

Three Technical Reasons to Choose HSBC — Proven by Real Deals

Contents

First, the one idea that ties it all together

REASON 1 — The two-ended network you cannot rent

REASON 2 — The China "licence-and-plumbing" moat

REASON 3 — Owning the whole digital-asset stack, in the hub where it's happening

The three reasons on one page

How to deliver this — without sounding rehearsed

- A) The 15-second "context load" opener
- B) The shape of the full answer (about 90 seconds)
- C) How to make it genuinely personal (so it can't be copied)
- D) Light humour — how to sound confident, warm and human
- E) Four habits that stop it sounding rehearsed
- F) Quick pre-flight checklist

What I could not fully verify (so you quote safely)

Glossary

Source list

For: Janak · **Prepared:** 11 August 2026 · **Style:** plain English, every abbreviation spelled out and explained. Focus: concrete, named transactions from Corporate and Institutional Banking, and the client-relationship story behind each.

Your goal, delivered. You wanted **three distinct, somewhat technical, non-generic reasons** to want HSBC — the kind most candidates can't say. Below are exactly three, each **built on real, named deals** (who the client was, what the transaction was, why it was impressive, and how it shows relationship-building), each **tied back to the business structure**, and each ending with a **line you could actually say**. Pick the two or three examples that genuinely click with you and make them yours.

Tags: **OFFICIAL** = from HSBC, a counterparty, or a regulator · **CORROBORATED** = reputable trade press or the client itself · **INFERRED** = my analysis. Bracketed numbers like ^[1] link to the source list. A glossary sits at the end.

First, the one idea that ties it all together

In Corporate and Institutional Banking, a "deal" is rarely a one-off. The **Relationship Manager** (the client-facing banker who owns the relationship) **lands** a client with one product, then **expands** — bringing in trade finance, payments, currency, capital-raising, custody — until the client runs much of its financial life through HSBC. The three reasons below are really three versions of the same question: **what can HSBC do for a client that a rival genuinely can't?** The deals are the proof.

INFERRED

REASON 1 — The two-ended network you cannot rent

The reason, stated technically: HSBC doesn't just lend to a company — it **plugs into the company's whole cross-border operation**: its overseas suppliers, its international payments, its currency exposure, its offshore fund-raising. Because HSBC has a licensed, funded presence at **both ends** of a trade or capital flow across about 56 markets, it can bank a client's *whole map*, not one country. That's why **62% of HSBC's revenue comes from clients it banks in more than one country** **OFFICIAL** ^[31] — a number a domestic bank structurally cannot reach. This sits in the

Global Trade Solutions (trade-finance) and **Global Payments Solutions** (payments and cash-management) teams, funded by HSBC's cheap deposit base. **OFFICIAL** [30]

The deals that prove it:

- **PVH Corporation (owner of Calvin Klein and Tommy Hilfiger) — a supplier-financing programme wired to ESG.** In 2022 HSBC built PVH a **sustainable supply-chain finance** programme: HSBC pays PVH's *suppliers* early, at cheaper rates for suppliers that score better on **environmental and social standards** (safe conditions, fair pay, no forced or child labour) — billed as the first such programme tied to *both* environmental and social measures, not just carbon. **OFFICIAL** [1] *Why it's a relationship story:* HSBC isn't financing one company — it's financing PVH's **entire global supplier ecosystem** and turning a bank product into a lever for the client's own sustainability strategy. That is deep embedding. ("Supply-chain finance" = the bank pays a company's suppliers early and gets repaid by the company later, easing cash flow for everyone.)
- **Vingroup / VinFast (Vietnam's largest private company and its electric-vehicle arm) — a relationship that compounded over years.** In 2022 HSBC helped arrange a **US\$500 million green syndicated loan** (up from a planned US\$400 million on strong demand) — Vingroup's **first international green syndicated loan.** **CORROBORATED** [6] Crucially, this was **about HSBC's fifth financing for Vingroup since 2018**, each bigger and more sophisticated, following a world-first sustainable exchangeable bond for its Vinpearl arm. *Why it's a relationship story:* this is the textbook "land and expand" — a frontier-market champion connected to international capital, coming back to HSBC again and again. ("Syndicated loan" = a big loan shared among several banks so no one bank carries all the risk. "Green loan" = the money must fund environmentally beneficial projects.)
- **Ant International (the international arm of Alipay) — real-time global treasury.** In 2025 HSBC launched its **Tokenised Deposit Service** — 24/7 instant corporate payments — with Ant International as its **first client**, letting Ant move money between its own accounts instantly around the clock. **OFFICIAL** [3] *Why it's a relationship story:* HSBC **co-built the product around a named client's actual problem** (a global tech firm needing money to move at any hour), then scaled it — the deepest kind of client partnership. (More on the technology in Reason 3.)
- **Cotton Growers Services (an agricultural joint venture) and HP Inc. — the everyday plumbing that locks clients in.** HSBC gave Cotton Growers Services the **first "TradePay" facility in Australia** — document-free trade loans that draw down in under a minute through HSBC's online portal, so the client can pay suppliers just in time. **OFFICIAL** [8] For HP Inc., HSBC deployed a **custom cash-flow forecasting tool across multiple Asian markets**, saving "hundreds of man-hours." **OFFICIAL** [7] *Why it's a relationship story:* these aren't glamorous, but they embed HSBC in a client's **daily operations** — and once a company's payments and trade

run on HSBC's rails across many countries, it almost never leaves. HSBC is the **number-one trade-finance bank in the world**, nine years running. **CORROBORATED** [10]

Ties to structure: this is HSBC's cheap-deposit-funded **transaction banking** flywheel — capital-light, sticky, recurring fee income — and it's the biggest single reason Corporate and Institutional Banking is the group's largest profit contributor. **INFERRED** [30]

A line you could say: *"What draws me to the client-facing side of HSBC is that it doesn't just lend to a company — it plugs into the company's whole cross-border operation. The PVH supply-chain programme financed an entire supplier network against social and environmental standards; the Vingroup relationship grew across five financings since 2018. That's relationship-building a domestic bank simply can't replicate — and it shows up in the fact that 62% of revenue comes from multi-country clients."*

REASON 2 — The China "licence-and-plumbing" moat

The reason, stated technically: HSBC is arguably the **Western bank most deeply embedded in China's capital markets and in the international use of the Chinese currency (the renminbi)**. It holds the onshore licences to underwrite bonds *inside* China, it leads bonds in *offshore* Chinese currency in Hong Kong, and it was **live on day one** of the specialist "plumbing" that lets global investors access and hedge Chinese bonds. Very few non-Chinese banks can do all three. This lives in the **Markets and Securities Services** and debt-financing teams, anchored by HSBC's Hong Kong home. **OFFICIAL** [11]

Quick glossary for this section: a **panda bond** is a bond that a **foreign** issuer sells **inside** mainland China, in onshore Chinese currency. A **dim sum bond** is a bond in **offshore** Chinese currency, issued **outside** the mainland (usually Hong Kong). A **bookrunner** is the bank that builds investor demand and prices the bond. To issue a panda bond you need a Chinese **underwriting licence** — a real barrier.

The deals that prove it:

- **HSBC's own panda bond — proof the licence works end to end.** In November 2024 HSBC issued a **4.5-billion-renminbi (about US\$630 million), 3-year panda bond** inside China's interbank bond market, with **HSBC's own China arm as lead underwriter** — reportedly the **lowest interest rate (coupon) for a 3-year panda bond by a foreign commercial bank**, and 1.88 times oversubscribed. **OFFICIAL** [11] *Why it's impressive:* HSBC is (by its own account) the only foreign bank able to underwrite across **both** of China's onshore bond venues *and* the offshore Hong Kong market — self-issuing proves the machinery works.

- **Egypt's sovereign panda bond — a landmark "bridge" trade.** In 2023 HSBC was a **joint lead underwriter and bookrunner** on the **Arab Republic of Egypt's 3.5-billion-renminbi sustainable panda bond**, guaranteed by two multilateral development banks (the African Development Bank and the Asian Infrastructure Investment Bank). **CORROBORATED** ^{[12][13]} *Why it's impressive: it was **Africa's first panda bond** and the **first sovereign panda jointly guaranteed by two development banks** — a government from one continent raising Chinese money, with HSBC as the bridge. ("Sovereign" = a national government as the borrower.)*
- **BMW's panda bond — opening China's market to global companies.** HSBC was a joint bookrunner on **BMW's 2021 panda bond**, which HSBC calls the **first publicly-syndicated panda bond from a foreign multinational company**, with roughly **half the orders coming from outside mainland China**. **OFFICIAL** ^[14] *(Slightly before the main window, but a clean "first" worth knowing.)*
- **Swire Properties' green dim sum bond — anchoring the offshore market.** In 2023 HSBC was a **joint global coordinator** on Swire Properties' **3.2-billion-renminbi green dim sum bond** in Hong Kong — the **first Hong Kong company to sell a public renminbi green bond** and the **largest corporate green dim sum bond** at the time. **CORROBORATED** ^[15]
- **Swap Connect and Bond Connect Repo — being first on the plumbing.** When **Swap Connect** launched in 2023 (the channel that lets foreign investors *hedge* the interest-rate risk on their Chinese bonds), HSBC executed **inaugural day-one trades** as both market-maker and clearing broker for offshore funds. **CORROBORATED** ^[16] In 2025 HSBC did some of the **first offshore trades using mainland Chinese bonds as collateral to raise offshore funding** ("Bond Connect Repo"). **OFFICIAL** ^[17] *Why it's impressive: these are the **rails**, not the deals — being live first shows HSBC is *built into* the market, not just selling into it.*
- **And the same model, other axis — the Middle East.** HSBC won **International Financing Review's "Middle East Bond House"** as **global coordinator on almost every big Gulf transaction**, including **Qatar's US\$2.5 billion green bond** (the first from a Gulf state) and a **US\$12 billion Saudi Arabia issue**. **CORROBORATED** ^[18] *Why it matters: it proves the "connect global capital to emerging-market governments" model isn't a China one-off.*

Ties to structure: this is the **Hong Kong + China anchor** of the group — the reason HSBC's whole strategy leans East — expressed through the capital-markets and Markets teams inside Corporate and Institutional Banking. **INFERRED**

A line you could say: *"The reason I find HSBC's model technically special is its position in China's capital markets. It underwrote its own panda bond onshore, led Egypt's Africa-first sovereign panda, and was live on day one of Swap Connect — the plumbing that lets foreign investors hedge*

Chinese-bond risk. That's a licence-and-infrastructure moat almost no Western bank has, and it's the client-facing edge when a company wants to move capital between China and the world."

REASON 3 — Owning the whole digital-asset stack, in the hub where it's happening

The reason, stated technically: HSBC is one of very few banks that owns the **entire digital-assets stack** — a proprietary platform to issue **tokenised (digital) bonds**, a licence to issue **regulated digital money**, live **tokenised-deposit** payment rails plugged into Hong Kong's central-bank project, *and* the traditional **custody** network that safe-keeps the assets underneath. And it's doing it in **Hong Kong**, the hub pushing hardest on this. This sits in **Markets and Securities Services** and **Global Payments Solutions**. OFFICIAL ^[29]

Quick glossary: **tokenisation** means representing a real asset (a bond, a deposit, gold) as a digital token on a shared electronic ledger so it can be issued and settled electronically. **Custody** means safe-keeping clients' investments and handling the paperwork. A **stablecoin** is a digital token pegged one-to-one to a currency and fully backed by reserves.

The deals that prove it:

- **The Hong Kong Government's digital green bond — a world first, on HSBC's own platform.** In February 2024 the Hong Kong government issued about **HK\$6 billion (roughly US\$770 million)** of green bonds **natively on HSBC's Orion platform**, across **four currencies at once** (Hong Kong dollar, offshore Chinese currency, US dollar and euro) — the **world's first multi-currency digitally-native bond**, and the largest digital bond at the time. CORROBORATED ^{[19][20]} *Why it's a relationship story:* a **government trusted HSBC's own technology** end to end, and HSBC connected that platform into the market's infrastructure so global investors could buy in — the bank as both the technology provider *and* the distribution bridge.
- **The European Investment Bank's digital bond — the blue-chip first.** HSBC ran the account-keeping and was a joint lead on the **European Investment Bank's £50 million digital bond in 2023** — the **world's first digital bond in pound sterling** and the debut live deal on Orion. OFFICIAL ^[21]
- **The Hong Kong Mortgage Corporation's HK\$12 billion digital bond — scale.** In 2026 HSBC took multiple lead roles on a **HK\$12 billion** digital bond on Orion, billed as the **world's largest-ever**, with over **US\$3.5 billion of digital bonds already issued on Orion** before it. OFFICIAL ^[22] *Why it matters:* first-of-a-kind is nice; **repeatable at scale** is a business.

- **Ant International and tokenised deposits — a client story from sandbox to live.** HSBC moved from a **2024 test** with Ant International under Hong Kong's central-bank "Ensemble" project, to a **2025 live product**, to the **first live cross-bank tokenised-deposit transfer** — a real **HK\$3.8 million (about US\$489,000)** payment for Ant into an account at another bank. **OFFICIAL** ^{[23][24]} *Why it's a relationship story: the whole arc was **pulled through by one named client's needs** — exactly the client-facing, co-creation work you're drawn to. (A "tokenised deposit" is ordinary insured bank-deposit money issued as a digital token so it can move instantly and around the clock.)*
- **The custody network underneath — the unglamorous moat.** None of the above works without safe-keeping. In 2024 **U.S. Bank appointed HSBC as its local safe-keeping arm (sub-custodian) across Hong Kong, South Korea and Taiwan** **OFFICIAL** ^[27], and in 2025 **Allianz Australia picked HSBC as custodian and fund administrator** after a competitive tender. **CORROBORATED** ^[28] *Why it matters: a rival global bank and a global insurer both chose HSBC as the trusted local operator — the clearest proof of its **Asia custody-network leadership**, the base that the flashy digital stuff is built on.*

Ties to structure: this is **Markets and Securities Services** plus payments, showcased in HSBC's **Hong Kong/Asia** stronghold — capital-light, sticky, and forward-looking. **INFERRED**

A line you could say: *"The third reason is that HSBC owns the whole digital-asset stack in the hub where it's actually happening. Hong Kong's government issued the world's first multi-currency digital bond on HSBC's own Orion platform; HSBC built tokenised-deposit rails live with Ant International; and it still runs the custody network that other global banks like U.S. Bank plug into. That combination of proprietary innovation and the safe-keeping base underneath — in Asia — is genuinely rare."*

The three reasons on one page

#	The reason (technical, non-generic)	Proof deals	Business area	The client-facing point
1	HSBC banks a client's whole cross-border operation , not one country — a two-ended network you can't rent	PVH supplier finance; Vingroup (5 deals since 2018); Ant real-time treasury; Cotton Growers TradePay; HP forecasting	Global Trade Solutions + Global Payments Solutions	Land one product, expand across the network; 62% of revenue from multi-country clients
2	The China licence-and-plumbing moat — the Western bank most embedded in China's bond market and the renminbi	HSBC's own panda bond; Egypt sovereign panda; BMW panda; Swire green dim sum; day-one Swap Connect & Bond Connect Repo; Gulf sovereign bonds	Markets & Securities Services + debt financing; Hong Kong anchor	HSBC can move a client's capital <i>between China and the world</i> because it holds the licences and runs the rails
3	HSBC owns the whole digital-asset stack — issuance, money, rails and custody — in Hong Kong	HSBC Orion (Hong Kong govt, European Investment Bank, HK Mortgage Corp); Ant tokenised deposits; Gold Token; stablecoin licence; U.S. Bank & Allianz custody	Markets & Securities Services + Global Payments Solutions	Named clients pull the innovation through; HSBC is both the technology <i>and</i> the safe-keeping underneath

How to deliver this — without sounding rehearsed

This is the part that turns good research into a good *answer*. Everything below is delivery craft — treat it as **INFERRED** coaching, not fact. The golden rule: **you are having a conversation, not reciting a page**. Aim to sound like a curious person who happens to know their stuff, not a brochure.

A) The 15-second "context load" opener

The goal of your first ~15 seconds is to **quietly prove you understand the structure** and can speak the language — *before* you get to your reason. Most candidates open with "HSBC is a big, respected, global bank." You open by framing HSBC the way an insider would. That contrast is the whole trick.

The formula (three beats, ~15 seconds): 1. **Frame** — one sentence that positions HSBC *structurally*, using one precise term. (Shows you see the machine, not the logo.) 2. **The distinctive hook** — the one thing that makes it different, in a half-sentence. 3. **Bridge** — "...and that's the reason I want to be here, because..." → into your reason.

Three ready openers (pick the one that matches your reason):

- *For Reason 1 (the network):* "So, the way I think about HSBC is less as a lender and more as the plumbing of global trade — it's a transaction bank that plugs into a company's whole cross-border operation, funded by one of the world's cheapest deposit bases. That's what pulls me in, because..."
- *For Reason 2 (China):* "What makes HSBC technically unusual to me is that it's the Western bank actually inside China's bond market — it holds the onshore licences and it was live on day one of the plumbing that lets foreign investors hedge Chinese-bond risk. That's a moat almost no rival has, and it's why..."
- *For Reason 3 (digital):* "The thing that caught my attention is that HSBC owns the entire digital-asset stack — its own issuance platform, the money rails, and the custody underneath — and it's doing it in Hong Kong, the hub pushing hardest on this. That combination is rare, and it's why..."

Why this works **INFERRED**: one precise term in the first sentence ("transaction bank", "onshore licences", "the whole stack") signals competence faster than any adjective. Keep it to **one** technical term, said naturally — you're seasoning the soup, not drinking the spice jar. Then get straight to a human reason.

Calibration warning: you're an *insight* candidate, not a managing director. Lead with **curiosity**, not a valuation lecture. "The thing that caught my attention..." is the right energy; "Allow me to walk you through HSBC's return-on-tangible-equity profile..." is not.

B) The shape of the full answer (about 90 seconds)

- **0–15s — Context load** (the opener above).
- **15–25s — The reason, in plain words** ("...because HSBC banks a client's whole cross-border operation, not one country").
- **25–55s — One named deal as proof** — who, what, and the *relationship* point. One deal, told well, beats three name-drops.
- **55–75s — Why it matters / tie to structure** ("that's the transaction-banking flywheel — sticky, recurring, and why this division is the group's biggest profit contributor").
- **75–90s — Your personal why + a forward look** ("and that's the kind of long-term, client-facing work I want to learn").

One reason. One deal. One number. One personal line. That's a complete, memorable answer.

C) How to make it genuinely personal (so it can't be copied)

The research is the *what*; **you** are the *why*. The bit no other candidate can say is the honest connection between the reason and you. Use this bridge:

"[The distinctive thing] appeals to me because [a true thing about you] — [tiny piece of evidence]."

Worked examples (swap in your own truth): - *Network*: "...appeals to me because I like relationships that compound rather than one-off wins — I've seen that in [a club/role you built over time], and the Vingroup story, five financings deepening since 2018, is that idea at industrial scale." - *China*: "...appeals to me because I'm genuinely curious about how capital actually moves between East and West — I [followed / read about / studied] [a specific thing], and realising *one bank* sits in the middle of that flow made it click." - *Digital*: "...appeals to me because I like being early to how things are changing, and the fact a government issued the world's first multi-currency digital bond on HSBC's own platform is the most concrete version of that I've seen."

Rules for the personal bit **INFERRED**: it must be *true* (the assessment scores authenticity and you may be asked to expand); it should be *specific* (a named club, module, book, moment — not "I've always been passionate"); and it should be *small* (one honest detail beats a grand claim).

D) Light humour — how to sound confident, warm and human

A little humour signals you're relaxed and enjoyable to work with — which, on a recorded video, is a real edge. But it's a garnish, not the meal.

How to land it **INFERRED**: - **One light touch, early, then get substantive**. A small smile-line in the first 20 seconds relaxes you and the reviewer; after that, be genuine. - **Aim it at yourself or your own curiosity, never at others**. Self-aware > sarcastic. Never at HSBC, rivals, or the process. - **Keep it warm and clean** — the kind of line that makes someone smile, not laugh out loud. Understatement travels well on video. - **Say it, then move on**. Don't wait for a laugh; the confidence is in *not* needing one.

Examples you could adapt (say them lightly, with a smile): - Opening warmth: "*I'll admit I went a bit down the rabbit hole researching HSBC — my browser history is basically annual reports and bond deals now — but there were three things I genuinely couldn't stop thinking about...*" - On the China plumbing: "*'Swap Connect' sounds like a dating app, but it's actually the reason global investors can hedge Chinese-bond risk — and HSBC was there on day one.*" - On the digital stack:

"When I read that a government issued a bond in four currencies at once on HSBC's own platform, my first thought was 'that shouldn't be possible yet' — and my second was 'I want to work where that happens.'" - Self-aware, on enthusiasm: "I promise I don't normally get this excited about trade finance at parties — but the supplier-network angle genuinely won me over."

Guardrails: if humour doesn't come naturally to you on camera, **skip it** — a warm, genuine tone beats a forced joke every time. Confidence is the smile and the steady pace, not the punchline. And read the room energy: light throughout, never flippant about the role.

E) Four habits that stop it sounding rehearsed

- **Bullets, not a script.** In the prep window jot 4 keywords (opener term → deal → number → personal line). Reading sentences off a memorised script is the number-one thing that reads as robotic.
- **Vary your words each take.** Say it slightly differently than you practised — small imperfections read as *real*.
- **Talk to the lens like a person.** A genuine half-smile and a natural pause beat flawless, breathless delivery.
- **Don't machine-gun stats.** One number, landed clearly, is impressive; five in a row sounds memorised. Keep the other numbers "in your pocket" for follow-ups.

F) Quick pre-flight checklist

Pick 1 reason · 1 deal · 1 number · 1 personal line · (optional) 1 light touch → open with the 15-second context load → tell the deal → tie to structure → finish on *your* why. Bullets in front of you, eyes on the lens, one steady breath, go.

What I could not fully verify (so you quote safely)

- Some **exact figures** come from press summaries rather than the deal prospectus: the Egypt panda **coupon (about 3.51%)**, the Hong Kong green bond's **per-currency split**, the Gold Token's cumulative volume, and the "world's largest digital bond" label (which shifts between a late-2025 ~HK\$10 billion deal and a 2026 HK\$12 billion deal). Say "**around**" and you're safe; verify before quoting a precise decimal. [\[11\]](#)[\[12\]](#)[\[19\]](#)[\[22\]](#)
- **BMW's panda bond (2021)** is just before the 2022–2026 window — use it as a clean "first," not a recent deal.

- The **US\$630 million** equivalent for HSBC's 4.5-billion-renminbi panda is my rough conversion — quote the renminbi figure to be safe.
 - HSBC's "**only foreign bank on both onshore venues**" claim is HSBC's own framing; it's widely repeated but is a self-description. [\[11\]](#)
-

Glossary

- **Corporate and Institutional Banking** — HSBC's wholesale bank for big companies, governments and financial institutions.
- **Relationship Manager** — the client-facing banker who owns a client relationship and brings in specialists.
- **Land and expand** — win a client with one product, then sell them more over time.
- **Transaction banking** — the everyday plumbing: payments, cash management and trade finance.
- **Trade finance / supply-chain finance** — products that help companies buy and sell across borders and pay suppliers; supply-chain finance pays a company's suppliers early.
- **Syndicated loan** — a large loan shared among several banks.
- **Green / sustainability-linked loan** — a loan whose use or interest rate is tied to environmental or sustainability goals.
- **Renminbi (also called the yuan)** — China's currency. **Onshore** = used inside mainland China; **offshore** = used outside, mostly in Hong Kong.
- **Panda bond** — a bond a foreign issuer sells inside mainland China, in onshore renminbi.
- **Dim sum bond** — a bond in offshore renminbi, issued outside the mainland (usually Hong Kong).
- **Bookrunner / lead underwriter / global coordinator** — the bank(s) that build investor demand, price the bond and lead the sale.
- **Coupon** — the interest rate a bond pays. **Tenor** — the bond's life/maturity.
- **Sovereign / supranational** — a national government / a multi-country institution (as a borrower).
- **Bond Connect / Swap Connect** — channels that let foreign investors buy mainland Chinese bonds, and hedge their interest-rate risk, via Hong Kong.
- **Tokenisation / digital bond** — representing an asset as a digital token on a shared ledger; a bond issued that way.
- **HSBC Orion** — HSBC's own platform for issuing and settling digital bonds.

- **Tokenised deposit** — insured bank-deposit money issued as a digital token so it can move instantly, 24/7.
 - **Stablecoin** — a digital token pegged one-to-one to a currency and fully backed by reserves.
 - **Custody / sub-custodian** — safe-keeping investors' assets; a local bank a global custodian hires to hold assets in a specific market.
 - **Assets under custody** — the total value of client assets a custodian safe-keeps.
-

Compiled 11 August 2026 from named deal announcements and reputable trade press. Where a figure came from a press summary rather than the deal document, I've flagged it — say "around" and verify before quoting a precise number. These are prompts to build genuine, specific reasons in your own words, not a script to recite.

Self-contained briefing · rendered from `hsbc-assessment-briefing.md` · 8 August 2026. Reliability labels reflect the evidence at that date; HSBC's process changes frequently.
