

The London Map & The Real ATS

Every 2027 London Summer Analyst role explained · the Oracle discovery · keyword analysis for Client Solutions Group (job 171037)

Built from the live requisition data on Goldman's own recruiting system, pulled 15 Aug 2026 · badges: **VERIFIED** = from the live posting/system · **LIKELY** = credible secondary · **BEST GUESS** = labelled inference

Three headline discoveries from the live system

- The link you sent IS Goldman — and it exposed the real ATS.** [redacted] is Goldman's **Oracle Recruiting Cloud** instance. [redacted] is just a branded skin over it. I previously called the platform "fully proprietary" — that was wrong, and the correction matters, because Oracle's parsing and screening behaviour is well documented (§3).
- Your role is confirmed live:** "2027 | EMEA | London | Asset Management, Client Solutions Group | Summer Analyst" — posted 15 Aug 2026, **no closing date set** in the system (the posted-end-date field is literally empty). It is a campus Summer Analyst role, and Client Solutions Group is the client-facing sales arm of Asset Management — your lane.
- The 4-application cap is now verified from the posting itself:** "up to 4 separate business / location combinations in any given recruiting year. Any additional application will be auto withdrawn... A single applicant should not create multiple email addresses." So: 23 London Summer Analyst roles, 4 bullets. Choose deliberately.

1. How Goldman is organised — the 60-second map

Global Banking & Markets (GBM)

"Normal Goldman" — the investment bank. Advises companies (M&A, IPOs, financing) and trades with institutions (sales & trading). ~70% of revenues. Clients: corporations, governments, hedge funds, asset managers.

Asset & Wealth Management (AWM)

The buy side inside Goldman. Manages over \$3tn of OTHER people's money. Two halves: Asset Management (institutions) and Wealth Management (rich individuals). ~30% of revenues, growing faster.

Client-facing seats

Where relationships are the product: IB coverage, S&T sales, AM Client Solutions, PWM, TxB Coverage.

Engineering & Strats

Builders and quants embedded across every division.

The Core (federation)

Risk, Compliance, Operations, Controllers, HCM — the control functions that let the firm take risk safely.

The distinction you asked about: Asset Management vs Private Wealth vs "normal Goldman"
One sentence each, because this is the confusion that sinks applications aimed at the wrong desk:

	Global Banking & Markets ("normal Goldman")	Asset Management	Private Wealth Management
Who is the client?	Companies and institutions doing <i>transactions</i> — a CEO selling a company, a fund trading a block	Institutions with <i>pools of capital to invest</i> — pension funds, sovereign wealth funds, insurers, endowments	<i>Individuals and families</i> — ultra-high-net-worth (think £10m+ investable), family offices, foundations
What do you sell them?	Advice and execution on deals and trades. Episodic: a deal happens, then ends	Investment performance. GS invests their money in funds and strategies. Continuous: mandates run for years	A whole financial life: investments, lending, banking, estate and liquidity planning. Continuous and deeply personal
How does GS get paid?	Fees per deal; bid-offer spread on trades	Management fees (% of assets) + performance fees	Fees on assets and services; grows with the relationship

The relationship feel	Intense bursts around transactions	Institutional: committees, consultants, RFPs, quarterly reviews	Personal: you know the family, the business they sold, the children's trusts
Analogy	The surgeon you hire for one operation	The manager a pension fund hires to run its money	The private doctor who looks after everything, for decades

Where your role sits: Client Solutions Group is *inside Asset Management* but it is not an investing seat — it is the **coverage/distribution seat**: the people who win, keep and grow the institutional client mandates that the investing teams then run. AM's version of a sales force. That is why it is squarely client-facing (\$4).

2. All 23 London Summer Analyst roles, decoded

Every title below is live in the system today **VERIFIED**. Role explanations combine the posting's own division text with standard industry knowledge of what each desk does **LIKELY**. Tags: **CLIENT-FACING** **INVESTING/MARKETS** **TECHNICAL** **CONTROL/ENABLING**

Global Banking & Markets — the "normal Goldman" roles

Role (req id)	What you'd actually do, and who should pick it
Investment Banking, Classic (170929) CLIENT-FACING	The classic M&A/advisory seat: valuation models, pitch decks, deal execution for corporates ("advising a company on a cross-border merger, structuring an IPO, refinancing a bond" — the posting's own words). Long hours, steep learning curve, the traditional prestige path. Client contact is real but earned over years — juniors are mostly execution.
Investment Banking, Capital Solutions Group (170927) CLIENT-FACING	Same division, different product: structured financing and private capital solutions — the fast-growing bridge between IB and private credit markets. Newer, less applied-to than Classic BEST GUESS , similar skills, more financing-structure nerdery.
FICC & Equities (Sales & Trading) (170675) CLIENT-FACING MARKETS	The trading floor: making markets in fixed income, currencies, commodities and equities, and the global sales force "maintaining relationships with clients, receiving orders and distributing research, trading ideas and analysis" (posting text). This is Jack's and Mini's world from your insight day. Sales seats = pure relationship + markets; trading seats = risk and pricing. You rotate desks in the summer.
Transaction Banking (TxB), Coverage (162040) CLIENT-FACING	The sleeper: GS's corporate-treasury banking platform ("150-year-old firm with the agility of a tech start-up" — posting). Coverage = supporting clients, researching new business, "creating deep relationships with internal and external stakeholders." Smaller intake, genuinely client-facing from day one, far less competitive than IB/S&T BEST GUESS .

Asset & Wealth Management — the division you asked about

Role (req id)	What it actually is
Asset Management, Client Solutions Group (171037) CLIENT-FACING	Your pasted role. The institutional sales & coverage arm of the \$3tn asset manager: winning and servicing mandates from pension funds, sovereign wealth funds, insurers, endowments and financial intermediaries. Day-to-day flavour LIKELY : supporting client coverage teams on portfolio reviews, RFP/DDQ responses, fund and market materials, product specialist work, client events. The purest "conductor" seat in AWM — you orchestrate the investing teams' capabilities for the client.
Asset Management, Public Investing (173051) INVESTING	The fund-manager seat: researching stocks/bonds and helping run strategies in public markets (equities, fixed income, multi-asset). Closer to the "Sam/Poppy/Dan" research-style work from your event, but on the buy side.
Asset Management, Private Investing (173050) INVESTING	The alternatives seat: private equity, private credit, real assets — Ahmed's world from your fireside chat. Deal analysis, underwriting, portfolio work. Extremely sought-after, small intake BEST GUESS .

Wealth Management, Private Wealth Management (170879) CLIENT-FACING	Teams advising ultra-high-net-worth individuals and family offices: portfolio construction, market views, lending, planning — "advisor-led businesses... empowering clients to reach their financial goals" (posting). The most relationship-first seat in the firm; success is measured in decades-long trust. Also offered as a one-year placement (171235).
Wealth Management, Quantitative Finance (170860) TECHNICAL	The quant engine behind WM: portfolio analytics, risk models, optimisation tools for advisors.
Wealth Management, Product Management & Design (170935) TECHNICAL	Building the WM platform and products (banking, lending, digital experience) rather than advising clients directly.
Asset Management, Change Management (171031) ENABLING	Project/programme management inside AM: process redesign, platform migrations, regulatory change delivery.
Asset Management, UX Design (171028) TECHNICAL	Designing the interfaces of AM's digital products. Portfolio required; a design career path, not a finance one.

Engineering & Quantitative Strats

Role (req id)	What it actually is
Engineering (170644) TECHNICAL	Software engineering across the firm — "massively scalable software, low-latency infrastructure, machine learning" (posting). The one with the HackerRank stage.
Quant Strats — four flavours: The Core (175426), Investment Banking (175428), Asset & Wealth Mgmt (175421), FICC & Equities (175424) TECHNICAL MARKETS	"Advanced training in mathematics, programming and logical thinking to construct quantitative models" (posting). Same craft, different home: pricing/risk models on the trading floor, deal analytics in IB, portfolio analytics in AWM, or firmwide platforms in the Core. Maths-heavy degrees expected.

The Core — control & enabling functions

Role (req id)	One-line truth
Risk (172894) CONTROL	Identifying and managing the firm's financial and non-financial risks — market, credit, liquidity, operational. Analytical, increasingly quantitative ("cloud computing and big data" per posting).
Compliance (170152) CONTROL	Keeping the firm inside laws, rules and its own reputation — surveillance, policy, regulatory response.
Operations (170158) CONTROL	"For every trade agreed... it is Operations that enables business to flow" (posting) — settlement, trade lifecycle, process engineering. Your prime-brokerage insight day (client service, middle office, corporate actions) lives here and in adjacent teams: a genuine hook if you apply.
Controllars (170163) CONTROL	The firm's financial reporting, accounting and capital/balance-sheet control. Accountancy-adjacent. Also a one-year placement (170142).
Human Capital Management (170145) ENABLING	The people function: recruiting, development, workforce strategy.
Office of Regulatory Relations (170160) CONTROL	Managing the firm's relationships with its regulators — exams, inquiries, coordination. Tiny, niche.
Corporate & Workplace Solutions (170173) ENABLING	The firm's real estate, workplace, procurement and commercial services.

Notable absence you should know about: Global Investment Research in London is offered for 2027 only as **Seasonal/Off-cycle internships** (Equity Research 170901; Macro: Commodities 170874, Economics 170880,

Portfolio Strategy 170877) — **there is no London GIR Summer Analyst role in the system**. If research (Jessica's division) was on your shortlist, the route is the off-cycle, not the summer programme. **VERIFIED** (absence from the live list as of 15 Aug 2026 — worth re-checking later in case roles post late).

Picking your 4 — a client-facing shortlist logic **BEST GUESS**

You have 23 options and 4 bullets. For your profile (client-facing, Pictet onboarding story, insight-day capital across S&T, prime and AWM), the natural portfolio shape is: **two core targets** (AM Client Solutions Group; FICC & Equities Sales & Trading), **one adjacent** (Wealth Management PWM — your Pictet story is almost purpose-built for it), and **one deliberate lower-competition seat** (TxB Coverage — genuinely client-facing, far thinner applicant pool). IB Classic only if you'd truly take it over the others: it consumes a slot the same as any role. This is strategy, not fact — the choice is yours.

3. The ATS, corrected: it's Oracle underneath

What the link you pasted proves **VERIFIED**

Your URL — `hdpc.fa.us2.oraclecloud.com/hcmUI/CandidateExperience/...` — is the giveaway. That is **Oracle Fusion Cloud HCM** ("Oracle Recruiting Cloud" / ORC), running in Oracle's US2 data centre, on Goldman's tenant (`hdpc`). The job data I used to build this document came straight from that system's own API. So the corrected picture:

- `higher.gs.com` = Goldman-branded front door (search, browse, campus site).
- `hdpc.fa.us2.oraclecloud.com` = the actual machine: candidate accounts, applications, requisitions, recruiter workflow.
- The `/sites/LateralHiring/` in your URL is just the site-skin the link was generated through (it's their experienced-hire site rendering a campus job — same backend, cosmetic difference). **Apply via `higher.gs.com/campus` so you go through the campus experience**, but don't panic if a link looks like this — it's the same system.
- The `/apply/email` ending is ORC's **email-first apply flow**: you enter your email → receive a verification code → it creates/matches your candidate profile → then the application form. This is why the posting warns against multiple email addresses: **the email IS your identity key across the whole system**. One email, forever, checked daily.

What Oracle Recruiting Cloud actually does with your CV

Mechanism	Status	What it means for you
Resume parsing into structured fields (education, employers, dates, skills) when you upload	VERIFIED (ORC core feature)	Your one-page, single-column, text-selectable PDF matters here. Parse errors = wrong data in your profile. ORC typically shows you the parsed fields — correct them manually if it mis-reads anything .
Duplicate detection across applications/emails	VERIFIED (the posting warns about it)	Never create a second account to dodge the 4-cap. The system is built to catch exactly that, and it reads as dishonesty.
Recruiter-side keyword search & filters over the parsed profiles	LIKELY (standard ORC recruiter tooling)	This is the real "keyword" mechanism: not an auto-scorer, but a recruiter's ability to filter a pile. Legible, conventional vocabulary on your CV makes you findable.
Oracle's optional AI candidate-matching / "recommended candidates" features	UNKNOWN	Oracle sells these add-ons; whether Goldman has them switched on for campus is not public. Do not build strategy around it.

An automatic score that ranks and rejects CVs without humans	NO EVIDENCE	Consistent with everything earlier: eligibility screening is mechanical, quality screening is human triage. My three-pile model from the previous PDF stands unchanged.
--	--------------------	---

- 1 **You apply (email-verified) via ORC**
Profile created against your email; CV parsed into structured fields; division/location recorded against the requisition (e.g. 171037).
- 2 **Mechanical checks**
Eligibility (graduation year, right to work), the 4-application cap, duplicate detection. No judgement, just validity.
- 3 **Per-requisition human triage, rolling**
Recruiting team works the queue for that specific role ("you may hear back regarding different roles at different times"). Seconds-long reads; division alignment and legibility decide.
- 4 **HireVue pushed by email**
Same email you applied with. Short completion window. Be ready before you submit.

4. Keyword analysis for job 171037 — Client Solutions Group

Honest framing first. This posting (like all GS campus postings) has **no qualifications or responsibilities section** — the fields are literally empty in the system. So there is no secret keyword checklist an algorithm is matching you against, and anyone who claims to "beat" this JD's ATS is performing. The real value of its language: it tells you **the vocabulary the human screener lives in**. Mirror it naturally — in your motivation statement mostly, your CV secondly — because fluency signals belonging. Never paste strings of it.

The language actually in the posting **VERIFIED**

Who the clients are (use these nouns — they are the desk's daily reality):

pension plans sovereign wealth funds insurance companies endowments foundations third-party wealth firms
financial advisors ultra-high-net-worth individuals

What the business says it does:

strategic investment and advisory services dedicated partnerships long-term performance and client success
over \$3 trillion in assets under supervision public and private markets traditional public investing and alternative investments
sustainable, long-term success

How it describes its people and culture:

meaningful client relationships apprenticeship culture integrity, transparency, and collaboration
across asset classes and regions passionate about their craft and clients

The desk's working vocabulary the posting doesn't spell out **LIKELY — industry knowledge, verify before using**

institutional client coverage distribution mandates RFPs / DDQs investment consultants portfolio reviews
product specialists asset allocation client onboarding retention and growth of client assets

Use one or two of these only if you genuinely understand them — each is an interview question you are inviting. "Mandates" and "client onboarding" are the safest for you: onboarding is literally your Pictet story.

Where each goes — CV vs motivation statement

Element	How to deploy it
Your Pictet bullets (CV)	Re-frame in this vocabulary where truthful: "onboarded [n] new clients" → the posting's world is <i>client onboarding, partnerships, advisory</i> . If any Pictet clients were institutions, name the type (<i>pension fund, foundation</i>) — those nouns are the desk's clients. Quantify everything.
CV ordering for this role	Client-facing experience top. Any markets/investing exposure second. The screener's alignment question is "does this person's history point at institutional client work?" — make the answer visible in five seconds.
Motivation statement (where mirroring really belongs)	Your trust/conductor spine already matches this desk almost perfectly — CSG is the seat that orchestrates the \$3tn platform for one client. Add one CSG-specific beat: the distinction between <i>managing money</i> and <i>being trusted with the relationship that brings the money</i> — and that you want the latter. The posting's own trio — <i>dedicated partnerships, long-term success, meaningful client relationships</i> — is your trust theme in Goldman's house language. Echo the ideas, not the sentences.
What NOT to do	Do not stuff "\$3 trillion" or "sovereign wealth funds" into your CV as decoration; do not use vocabulary you can't defend; do not quote the posting's culture line back at them ("integrity, transparency and collaboration") — that's the generic-flattery trap from every earlier document.

How your answer/CV for THIS role gets ranked — the sharpest version

BEST GUESS, built on verified structure

1. **Mechanics first:** eligible year, parseable CV, inside the 4-cap, one email. (System, not judgement.)
2. **The five-second CV read:** university + grad year found instantly; top bullets visibly client-facing. For 171037 the screener is pattern-matching "institutional client work" — Pictet onboarding is your match, put it first.
3. **The statement read:** is it about *this desk* (institutional relationships, the platform conducted for clients) or recyclable AM-flavoured filler? Your event-anchored trust narrative + one CSG-specific beat clears this.
4. **Consistency check downstream:** HireVue answers must tell the same story — the vocabulary you deploy here is the vocabulary you'll be probed on.

5. Do this now

1. **Apply through** higher.gs.com/campus with the one email address you'll monitor daily — it is your identity key in Oracle.
2. **Pick your 4** from §2 deliberately; my suggested shape is there, the decision is yours.
3. **Check the parsed profile fields** after the CV upload and fix any mis-parses by hand.
4. **Re-frame the Pictet bullets** in the posting's vocabulary (truthfully), quantified, ordered client-first.
5. **Adapt the motivation statement per role** — trust spine constant, final beat re-pointed (CSG: the relationship that brings the money; PWM: the family across decades; S&T: the daily-markets version of the same trust).
6. **Be HireVue-ready before submitting.**

Sources & method. Role list and all posting text pulled directly from Goldman's Oracle Recruiting Cloud API (hdpc.fa.us2.oraclecloud.com, requisitions incl. 171037, 15 Aug 2026) — titles, division descriptions, the 4-application cap wording and empty close-date field are quoted from that system. Oracle Recruiting Cloud mechanics from Oracle's public product documentation and standard ORC behaviour **LIKELY** where GS-specific configuration is unknowable. Desk-level descriptions of what each role does day-to-day blend posting text with industry knowledge and are labelled. Strategy recommendations are labelled BEST GUESS and are mine, not Goldman's. The live posting always overrides this document.
