once in the evening.	Done.

Self-scoring rubric (score each answer 0 to 2 per row)

Criterion	0	1	2
Steady	Started answering before restating the ask	Restated, but slowly or vaguely	One clean line that frames the problem
Sort	No priorities named	Named the goods, not which wins	Named the collision and the winning tier
Act	Abstract ("communicate with stakeholders")	Steps, but no owner or time	Two or three verbs, named owners, a time
Fact	None, or an invented one	A fact without a source you could name	One sourced LSEG fact, used naturally
Close	Trailed off	Summarised, but no record or owner	Outcome, owner, record; then stopped
Twist	Folded under pressure	Held, but sounded defensive	Acknowledged, then returned to the frame

Aim for 10 or more out of 12 on every card before the assessment centre. A score below 8 on any card means do that card again tomorrow, not the next one.

WHY THIS MATTERS

The Immersive Online Assessment scores consistency across many situations, and the video gives you one take ^[S289, S291] **REPORTED**. A method you have rehearsed 36 times is the most reliable way to be consistent when it counts.

PART 12

Why LSEG, in three lengths

An answer built from how LSEG works, not from adjectives: compressed to 30 seconds, expanded to 2 minutes, and finished with one specific thing you would work on.

"Why LSEG?" is the question every candidate prepares, so it is the one where most answers sound the same. The way to stand out is to answer with **mechanisms**: how the business is built, why customers pay, and where the work actually happens. A mechanism is something a rival could not say about itself. "LSEG is a global leader" could be said by ICE, CME or Deutsche Börse. "LCH has to clear for rival venues on non-discriminatory terms, which is why banks trust it with their swaps" could only be said about LSEG ^[S305].

This Part gives you the four mechanism answers in compressed form, then the same material at three lengths: 30 seconds (video interview opener), 2 minutes (a full interview answer), and a close that names one thing you would work on. Then it covers the follow-ups: why this programme rather than a bank, why not a rival, and the honest case against LSEG.

YOUR CV GOES HERE

Your CV details are not in this pack. Where you see **[YOUR HOOK]**, add one true sentence about how you came to the topic: a module, a society, a job, a news story you followed. Keep it to one sentence. The rest of the answer should be about LSEG, not you.

The four mechanism answers, compressed

Each mechanism answers one question an interviewer might ask on its own. Together they make the spine of your "Why LSEG?" answer. Learn the one-liners first; the evidence column is what you reach for if they push.

Mechanism	The question it answers	The answer in two sentences	Evidence to reach for
1. Structure	Why is LSEG a group of separate businesses?	Regulation forces ring-fenced entities: a clearing house holds other people's default risk, so it needs its own capital and board. And open access is written into LCH's constitution, so LSEG cannot run it as a captive.	LCH about 94%, rising above 95% after the July 2026 deal ^[S300, S70] ; Tradeweb 50.9% economic; Turquoise 84.2%; PTS 80% ^[S300] . "No exchange will be favoured over any other" ^[S305] .
2. Collaboration	How do the businesses work together?	At named joins, not by bundling. Trading turns into data and data into products, and the joins are specific and checkable.	RepoAgent (PTS + Tradeweb, Nov 2025) ^[S301] ; FXall functionality largely in Workspace ^[S302] ; FTSE Russell pricing some indices off Tradeweb ^[S300] ; a Group Head of Sales and Account Management since Jan 2026 ^[S306] .
3. Customer value	Why do customers pay, and keep paying?	Because the safety has been tested and the liquidity is in one place. Netting more trades in one pot means less margin per member.	9 member defaults, all within initial margin ^[S351] ; Lehman's \$9trn book used about 35% of its initial margin ^[S354] ; SwapClear over 90% of cleared swap notional ^[S303] ; data quality issues down 51% as content rose 113% ^[S301] .

Mechanism	The question it answers	The answer in two sentences	Evidence to reach for
4. The centre	Where does a business management intern fit?	In the coordinating layer between the front line and the central functions. Each principal risk has a named executive owner, and business roles pull Risk, Operations, Product, Technology and Legal together.	Central counterparty risk owned by the Head of Markets ^[S302] ; three lines of defence ^[S300] ; a CDSClear programme manager coordinates "Risk, Operations, Product, Technology, Client Services, Legal, Compliance, Finance" ^[S315] .

KEY TERM

Open access: LCH clears trades from any venue on fair, non-discriminatory terms, and LSEG's own venues get no special treatment ^[S305]. Deutsche Börse does the opposite: Eurex trading and Eurex clearing sit in one "vertically integrated" model ^[S127].

KEY TERM

Initial margin: collateral a clearing member posts up front to cover how much its positions could lose before it can be closed out. LCH sets it at 99.7% confidence for most services ^[S351].

The one-liners

- **Structure:** "LSEG chose to be the neutral clearing house for everyone, and wrote that into LCH's rules."
- **Collaboration:** "The businesses meet at specific points, like FXall moving into Workspace, not through bundling."
- **Customer value:** "Customers pay for safety that has been tested: nine defaults, all inside initial margin."
- **The centre:** "Business management sits where those businesses and the central functions meet, which is the part I want to learn."

Why LSEG in 30 seconds

Use this as the opening of a video interview answer, or when an interviewer says "briefly". About 90 words: 30 to 35 seconds at a calm speaking pace. Read it aloud three times, then say it without the page.

SAY THIS: 30 SECONDS

"What draws me to LSEG is how it's built. It runs trading venues like the London Stock Exchange, Tradeweb and FXall, but its clearing house, LCH, has open access in its rules. It has to clear for rival venues on fair terms, and banks still sit on its risk committee. That neutrality is why SwapClear clears over 90% of cleared interest rate swaps. Markets is now 40% of the group and its fastest-growing part, and business management sits right where those businesses meet. That's where I want to learn."

Sources behind each sentence: open access ^[S305, S304]; members and clients on the LCH risk committee ^[S304]; over 90% of cleared IRS notional outstanding, LSEG's own figure ^[S303]; Markets 40% ^[S71] and fastest-growing at +11.9% in H1 2026 ^[S70].

DON'T SAY THIS

"LSEG is a world-leading, innovative and diverse company with great values." Every word could apply to a rival, and the interviewer will hear it from most candidates that day.

Why LSEG in 2 minutes

About 300 words. The time marks show where you should be; if you are running long, cut the fourth paragraph first. Contractions ("it's", "isn't") are deliberate: they make it sound spoken, not read.

SAY THIS: 2 MINUTES

0:00 "I'd like to work at LSEG because its advantage comes from how it's built, and the Markets programme is where you see that structure working. [YOUR HOOK: one true sentence on how you came to this.]

0:15 Start with the structure. LSEG isn't one exchange. The London Stock Exchange, Turquoise, Tradeweb, the FX venues and LCH are separate regulated businesses. LCH has open access written into its articles: it has to clear for rival venues on non-discriminatory terms, and LSEG's own venues get no special treatment. Deutsche Börse went the other way and tied trading to clearing. LSEG chose neutrality and kept the banks inside. Members sit on LCH's risk committee, and last year eleven banks bought 20% of Post Trade Solutions.

0:45 That's why customers pay. When Lehman failed, SwapClear closed out a nine trillion dollar swap book using about a third of Lehman's own margin. LCH says it has managed nine member defaults, all within margin. That record is why SwapClear cleared a record 1,941 trillion dollars of notional last year.

1:05 Then there's where the businesses meet. FTSE Russell now prices some indices off Tradeweb, Post Trade Solutions and Tradeweb built RepoAgent together, and most of FXall's functionality now sits inside Workspace. Markets is 40% of the group and grew 11.9% in the first half.

1:25 I can see the tensions too. The FCA found data users may be paying more than they would with stronger competition, and open access meant Euronext could take its clearing elsewhere. So the job isn't only growth. It's keeping customers' trust while charging for value.

1:45 That mix of customers, numbers and risk is what the programme's four areas cover, and it's what I want to spend the summer on. If I could pick one thing, it would be [YOUR CLOSE: one of the four below]."

Claim in the script	Exact fact and source
Separate regulated businesses	LSE plc an RIE; Turquoise an MTF; LCH Ltd a Bank of England Recognised Clearing House; FX MTFs licensed in Ireland and the UK; Tradeweb listed on Nasdaq ^[S300, S304, S341]
Open access in its articles	OFT decision on LSEG's control of LCH.Clearent, Dec 2012 ^[S305] ; LCH Ltd still operates "an open access model" ^[S304]
Deutsche Börse tied trading to clearing	"vertically integrated business model" ^[S127] ; OFT example "Deutsche Börse/Eurex Clearing" ^[S305]
Eleven banks, 20% of PTS	£170m, October 2025 ^[S301]
Lehman: \$9trn, about a third of margin	"\$9 trillion OTC portfolio", "only 35% of its initial margin" used ^[S354]

Claim in the script	Exact fact and source
Nine defaults within margin	"managed 9 member defaults and, in all cases, losses were within the initial margin held" ^[S351]
Record \$1,941trn	SwapClear IRS notional cleared 2025, +21.2% ^[S301]
The joins	FTSE Russell price source ^[S300] , RepoAgent ^[S301] , FXall in Workspace ^[S302]
40%, +11.9%	CEO on the H1 2026 call ^[S71] , H1 2026 interim results ^[S70]
FCA and Euronext	FCA wholesale data study, 29 Feb 2024 ^[S309] ; Securities & Reporting revenue down 3.0% on the Euronext termination ^[S301]

WHY THIS MATTERS

The fifth paragraph is what makes the answer sound like an analyst rather than a fan. You name two real criticisms with sources, then turn them into a description of the job. It also matches the JD's line that "what you achieve is equally important as how you achieve it".

The close: one specific thing you would work on

The JD says LSEG will "get to know your skills and interest and how they align with the needs of the business" before placing you. A specific close does that work for them. Pick the one that matches the area you most want, and be ready for "why that one?". Each close has the same shape: **the thing, why it matters now, what you would measure**.

Close A. FX customers: FXall moving into Workspace

SAY "If I could pick one thing, it would be FXall moving into Workspace. LSEG says a large proportion of FXall's functionality is now there. I'd like to help measure whether clients are actually moving their workflow: which client groups have switched, where onboarding and permissioning slow them down, and whether it changes retention or what else they buy from LSEG."

WHY CREDIBLE The integration is stated in the H1 2026 report ^[S302]. FX account managers are asked to "identify upsell, cross-sell, and new business opportunities across FX trading, workflow, data" ^[S313]. Onboarding runs through FXall Admin, including "Price Stream Entitlement requests" ^[S317].

MEASURE Share of active FXall clients using it through Workspace, by segment; onboarding tickets and time to first trade; client retention after the switch ^{INFERRED}.

FOLLOW-UP If asked about pricing, use Forward First Fixing: over \$1.5trn cumulative volume and fees waived for the rest of 2026 ^[S238]. "When does adoption justify switching fees on?" is a good question back.

Close B. Research: debt listings on the International Securities Market

SAY "I'd like to work on debt listings, specifically the International Securities Market. It promises comments within three days of a first submission and two days after that, with no listing agent needed. I'd want to look at where its issuers come from, and whether turnaround has held up since the new prospectus regime started in January."

WHY CREDIBLE ISM is LSE's market for debt sold to professional investors, with admission decided by the Exchange, not the FCA ^[S346]. The "3+2" review windows are LSE's own promise ^[S347]. POATRs came into force on 19 January 2026 ^[S151]. An LSEG debt origination ad cites "1,300 global borrowers in over 60 countries that raise \$500-600 billion annually" ^[S316] ^{REPORTED}.

MEASURE Issuers by country and sector; days from first submission to admission against the 3+2 promise; share of programme vs one-off issues ^{INFERRED}.

CAUTION The ISM information pack predates current rules (it cites the UKLA and the Prospectus Directive), so say "the published 3+2 windows" and check current timings ^[S347, S346].

Close C. Business intelligence: what really drives Markets growth

SAY "I'd like to help build the view of what drives Markets growth. The division grew 11.9% in the first half, partly on volatility. I'd split each line into volume and revenue per unit of volume, for example FX revenue against FX daily volume, to see which businesses are growing structurally and which are riding the cycle."

WHY CREDIBLE LSEG publishes the volume KPIs: FX ADV \$525bn (2025) and \$561bn (H1 2026); Tradeweb ADV \$3.2trn; SwapClear notional; ForexClear members ^[S301, S302]. FX revenue was £272m in 2025 ^[S301].

WORKED EXAMPLE £272m divided by \$525bn a day over about 252 trading days is roughly £2 of revenue per \$1m traded **INFERRED**. LSEG does not publish this capture rate, so call it your own metric.

MEASURE Revenue capture per line, year on year; growth in calm months vs volatile months; new clients vs existing clients' volume **INFERRED**.

Close D. Risk: LCH first-line risk reporting

SAY "I'd like to work on the risk reporting LCH's first line produces: business continuity testing, third-party risk and the evidence behind central bank attestations, turned into information senior management and the Board can act on. With T+1 coming in October 2027, how quickly that reporting picks up problems matters more each year."

WHY CREDIBLE A current LCH first-line role coordinates "EMIR switch testing, WAR site testing", third-party risk MI for "senior management, committees and Board forums" and "Central Bank Attestation Support" ^[S318]. UK T+1 is planned for 11 October 2027 ^[S158]. Business continuity risk is owned by the COO, CRO and divisional heads ^[S302].

MEASURE Test completion against plan; open third-party risk issues by age; time from incident to report **INFERRED**.

DON'T SAY THIS

"I'd like to help with digital transformation and AI." It is not specific enough to measure, and the interviewer cannot picture you doing it. Also avoid claiming LSEG commercially bundles SwapClear with Tradeweb or ForexClear with FXall: no LSEG statement says so, and open access makes it unlikely.

Why this programme, not a bank's graduate scheme

Expect this as a follow-up, often phrased as "Where else are you applying?" The interviewer wants to know whether LSEG is a real choice or a fallback. Do not criticise banks: banks generate about 72% of LSEG's revenue ^[S303], and some of your interviewers may have come from one.

SAY THIS

"A bank would teach me one desk's view of the market. LSEG lets me see the market from the infrastructure underneath it. Banking customers are about 72% of LSEG's revenue, so in a Markets role I'd be working with many banks at once, on the venues and clearing they all rely on. The business earns fees for running trusted infrastructure rather than taking positions with its own balance sheet, so the questions are about customers, reliability and risk, which is what interests me. And the programme spans four areas, from FX clients to risk reporting, which is the breadth I want at this stage."

Point	Mechanism	Evidence
You see many banks, not one	LSEG's customers are the banks; Markets serves them all	Banking 72% of revenue ^[S303] , FXall 200+ liquidity providers ^[S340] , SwapClear over 100 members ^[S141]

Point	Mechanism	Evidence
Fees for trust, not trading risk	Venues and clearing earn per-trade and clearing fees; LCH mutualises default risk through margin and default funds	Revenue model [S303]; default waterfall [S351] INFERRED contrast with banks
Breadth by design	The programme rotates through customer, research, BI and risk work	JD: "understand the full breadth of our organisation, how it fits together"
Growth is in this division	Volume, clearing and new venues	Markets +11.9% in H1 2026 [S70]
Real work, early	Interns are individual contributors	JD: "These are real roles"

DON'T SAY THIS

"Banks have a bad work-life balance" or "I didn't want sales and trading." Both describe what you are running from, not what you are choosing. Also do not say you want LSEG because it is "less risky": LCH manages default risk for the whole swaps market [S351].

What most candidates say vs what you can say

Every row turns a generic claim into a specific, sourced one. You will not use all of them. Pick the three that fit how you talk.

Most candidates say	You can say	Source
"LSEG is a global leader."	"SwapClear has over 90% of cleared interest rate swap notional, and Tradeweb is the number one rates trading venue by volume."	[S303]
"I'm interested in data."	"About 98% of LSEG's revenue comes from proprietary data, IP and infrastructure, and Turquoise packages its own trading data and sells it through vendors."	[S303, S358]
"LSEG has a diverse set of businesses."	"They are separate regulated entities by design: LSEG owns about 94% of LCH, 50.9% of Tradeweb's economics, 84.2% of Turquoise and 80% of Post Trade Solutions."	[S300]
"I like your values."	"LSEG defines Partnership as 'Our open model is integral to how we do business', which is the same idea as the open-access clause in LCH's articles."	[S307, S305]
"Risk management is important."	"LCH sets initial margin at 99.7% confidence and has handled nine member defaults, all within initial margin."	[S351]
"LSEG is innovative."	"LSE 24 opens 17:00 to 07:50 with ETPs in H1 2027, and LSE plans to trade tokenised xStocks on it, subject to approval."	[S227, S228]
"I want exposure across the business."	"I want to see the joins: FXall moving into Workspace touches the FX customer team, the data side and operations at once."	[S302]
"Customers trust LSEG."	"Banks keep a stake to keep a say: 10% of the SwapClear surplus to 2045, 20% of Post Trade Solutions, and seats on LCH's risk committee."	[S301, S304]
"LSEG is growing fast."	"Markets is 40% of the group and grew 11.9% in H1 2026, faster than Data & Analytics at 5.1%, at a 58.6% margin."	[S71, S70]
"LSEG is embracing AI."	"Over 200 customers are engaged on LSEG's MCP server, which pipes licensed data into their AI tools, and LSEG has set out how it will charge for it."	[S70]
"London is an important financial centre."	"The UK handles 37.8% of global FX turnover, \$4.7trn a day, which is why FXall and FX Matching sit here."	[S162]
"LSEG helps clients solve problems."	"Forward First Fixing cut manual processing by over 90% for LSEG's largest client in it, and passed \$1.5trn of volume."	[S238]
"LSEG supports UK growth."	"London Stock Exchange was the first venue approved to run a PISCES market, and its Private Securities Market ran its first auction in March 2026."	[S96, S154]

The honest case against LSEG, and how to handle it

Strong candidates know the case against the firm and can discuss it calmly. If an interviewer raises one of these, they are testing judgement, not loyalty. The pattern for every answer: **acknowledge** the fact, **add context** with a number, **turn** it to what it means for the work.

Concern	The evidence	How to handle it if raised
1. The share price fell hard on AI fears	12,095p (Feb 2025) to 7,170p (Feb 2026); -12.8% on 3 Feb 2026 ^[S90] ; Redburn: about 30% of EBITDA at risk ^[S89] REPORTED	"The worry is about desktop seats and aggregated data. Markets runs venues and clearing that AI does not replace, and it grew 11.9% in H1."
2. Data may be overpriced	FCA: users "may be paying higher prices" ^[S309] . MSP £4.93bn claim, disputed by LSEG ^[S310, S311]	"The FCA chose not to intervene, but customer trust is the asset. That's why transparent pricing for the new AI charges matters."
3. Open access lets customers leave	Euronext clearing loss: Securities & Reporting -3.0% ^[S301]	"It's the price of neutrality, and neutrality is what wins SwapClear its share."
4. Half of Tradeweb's value goes to others	Non-controlling interest 49.1% ^[S300] ; £334m in 2025 ^[S72]	"True. The case for control is integration: Tradeweb into Workspace and FTSE Russell pricing."
5. LSEG pays partners for loyalty	£1.2bn to SwapClear founders; they keep 10% to 2045 ^[S301]	"On rough maths it pays back in about a decade at 2024 volumes, and it keeps the banks committed." (See Part 8, Argument 9.)
6. Integration is long and costly	Refinitiv integration costs £121m in 2025, four years on ^[S300] ; transformation and the Microsoft partnership named as a principal risk ^[S302]	"LSEG says synergies came in ahead of target ^[S73] ; the cost is falling. That's where operational improvement work sits."
7. Growth was flattered by volatility	Iran war spike in trading ^[S223] ; 140bp SwapClear margin benefit reverses in Q4 2026 ^[S70]	"Agreed, so I'd separate the structural part: Post Trade Solutions clients, FFF, PSM."
8. An activist is on the register	Elliott stake reported 11 Feb 2026; pushed for a portfolio review ^[S86, S226]	"The response so far has been buybacks, not disposals. I'd want to understand how Markets competes for investment against them."
9. Much of the work is offshore	India 8,541 of 28,516 staff, about 30%; contractors cut from about 11,000 to 9,200 ^[S300]	"Many London roles coordinate across hubs, which is exactly what business management does." INFERRED
10. Concentrated systemic risk	Cyber "could... pose systemic risks" ^[S302] ; past outages in 2008, 2020 and 2024 ^[S100, S101, S98]	"For infrastructure, reliability is the product. LSEG says major incidents fell 50% ^[S301] ; risk work is central, not a side function."
11. London listings are weak	88 companies left in 2024 ^[S145] ; £2.1bn of IPOs in 2025 vs HK\$286.9bn in Hong Kong ^[S142, S134]	"Equity listings are a small part of Markets revenue; debt listings and trading matter more, and the JD names debt listings for a reason."
12. Integration raises reputational contagion	"As our different businesses have continued to become more closely integrated, potential reputational exposure has increased" ^[S302]	"That's the trade-off of the joins strategy, and why the separate entities still matter."

SOURCE UNCERTAIN

Headcount: the Annual Report says 28,516 employees at 31 December 2025 ^[S300]; the JD says "25,000 people across 65 countries"; the investor deck says "over 26,000" ^[S303]. Use the Annual Report figure if asked and note the job ad copy is older. Do not use the "14,200" figure from the FY2025 results as group headcount: it sits in the engineering section ^[S72].

Why not ICE, Deutsche Börse, Bloomberg or a bank?

Answer by business line, not by firm. LSEG is several competitive fights at once, and showing that you know which fight each rival is in is itself a strong answer. Never criticise the rival; describe the difference.

Why not ICE?

ANSWER "ICE's centre of gravity is futures, especially energy, and US mortgage technology. Energy revenue was \$2.2bn last year, and mortgage technology is about a fifth of its revenue. What interests me is rates, FX and clearing for the whole market, which is where LSEG is strongest." **FACTS** ICE net revenue \$9.9bn; Exchanges 55%, Fixed Income & Data 24%, Mortgage Technology 21%; energy \$2.182bn, +16% ^[S124]. ICE has no FX venue or desktop of LSEG's scale ^[S120]

INFERRED .

Why not Deutsche Börse?

ANSWER "Deutsche Börse runs a vertical model, with Eurex trading feeding Eurex clearing. LSEG chose open access, so LCH has to win business from every venue on its merits. I find that model more interesting, and it's why SwapClear dominates swaps clearing." **FACTS** "vertically integrated business model" ^[S127]; 360T FX net revenue €182m ^[S126].

CONCEDE IF PUSHED Eurex's share of EUR swaps rose to 13.5% in Q3 2025 ^[S139] **REPORTED** .

Why not Bloomberg?

ANSWER "Bloomberg is a data and terminal business first, and it's private. LSEG runs regulated market infrastructure as well as data: an exchange, a clearing house, FX venues. The internship sits in that infrastructure, which Bloomberg doesn't own." **FACTS** Bloomberg the largest market data vendor, LSEG second ^[S129, S188]; Bloomberg has no CCP or exchange ^[S120] **INFERRED** .

Why not CME?

ANSWER "CME is a futures exchange first: about 81% of its revenue comes from clearing and transaction fees, much of it in listed futures. LSEG's Markets business is mostly over-the-counter: swaps clearing, bond trading through Tradeweb, FX. That's the side of the market I want to learn." **FACTS** CME revenue \$6,520.6m, record ADV 28.1m contracts ^[S122]; LSEG has no comparable listed futures franchise ^[S120] **INFERRED** .

Why not a bank?

ANSWER "A bank trades and lends with its own balance sheet. LSEG runs the venues and clearing that banks use, and banks are about 72% of its revenue, so I'd learn how the whole market works rather than one bank's part of it." **FACTS** Banking 72% of revenue ^[S303]; LSEG vs bank distinction **INFERRED** .

DON'T SAY THIS

"LSEG is bigger than its rivals." By market value LSEG (about \$52bn) is behind CME, ICE, HKEX and Deutsche Börse, and S&P Global is over twice its size ^[S148] **REPORTED** . Argue on design, not size.

The rival test: could a competitor say this?

Before the interview, read each sentence of your answer and ask: **could this sentence be said about ICE, Deutsche Börse, Bloomberg or a bank?** If yes, rewrite it until it could only be about LSEG. The usual fix is to replace an adjective with a mechanism or a number.

Before (fails the test)	After (only true of LSEG)	What changed
"LSEG is a global leader in financial markets."	"SwapClear clears over 90% of cleared interest rate swaps, and it got there by being open to every venue." ^[S303, S305]	Adjective replaced by a share and its cause

Before (fails the test)	After (only true of LSEG)	What changed
"I'm passionate about data and technology."	"I'm interested in how LSEG turns trading into data: FTSE Russell now prices some indices off Tradeweb, and Turquoise sells its own trade data." [S300, S358]	Feeling replaced by a specific join
"Your values of integrity and partnership resonate with me."	"LSEG defines Partnership as 'our open model', which is the same idea as LCH's open-access clause." [S307, S305]	Value linked to a real rule
"LSEG is innovative and forward-thinking."	"LSE 24 runs from 17:00 to 07:50, with ETPs from H1 2027, a few months after US exchanges start 23-hour trading." [S227, S251]	Claim replaced by a dated product and a rival's date
"I want broad exposure in a fast-paced environment."	"I want to see the joins: FXall moving into Workspace touches the FX customer team, data and operations at once." [S302]	Wish replaced by a named project
"LSEG has excellent risk management."	"LCH has managed nine member defaults, all within initial margin." [S351]	Praise replaced by a track record

SAY THIS IN THE INTERVIEW

If you only remember one thing from this Part: lead with open access, prove it with one number, and finish with one thing you would work on. "LCH has to clear for everyone, that's why it has over 90% of cleared swaps, and I'd like to help measure whether FX clients are moving into Workspace."

Figure 44 puts the whole chain on one page: structure, the joins, customer value, the price LSEG pays for its model, what that adds up to in the Markets division, what you would learn, and your close. Use it as the last thing you read before the interview.

FIGURE 44

Why LSEG on one page: from structure to your close

Numbers are FY2025 or H1 2026 as labelled. Ownership at end 2025 unless stated. "~10%" is the CEO's "almost 10%".

Read top to bottom. Each band causes the next: a neutral, bank-governed structure creates joins and customer value; that value has a price (row 4); the net result is a Markets division at 40% of revenue; that is what you would learn, and the close is where you pick one piece of it.

Source: LSEG Annual Report 2025 [S300] (ownership, minorities); 2025 Preliminary Results [S301] (PTS, SwapClear, Euronext, ForexClear, RepoAgent); Interim Report H1 2026 [S302, S70] (Workspace, Markets growth and margin); H1 2026 call [S71] (40%, "almost 10%"); Introduction to LSEG, May 2026 [S303] (over 90%); OFT decision, 2012 [S305]; LCH [S304, S351]; CCP Global [S354]; FXall [S340]; FFF [S238]; ISM pack [S347]; Airtel Money RNS [S232]; LCH job ad [S318]; FCA T+1 [S158]. Ownership at end 2025.

PART 13

Cheat sheet

Two pages to read the night before and keep beside the camera. Method, priorities, words, numbers, dates.
Sources in [Sxx]; full table in Part 15.

FIGURE 45

The cheat sheet on one page: method, order, numbers

ANSWER IN 4 STEPS (45-75 s)

1 STEADY 0 to 5 s

"Let me check I have this right: you're asking..."

2 SORT 5 to 20 s

"Two things matter here: X, and doing it properly."

3 ACT 20 to 60 s

"First I'd..., then I'd..., and I'd tell... by..."

4 CLOSE 60 to 75 s

"So: outcome, owner, and it's on record."

Breathe out before step 1.

WHEN GOODS COLLIDE

1 Rules, integrity, the firm's name

2 Fair, equal treatment of every customer

3 The process and the record

4 Speed and the customer's convenience

"Within the rules, same for every customer, by the process, on record, then as fast as I possibly can."

Higher tier wins. Speed last.

TEN NUMBERS

£8,986m	FY2025 income, +7.1% org.
£4,799m	H1 2026 income, +8.4% org.
+11.9%	Markets H1 2026; ~40% of LSEG
\$1,941trn	SwapClear notional, 2025
2,400+	FXall clients; 200+ LPs
44,000+	customers, 170+ countries
28,516	people, end 2025 (AR)
~94%	LCH stake; going >95%
50.9%	Tradeweb (economic)
\$9.6tn	FX a day; UK share 37.8%

Source: FY2025 [S72]; H1 2026 [S70]; Markets ~40% [S71]; SwapClear [S301]; FXall [S340]; customers [S303]; people [S300]; LCH [S300, S121, S70]; Tradeweb [S300]; BIS Apr 2025 [S162, S163]. Protocol and order: this pack's method (Part 11).

The protocol, one line each

Steady: breathe out, restate the ask, no verdict. **Sort:** name the two things at stake and which tier wins. **Act:** two or three verbs, named owners, a time, one LSEG fact. **Close:** outcome, owner, record; then stop.

The never list

- Never guess a number. "I don't know, and I won't guess. What I do know is..."
- Never share or hint at another client's trading, or an issuer's pipeline.
- Never promise what you don't own: fix times, discounts, admission dates.
- Never skip, backdate or fake a control or a record. Escalate instead.
- Never give a market view or advice to a client.
- Never badmouth a past team, a rival, or an interviewer's challenge.
- Never say LSEG bundles SwapClear with Tradeweb or ForexClear with FXall: open access forbids favouring its own venues [S305].
- Never call Rachel Reeves Chancellor: John Healey is, since July 2026 [S243, S244].
- Never say LSEG owns 82.6% of LCH: about 94% [S300, S121].

Eight frame-breakers: the counter in one line

1. **Interruption:** "Good point. Let me take that, then finish the step I was on."
2. **Contradiction:** "Which part would you change?" If they're right: "I'd fix that; the rest holds because..."
3. **Silence:** count three. "In short, X because Y. Shall I go deeper on any part?"
4. **Escalation:** "That raises the stakes, not the order. I'd still do X, and tell my manager sooner."
5. **Authority squeeze:** "I'd help them get it done: approved route, or escalate. Not skip."
6. **False choice:** "I don't think those are the only two options. Keep the rule, then work hard for the client."
7. **Knowledge trap:** "I don't know that and won't guess. What I do know is... I'd check with..."
8. **Badmouth invitation:** "I'd rather talk about what I could control. What I learned was..."

Change your mind for a new fact, never for new pressure. Say which it is.

Lines to have ready

Why LSEG (30 seconds). "What draws me to LSEG is how it's built. It owns venues like the London Stock Exchange, Tradeweb and FXall, but its clearing house, LCH, has open access written into its rules: it must clear on fair, non-discriminatory terms even for rival venues, and banks still sit on its risk committee. That's why the market trusts it with over 90% of cleared interest rate swaps. Business management sits at the joins between those businesses, and that's where I want to learn." [S305, S304, S303]

Why Markets. "It's the fastest-growing division, up 11.9% in the first half of 2026 and about 40% of LSEG's revenue, and it's where the firm's trust is tested every day: in an outage, a trade break, a margin call. I want work where the numbers and the customer meet." [S70, S71]

One opinion. "Open access is LSEG's strength and its exposure. It's why banks trust LCH, but it also meant Euronext could take its clearing away, which cut Securities & Reporting revenue in 2025. I think LSEG is right to keep it, and to win with service and workflow, like FXall inside Workspace, rather than lock-in." [S301, S302] **INFERRED**

One question to ask. "LSEG says a large share of FXall's functionality is now in Workspace. How does the team measure whether FX clients are really moving their workflow, and would an intern work on that?" [S302]

Facts to use inside scenarios

- FX Global Code** (Dec 2024): P17 last look must be disclosed; P19/P20 confidential information; P46/P48 confirm and fix breaks fast; P45 amendments controlled [S343].
- ISM:** comments within 3 days (first) and 2 days (later); final docs and Form 1 by 9am one business day before; decision by Dealing Notice on RNS [S347]. Admission decided by the Exchange [S346].
- UK MAR:** Art 7 inside information = precise, non-public, price-sensitive [S349]; Art 18 insider lists, kept at least 5 years [S348].
- LCH:** defaulter's margin and fund, then LCH capital, then others' fund; IM at 99.7%; 9 defaults all within IM; Lehman \$9trn, ~35% IM used [S351, S354].
- Three lines:** business owns risk; Risk challenges; Audit assures [S300]. **Speak Up:** 192 reports in 2025; no retaliation [S300, S307].
- Values:** Integrity, Partnership ("Our open model is integral..."), Excellence, Change [S307].

Numbers if asked (say the date too)

Number	What	Src
£8,986m	FY2025 income ex recoveries, +7.1% organic; EBITDA margin 50.3%	S72
£4,799m	H1 2026 income, +8.4% organic	S70
£1,920m	Markets H1 2026, +11.9%, ~40% of group; margin 58.6%	S70, S71
\$1,941trn	SwapClear notional cleared 2025, +21.2%; >90% share of cleared IRS	S301, S303
\$561bn	LSEG FX ADV H1 2026, +5.8%; FX revenue £272m in 2025	S302, S301
2,400+	FXall institutional clients; 200+ liquidity providers	S340
44,000+	Customers in 170+ countries (May 2026)	S303
28,516	Employees end 2025 (JD says 25,000: older copy)	S300
~94%	LCH stake (94.2% to 94.4%), going above 95% after Jul 2026 deal	S121, S300, S70
50.9%	Tradeweb economic interest (majority-owned)	S300
23 / £2.1bn	UK IPOs 2025, proceeds +170% on 2024	S192
\$9.6tn	Global FX a day (BIS, Apr 2025); UK 37.8%	S163, S162

Key dates

22 Oct 2026	LSEG Q3 trading statement (not out yet: check it) [S91]
28 Oct 2026	UK Autumn Budget [S243]
30 Oct 2026	Applications close; rolling, may close early [S260]
1 Dec 2026	Amit Zavery joins LSEG board [S92] REPORTED
End 2026	LSE 24 client testing; ETPs from H1 2027, 17:00 to 07:50 [S278]
June 2027	Internship starts: 9 weeks, London, 3 days in office [S260]

Who's who (Markets)

Daniel Maguire: Group Head, LSEG Markets and CEO, LCH Group. Julia Hoggett: CEO, London Stock Exchange plc. Susi de Verdelon: CEO, LCH Ltd. David Schwimmer: Group CEO [S306, S273, S275].

On the day

Camera at eye level, light in front. Card behind the lens: four steps, four tiers, three numbers. Water in reach. In 4, out 6, twice. Slower than feels natural. Look at the lens to close.

FIVE COMPOSURE TREES, ONE LINE EACH

Two seniors, one resource: find each deadline, try a split, else your manager decides. **Skip a control:** which control, approved exception? If none, escalate fast; never skip. **Overheard inside information:** precise, non-public, price-moving, or not sure? Stop, don't share or trade, tell Compliance today. **Your error sent to a client:** tell your manager within the hour, draft the correction, fix the cause. **Incomplete data at deadline:** reversible? Send best estimate, assumptions in bold. Not reversible? Escalate for time or a senior decision.

PART 14

Glossary

Every term in this pack in plain English, with the LSEG business it touches, so you can explain any of them to an interviewer in two sentences.

This glossary is alphabetical. Each entry gives a plain-English definition first. Where the term matters to a specific part of LSEG, an *LSEG angle* line tells you which business it touches and gives one fact you can use. Numbers and dates carry source markers that match the source list in Part 15. Definitions with no marker are standard market vocabulary rather than facts about LSEG.

HOW TO USE THIS PART

Do not learn it front to back. Before each stage, cover the definitions and test yourself on the twenty terms most likely to come up for a Markets intern: CCP, clearing, settlement, margin, default waterfall, open access, MTF, RFQ, FX spot, FX forward, fixing, interest rate swap, IPO, ISM, PISCES, T+1, EMIR 3, net treasury income, organic growth and three lines of defence. If you can say each in one sentence and name the LSEG business it belongs to, you are ahead of most candidates.

KEY TERM

The one-line test: for any term, an interviewer is checking two things. Do you know what it is, and do you know why LSEG cares? The *LSEG angle* lines are there for the second half. Use one fact, not five.

Terms A to E

A

Active account (EMIR 3): An EU rule that makes some large EU firms hold, and actually use, an account at an EU clearing house for certain euro and Polish zloty interest rate derivatives. It applies from 25 June 2025, with at least five trades per sub-category per reference period going through the EU account ^[S161]. *LSEG angle:* it is designed to pull euro swap clearing away from LCH SwapClear in London. First reports covering 25 June 2025 to 30 June 2026 were due by 31 July 2026 ^[S257].

ADV (average daily volume): The total traded on a platform in a period, divided by the number of trading days. Bonds and FX are measured in money (dollars or pounds), futures in contracts. *LSEG angle:* a headline Markets KPI. In H1 2026 Tradeweb ADV was \$3.2trn (+24.8%) and LSEG FX average daily total volume \$561bn (+5.8%) ^[S24].

Adjusted EPS (AEPS): Earnings per share after removing items management treats as one-off or non-cash, such as amortisation of intangible assets bought in acquisitions. *LSEG angle:* FY2025 AEPS was 420.6p (+15.7%) against reported EPS of 238.4p ^[S72]. Much of the gap is amortisation from the Refinitiv deal **INFERRED** ^[S70].

AIM: London Stock Exchange's market for smaller, growing companies, founded in 1995, with lighter admission rules than the Main Market. AIM companies work with a nominated adviser (a "nomad") ^[S78]. *LSEG angle:* 14 of London's 23 IPOs in 2025 were on AIM ^[S192]. LSE's Primary Market and AIM Regulation team (PMAR) oversees it ^[S13].

ASV (annual subscription value): The yearly value of all subscription contracts live at a point in time. Its growth rate is an early signal of future subscription revenue. *LSEG angle:* ASV growth was 6.1% at June 2026 ^[S70]. Slower ASV growth was blamed for a sharp share fall on 31 July 2025 ^[S102, S103].

B

BI (business intelligence): Turning raw business data (volumes, revenue, client activity) into dashboards and reports that managers use to decide things. *LSEG angle:* one of the four JD exposure areas is "Delivery of business intelligence, strategic initiatives, and operational improvements" ^[JD]. The sibling Business Analyst internship names Power BI and Tableau ^[S5].

Bond: A loan turned into a tradable security. The issuer borrows money, pays interest (the coupon) and repays the face value at maturity. When market yields rise, existing bond prices fall. *LSEG angle:* bonds are listed on the Main Market, ISM and Sustainable Bond Market, and traded on Tradeweb ^[S15, S177].

Buy side and sell side: The buy side invests money (asset managers, pension funds, hedge funds). The sell side is banks and dealers that make prices and sell trading services. *LSEG angle:* FXall connects buy-side clients to more than 200 bank liquidity providers ^[S340]. Banking customers produce 72% of LSEG revenue ^[S303].

Buyback: A company buys its own shares and cancels them. This returns cash to shareholders and raises earnings per share. *LSEG angle:* £2.1bn in 2025, £2.1bn in H1 2026 and up to £1.35bn more by February 2027, taking buybacks since 2022 above £8bn. The Board cited a "dislocation" between the value of the business and the share price ^[S72, S70].

C

Cappfinity: A UK assessment company (formerly Capp) whose tests measure strengths: what you do well and what energises you. *LSEG angle:* LSEG's "Assessment Preparation Hub" link opens a page titled "Cappfinity Preparation Hub", so the Immersive Online Assessment is very likely Cappfinity's ^[INFERRED] ^[S264, S265].

CCP (central counterparty): A clearing house that steps into the middle of a trade, becoming the buyer to every seller and the seller to every buyer. If one side defaults, the other still gets paid. It collects margin and a default fund to cover that risk. *LSEG angle:* LCH Ltd (London) and LCH SA (Paris). Member margin and default fund collateral across LSEG's CCPs was £277bn at 31 December 2025 ^[S74].

CDSClear: LCH SA's service for clearing credit default swaps, contracts that pay out if a borrower defaults. *LSEG angle:* run from Paris and led alongside DigitalAssetClear ^[S28]. A London Business Programme Manager role supports its transformation programme across Risk, Operations, Product, Technology and other teams ^[S12].

Clearing: The step between agreeing a trade and settling it, where obligations are confirmed, netted and risk-managed. Central clearing puts a CCP in the middle. *LSEG angle:* LCH. After the 2008 crisis, G20 rules pushed standard over-the-counter derivatives into central clearing, which is why SwapClear is so large ^[INFERRED].

CLS: The system that settles FX trades payment-versus-payment, operating since September 2002. It settles over \$8.0trn of payments a day in 18 currencies for over 75 members ^[S204, S345]. *LSEG angle:* ForexClear's CLSClearedFX service was redesigned in July 2025 to put cleared FX into the main CLS settlement session ^[S304].

Commercial companies category: see ESCC.

Compression: Tearing up derivatives trades that offset each other and replacing them with fewer trades carrying the same net risk. It cuts notional outstanding, capital use and admin. *LSEG angle:* OTC Derivatives revenue rose 11.6% in 2025, "driven by growth in clearing and compression activity" ^[S301]. 7.8m SwapClear trades were compressed in 2023; no 2025 figure was found ^[S356]. Post Trade Solutions sells compression and optimisation for uncleared trades ^[S300].

Consolidated tape: One feed that combines trade data from every venue for an asset class, so investors see the whole market. *LSEG angle:* the UK bond tape, run by ETS Connect UK, went live on 22 June 2026. The equity tape is due to be procured in early 2027 and to operate "in 2027 or early 2028", with income shared with data contributors ^[S155, S157]. LSE, Turquoise and Tradeweb feed tapes, and a cheap public tape can compete with paid venue data ^[INFERRED].

COO office: The team supporting a chief operating officer with performance reporting, governance, planning and executive papers. *LSEG angle:* a Markets Operations and Controls Business Manager advert asks the holder to "own the production of high-quality executive materials" and keep "KPIs, MI, and performance reporting" consistent ^[S18]. The exact COO-office structure in Markets was not confirmed (Part 16).

Critical third parties (CTP): Suppliers, mostly cloud providers, that HM Treasury designates for direct oversight by UK financial regulators, because many firms depend on them. *LSEG angle:* the regime started on 1 January 2025 and the first designations took effect on 13 July 2026 ^[S170]; those named were reported as AWS, Google Cloud, Microsoft and Oracle ^[S171]. LSEG runs on Microsoft Azure under a 10-year partnership ^[S79].

CSD (central securities depository): The institution that keeps the official record of who owns which securities and moves them from seller to buyer at settlement. *LSEG angle:* LSEG is not the main UK CSD (that is Euroclear UK and International) ^[INFERRED]. It is building a Digital Securities Depository for tokenised assets ^[S70].

D

D2C and D2D: Dealer-to-client platforms let investors trade with banks. Dealer-to-dealer platforms let banks trade with each other. *LSEG angle:* FXall is LSEG's D2C FX platform and FX Matching its D2D platform [S22].

Default fund: A pool of money paid in by a CCP's clearing members, used if a defaulting member's own margin does not cover its losses. *LSEG angle:* LSEG says its default funds are sized by stress tests to cover "multiple defaults in extreme market circumstances" [S74].

Default waterfall: The fixed order in which a CCP uses resources to absorb a member's default. *LSEG angle:* at LCH the defaulter's collateral and default fund contribution go first, then LCH's own funds, then the default fund contributions of the other members [S93]. LCH says it has managed 9 member defaults, all within the initial margin held [S351].

Digital gilt (DIGIT): A UK government bond issued and recorded on a distributed ledger, as a pilot. *LSEG angle:* HSBC Orion is the issuer depository and LSEG's Digital Securities Depository the investor depository under an MoU, with issuance by Q1 2027 [S246, S221]. Rachel Reeves said the UK would be the first G7 country to issue a digital sovereign bond [S245].

Digital Markets Infrastructure (DMI): LSEG's ledger-based platform for private funds, built on Microsoft Azure. *LSEG angle:* launched September 2025; six fund providers onboarded by H1 2026 [S72, S70].

Digital Securities Sandbox (DSS): A Bank of England and FCA regime that lets firms test DLT-based trading and settlement under adjusted rules. It came into force on 8 January 2024 and opened to applicants on 30 September 2024, running to December 2028 unless extended [S169, S168]. *LSEG angle:* HSBC Orion was the first firm approved to go live as a Digital Securities Depository on 13 July 2026, linking to LSEG for DIGIT [S246].

DLT (distributed ledger technology): A shared database copied across many participants and updated under agreed rules. Blockchains are one type. It can record ownership and settle trades almost instantly. *LSEG angle:* sits behind LSEG's digital projects: DMI, the Digital Securities Depository and DIGIT [S70, S246].

DORA: The EU Digital Operational Resilience Act, which sets rules on IT risk, incident reporting, resilience testing and oversight of tech suppliers. It applies from 17 January 2025 [S173]. *LSEG angle:* relevant to LSEG's EU entities such as LCH SA and Turquoise Europe [INFERRED].

Dual listing: A company whose shares are listed on two exchanges, often its home market plus a second market to reach more investors. *LSEG angle:* LSE's Equity Primary Markets team covers IPOs and secondary listings, and LSE claims "the highest proportion of international companies among its issuers of any major exchange" [S16] [REPORTED].

E

EBITDA: Earnings before interest, tax, depreciation and amortisation. A rough measure of operating profit before investment costs. "Adjusted" removes one-off items. *LSEG angle:* adjusted EBITDA £4,523m in 2025, a 50.3% margin; 52.7% in H1 2026 [S72, S70].

EMIR, UK EMIR and EMIR 3: EU rules on derivatives clearing, trade reporting and CCPs. The UK kept its own version (UK EMIR) after Brexit. EMIR 3 is the EU revision in force from 24 December 2024 [S161]. *LSEG angle:* the Bank of England consulted in July 2025 on moving UK EMIR CCP rules into its own FMI Rulebook [S197].

Equivalence: An EU decision that a non-EU rulebook is good enough, so EU firms can use that country's infrastructure. *LSEG angle:* the EU extended equivalence for UK CCPs on 31 January 2025 to 30 June 2028 [S160]. Without renewal, that is a cliff edge for LCH's EU clients [INFERRED].

ESCC (equity shares in commercial companies): The single main category for listing company shares under the UK Listing Rules from 29 July 2024, replacing the old premium and standard segments. The FCA's own text says "commercial companies category"; ESCC is practitioner shorthand [S150] [REPORTED]. *LSEG angle:* part of the reform package meant to win IPOs back to London.

ETF (exchange-traded fund): A fund whose shares trade on an exchange all day, usually tracking an index. *LSEG angle:* FTSE Russell earns asset-based fees from ETFs tracking its indices: \$2.19trn of ETF assets at June 2026 [S70].

ETP (exchange-traded product): The umbrella term for anything fund-like traded on an exchange, including ETFs and exchange-traded notes and commodities. *LSEG angle:* ETPs will be the first asset class on LSE 24 in H1 2027, subject to regulatory approval [S196].

Eurobond: A bond issued in a currency other than that of the country where it is sold, placed with international investors. *LSEG angle:* the market began with Autostrade in July 1963 (\$15m, 15 years, 5.5%), lead-managed from London by S G Warburg [S174], but listed in Luxembourg, not London [S175] [REPORTED].

Exchange (regulated market): The most heavily regulated kind of trading venue, where securities are admitted to trading under fixed, non-discretionary rules. *LSEG angle:* London Stock Exchange plc operates its markets as a Recognised Investment Exchange [S13].

Terms F to M

F

First line (of defence): The business teams that own their risks day to day: running controls, assessing new products, finding root causes of incidents. *LSEG angle:* a Post Trade Solutions role must "maintain the PTS control library within the GRC system" [S19]; LCH Ltd has a First Line Business Continuity Management team [S318]. See three lines of defence.

Fixing: A benchmark exchange rate set at a fixed time each day, such as the WM/Reuters 4pm London fix. Asset managers often trade at the fix so their trades match the rate used to value their funds **INFERRED**. *LSEG angle:* LSEG owns WM/Reuters through WMR [S221].

FMI (financial market infrastructure): The plumbing of markets: exchanges, trading platforms, clearing houses, depositories, payment and data systems. They make trading safe rather than taking bets themselves. *LSEG angle:* LSEG describes itself as "a leading financial markets infrastructure and data provider" [S74].

Forward First Fixing (FFF): An FXall workflow that lets asset managers arrange the forward part of fixing-related trades electronically, hours ahead. *LSEG angle:* passed \$1.5trn cumulative volume by May 2026, with 30+ clients and 18 partner banks; fees waived for the rest of 2026 [S238]; a record \$330bn+ in Q2 2026 [S221].

ForexClear: LCH Ltd's service for clearing over-the-counter FX derivatives. *LSEG angle:* \$48.1trn notional cleared in 2025 (+31.4%) and \$33.3trn in H1 2026 (+45.2%), with 41 members [S301, S221].

Free float: The share of a company's shares available for the public to trade, excluding stakes held by founders, governments or strategic owners. It affects liquidity and index inclusion. *LSEG angle:* Airtel Money is listing with about 16.5% to 17.5% in public hands [S232]; FTSE Russell cut the minimum free float for non-UK incorporated companies from 25% to 10% from June 2026 [S253].

FTSE Russell: LSEG's index business, which designs and calculates benchmarks such as the FTSE 100 and Russell indices and licenses them. *LSEG angle:* £954m income in 2025 at a 66.6% EBITDA margin, the group's most profitable division [S72]. FTSE Group was established in 1995 and Frank Russell bought in December 2014 [S78].

FX forward: An agreement to exchange currencies at a rate fixed today for a date later than spot. Companies use forwards to lock in the cost of a future payment.

FX Global Code: A voluntary set of 55 principles of good practice for FX markets, maintained by the Global Foreign Exchange Committee and first published in 2017 [S204]. A review completed in December 2024 strengthened guidance on settlement risk; the updated Code came out in January 2025 [S164]. *LSEG angle:* principles on last look (P17), confidentiality (P19, P20) and confirmations (P46, P48) are your anchors in any FX client scenario [S343].

FX Matching: LSEG's anonymous dealer-to-dealer central limit order book for FX, which came with Refinitiv [S303, S300]. *LSEG angle:* reported to have over 1,000 subscribers **REPORTED**. FX revenue (FXall plus Matching) was £272m in 2025 [S22].

FX spot: Exchanging currencies for near-immediate delivery, usually in two business days. *LSEG angle:* spot was 31% of global FX turnover of \$9.6trn a day in April 2025 [S163]. LSEG's US Streaming FX Spot business made its first trades on AWS Outposts [S24].

FX swap: A spot trade combined with a reverse forward trade. In effect, borrowing one currency against another for a period. *LSEG angle:* FX swaps were 42% of global FX turnover in April 2025, the biggest single product [S163].

FXall: LSEG's dealer-to-client FX trading platform, offering request-for-quote, bank price streams, an order book and post-trade services. *LSEG angle:* 2,400+ institutional clients, 200+ liquidity providers, 500+ currency pairs [S340]. A large share of its functionality is now inside Workspace [S302].

G

Gilt: A UK government bond. *LSEG angle:* the 10-year gilt yield reached 5.38% in late September 2026, near two-decade highs [S243]. Gilt volatility tends to lift rates trading and sterling swap hedging, which feeds Tradeweb and SwapClear volumes **INFERRED**. See also digital gilt.

I

Index: A single number tracking the value of a defined basket of securities, such as the FTSE 100. Index providers license their indices to fund managers who build index funds and ETFs. *LSEG angle:* FTSE Russell, with its index revenue split between subscription licences and asset-based fees [S72].

Initial margin: Collateral posted up front to a CCP to cover the losses it might face while closing out a defaulting member's positions. *LSEG angle:* LCH sets initial margin at 99.7% confidence for most services (99% for Listed Rates), above the 99.5% regulatory minimum for OTC products [S93].

Inside information: Under UK MAR Article 7, information "of a precise nature, which has not been made public" and which would be "likely to have a significant effect on the prices" if it were ^[S349]. *LSEG angle:* Primary Markets staff see issuer pipelines before they are public, so this matters from day one ^{INFERRED} ^[S13].

Insider list: A list issuers must keep of everyone with access to inside information, including advisers, with the date and time of access, kept for at least five years (UK MAR Article 18) ^[S348].

Interest rate swap (IRS): Two parties swap interest payments on a notional amount, typically one paying a fixed rate and the other a floating rate such as SONIA. Used to hedge or take a view on rates. *LSEG angle:* SwapClear cleared a record \$1,941trn of IRS notional in 2025 (+21.2%) ^[S72].

IPO (initial public offering): A company's first sale of shares to the public, with admission to trading on an exchange. *LSEG angle:* London had 23 IPOs raising £2.1bn in 2025 ^[S192]. Airtel Money priced at £1.96 a share on 1 October 2026 (market value £5.3bn), with Main Market admission expected on 14 October ^[S232].

ISM (International Securities Market): LSE's market for debt sold to professional investors, launched in May 2017 ^[S176]. It is a UK MTF operated by the Exchange as an RIE; admission is decided by the Exchange and ISM securities are not on the FCA's Official List ^[S346]. *LSEG angle:* LSE markets it with "3+2" turnaround (comments within three days, then two) ^[S347], and calls ISM a "key engine of growth" ^[S15].

K

KPI (key performance indicator): A number used to judge progress against a goal. *LSEG angle:* Markets publishes UK value traded, Tradeweb ADV, FX volume, SwapClear notional and client trades, ForexClear members and collateral balances ^[S301].

L

Last look: A final window in which a liquidity provider can accept or reject a trade request at its quoted price. *LSEG angle:* FX Global Code P17 says those using it "should be transparent regarding its use and provide appropriate disclosures to Clients" ^[S343]. GFCX guidance says it should not be used for information gathering ^[S344] ^{REPORTED}.

LCH Ltd and LCH SA: LSEG's two clearing houses. LCH Ltd in London (SwapClear, ForexClear, RepoClear, EquityClear) is a Recognised Clearing House supervised by the Bank of England ^[S304]. LCH SA in Paris (CDSClear, euro repo) is regulated in France by the ACPR ^[S105] ^{REPORTED}. *LSEG angle:* LSEG owns about 94% of LCH Group (94.2% after a 2024 purchase, 94.4% at end 2025), rising above 95% after a July 2026 deal ^[S121, S23, S70].

Leeds Reforms: A UK financial services reform package announced on 15 July 2025 alongside Rachel Reeves' Mansion House speech, aiming to make the UK the top destination for financial services by 2035 ^[S180]. Whether the new Chancellor, John Healey, keeps it unchanged is not known (Part 16).

Listing particulars: A disclosure document used for some admissions that are not public offers, lighter than a full prospectus. *LSEG angle:* LSE's ISM information pack compares admission particulars, full prospectus and listing particulars across its markets, but uses pre-2026 terms; the January 2026 ISM rulebook uses the new POATRs language ^[S347, S346].

Lit and dark: On a lit venue, orders are visible to everyone before trading. In a dark pool, orders stay hidden until they execute, which helps large investors trade without moving the price. *LSEG angle:* Turquoise runs both lit and dark (Turquoise Plato) books ^{INFERRED}. Its lit and dark volume split was not found.

LSE 24: A new, separate London Stock Exchange venue trading 17:00 to 07:50, Monday to Friday, with a pause from 18:30 to 19:00 ^[S227]. *LSEG angle:* client testing by end 2026; ETPs first in H1 2027, then equities, subject to approval. It "intends to draw on elements of central limit order book and request-for-quote functionality" ^[S196]. Tokenised xStocks are planned to trade there in 2027 ^[S228].

LSEG Everywhere: LSEG's plan to deliver AI-ready data wherever customers work, including through MCP (Model Context Protocol, an open standard for plugging data into AI tools). *LSEG angle:* partners include Anthropic, Databricks, Microsoft, OpenAI, Rogo and Snowflake, then Amazon Quick and Google Gemini; over 200 customers were engaged on the MCP server by July 2026 ^[S72, S70].

M

Main Market: London Stock Exchange's flagship regulated market for shares and bonds. *LSEG angle:* 9 of London's 23 IPOs in 2025 were on the Main Market ^[S192]. Airtel Money is due to list there ^[S232].

Mansion House: The Chancellor's annual City speech, and the pension pledges named after it. The Compact (10 July 2023) aimed for 5% of default funds in unlisted equities by 2030; the Accord (13 May 2025) for 10% in private markets by 2030, half in the UK ^[S181]. *LSEG angle:* Rachel Reeves gave the 14 July 2026 speech ^[S245], then was replaced as Chancellor by John Healey ^[S243, S244]. Never call Reeves the current Chancellor.

MAR (UK Market Abuse Regulation): Bans insider dealing, unlawful disclosure of inside information and market manipulation; issuers must disclose inside information promptly and keep insider lists. *LSEG angle:* LSEG Market Supervision monitors all secondary trading on LSE and Turquoise for possible abuse and files STORs (suspicious transaction and order reports) [S10].

Margin (two meanings): (1) Profit margin: profit as a share of revenue. Markets' adjusted EBITDA margin was 58.6% in H1 2026 [S70]. (2) Clearing margin: collateral posted to a CCP; see initial margin and variation margin. Say which one you mean.

MiFID II and UK MiFIR: EU rules from 3 January 2018 on investment firms and trading venues: more transparency, trade reporting and trading obligations [S203]. The original MiFID (1 November 2007) opened the door to competing venues such as Turquoise. The UK kept the rules as UK MiFIR and has since changed them, for example revoking the share trading obligation on 29 August 2023 [S167].

MTF (multilateral trading facility): A trading venue that brings many buyers and sellers together under fixed rules, regulated more lightly than an exchange. *LSEG angle:* Turquoise is an equity MTF; AIM and ISM are MTFs run by LSE [S346]; FXall runs an EU MTF in Ireland and a UK MTF [S341].

Terms N to S

N

NDF (non-deliverable forward): An FX forward where the two currencies are never exchanged in full. At maturity, the difference between the agreed rate and a fixing rate is paid in a major currency, usually dollars. Used for currencies with capital controls. *LSEG angle:* LSEG's FX surveillance product covers "Spot, Forward, Swap, NDF, Options" [S14], and FXall onboarding includes NDF Matching participants [S317].

Net treasury income (NTI): "Income earned on cash deposited with LCH as margin and default funds as part of the risk management process" [S23], after paying members their share. *LSEG angle:* £257m in 2025 and £143m in H1 2026 (+12.6%), driven by higher cash collateral in volatile markets [S72, S70]. It falls if interest rates fall **INFERRED**.

Netting: Offsetting buys against sells so that only the net amount is settled or margined. It reduces risk and the cash needed. *LSEG angle:* the more trades sit in one CCP, the more can be netted, which lowers margin. That network effect is why SwapClear's scale matters **INFERRED**.

Non-controlling interest: The share of a subsidiary's profit that belongs to outside shareholders. *LSEG angle:* LSEG consolidates all of Tradeweb's revenue, and the outside owners' share shows up here: £334m (adjusted) in 2025 [S72].

Notional: The face amount a derivative is based on, used to calculate payments. It is not the money at risk. *LSEG angle:* SwapClear's \$1,941trn notional cleared in 2025 sounds huge because it is a notional sum [S72]. Never compare it with revenue or GDP.

O

Open access: A CCP clears trades from any venue on fair, non-discriminatory terms, rather than only its owner's venues. *LSEG angle:* written into LCH's articles when LSEG took control: "No exchange will be favoured over any other" [S305]. It cuts both ways: Euronext moved its clearing in-house, cutting LSEG's Securities and Reporting revenue 3.0% in 2025 [S301].

Operational resilience: The ability to keep important business services running through disruption, within a set "impact tolerance" (the maximum tolerable outage). *LSEG angle:* UK firms had until 31 March 2025 to meet their tolerances [S172]. The Bank of England's FMI supervision priorities include meeting impact tolerances "under cyber and extreme scenarios" [S94].

Order book (CLOB): A central limit order book continuously matches anonymous buy and sell orders by price, then time. Most shares trade this way. *LSEG angle:* LSE, Turquoise and FX Matching are order books; LSE 24 will mix order book and RFQ features [S196].

Organic growth: Growth with acquisitions and disposals removed and exchange rates held constant ("constant currency"). LSEG also strips out "recoveries", fees it collects for third-party content and passes on. *LSEG angle:* +7.1% in 2025, +8.4% in H1 2026, 2026 guidance raised to 7.0% to 7.5% [S72, S70].

OTC (over the counter): Trades negotiated directly between two parties, often a bank and a client, rather than on an exchange order book. Most FX, bonds and swaps trade OTC. *LSEG angle:* LCH's OTC Derivatives line earned £641m in 2025 [S22].

OTF (organised trading facility): A venue for bonds and derivatives where the operator has some discretion over how orders meet. *LSEG angle:* not a focus for LSEG; interdealer brokers are the typical operators **INFERRED**.

P

PISCES: The Private Intermittent Securities and Capital Exchange System: a UK legal sandbox letting private companies' shares trade during set trading windows. In force from 5 June 2025 (FCA rules PS25/6 from 10 June 2025), it expires on 5 June 2030 unless made permanent ^[S152]. Trading is secondary only: no new money is raised ^[S154].

PMO (programme management office): The team that runs the governance of a project or programme: plans, budgets, RAID logs (risks, actions, issues, decisions) and steering committee papers. *LSEG angle:* Post Trade Solutions and Markets Operations Transformation PMO roles are advertised, many in Manila ^[S4].

Post Trade Solutions (PTS): LSEG's business for uncleared derivatives and post-trade efficiency, including Quantile, Acadia, TradeAgent and RepoAgent. *LSEG angle:* 11 banks bought 20% for £170m in October 2025, "replicating the original LCH model" ^[S72]; over 80 customers were added in H1 2026 ^[S70].

Primary and secondary market: In the primary market, new securities are sold for the first time and the issuer gets the cash (an IPO, a new bond). In the secondary market, existing securities change hands between investors. *LSEG angle:* listings and debt capital markets teams work in the primary market; LSE, Turquoise and Tradeweb trading is secondary.

Private Securities Market (PSM): London Stock Exchange's PISCES venue. *LSEG angle:* LSE was the first operator granted a PISCES Approval Notice, on 26 August 2025 ^[S96]. The first auction ran on 25 March 2026 ^[S154]; Wayve ran an \$85m auction for employees in July 2026 ^[S235].

Prospectus: The legal document describing a security and its issuer for investors. *LSEG angle:* from 19 January 2026 the Public Offers and Admissions to Trading Regulations (POATRs) replaced the UK Prospectus Regulation, with FCA rules in PS25/9 ^[S151].

PvP (payment versus payment): Both legs of an FX trade settle at the same moment, or neither does. It removes settlement risk (also called Herstatt risk): paying one currency and not receiving the other. *LSEG angle:* in April 2025, \$5.2trn a day settled via PvP and about \$1.4trn (10%) settled with no protection ^[S205].

R

Recurring revenue: Revenue from contracts that repeat, such as subscriptions and licences, rather than one-off fees. *LSEG angle:* 73% of total income including recoveries in 2025 ^[S74].

Repo (repurchase agreement): A sale of securities with an agreement to buy them back later at a slightly higher price. In effect, a short-term secured loan where the price difference is the interest.

RepoClear: LCH's repo clearing service, run across LCH Ltd and LCH SA. *LSEG angle:* €334.2trn nominal cleared in 2025 (+7.8%) ^[S301], 86 live members at LCH Ltd, including 16 Sponsored Members ^[S304]. RepoAgent, built by PTS with Tradeweb, helps reduce repo settlement fails ^[S301].

Revenue capture: Revenue earned per unit of volume (revenue divided by volume). *LSEG angle:* LSEG does not publish a capture rate in the documents read. If you compute one, for example FX revenue against FX ADV, say clearly it is your own metric ^[INFERRED] ^[S301].

RFQ (request for quote): A client asks a few dealers for a price and picks the best. Most bonds, swaps and much FX trade this way. *LSEG angle:* Tradeweb's core model and FXall's QuickTrade ^[S342].

RIE (Recognised Investment Exchange): UK legal status for an exchange, recognised and supervised by the FCA. *LSEG angle:* London Stock Exchange plc is an RIE ^[S95] ^[REPORTED]; its PMAR team gives "first line primary regulatory oversight" of its markets in that capacity ^[S13].

RNS (Regulatory News Service): LSE's service for publishing issuer announcements such as results and inside information. *LSEG angle:* roles there require "ability to respect confidentiality at all times" ^[S20], the July 2024 Workspace outage disrupted RNS ^[S98].

S

Settlement: The actual exchange of cash and securities that completes a trade, usually at a CSD (or through CLS for FX). See T+1.

Skin in the game: A CCP's own capital placed in the default waterfall ahead of other members' default fund money, so the CCP shares the pain. *LSEG angle:* LCH sets aside 25% of its minimum regulatory capital as skin in the game ^[S93].

SJT (situational judgement test): A test that sets out a work scenario and asks what you would do. Cappfinity-style tests may also ask how much you would enjoy each option ^[S289]. *LSEG angle:* likely part of the Immersive Online Assessment ^[INFERRED].

SLA (service level agreement): A written promise of a service standard, such as uptime or response time, between a provider and a client or between internal teams. *LSEG angle:* useful vocabulary for FX client and operations scenarios ^[INFERRED].

SONIA: The Sterling Overnight Index Average, the benchmark overnight sterling interest rate that replaced LIBOR for sterling contracts. *LSEG angle:* LCH SwapClear had a 99.995% share of cleared GBP SONIA swaps in Q1 2026 ^[S140] ^[REPORTED].

Speak Up: LSEG's whistleblowing channels: confidential, optionally anonymous, with a 24-hour hotline. *LSEG angle:* 192 reports were received in 2025 [S300]. The Code of Conduct says you "must follow the Speak Up Policy and not look the other way" and that LSEG "does not tolerate retaliation" [S307].

STP (straight-through processing): A trade flows from execution to confirmation, booking and settlement without anyone re-keying it. *LSEG angle:* FXall sends trades to clients' order and treasury systems "with full STP" [S340]; David Schwimmer cites "straight through FXall execution capabilities into ForexClear" [S284].

Strengths-based interview: An interview that asks what you do well and what energises you, not only what you have done. *LSEG angle:* LSEG's video stage uses "a strength-based-interview style" [S260]. One candidate anecdote reports about 8 questions, one take each, 1 to 2 minutes per answer [S291] **REPORTED**.

Subscription: A recurring fee for access to data, software or index licences. *LSEG angle:* Data and Analytics, FTSE Russell and Risk Intelligence together are about 61% of income **INFERRED** [S120]; subscription revenue retention was 92.8% at June 2026 [S70].

SwapClear: LCH Ltd's interest rate swap clearing service, "founded in collaboration with clearing members 25 years ago" [S304]. *LSEG angle:* over 90% of cleared IRS notional outstanding [S303]. In October 2025 LSEG paid £1.2bn to cut the founding banks' share of SwapClear's revenue surplus from about 30% to 10% from 2026 to 2045 [S72].

Terms T to W

T

T+1: Settlement one business day after the trade date. *LSEG angle:* the UK and EU both plan to move to T+1 from 11 October 2027 [S158, S159]. In the UK only the draft statutory instrument (November 2025) is confirmed. Less time to fix failed trades means more automation for venues and LCH **INFERRED**.

TCA (transaction cost analysis): Measuring how much a trade cost against a benchmark, to prove best execution. *LSEG angle:* FXall's Trade Performance Reporting lets clients "evaluate the cost and effectiveness of your execution strategies" [S340].

Three lines of defence: A risk model in which the business owns its risks (first line), Risk and Compliance oversee and challenge (second line), and Internal Audit gives independent assurance (third line). *LSEG angle:* "LSEG operates a three lines of defence model, providing appropriate segregation of duties and clear roles and responsibilities" [S74].

Tokenisation: Representing a security or other asset as a digital token on a ledger, so it can move between digital wallets and potentially trade around the clock. *LSEG angle:* on 1 September 2026 LSE announced UK tokenised equity structures, including xStocks (1:1 backed tokenised shares), and a partnership with Payward [S228].

Trade repository: A database that collects reports of derivatives trades so regulators can see risk building up. *LSEG angle:* LSEG's UnaVista operates in this space **INFERRED**; Regulatory Reporting is a separate unit inside Markets [S22].

Tradeweb: An electronic marketplace for rates, credit, equities and money markets, separately listed on Nasdaq (TW). *LSEG angle:* LSEG holds about 50.9% of the economics [S74] and about 89.9% of the votes [S137], so say "majority-owned". Revenue \$2,052.4m in 2025 (+18.9%) [S137]; ADV \$3.18trn in H1 2026 [S70].

Turquoise: LSEG's pan-European equities MTF, founded in 2006 by nine banks, with Turquoise Europe in Amsterdam [S95]. *LSEG angle:* 84.2% owned by LSEG [S300]. Tom Stenhouse was appointed CEO in March 2026, subject to regulatory approval [S32].

U

UK Listing Relief: A three-year exemption from the 0.5% stamp duty reserve tax (SDRT) on shares of companies newly listed on a UK regulated market on or after 27 November 2025 [S182] **REPORTED**. *LSEG angle:* one of the incentives for IPOs in London.

UKLR (UK Listing Rules): The FCA rulebook for listed companies, in force from 29 July 2024. The FCA called it "the most significant changes to the UK's listing regime in over 3 decades" [S150]. See ESCC.

V

Variation margin: Cash paid daily (or more often) to settle gains and losses on open positions, so losses never pile up. *LSEG angle:* LCH can make "multiple intraday margin calls" in volatile markets [S351].

Vertical silo: A group owns both the trading venue and the CCP that clears it, so trading and clearing are tied together. *LSEG angle:* Deutsche Börse describes its "vertically integrated business model" (Eurex trading, Eurex Clearing, Clearstream) ^[S127]; LSEG chose open access instead ^[S300, S305].

W

Workspace: LSEG's desktop data and analytics platform, the successor to Eikon (Eikon access ended on 30 June 2025) ^[S72]. *LSEG angle:* FXall functionality, FTSE Russell indices and LCH data are now available inside it ^[S300]; AI Search had 17,000 active users in H1 2026 ^[S70]. Its Workflows line grew only 2.8% in H1 2026 ^[S70].

World-Check: LSEG Risk Intelligence's database for screening customers against sanctions lists and politically exposed persons. *LSEG angle:* in 2024 a hacking group claimed to hold 5.3m World-Check records; LSEG said it "was not a security breach of LSEG/our systems" but a third party's copy ^[S99] **REPORTED**. The Business Analyst internship mentions World-Check under Markets, which is unexplained ^[S5].

DON'T SAY THIS

"SwapClear cleared \$1,941 trillion, so it is worth more than the world economy." Notional is a reference amount, not money at risk. Also avoid "LCH is LSEG's clearing division" without naming LCH Ltd and LCH SA as separate legal entities in two countries ^[S22, S28].

SAY THIS IN THE INTERVIEW

"Open access means LCH clears for any venue on fair terms, even rival ones. That is why banks trust it, and why it lost Euronext's clearing when Euronext built its own. It is a deliberate trade-off, not an accident" ^[S305, S301].

PART 16

Gaps, open questions and self-check

What this pack could not establish, where its sources disagree, how the research was done, and what to re-check before each stage.

A research pack is only as good as its honesty about what it does not know. This part collects every "Gaps" section from the seven research workstreams in one place, groups them by theme, and tells you two things for each: why it matters for you, and how you could close it yourself. It then lists the places where sources disagreed and how the pack settled each one, so that you never repeat a figure an interviewer could correct.

WHY THIS MATTERS

Interviewers at an infrastructure business value people who know the limits of their data. If you say "the annual report gives 28,516 employees, although the job advert still says 25,000", you show exactly the "curiosity for data" the JD asks for ^[JD]. Saying "I couldn't find that, so I'd like to ask you" is a strength, not a weakness.

What could not be established

Each table lists the gap, why it matters to you, and the quickest way to close it. "Ask at AC" means it is a good, genuine question for the assessment centre, where LSEG says you will "meet our people" ^[S264].

Role and team

Gap	Why it matters	How to close it
Which team you will join	Placement is decided during recruitment, not at application ^[S2] . The four JD bullets are a template reused in New York and in the London graduate advert, so they describe a pool of placements, not one team ^[S9, S6] .	Ask at AC: "How do you decide which business an intern joins, and can preferences change?" Prepare one story for each of the four areas.
Intern and graduate intake numbers	Not in the Annual Report, interim report, Sustainability Report or careers pages ^[S23, S57] . The pack's 8 to 20 intern estimate is reasoning only ^{INFERRED} .	Ask at AC or on any LSEG careers event. Do not quote an intake figure.
Intern-to-graduate conversion rate	ISE reports a 42% rise in intern conversions in one year, a relative change, not a rate ^[S270] .	Ask at AC: "What do interns who convert tend to do differently?"
Rotation structure of the graduate programme	Sources conflict (see contradictions table). It affects how you describe your career plan.	Ask at AC. Until then, say "placements" or "exposure", not "rotations".
COO-office and business management structure in Markets	JD bullet 3 points at business management, but no public map exists; "chief of staff" searches found nothing relevant ^[S319] .	Ask at AC who the Markets business management teams report to.
Heads of Capital Markets, Equities and Fixed Income Primary Markets in London	You may meet them or their teams. Not found on any page read; a New York advert names a role but no person ^[S15] .	Check LSEG press releases and the London Stock Exchange website the week before the AC.

Gap	Why it matters	How to close it
Why the Business Analyst internship mentions World-Check under Markets	World-Check sits in Risk Intelligence, a separate division ^[S5, S22] . Could be a copy error or real cross-division work.	Ask at AC whether Markets interns ever work with Risk Intelligence.
Intern pay	No official figure. Glassdoor snippets suggest about £37k to £38k a year pro rata, low confidence ^[S295] .	The offer letter will state it. Do not raise pay before an offer.

The firm

Gap	Why it matters	How to close it
Q3 2026 trading statement	Due 22 October 2026, not out on 5 October ^[S91, S252] . It will be the freshest data before any interview.	Read it on 22 October: Markets growth, guidance, buyback progress, and any comment on the SwapClear margin benefit reversing in Q4 ^[S70] .
Market capitalisation	The pack's "about £40bn" is arithmetic, not sourced ^{INFERRED} ^[S90, S70] ; an aggregator gave \$52.26bn ^[S148] .	Say "about £40bn" with "roughly". Check on the day if you plan to use it.
Elliott's stake size and any later statements	Elliott's role shapes the Tradeweb debate. Only the February 2026 reports and Schwimmer's "constructive dialogue" quote were read ^[S86, S223] .	Search news the week before each stage. Do not cite FT or Bloomberg articles you have not read.
LCH fines, FTSE Russell index errors, Refinitiv cost overruns, FT pieces on Workspace complaints	None found. The Bank of England's 2025 Vocalink fine was described as its first FMI fine, which suggests but does not prove LCH has not been fined ^[S106] .	Never claim any of these. Absence of evidence is not proof either way.
2025 SwapClear compression volume	Latest figure is 7.8m trades compressed in 2023 ^[S356] .	Check LCH SwapClear volume pages. Otherwise quote the 2023 figure with its year.
Commercial bundling of SwapClear with Tradeweb or ForexClear with FXall	No LSEG statement found, and open access forbids favouring LSEG venues ^[S305] .	Do not claim a bundle. You can ask how teams work together within open-access rules.

Competitors

Gap	Why it matters	How to close it
FX venue market shares (FXall vs 360T vs FXGO vs EBS vs Cboe FX)	Only volumes on different bases were found; Bloomberg's FXGO figure is self-reported ^[S149] .	Compare volumes only with a caveat. Ask the FX team how they measure share.
Turquoise market share and lit/dark split	Cboe Europe's 25% is known ^[S133] ; Turquoise's share is not.	Ask at AC "what does success for Turquoise look like?" rather than quote a share.

Regulation

Gap	Why it matters	How to close it
UK T+1: whether the final statutory instrument has been made; the "T+0 allocations and confirmations by December 2026" milestone	Only the November 2025 draft SI is confirmed ^[S158] ; the milestone came from a search summary ^[S247] . T+1 lands during your graduate year.	Check acceleratedsettlement.co.uk and the FCA's T+1 page before the AC.
EMIR 3 legal citation; first active-account reports' results	Citation not verified; reports were due 31 July 2026 but results are unknown ^[S257] .	Ask LCH-side interviewers whether the active account has moved meaningful volume.
POATRs details (SI number, 75% further-issuance threshold); Main Market debt admission process under the new rules	Relevant to debt listings research; not seen on the FCA pages read ^[S151] .	Read the FCA PRM sourcebook summary if placed in Primary Markets.

Gap	Why it matters	How to close it
The FCA document that finalised the bond tape framework (distinct from PS24/14)	Easy to mislabel PS24/14 as the tape appointment [S156, S155] .	Say "the FCA authorised ETS Connect UK, live 22 June 2026" and leave the document number out.
Whether Reeves' departure changes the Leeds Reforms or stamp duty agenda	John Healey is Chancellor; the Budget is on 28 October 2026 [S243] .	Read the Budget on 28 October for listings, ISA and stamp duty measures.

News

Gap	Why it matters	How to close it
FT, Bloomberg, Financial News and Risk.net coverage	Paywalled or blocked; only headlines read [S87, S131, S225, S234, S240] .	Use your university library's FT access if you have it. Never cite an article you have not read.

Interview process

Gap	Why it matters	How to close it
Assessment vendor not named by LSEG	The Cappfinity link is strong evidence but still an inference INFERRED [S264, S265] . The video platform is unconfirmed.	The invitation email will show the platform. Use the Cappfinity Preparation Hub when invited.
Number of video questions and timings for the 2027 cycle	Only one anecdote: about 8 questions, 1 to 2 minutes, one take [S291] .	Read the invite instructions; practise 90-second answers to be safe.
Assessment centre content for the business track	The detailed anecdote is from the technology track [S292] .	Prepare for a group exercise, a case pack and an interview; details come with the invite [S260] .
First-hand forum threads; YouTube intern vlogs	Glassdoor, TheStudentRoom, Reddit and others blocked scripted access; vlogs not searched.	Browse TheStudentRoom LSEG threads yourself, treating claims as anecdote.

People

Gap	Why it matters	How to close it
James Pearson as Head of FX	No LSEG release found; title rests on trade press, latest May 2026 [S282, S283] .	Check The Full FX and LSEG FX pages in the week of the AC.
Billy Hult as Tradeweb CEO	Confirmed only by snippet [S33, S298] , though consistent.	Check Tradeweb's leadership page.
Tom Stenhouse as Turquoise CEO	Appointed March 2026 "subject to regulatory approval" [S32] .	Check whether approval has been announced.

Where sources disagreed

These are the places where two sources, or a source and the original brief, did not match. The right-hand column is the line this pack uses everywhere. If another part of the pack seems to differ, this table wins.

Issue	Source A	Source B	How the pack resolved it
Headcount	JD and job adverts: "25,000 people across 65 countries" [JD, S317] . Careers page and investor deck: "over 26,000" [S272, S303] .	Annual Report 2025: 28,516 employees at 31 December 2025 (UK 5,043) [S23, S74, S300] .	Use 28,516 and say the advert copy is out of date. Never use "around 14,200": that is engineering headcount, which WS3 read as group headcount [S120] .

Issue	Source A	Source B	How the pack resolved it
LCH ownership	94.2% of LCH Group after buying 11.6% in 2024 [S121] .	94.4% in the 2025 Annual Report, "up 0.2pt in Oct 2025" [S23, S300] ; above 95% after the July 2026 €70m deal [S70] . Wikipedia's 82.61% is out of date [S44] .	A time series, not a true conflict. Say "about 94%, going above 95% when the July 2026 deal completes". Note WS1 labels the 94.4% as LCH Limited and WS8 as LCH Group Holdings.
Posting date	The candidate's JD copy: posted about 29 September ("6 days ago") [JD] .	Workday API start date 2026-09-21 [S2, S260] .	Use 21 September. Immaterial; what matters is the rolling close on 30 October.
ESCC naming	FCA text: "a new commercial companies category for equity shares" [S150] .	Practitioners say "ESCC" REPORTED .	Say "the commercial companies category, often called ESCC".
First Eurobond (1963)	Brief: "first Eurobond listed in London".	ICMA: Autostrade, July 1963, lead-managed by S G Warburg [S174] , listed in Luxembourg [S175] .	"Arranged in London, listed in Luxembourg." The Luxembourg venue is REPORTED .
Julia Hoggett's title	WS1: CEO of LSE plc from search snippets only [S49] REPORTED .	WS2 and WS6: LSEG press releases quote her as CEO, LSE plc [S96, S278, S279] .	Confirmed: CEO, London Stock Exchange plc and Head of Digital and Securities Markets. She is not on the Group Executive Team page [S273] , so do not call her an ExCo member.
TradElect outage	Brief: 2009.	Boston Globe: 8 September 2008, over 7 hours [S100] . A further crash in November 2009 appears in one headline snippet.	Use 8 September 2008.
Rotations	R0123406: "rotational programme" and "exposure/rotations"; BA graduate advert mentions "your first rotation" [S6, S7] . Old careers page: "two six-month rotations" (snippet, page now 403) [S51] .	Same advert: "from day one you will be aligned to one team" [S6] ; current careers page does not mention rotations [S38] .	Unresolved. Say "placements" for the internship and ask at AC. Avoid "the four rotations": the JD bullets are exposure areas.
Tradeweb ownership	50.9% effective economic interest [S74, S300] , 45.6% in Tradeweb Markets Inc [S300] . 50.7% in a 10-Q snippet [S137] .	About 89.9% of voting power [S137] , "about 51%" in press [S226] .	"Majority-owned: about half the economics, about 90% of the votes."
LCH Ltd's supervisor	WS1: no primary page names it, so INFERRED [S43] .	LCH Ltd 2025 accounts: Recognised Clearing House supervised by the Bank of England [S304] .	Confirmed: Bank of England.
PISCES approval date for LSE	WS4: 26 August 2025 from a law-firm snippet [S153] REPORTED .	LSEG press release dated 26 August 2025 [S96] .	Confirmed: 26 August 2025, first operator approved.
Assessment vendor and format	Test-prep sites: timed SHL tests, sometimes a phone interview [S286, S287, S288] .	LSEG: untimed immersive assessment, strengths video; hub link is Cappfinity [S260, S264, S265] .	Cappfinity, INFERRED with high confidence. Light numerical practice still helps.
H1 2026 results-day share move	Reuters: down 3.1% on the day [S223] .	Yahoo daily closes: down 6.4% (9,198p to 8,606p) [S90] .	Likely different times of day INFERRED . Say "the shares fell despite record results".
Elliott's buyback ask	£5bn [S225, S226] .	RTE wrote "\$5 billion" [S222] .	"A reported £5bn buyback" (two sources).
SwapClear share	"Over 90%" of cleared IRS notional [S23, S303] .	"95 percent of all 'vanilla' OTC interest rate swap products" (undated page) [S141] , 99.995% of GBP SONIA swaps in Q1 2026 [S140] .	Use "over 90%", the measure in LSEG's own reports.

Issue	Source A	Source B	How the pack resolved it
Division names on the careers site	Careers pages: "Capital Markets and Post Trade" [S37, S38] ; also says "summer 2027" eligibility.	Workday and results: "Markets", formed 1 January 2025; JD says summer 2028 [S2, S22] .	"The Markets division, which brought Capital Markets and Post Trade together in 2025." The JD's eligibility year wins.

SOURCE UNCERTAIN

The WS3 revenue-per-head table divides LSEG's £8,986m income by 14,200 (the engineering headcount), giving about £633k per head [\[S120\]](#). Using the group figure of 28,516 gives about £315k, which puts LSEG below the venue and trading peers (CME, Cboe, ICE, Nasdaq, Tradeweb, MarketAxess) and MSCI, and roughly level with S&P Global and Deutsche Börse [INFERRED \[S74\]](#). Part 4 uses this corrected basis. If you use revenue per head at all, use 28,516 and say the peers' figures use different currencies and definitions.

How the research was done

All research was carried out on 5 October 2026 by seven workstreams, each with its own block of source IDs. No new research was done for the write-up. Every fact in this pack traces back to one of these files. The primary documents read in full include the Annual Report 2025, the FY2025 preliminary results, the H1 2026 Interim Report and transcript, LCH Ltd's 2025 accounts, the Workday job API, FCA policy statements, BIS and Bank of England FX surveys, the FX Global Code, the ISM rulebook and UK MAR Articles 7 and 18.

Stream	Source IDs	Scope
WS1, WS1B	S1 to S57	Decoding the JD; mapping the Markets team, open roles and leaders
WS2	S70 to S109	LSEG as a business: money, risk, strategy, share price, history
WS3	S120 to S149	Competitors and design choices
WS4	S150 to S205	Market infrastructure from zero; UK listings, FX and clearing regulation
WS5	S220 to S259	Live commercial awareness, April to October 2026
WS6, WS7	S260 to S299	Interview process intelligence; leaders' public backgrounds
WS8, WS9	S300 to S358	"Why LSEG" from mechanism; scenario fact base

Tags and how to read them

CONFIRMED means read in a primary or official source (or two credible outlets). **REPORTED** means a single secondary source or a search snippet that was not fully read. **INFERRED** means the pack's own reasoning from sourced facts. The same document sometimes has several IDs because each workstream numbered its own sources: for example, the 2025 preliminary results are S22, S72, S120 and S301.

Limits on the research

- **Search budget ran out late in several workstreams.** WS1 ran 11 searches before the 12th and 13th were refused, and made up for it with direct fetches and the Workday API. WS2 ran out before repeating the Refinitiv integration and FTSE index-error checks. WS6 lost planned searches on YouTube vlogs, Bright Network pay and extra forum threads. WS8 ran out before reading LSEG FX's last-look disclosure. WS3 ran out of source IDs, so the SIX and Aquis deal was left uncited. WS4 used 37 searches and 15 fetches plus 13 full-page downloads.

- **Sites that blocked scripted access (HTTP 403):** Glassdoor, TheStudentRoom, Reddit, Bright Network, Gradcracker and Tradeweb.com. Anything from them is a snippet and marked as anecdote. WallStreetOasis returned nothing usable.
- **Paywalls:** FT and Bloomberg (for example S55, S87, S102, S131, S225, S234), Risk.net and FX Markets ^[S240], Coalition Greenwich and the full Burton-Taylor reports. Only headlines were used, and never as the sole basis for a claim.
- **Other failures:** McKinsey's report returned HTTP 503 ^[S187]; londonstockexchange.com pages are rendered by JavaScript and gave no content; Etrading Software's site was behind Cloudflare ^[S248]; LCH's 2008 press release domain no longer resolves ^[S355]; old.lseg.com and Forbes returned 403 ^[S51, S233]; the lseg.com culture page returned 404.
- **Candidate CV details were not available**, so CV-based answers in this pack use placeholders and a method, not your real examples.

Re-check before each stage

Facts in this pack were correct on 5 October 2026. These are the ones that will move. Tick each off before the stage it belongs to. Five errors to avoid at every stage: calling Rachel Reeves the Chancellor (it is John Healey), "25,000 staff", "LCH is 82% owned", "the first Eurobond was listed in London" and "TradElect crashed in 2009" ^[S243, S23, S70, S175, S100].

When	What to check	Where	Why
Before you apply (as soon as possible; closes 30 Oct 2026, rolling)	Posting still open; make one application only; the JD wording and four exposure areas	LSEG Workday posting R0123386; LSEG careers FAQ ^[S266]	Review is first-come, first-served and only the first application is read ^[S260, S266] .
14 Oct 2026	Airtel Money admission and first-day trading	RNS, news	London's largest IPO test since 2021 ^[S231, S232] .
22 Oct 2026	LSEG Q3 trading statement: Markets growth, guidance, buyback, SwapClear margin note	LSEG investor relations	Freshest numbers before any interview ^[S252] .
Late Oct 2026	Tradeweb Q3 results and monthly volumes	Tradeweb newsroom	Largest single Markets line ^[S237] .
28 Oct 2026	Autumn Budget: stamp duty, ISA, listings and Leeds Reforms measures	HM Treasury; news	New Chancellor John Healey's first Budget ^[S243] .
On the online assessment invite	Deadline in the email; Cappfinity Preparation Hub	Invite email; hub link on LSEG hints page ^[S264]	Deadlines are set per invite ^[S269] .
Before the video interview	Share price today; one Markets story you can explain in 60 seconds; any LSEG news since the Q3 statement	LSEG media centre; Part 7	Strengths questions ask what inspires you about LSEG ^[S264] .
Before the assessment centre	Leader titles (Hoggett, Walker, Pearson, Stenhouse approval, de Verdelon); LCH stake deal completed; LSE 24 client testing status (due by end 2026)	LSEG executive and LCH leadership pages; press releases	Several Markets roles changed in 2025 and 2026 ^[S273, S274, S277] .
Late Nov to early Dec 2026	US 23×5 trading start (expected 6 Dec); Amit Zavery joins LSEG Board (1 Dec); T+0 allocation milestone (Dec)	News; LSEG RNS; acceleratedsettlement.co.uk	Competitor hours race; board change; T+1 readiness ^[S251, S259, S247] .
Early 2027 (if your stages run late)	FY2026 results (last year's were on 26 Feb); DIGIT issuance (by Q1 2027); end of the buyback tranche (Feb 2027)	LSEG investor relations	Full-year numbers replace H1 figures ^[S72, S221, S70] .

When	What to check	Where	Why
Any time before an interview	Bank Rate (3.75% as of 17 Sep 2026); 10-year gilt yield; any EMIR 3 or equivalence news	Bank of England; news	Rates drive SwapClear, Tradeweb and NTI talking points [S241, S243] .

Final self-check

Each check from the brief, stated plainly, with what was done to verify it and any exception.

Check	Result	How it was verified, and exceptions
Every figure has a source and date; estimates are labelled as estimates on the chart	Yes	All 45 figures carry a source line, and a script confirmed that every figure has one. Derived numbers (pound-flow splits, currency conversions, headcount splits, revenue per head) are marked "est." or Inferred on the chart itself. Illustrative diagrams (netting, Figure 20) say ILLUSTRATIVE on the chart.
A total beginner could read Parts 1, 2 and 5 without another source	Yes, with effort	92 KEY TERM callouts across the pack, most of them in Parts 1, 2 and 5, plus a 119-term glossary (Part 14). Part 5 starts from "what is an exchange" and walks the trade lifecycle before any LSEG detail. Part 2 is dense in places (Figure 11); read Part 5 first if finance is new to you.
"Why LSEG" is mechanism, not adjectives, and cannot be transplanted to a rival	Yes	Part 12 builds every answer on LSEG-only facts: LCH's open-access articles, user governance and the SwapClear revenue-share deal, Tradeweb and FXall inside one group, FXall moving into Workspace. Part 12 includes a rival test with before/after rewrites, and Part 4 lists where LSEG does not lead, so the answer never overclaims.
The regulatory section for the role is current and dated correctly	Yes, with two caveats	Dates were checked against FCA, Bank of England, European Commission, BIS and legislation.gov.uk pages (Part 6, Figure 31). Caveats: the UK T+1 statutory instrument was published in draft (Nov 2025) and the final made version was not confirmed; EMIR 3 dates rest on law-firm summaries.
The team section goes materially beyond the JD, with method shown and thin evidence admitted	Yes	Part 1 pulls 45 live Markets postings from LSEG's Workday API, reconstructs the org chart colour-coded by confidence (Figure 5), shows the headcount method with ranges, and states that the four JD bullets are a template reused across postings. Intake size, COO-office structure and rotations remain unconfirmed and are listed above.
Every JD bullet has three scenarios, and the composure set has decision trees	Yes	36 scenario cards (12 duty lines × easy, medium, hard), counted by script. The composure set has five scenarios: two as drawn decision trees (Figures 42, 43) and three as step tables.
People sections contain only public professional information, with identity uncertainty flagged	Yes	Only roles, dates, career paths and public statements from LSEG pages, official releases and trade press. James Pearson (Head of FX) and Billy Hult (Tradeweb CEO) are flagged as trade press or snippet only. No interviewers were named, so none were researched.
The PDF rendered, the contents page numbers are correct, and every figure was checked for clipping	Yes	Two-pass render: page markers were read from the first pass and written into the contents page, and the script found every marker. Every SVG text element was tested programmatically for overflow of its drawing area, overlaps and font size (one fix, Figure 4), and all 45 figure pages were rasterised and inspected by eye.
What could not be found is listed	Yes	Sections (a) and (b) of this Part, plus SOURCE UNCERTAIN callouts in place throughout the pack.
Candidate inputs	Not supplied	No CV, degree, interview date or interviewer names were given. The CV grill (Part 11) and the 2-minute answer (Part 12) use marked placeholders. Re-run Parts 9 to 11 once you have a date.
