TECHNICAL GUIDE · BEGINNER-FRIENDLY · SUMMER 2027 INTERNSHIP

Inside Hayfin's Partner Solutions Group

What the team really does, the technical skills behind it, what you would do and learn as an intern, and what you can only learn at Hayfin

5
technical toolkits
fund maths, loans, structuring, documents, rules

12
weeks mapped
June to August 2027, against the real reporting calendar

10
Hayfin-only lessons
what you would not learn at Ares, ICG or a bank

200
words
your application answer, drafted and explained

How to read it: grey boxes in monospace are worked calculations. Every worked example uses **illustrative** numbers unless a source marker [S] says otherwise. Facts about Hayfin carry a source and a confidence tag: Confirmed, Reported or Inferred.
Built: 11 October 2026 from public sources only. It complements the full interview pack and the "Hayfin as a Shop" explainer.

SECTION 0

The application question, answered first

"What interests you about this opportunity, and how does it align with your career goals? Please reference your preferred team(s) and explain why they appeal to you." (max. 200 words)

The answer is first so you have it now. Section 11 explains why each sentence is there and gives an alternative. Personalise the bracketed part with your own experience; do not invent any.

RECOMMENDED ANSWER · 167 WORDS + YOUR OWN SENTENCE (UP TO ~30 WORDS)

I want to work in Partner Solutions because it is where Hayfin's lending becomes something an investor can underwrite. DLF V raised over €15bn through five wrappers for one strategy, including a rated note feeder that gives insurers capital-efficient access to the same loans. That one example joins three things I want to master: how institutions allocate capital, how fund terms and reporting are engineered, and how credit risk is explained honestly.

Hayfin is unusual because the same platform lends at both ends of the risk range, and its workout team stands behind every fund. PSG has to evidence that to pensions, insurers and consultants who now probe PIK, software exposure and loss rates. I want to learn to answer those questions with data: building track records, reconciling the Portfolio Breakdown and preparing for ILPA's new performance reporting.

[One sentence from your own experience: e.g. "At X, I rebuilt a client data pack and caught errors before it went out."] I would like to begin a career in investor relations, moving from reporting into coverage. PSG's global reach, from Seoul to Dallas, is where I would learn that best.

Facts used: five wrappers and LP scrutiny **[S222]**; rated note feeder ~$600m **[S237]**; "8%+ and 15%+ lender" idea **[S307]**; workout team **[S331]**; Portfolio Breakdown **[S305]**; ILPA Performance Template **[S43][S45]**; Seoul and Dallas **[S223][S99]**. The 167 words exclude the bracketed instruction; your own sentence can use up to about 30 words. Recount after adding it.

HOW TO USE THE REST OF THIS GUIDE

Sections 1 to 3 explain the team. Sections 4 to 8 are the five technical toolkits, from basic fund maths to insurer capital rules. Section 9 maps your summer week by week. Section 10 lists what only Hayfin can teach you. Section 11 links current news to the role. Section 12 is the answer, dissected.

SECTION 1

What you need to assume

Eight building blocks. If any feels shaky, read it twice; every later section depends on them

#	Building block	Plain-English explanation
1	**A fund is a contract, not a product on a shelf**	Investors (limited partners, LPs) sign a limited partnership agreement (LPA) promising money to a fund run by Hayfin (the general partner, GP). The LPA sets the fees, the rules, the life of the fund and the reports Hayfin must send. Much of Partner Solutions' work is honouring that contract in writing.
2	**Commitments are drawn over time**	An LP commits, say, €100m. Hayfin "calls" it in pieces when it makes loans, then "distributes" interest and repayments back. Hayfin's private credit funds invest for three to four years and harvest for three to four more, with two possible one-year extensions [S305].
3	**Returns are measured several ways**	IRR (an annual rate that accounts for timing), MOIC (how many times money came back), DPI (cash returned so far), TVPI (cash returned plus what is still held). Section 4 calculates each.
4	**Gross is before fees; net is after**	Investors care about net. Regulators insist net is shown next to gross in marketing [S53].
5	**Private loans have no market price**	So the manager estimates their value every quarter (a "mark"). That is why valuation policy is one of the most scrutinised sections of any due diligence questionnaire [S166][S250].
6	**Investors have their own rulebooks**	An insurer's capital rules, a pension's currency limits, a sovereign fund's custom terms. The same loans may need different packaging (a "wrapper") for each [S222].
7	**Everything external is regulated**	Every slide, case study and DDQ answer is a communication that must be "fair, clear and not misleading" (FCA COBS 4.2.1R) [S49].
8	**Hayfin is private**	Fees, recent fund returns and loss rates are not public. This guide teaches the mechanics with illustrative numbers and only uses real Hayfin figures where they are published.

SECTION 2

What PSG actually is: the machine

Four engines, the data that flows through them, and where an intern plugs in

The job description lists four duties: marketing and fundraising materials, ad hoc requests, case studies and quarterly LP reporting [JD]. Those are outputs. Underneath sit four engines that produce them. Hayfin's public bios and postings show each one [S1][S19][S20][S305].

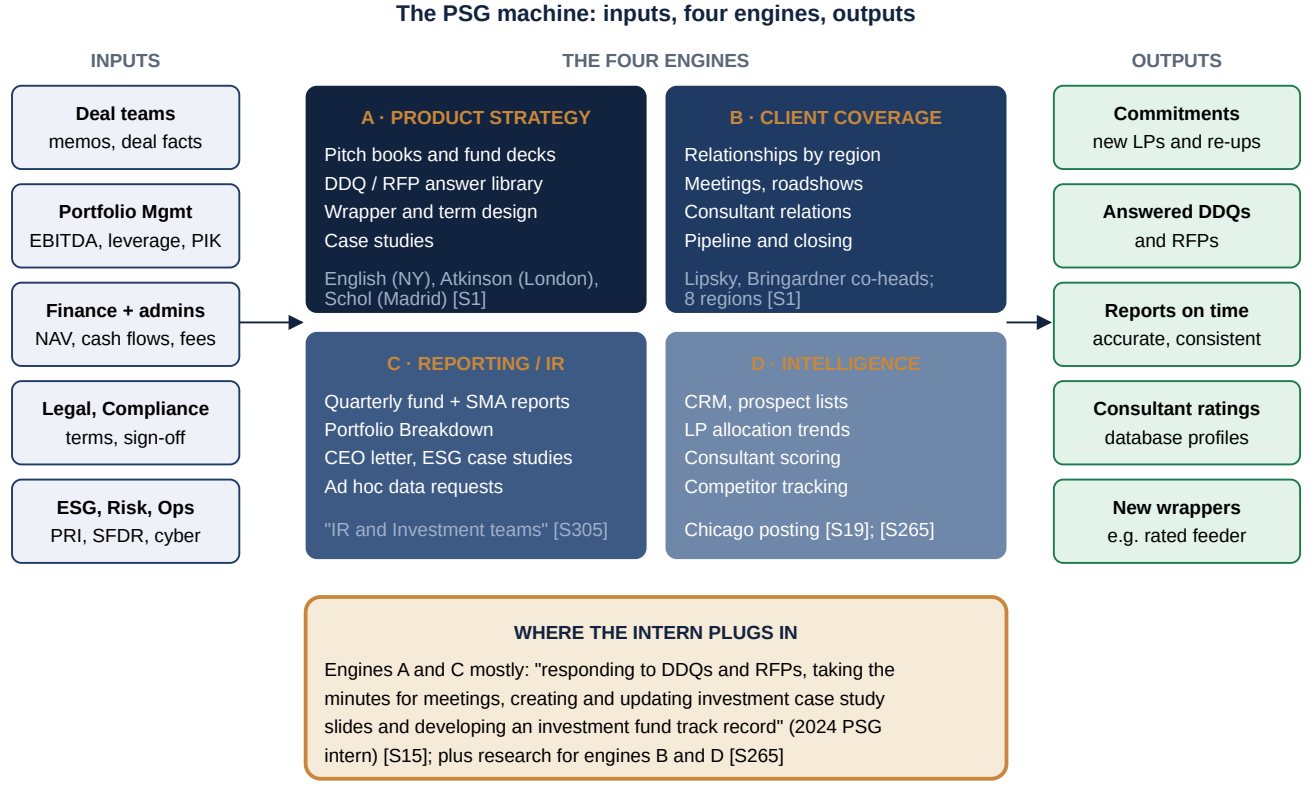

Figure 2.1 · The PSG machine. Engine names are the author's grouping Inferred; each engine's people and tasks are from Hayfin's bios **[S1]**, postings **[S19][S20]**, the Stewardship report **[S305]** and intern accounts **[S15][S265]**.

The data spine: where every number in a PSG document comes from

The single most important technical idea in investor relations is **provenance**: every figure must trace back to one approved source, and the same figure must match everywhere. A DDQ, a pitch book and a quarterly report that disagree by one decimal place will be noticed by a consultant.

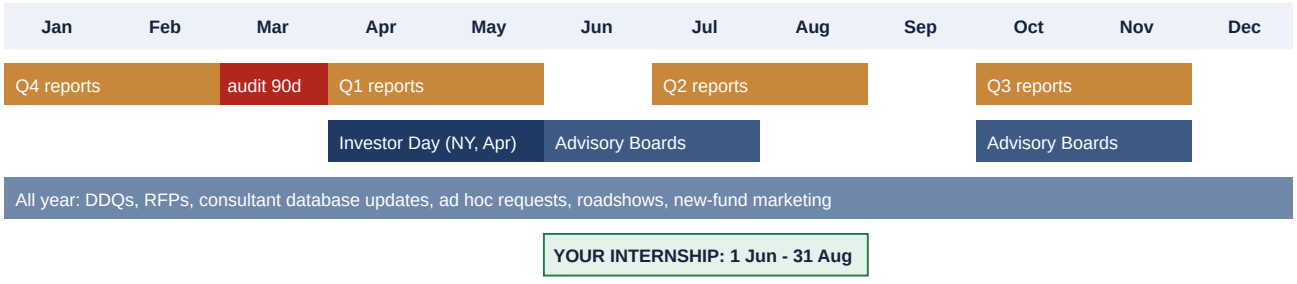

What the intern checks at the last step (the "tie-out")

1. Does every number tie to the administrator or Finance-reviewed source for the same date?
2. Is the definition the same (gross or net; fund or strategy; committed or invested; EUR or USD)?
3. Do totals add, and do percentages sum to 100% (or carry a rounding note)?
4. Does the commentary match the numbers (e.g. "leverage fell" when it did)?
5. Is anything confidential (borrower names, terms, another LP's details) where it should not be?

Figure 2.2 · The data spine. The chain is the author's description of standard practice Inferred, anchored on Hayfin's Valuation Committee **[S305]** and the Fund Controller role that reviews NAV "before it goes to investors" **[S333]**.

The annual rhythm of the team

A PSG year (illustrative, based on standard quarter-end practice)

Audited accounts within 90 days of 31 Dec and Advisory Boards twice a year: [S305]. Investor Day April 2026: [S31]. Report timing and Advisory Board months are il

Figure 2.3 · The PSG calendar. Your internship spans the Q1 reporting tail, the 30 June quarter end and the Q2 reporting season, so you are likely to see a full reporting cycle Inferred.

SECTION 3

What Hayfin's PSG does differently

Ten features that change the technical content of the job, compared with a typical IR team

#	Feature	Evidence	What it changes in the work
1	Sells a **multi-strategy credit platform**, not one fund	DL, Special Opps, Tactical, HY/CLOs, PE Solutions, Healthcare, Maritime, Real Estate [S327]; "8%+ and 15%+ lender" [S307]	You must explain how strategies relate, and how cross-fund conflicts are handled [S305]. A single-strategy IR team never answers that.
2	**Engineers wrappers**, including a rated note feeder	Five access routes for DLF V; ~$600m rated feeder "one of the first priced by a European direct lending manager" (Hayfin's claim) [S222][S237]	Structuring knowledge: insurer capital rules, ratings, look-through data (Section 6).
3	**Sits inside deal approval**	ESG Deal Committee includes "partner solutions" [S305]	PSG hears about deals before IC, so materials are built from the source, not second-hand.
4	**Co-produces reporting** with investment teams	"Hayfin's Investor Relations and Investment teams produce the following quarterly reports" [S305]	You learn to read company-level credit data, not just fund totals.
5	**Line-by-line transparency**	Line-by-line track record, expected gross IRR per deal and fund, LTM EBITDA, EV and leverage per company [S305]	Very granular proofreading and data work; a real credit education.
6	**Hired the gatekeepers**	Ex-BlackRock consultant relations, ex-Mercer, ex-JANA CIO, ex-Meketa, ex-Texas PSF allocator [S1][S4][S272][S289]	You learn how consultants score managers from people who did it.
7	**Global investor base** for European assets	Australia 22.8%, North America 26.2% of AUM [S305]; Seoul, Tokyo, Dubai, Melbourne, Dallas [S1][S223]	Currency, time zones, local regulation (e.g. Korean insurers) become part of the job.
8	**Publishes its thinking**	"A Tale of Three PIKs" [S229]; "The Complexity Premium" [S262]; €15bn debrief by PSG co-heads [S222]	Content creation is part of the role; you see how a view becomes a marketing asset.
9	**Institutional only**, closed-end by default	"no retail capital" [S227]; institutional evergreen exists [S221][S322]	No retail distribution work; deep institutional diligence instead.
10	**Small team, wide remit**	~32 people estimated (range 28-40) [Inferred, see main pack]; 228 firm staff in 2025 [S305]	An intern touches more of the chain than at a giant: Ares has over 2,850 direct institutional relationships [S64].

SECTION 4 · TOOLKIT 1

Fund maths, the way an LP reads it

Cash flows, IRR, MOIC, DPI, TVPI, the J-curve, subscription lines, fees, the waterfall and currency, all worked through

Everything here uses one **illustrative** fund so the numbers connect. It is not a Hayfin fund. An LP commits €100m. Hayfin calls €90m over three years and pays back €116m over six.

Cash flows, IRR and MOIC

```
Year:            0     1     2     3     4     5     6
Capital called: -30   -40   -20     0     0     0     0
Distributions:    0    +3    +8   +25   +30   +30   +20
Net cash flow:  -30   -37   -12   +25   +30   +30   +20

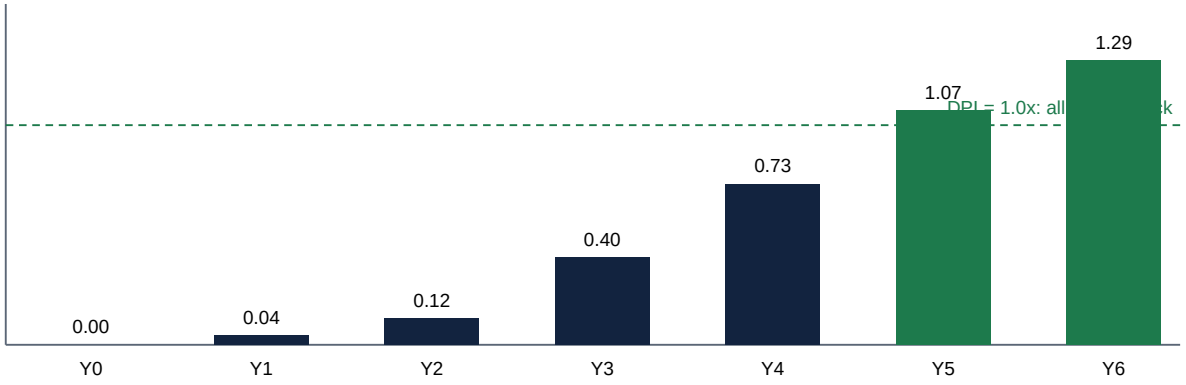

MOIC  = total returned / total paid in = 116 / 90 = 1.29x
IRR   = the rate r where  -30 - 37/(1+r) - 12/(1+r)^2 + 25/(1+r)^3
        + 30/(1+r)^4 + 30/(1+r)^5 + 20/(1+r)^6 = 0   →   r ≈ 8.1%
In Excel: =IRR(range) for annual flows, or =XIRR(values, dates) for real dates.
```

WHY BOTH NUMBERS

IRR rewards speed: getting money back sooner lifts it. **MOIC** ignores time: it only counts how many euros came back per euro in. A fund can have a high IRR and a low multiple (quick but small gains) or the reverse. LPs look at both, which is why ILPA's new Performance Template asks for IRR and multiples together [S45].

DPI, TVPI and the J-curve

DPI over the life of the illustrative fund (cash back ÷ cash paid in)

Illustrative numbers. Scale: 116 px = 1.0x. TVPI = DPI + RVPI (remaining value ÷ paid in); at Y6 everything is distributed, so TVPI = DPI = 1.29x.

Figure 4.1 · DPI builds slowly. Early on, fees and set-up costs mean the value an LP holds can dip below what it paid: the "J-curve". Credit funds have a shallower J-curve than private equity because loans pay interest from the start [Inferred, standard].

Why this matters in 2026. When exits slow, LPs focus on DPI, the cash actually returned. A credit fund's steady interest and repayments are a DPI story. Hayfin's DLF V was over 50% deployed across 35+ companies at close [S71], so its DPI clock is already running.

The subscription line trick (and why ILPA cares)

```
Same fund, but it borrows from a bank for one year before calling capital (a "subscription line"),
paying 5% interest, so each call arrives a year later and 5% larger:

                 Y0     Y1      Y2      Y3     Y4     Y5     Y6
Net cash flow:    0   -28.5   -34.0   +4.0   +30    +30    +20

IRR  ≈ 9.6%   (was 8.1%)   →  looks better, because the LP's money is out for less time
MOIC ≈ 1.23x  (was 1.29x)  →  is actually worse, because the fund paid interest
```

ILPA's own notional example shows the same effect: IRR 6.62% and TVPI 1.45x with no line; 7.14% and 1.40x with a one-year line; 7.98% and 1.35x with a two-year line [S437]. ILPA's 2017 guidance suggested lines of 15-25% of uncalled capital outstanding for no more than 180 days [S437].

This is why the ILPA Performance Template asks managers to show performance with and without the effect of subscription facilities [S45]. When you proofread a performance page, check which basis each IRR uses. An intern who can explain this example will stand out.

Fees and the waterfall

Management fee. Hayfin's terms are not public. European direct lending norm (Macfarlanes, Hayfin's fund counsel): "a management fee on net invested capital, a performance fee subject to a preferred return with catch-up", headline about 1%, slightly less after discounts; "A 2% management fee would be seen as commercially unviable within direct lending" [S104]. Charging on *invested* rather than *committed* capital means LPs do not pay fees on money sitting idle Inferred. In Macfarlanes' model, cutting the fee from 1% to 0.75% lifts net IRR to 9.05%, and "all of the performance fee" arrives in the last two years [S440]. A survey of mostly US lenders (Cliffwater 2025, relayed by a blog, so treat with care) put unlevered direct lending at about 1.04% fees, an average hurdle of 5.12% and average carry of 11.2% [S441]: far below private equity's typical 2% and 20% Inferred.

```
Illustrative "whole-fund" waterfall (NOT Hayfin's terms). Fund returns €120m on €90m paid in.
Assume a preferred return worth €15m, a 100% catch-up and a 15% performance fee
(within the 10-15% range seen in direct lending [S441]).

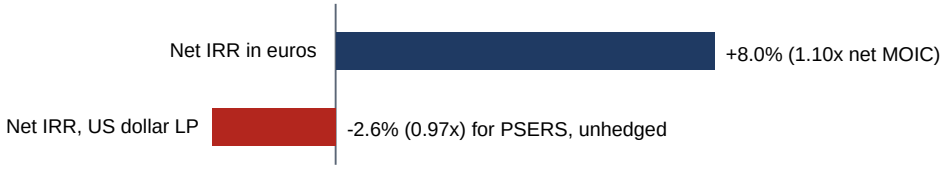

Step 1  Return of capital        LP gets 90.0              (remaining profit 30.0)
Step 2  Preferred return (hurdle) LP gets 15.0              (remaining 15.0)
Step 3  Catch-up to GP            GP gets c, where c = 15% × (15 + c)  →  c = 2.65
Step 4  Split the rest 85/15      remaining 12.35 → LP 10.50, GP 1.85

Totals: LP profit 25.5, GP profit 4.5  →  GP has exactly 15% of the 30.0 profit.
```

> **GROSS-TO-NET IN ONE LINE**
> Gross return (what the loans earned) minus management fee, minus fund expenses, minus the performance fee, minus the cost of any fund borrowing, equals net return to the LP. ILPA's 2025 Reporting Template adds a standard gross-to-net fee reconciliation, including rebates, waivers, offsets, placement fees and internal chargebacks [S170][S258].

Currency: the lesson in Hayfin's own history

Same fund, two currencies: Special Opportunities Credit Fund I at 30 Sep 2015 (real figures)

Scale 25 px per point. Source: PSERS investment memo, February 2016 [S307]. Nashville hedged the euro on its 2013 Hayfin commitment [S309].

Figure 4.2 · Currency can erase a good result. Hayfin's investors are 26.2% North American and 22.8% Australian by AUM **[S305]**, so "how do I hedge the euro?" is a standing question. You will see currency in DDQs, in reports and in wrapper design (for example hedged share classes or feeders) **Inferred**.

SECTION 5 · TOOLKIT 2

The loan underneath

How a direct loan is priced, how its health is measured, and what PIK really does

You cannot explain a credit fund without understanding a single loan. Hayfin's quarterly Portfolio Breakdown shows each company's "LTM EBITDA, enterprise value and leverage" [S305]. Here is how to read those.

Pricing a unitranche loan

```
Illustrative €100m unitranche, 3-year expected life (NOT a Hayfin deal):

Base rate: 3-month Euribor, June 2026 [S443]          2.32%
Margin over Euribor (market range E+500-625bps)     + 5.25%
Cash coupon                                         = 7.57% a year
Issue price 98 (a 2-point OID; market 97.5-98.5),
spread over a 3-year expected life                  + 0.67% a year (approx.)
Approximate all-in yield to the lender              ≈ 8.2% a year (gross)

Floating rate: if Euribor rises 1 point, the coupon rises 1 point. Good for the lender's
income; harder for the borrower to pay.
```

Where the market is (2025-2026). European direct lending median spreads fell from 613bps (2023) to 550bps (2024) to 500bps (2025 YTD), while sponsored leverage averaged 6.12x EBITDA against 4.83x in syndicated loans (Rothschild) [S445]. Q1 2026 unitranche priced at about E+525-625bps in the traditional mid-market and E+500-600bps upper mid-market (Baird) [S442]; KBRA said euro loans were "flirting with sub-8% yields for the first time" [S444]. The ECB raised its deposit rate to 2.25% in June 2026, its first hike in almost three years [S443]. Call protection is thin: over 80% of European deals had none from year three (2022 data) [S446].

This is why Hayfin was described by its LP as "an 8%+ lender" in direct lending and "15%+" in special opportunities [S307]: the label is best read as the rough all-in yield range of each product Inferred.

Measuring a borrower's health

```
Illustrative borrower:  LTM EBITDA €50m, total debt €250m, enterprise value (EV) €550m
(5.0x is below the 6.12x 2025 average for sponsored European direct lending [S445])

Leverage           = debt / EBITDA          = 250 / 50     = 5.0x
Loan-to-value (LTV)= debt / EV              = 250 / 550    = 45%
Interest cost      = 250 × 7.57%            = €18.9m
Interest cover     = EBITDA / interest      = 50 / 18.9    = 2.6x
(syndicated loans averaged 2.71x in Q2 2026, vs 4.0x before 2022 [S443])
Equity cushion     = EV − debt              = €300m  (what the PE owner loses first)
```

READ THE PORTFOLIO BREAKDOWN LIKE A CREDIT ANALYST

Rising leverage or falling interest cover across several quarters is a warning. A big equity cushion below the loan is protection: the private equity owner loses first. A covenant (for example "leverage must stay under 6.0x") gives the lender a seat at the table before things get bad. Hayfin says European deals offer "lower leverage, tighter documentation and smaller lender groups" than US ones [S95] (firm claim).

PIK: the topic of 2026

```
PIK (payment in kind) = interest added to the loan instead of paid in cash.

€100m loan, 4% PIK for 3 years:   100 × 1.04^3 = €112.5m owed
Interest earned on paper: €12.5m. Cash received: €0.
If the company's value falls, the extra €12.5m may never be collected.
```

Hayfin's three PIKs [S229]	What it means	How you would report it
Good PIK	Agreed at the start, capped, time-limited, priced at a premium, used for growth that pays it back.	Show it as planned, with the cap and the coverage.
Bad PIK	Introduced later because the borrower cannot pay cash: a stress signal. Lincoln calls loans that switched to PIK a "shadow default" (6.2% of loans, Q2 2026) [S162].	Flag as an amendment; track on the watchlist.
Fake good PIK	Agreed at entry, but the business never really covers it, so value slowly moves from lender to borrower.	Hayfin's point: origin "says nothing about whether the position stays covered" [S229]. Track coverage, not just origin.

Why it is in your job. Fitch counted interest deferrals and PIK switches as 47% of US private credit default events in August 2026 [S245], and Hayfin's LPs probed PIK harder in DLF V than ever before [S222]. Expect ad hoc requests like "PIK income as a share of total income, split by planned and amended", and DDQ questions on PIK policy.

From one loan to the whole fund

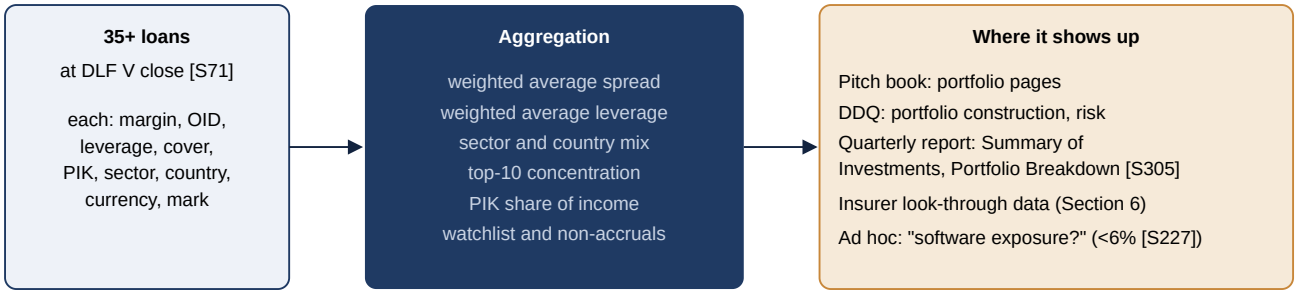

Figure 5.1 · From loan data to investor answers. Aggregation metrics are standard practice Inferred; Hayfin's report contents from [S305].

WEIGHTED AVERAGE, THE MOST USED FORMULA IN IR

Weighted average leverage = Σ (loan size × leverage) ÷ Σ loan size. Two loans: €60m at 5.0x and €40m at 4.0x → (60×5 + 40×4) ÷ 100 = 4.6x. A simple average would wrongly say 4.5x. Always ask "weighted by what?" (commitment, drawn amount, fair value).

SECTION 6 · TOOLKIT 3

Packaging: why the same loans need different wrappers

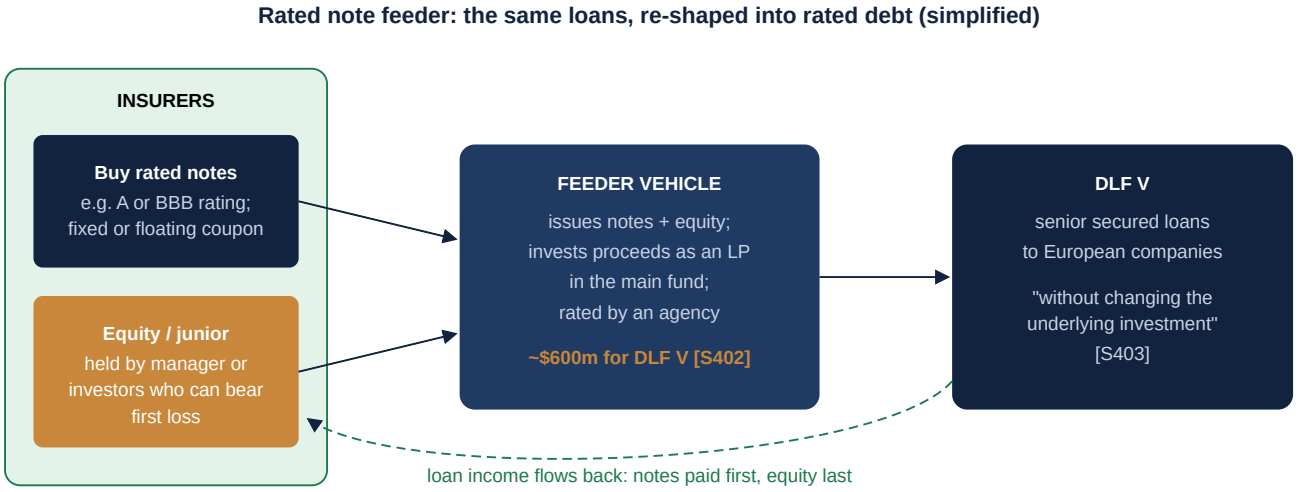

The rated note feeder, insurer capital rules in the EU, US and Korea, and the look-through data insurers need. The most Hayfin-specific technical topic in this guide

The PSG co-heads put the problem in one sentence: "A European pension fund, a US institution and an Asian insurer may all want exposure to the same underlying senior-secured loans, but they may not want to access that exposure in the same form" [S403]. This section explains why, with the actual rule numbers.

The five wrappers, technically

Wrapper	How it works	Who it suits, and the technical catch
Unlevered commingled fund	Many LPs in one closed-ended fund; no borrowing at fund level beyond short-term lines	Pensions. For EU insurers, units of an unleveraged closed-ended EU AIF can get a 39% equity charge instead of 49% even without look-through (Solvency II Art 168(6)(c)) [S407]
Levered commingled fund	The fund borrows against its loans (asset-backed or NAV facilities) to lift returns; levered DLF V assets "more than doubling" vs DLF IV [S403]	Return-seeking LPs. Leverage disqualifies the 39% route above, so insurers without look-through face 49% [Inferred from S407]. EU loan-origination AIFs are capped at 300% leverage (closed-ended) under AIFMD II [S163]
SMA	A separate account for one investor following the strategy, with custom rules and reporting	Large pensions, SWFs, insurers wanting control. Extra reporting per account [S305]
Institutional evergreen	No fixed end date; limited, gated exits; e.g. Tactical Solutions Evergreen Fund [S322]	Investors wanting to stay invested without re-upping. Liquidity terms must be explained precisely
Rated note feeder (RNF)	A vehicle that invests in the fund and funds itself by issuing rated notes (debt) plus some equity. DLF V's raised about $600m [S402]	Insurers. Notes are treated as bonds, not fund equity, so capital charges fall sharply (below). Catches: rating cost, securitisation classification, equity tranche [S417][S418]

How a rated note feeder works

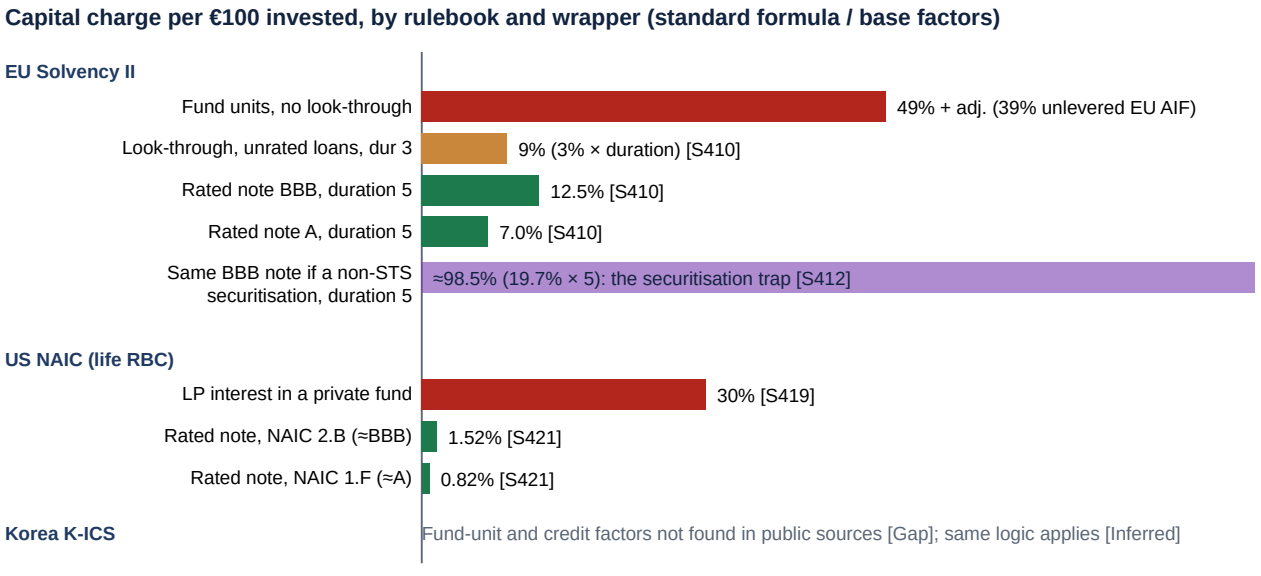

Simplified. Hayfin's feeder terms (ratings, currencies, tranches) are not public. Features: [S417][S418].

Figure 6.1 · A rated note feeder. Because the notes are paid before the equity, they are safer than a fund stake, which is what earns the rating. Hayfin calls its feeder "one of the first priced by a European direct lending manager" **[S403]**; KBRA rated $17bn of note feeder funds in 2025 against $8bn in 2024 (per Macfarlanes) **[S418]**.

Why it saves capital: three insurer rulebooks

KEY IDEA

Insurers must hold capital against each investment, in proportion to how risky the regulator thinks it is. An opaque fund stake is treated like equity (high charge). A rated bond is treated like a bond (low charge). Same loans underneath; very different capital cost.

Scale 5 px per point. Solvency II: Reg. 2015/35 as amended [S407][S408]; NAIC: pretax base factors. Durations illustrative.

Figure 6.2 · The capital arithmetic behind "capital-efficient". A vendor worked example: a €50m commitment at 49% needs "nearly €25 million" of capital; via a BBB rated note feeder "9% to 15%", or €4.5-7.5m **[S417]** (vendor framing, not a regulator).

The three rulebooks, simply

- **EU insurers (Solvency II).** Without look-through, fund units are "type 2" equity at 49% plus a symmetric adjustment of -10% to +10% (widening to ±13% from 30 January 2027) **[S408][S409][S414]**. Unleveraged

closed-ended EU funds can be "type 1" at 39% [S407]. With look-through, each loan is charged as spread risk; unrated loans cost 3% × duration [S410], which is why insurers demand line-by-line data (below). A rated note gets bond factors, unless it counts as a securitisation, in which case much higher factors apply [S412]. Macfarlanes says a feeder that works for Solvency II insurers, as opposed to US ones, "remains a work in progress" [S448]. The Solvency II review applies from 30 January 2027 [S414][S415].

- **US insurers (NAIC).** A private fund LP interest carries a 30% risk-based capital charge; investment-grade debt is "generally under 2%" [S419]. Rated feeders started here ("first designed for US insurers") [S418]. Regulators push back: the NAIC worried feeders could "repackage equity-like exposure", one driver of the principles-based bond definition effective 1 January 2025 [S419][S423], and the NAIC's securities office gained power from 1 January 2026 to challenge private ratings [S422].
- **Korean insurers (K-ICS).** Since 2023 Korea uses K-ICS, a market-consistent regime at a 99.5% confidence level [S429]. Regulators cut the recommended ratio from 150% to 130-140% in 2025 and add a core capital rule from 2027 [S426][S427]. Samsung Life, a Hayfin shareholder, reported 208.2% at end-June 2026 [S428]. Exact fund and credit factors were not found [Gap], but one industry comment says some Korean insurers restructure alternatives into "rated" notes to get better treatment [S430] (snippet). This is the context for Hayfin's new Seoul office [S404].

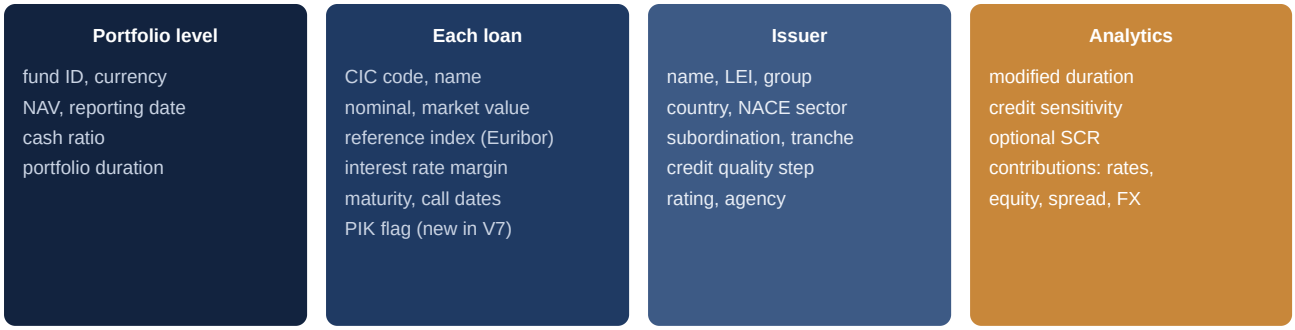

WHY THIS IS THE MOST DISTINCTIVE THING YOU COULD LEARN AT HAYFIN

Most students can define IRR. Very few can explain why an insurer would buy the same European loans through a rated note rather than a fund stake, what the capital difference is, and what can go wrong (the securitisation classification, the NAIC's scrutiny). Hayfin did this in its flagship raise in 2026 [S402]. That is a conversation you can have in an interview.

Look-through data: the TPT and EET

If an insurer wants the lower look-through charge, it needs data on every loan. The industry template is the **Tripartite Template (TPT)**, maintained by FinDatEx: "a widely used European data exchange template designed to support the provision of asset data from asset managers to insurers for Solvency II reporting purposes" [S431]. Version 7 (December 2024) added "Improved handling of bonds or loans with payment-in-kind features" [S432]. Version 8 was consulted on from July to September 2026 and is expected to be mandatory in Q1 2027 [S431]. Whether V8 was finalised is not confirmed [Gap].

What a direct lending fund supplies in a TPT, one row per loan (V7 field groups) [S433]

About 150 fields in total in the V7 workbook [S433]. Who prepares Hayfin's TPTs (PSG, Finance or the administrator) is not public; the Fund Controller role supports

Figure 6.3 · Look-through data. Notice the overlap with the quarterly Portfolio Breakdown and with PIK reporting: the same loan data feeds investor reports, DDQ answers and insurer capital calculations **Inferred**.

The **European ESG Template (EET)** does the same job for sustainability data under SFDR and the EU's suitability rules; version 1.1.3 has applied since 1 January 2025 [S434]. Hayfin runs six SFDR Article 8 funds [S25].

SECTION 7 · TOOLKIT 4

The documents you will build

Pitch book, DDQ, RFP, case study and quarterly report, with their anatomy and the checks that matter

The pitch book

Anatomy of a private credit fund pitch book (typical order)

Intern work: refresh every number for the latest quarter; check page 5 shows net with equal prominence to gross [S53]; make sure page 1 says ~€40bn (Q2 2026) [S224], 13 offices [S71], not the old €30bn; keep a version log; route every change through Compliance.

Figure 7.1 · Pitch book anatomy. Typical structure Inferred; Hayfin themes from [S95][S117][S305].

The DDQ: twenty topics, and the hard ones for Hayfin

The industry template is ILPA DDQ 2.0 (November 2021) with 20 topics: firm, fund, succession and key persons, strategy, co-investments, GP-led secondaries, credit facilities, investment process, team, alignment of interests, market environment, fund terms, governance, risk and compliance, track record, accounting and valuation, reporting, legal, data security and technology, ESG, and diversity [S299]. ILPA says it "was not designed with" private credit in mind [S46], so credit managers also see AIMA's private credit modules [S48].

DDQ topic	Why it is hard for a multi-strategy credit manager	The Hayfin facts you would draw on
Conflicts and allocation	Several Hayfin funds can face the same company	Non-blocking minority rule; CCO/COO cross-trade sign-off; Investments Conflicts Committee; annual allocation policy review [S305]
Valuation	No market prices; regulators watching [S166] [S250]	Valuation Committee; Finance reviews NAV before investors see it [S305][S333]
Track record and losses	LPs probed loss rates in DLF V [S222]	Line-by-line realised and unrealised track record in reports [S305]; current loss rate not public
Key persons, succession	New leaders arrive	Co-CEOs since 2025; Head of Investments created May 2026 [S81][S226]
Credit facilities	Fund leverage and subscription lines change returns (Section 4)	Levered and unlevered DLF V sleeves [S222]; AIFMD II leverage caps for EU loan funds [S163]
ESG	77% of LPs call ESG credentials very important [S189]	PRI signatory since 2018; six SFDR Article 8 funds; ESG Deal Committee [S25][S305]
Ownership	Changes since 2017	Management majority after Arctos-backed MBO; minorities Mubadala, AXA IM Prime, Samsung Life [S301][S74][S75]

THE DDQ WORKFLOW SKILL

A vendor estimates 40-60 hours per DDQ across IR, finance, compliance and legal [S190]. The real skill is an answer library: each answer tagged with owner, date and source, so stale answers flag themselves. That is where AI tools help safely: first drafts from approved text only, every fact human-checked, nothing confidential pasted into public tools. Hayfin's Chicago IR posting asks for AI "used with careful attention to accuracy" [S19].

RFPs and consultant databases

An RFP (request for proposal) is a formal search by an investor or consultant with fixed questions, word limits and deadlines. Consultants also screen managers through databases such as eVestment, which covered 16,231 GP profiles in Q1 2026 (vendor figure) [S55]. Hayfin's Chicago posting mentions tracking "consultant scoring activity" [S19]. Because DLF V had more consultant involvement than any earlier Hayfin fund [S222], database accuracy is now a fundraising tool, not admin.

The case study, built properly

```
One-page case study template (illustrative):
1. Situation     borrower, sector, country, sponsor, why it needed capital
2. Why Hayfin    sole lender? speed? sector team? incumbency?
3. Structure     senior / unitranche, size, leverage, covenants (only cleared terms)
4. Protections   equity cushion, security, documentation
5. Outcome       realised or current status; if shown, gross AND fund-level net
6. Disclosures   selection basis; "past performance is not a reliable indicator...";
                 hypothetical-performance wording where relevant; Compliance sign-off
```

The rules: fair, clear and not misleading (COBS 4.2.1R) [S49]; past-performance standards (COBS 4.6.2R) [S50]; for US material, single-deal gross figures only with whole-portfolio gross and net at equal prominence (SEC FAQ, 19 March 2025) [S53]; sustainability claims must match the product (anti-greenwashing rule, ESG 4.3.1R) [S52]. Hayfin's own PE Solutions update shows the house style: gross and net TVPI defined and hypothetical performance labelled under Rule 206(4)-1 [S330].

The quarterly report, page by page

Section (Hayfin's list [S305])	What is in it	Your checks as an intern
Summary of Investments and Portfolio Update	"A line-by-line track record is provided for both realised and unrealised investments": amount invested and called, carrying value, realised proceeds, expected gross IRR at deal and fund level, deployment and repayment profile	Ties to administrator data; realised vs unrealised labelled; gross IRR not presented as net
Portfolio Breakdown	Each company's LTM EBITDA, enterprise value, leverage	Quarter-on-quarter changes explained; leverage = debt ÷ EBITDA; names spelt right
CEO Letter	Market view and fund commentary, released via the administrator portal	Commentary matches the numbers; no stray forward-looking promises
ESG case studies	"drafted by the ESG function and overseen by the Investor Relations team"	Claims evidenced (anti-greenwashing)
Audited financials	Annual, at 31 December, within 90 days	Deadline management

The ILPA templates arriving in your summer

ILPA's updated Reporting Template is "provided for the first time after Q1 2026", and the new Performance Template "for the first time after Q1 2027", with data capture from Q1 2026 [S436]. Your internship (June to August 2027) falls just after those first performance deliveries [Inferred, if Hayfin adopts them].

Template element	What changes	Why a credit manager notices
Management fees	"Added gross-to-net reconciliation of management fees. Step-by-step netting of rebates, waivers and offsets" [S436]	Discounts for early and large LPs (common in DL [S440]) must be shown line by line
Partnership expenses	Internal chargebacks split from external; new lines incl. third-party valuations and "Subscription Facility Fees/Interest" [S436]	Valuation costs and fund borrowing costs become visible
Offsets / portfolio company fees	Arrangement, origination and consulting fees captured [S436]	Direct lenders earn arrangement fees on every loan Inferred
Carried interest	Accrued, earned and paid carry reconciled inside the capital account statement [S436]	Ties the waterfall (Section 4) to each LP's statement
Performance Template	Three tables: Fund, Gross Portfolio, Net Portfolio; net fund metrics required; "both with and without the impact of fund-level subscription facilities" [S436]	Exactly the subscription-line example in Section 4
Granular vs Gross Up	Granular itemises calls and excludes fees from gross; Gross Up uses total calls, giving "a slightly lower gross IRR and TVPI" but a smaller gross/net spread [S436]	Two legitimate ways to compute gross; know which one a page uses

The template cannot be modified by GPs or LPs [S436]. ILPA Principles 3.0 (2019) call "whole of fund" waterfalls best practice [S439].

SECTION 8 · TOOLKIT 5

The rules that shape every page

What an intern must know about regulation, explained simply

Rule	What it says, simply	Where it bites in PSG work
FCA COBS 4.2.1R	Communications must be "fair, clear and not misleading" [S49]	Every slide, DDQ answer, email with numbers
FCA COBS 4.6.2R	Past performance: not most prominent, full 12-month periods, source stated, warning, effect of fees [S50]	Track record pages, case studies (best practice for professional clients Inferred)
FCA anti-greenwashing (ESG 4.3.1R)	Sustainability claims must match the product [S52]	ESG pages, case studies; Hayfin trained PSG on it in 2024 [S25]
SEC Marketing Rule (206(4)-1)	Net with gross; context for extracted performance (FAQ 19 Mar 2025) [S53]	US-facing materials (Chicago, Dallas, San Diego, New York coverage)
AIFMD and AIFMD II (EU)	Rules on marketing EU funds; pre-marketing cannot include subscription documents [S54]; loan-origination funds: leverage caps 300% closed / 175% open, 5% retention, no originate-to-distribute; transposed by 16 Apr 2026 [S163] [S251]	What can be sent to EU prospects; DDQ answers on leverage and liquidity
UK AIFM reform (CP26/28)	A tiered UK regime; consultation closes 22 Oct 2026; final rules expected 2027 [S167][S253]	Future UK reporting (FRAME replacing Annex IV) [S253]
SFDR (EU)	Sustainability disclosures; Article 8 funds report periodically; SFDR 2.0 being negotiated [S174] [S254]	Hayfin's six Article 8 funds need periodic ESG data [S25]
Market abuse (MNPI)	No trading or tipping on material non-public information [S301]	Borrower data is often private; Hayfin also runs public high-yield funds [S305]

THE SENTENCE THAT SHOWS YOU GET IT

"In investor relations every page is a regulated communication, so accuracy is not polish, it is compliance. Net next to gross, claims that match the product, and nothing confidential leaving the building."

SECTION 9

Your summer, week by week

A realistic map of June to August 2027, tied to the reporting calendar and to the skill each week builds

ILLUSTRATIVE PLAN

Hayfin has not published an intern schedule. This plan combines the 2024 PSG intern's account (DDQs and RFPs, meeting minutes, case study slides, a fund track record, a Monday "Weekly IR" meeting) [S15], the 2026 intern posting (marketing support, ESG projects, client requests, competitive landscape, case studies) [S265], the 2027 job description, and the standard quarter-end cycle. Treat it as a likely shape, not a promise.

Twelve weeks: what you do, and what you learn

Week	Likely work	Technical skill built
1-2 June	Induction; read DLF V and SOF materials; shadow the DDQ library; take minutes at the Monday "Weekly IR" meeting [S15]	Product map; vocabulary; where data lives (Section 2)
3-4 June	First DDQ: update 20-30 library answers; route new questions to Legal, Risk, ESG; draft one RFP section within word limits	DDQ topics; provenance; conflict and valuation answers (Section 7)
5 30 Jun	Q2 quarter end. Help prepare data requests to deal teams and Finance; set up the Q2 report templates	Reporting calendar; the data spine (Figure 2.2)
6-7 July	Build a fund track record in Excel: calls, distributions, NAV; IRR, MOIC, DPI, TVPI; with and without the subscription line	Fund maths (Section 4); XIRR; ILPA performance logic
7-8 July	Proofread the Q2 Portfolio Breakdown: tie EBITDA, EV, leverage per company; flag changes; check PIK lines	Credit metrics (Section 5); weighted averages; PIK classification
8-9 July	Two case studies (e.g. a sole-lender unitranche and a workout); add selection basis and disclosures; Compliance review	Marketing rules (Section 8); storytelling with evidence
9-10 August	Ad hoc requests: e.g. an insurer's look-through data, a US LP's currency question, a Korean LP's sector exposure	Wrapper and insurer needs (Section 6); currency (Figure 4.2)
10-11 August	Research project for coverage: e.g. competitor fundraising, LP allocation trends in one region; one-page summary and presentation	Market intelligence; presenting "with gravitas" (JD)
12 31 Aug	Present an improvement idea (e.g. tagged answer library or AI first-draft workflow); handover notes	Process design; responsible AI use (JD skill line)

What could make your summer unusual (live items in 2027)

- DLF V likely fully deployed or close to it, with "DLF VI to follow" mentioned in a Hayfin posting [S333]: reporting and marketing overlap.
- First ILPA Performance Template deliveries due after Q1 2027 for funds started from 2026, if Hayfin adopts it [S45] [Inferred applicability].
- A new Seoul office in its first year [S223]; AIFMD II and possibly final UK AIFM rules bedding in [S251][S253].

Figure 9.1 · A likely twelve-week shape. Illustrative Inferred. The 2026 PSG internship ran 22 June to 14 August [S265]; the 2027 SEO listing says 1 June to 31 August.

SECTION 10

What you can only learn at Hayfin

Ten lessons, each with why it is specific to Hayfin, and what you would learn instead at a giant like Ares or a bank

#	The lesson	Why Hayfin specifically	Compared with elsewhere
1	**Packaging one strategy five ways**	DLF V was sold as unlevered and levered commingled funds, SMAs, institutional evergreen and a rated note feeder [S222]	A single-strategy manager sells one fund; a giant has separate product teams for each wrapper, so an intern sees one slice Inferred
2	**Insurer structuring inside a flagship raise**	The ~$600m rated note feeder, "one of the first priced by a European direct lending manager" (Hayfin's claim) [S222][S237]	At a US insurer-owned platform this is routine and siloed; at Hayfin it was new, so the reasoning is visible Inferred
3	**Explaining cross-fund conflicts**	Written rules: non-blocking minority stakes, cross-trade sign-off, Conflicts Committee [S305]	Single-strategy lenders rarely face this question
4	**Selling the full risk ladder**	8%+ and 15%+ lending from one platform [S307]; Tactical between DL and SO [S328]	Most direct lenders sell one rung
5	**Reporting workouts honestly**	Workout team as a core edge [S331]; Hayfin took equity in Netceed in a 2025 debt-for-equity swap [S109]	A bank IR team rarely reports a single restructuring to the investors who own the loan
6	**Specialist asset reporting**	Maritime (vessels, charters, in-house ship manager Greenheart) and healthcare IP-backed lending [S227][S102][S328]	Few peers of similar size run maritime Inferred
7	**Global LPs, European assets**	Australia 22.8% and North America 26.2% of AUM [S305]; Seoul IR office (Oct 2026) [S223]	A domestic manager does not face currency, time-zone and foreign-rulebook questions daily
8	**How consultants score managers**	PSG staffed with ex-consultants (Mercer, JANA, Meketa) and a BlackRock consultant-relations head [S1][S4][S272]	Elsewhere you learn the consultant process from the outside
9	**Line-by-line credit transparency**	Every loan's EBITDA, EV, leverage and expected gross IRR in quarterly reports [S305]	Many funds report at portfolio level only Inferred
10	**Seeing a whole small team at once**	About 32 people across coverage, product strategy and reporting (estimate) Inferred ; PSG on the ESG Deal Committee [S305]	Ares has 2,850+ direct institutional relationships [S64]; scale means narrower intern roles Inferred

PICK TWO FOR YOUR APPLICATION AND INTERVIEWS

Lessons 1-2 (packaging and insurer structuring) and 3 (conflicts) are the most specific to Hayfin and the hardest for another candidate to copy. They also link directly to the JD's "pitch materials, DDQ responses" and "quarterly LP reporting".

SECTION 11

The news, and what each story teaches you

Stories that directly involve or affect Hayfin, how they hit PSG's work, and the skill you would build from each

Story (date)	What happened	How it hits PSG	What you learn from it
DLF V closes >€15bn (2 Jul 2026)	More than double DLF IV; ~$600m rated feeder; >50% deployed at close [S71][S237]	Reporting on a much larger fund; feeder reporting; marketing the next vintage	Wrappers; insurer needs; deployment metrics
PSG co-heads' debrief (22 Sep 2026)	Over half from EMEA, 10% Middle East; consultants more involved; LPs probed PIK, tech, losses [S222]	The questions you will answer all summer	What institutional LPs worry about, in their order
Seoul IR office opens (1 Oct 2026)	Dedicated distribution and IR office; ~€1bn for Korean investors [S223] [S239]	New regional reporting and DDQ needs	Serving foreign insurers and pensions (Section 6)
US CLO review; European CLO raise (18 May 2026)	Greensledge appointed for the €1.4bn US CLO business [S225]	Careful, consistent investor messaging on a strategic change	Communicating change to different investor groups
New Head of Investments (7 May 2026)	Michael Marsh, ex-Goldman [S226]	Key-person and team sections of every DDQ need updating	Keeping the answer library current
"A Tale of Three PIKs" (28 Jul 2026)	Good, bad and fake-good PIK [S229]	Framework for PIK questions and reporting	Reading PIK in a Portfolio Breakdown (Section 5)
Fitch US default rate 6.3% (14 Sep 2026)	47% of defaults were PIK or deferrals [S245]	LPs bring these numbers to meetings	Why default definitions differ
US retail fund gating (Q1-Q3 2026)	Withdrawals far above 5% limits [S184][S243][S244]	Hayfin made "locked-up institutional" a selling point [S221]	Liquidity terms as a product feature
SEC valuation statement (28 Sep 2026)	Private credit valuations need "particular care" [S250]	Valuation DDQ sections; US investors' focus	Valuation policy and how to explain marks
ILPA templates (Q1 2026 / Q1 2027)	New reporting and performance standards [S43][S45]	Possible template work during your internship	Standardised gross-to-net and performance reporting
AIFMD II in force (16 Apr 2026); UK CP26/28 (closes 22 Oct 2026)	EU loan-fund rules; UK tiered regime [S251][S167]	DDQ answers on leverage, liquidity, delegation	How regulation becomes investor content
Mergermarket Private Credit Lender of the Year (30 Sep 2026)	Award, with a disclaimer that awards are not indicative of performance [S224]	Marketing use of awards	Compliance wording on marketing claims

Newest item (9 Oct 2026): Hayfin published "Opportunities in European Real Estate: Enhancing Opportunistic Credit Portfolios by Adapting to Evolving Markets", citing "more than €4bn invested across European real estate over 15 years" [S401]. It is framed around opportunistic credit portfolios, which could hint at marketing for the opportunistic strategies [Inferred; no Special Opportunities Fund IV announcement found [S449]]. What you learn from it: how a gated thought-leadership report works as a lead-generation tool for PSG.

SECTION 12

The 200-word answer, dissected

Why each sentence is there, an alternative version, and the traps to avoid

What the question is really testing

Part of the question	What the reader is checking
"What interests you about this opportunity"	That you know what PSG does, specifically at Hayfin, not investor relations in general
"How does it align with your career goals"	That you want a career on the client side, so you are a retention risk worth taking
"Reference your preferred team(s)"	That you chose PSG deliberately, among six intern teams (HY Syndicated Loans, Portfolio Management, Change & Transformation, Financing Solutions, Healthcare, Partner Solutions)
"Explain why they appeal to you"	Mechanism, not adjectives: what about this team's work fits you

The recommended answer, line by line

Sentence	Why it is there
"...where Hayfin's lending becomes something an investor can underwrite."	Defines PSG's job in one line, from the investor's side. Shows you understand the role is translation, not sales.
"DLF V raised over €15bn through five wrappers... rated note feeder..."	One concrete, recent, Hayfin-only fact [S222][S237]. Few applicants will know the feeder exists.
"...how institutions allocate capital, how fund terms and reporting are engineered, and how credit risk is explained honestly."	Mirrors the JD's attributes (how investors allocate capital) and duties (reporting, DDQs) without copying them.
"...lends at both ends of the risk range, and its workout team stands behind every fund."	The mechanism behind "why Hayfin" [S307][S331]; shows you read beyond the website headline.
"...pensions, insurers and consultants who now probe PIK, software exposure and loss rates."	Proves current awareness, straight from the PSG co-heads' September 2026 piece [S222].
"...building track records, reconciling the Portfolio Breakdown and preparing for ILPA's new performance reporting."	Names the real technical work: track records (2024 intern [S15]), the Portfolio Breakdown (Hayfin's own report name [S305]), ILPA templates [S45].
[Your evidence sentence]	The only place for you. One real example of accuracy, client materials or data. Without it the answer is about Hayfin, not you.
"...moving from reporting into coverage... from Seoul to Dallas"	Career goal on the client side; shows you know PSG's two tracks and its global reach [S223][S99].

An alternative version, naming two teams

Use this only if you genuinely want a second team considered. Portfolio Management is the natural partner: it supplies the data PSG reports.

ALTERNATIVE ANSWER · 172 WORDS + YOUR OWN SENTENCE (UP TO ~25 WORDS)

My first choice is Partner Solutions, with Portfolio Management second, because together they connect a loan's performance to the investor who owns it.

Partner Solutions appeals to me because Hayfin sells one platform through many doors. DLF V raised over €15bn through five wrappers, including a rated note feeder built for insurers, and investors pressed hardest on PIK, software exposure and loss rates. Answering them well needs both a clear story and exact data, which is the work I want to learn: DDQs, case studies and quarterly reports where every number ties back to its source.

Portfolio Management interests me as the source of that data. Understanding how leverage, interest cover and PIK are tracked loan by loan would make me a better investor relations professional, because I could explain a workout as well as a win.

[One sentence from your own experience.] My goal is a career on the client side of private credit. Hayfin's mix of strategies, its workout capability and its global investor base, from Seoul to Melbourne, make it the best place to start.

Traps to avoid in a 200-word answer

- **Stale facts.** Do not write "€30bn" or "ten offices". Use "about €40bn" (Q2 2026) [S224] or avoid AUM entirely.
- **Adjectives.** "Leading", "prestigious", "dynamic" add nothing. Replace each with a fact.
- **Overclaiming.** Do not say Hayfin has the best returns or the biggest fund; neither is supported.
- **The JD's typo.** "Special Memorandum Accounts" should be "separately managed accounts" [S25]. If you mention SMAs, use the correct term.
- **No "you".** Without your own evidence sentence, the answer could be written by anyone who read this guide.
- **Word count.** The limit is 200. Count after you add your own sentence.
